FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, JULY 26, 1888.

VOL. XXXI.—No. 1. No. 318 BROADWAY, NEW YORK.

CORRESPONDENCE.

THE FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. Communications on the subject to which its pages are devoted are respectfully invited. Anonymous communications will not be regarded. No name will be published except with writer's consent. The Editors are not responsible for the views of correspondents.

ADVERTISEMENTS.

Only advertisements of an approved character inserted. Inside pages, nonpareil type, 30 cents per line. Special rates for three, six, and twelve months. Seven words to the line, twelve lines to one inch. Advertisements should be sent in by Saturday previous to issue in which they are to be inserted. Transient advertisements must invariably be accompanied by the money or they will not be inserted. Reading notices $1.00 per line.

SUBSCRIPTIONS

May begin at any time. Subscription price, $4 per year; $2 for six months; to a club of three annual subscribers, three copies for $10; five copies for $16. Remit by express money-order, registered letter, money-order, or draft, payable to the Forest and Stream Publishing Company. The paper may be obtained of newsdealers throughout the United States, Canadas and Great Britain. For sale by Davies & Co., No. 1 Finch Lane, Cornhill, London. General subscription agents for Great Britain, Messrs. Davies & Co., and Messrs. Sampson Low, Marston, Searles and Rivington, 188 Fleet street, London, Eng. Brentano's, 17 Avenue de l'Opera, Paris, France, sole Paris agent for sales and subscriptions. Foreign subscription price, $5 per year; $2.50 for six months.

Address all communications,

ANSWERS TO CORRESPONDENTS.

A BIT OF KENNEL HISTORY.

TWO current incidents make pertinent the relation of a bit of history connected with kennel affairs. One of these is the charge made by certain parties that the Buffalo dog show has been gotten up to "back" Mr. Chas. H. Mason, in antagonism to the American Kennel Club. The other is the discussion by the American Kennel Club of the project of establishing a new publication as a club organ. That project is not a new one; and the bit of history is this:

The plan of establishing a club organ was discussed last winter; and probably it would have been put into effect then, had the promotors of the scheme succeeded in securing the services of the person whom they wished to edit it. That person was Mr. Chas. H. Mason. Mr. C. J. Peshall went to Mr. Mason and asked him if in the event of the American Kennel Club starting an organ he could be induced to assume the editorship of it. To this proposition Mr. Mason returned a negative reply.

A fortnight after that Mr. Peshall again repaired to Mr. Mason, and this time asked him on what terms he could be induced to take the position then held by Mr. Vredenburg as editor of the American Kennel Club Stud Book. Mr. Mason replied that his position as a judge in this country rendered it impossible for him to identify himself in any such way with the American Kennel Club.

Then Mr. Peshall sat down and wrote a derisive letter about Mr. Mason as "an English Gentleman," and sent it to the papers. This letter, at Mr. Peshall's personal solicitation and with a knowledge of the above facts, we withheld from publication in the FOREST AND STREAM.

This is an interesting bit of history just at this time, when the publication scheme has come up again; and when certain uninformed persons appear to imagine that in the selection of Mr. Mason as a judge at their show the Buffalo managers have secured the services of a gentleman whose co-operation would not be valued by the American Kennel Club.

IMPORTANT MEASURES.

IN the Sundry Civil Service Bill, now before the Senate, are two very important provisions, the full text of which we print elsewhere.

One of these appropriates $30,000 for the construction, care and maintenance of roads and bridges in the Yellowstone National Park. This is an increase over the amount appropriated annually for two or three sessions, and the money can be used to the very great benefit of the reservation, and will materially add to the comfort of that portion of the public who visit it.

The other provision authorizes the establishment in Washington of a National Zoological Park. This is an amendment added to the Sundry Civil Service Bill in the Senate. It has been favorably reported, and seems likely to pass that body this week.

Both these matters are of great importance, and the views held about them by the FOREST AND STREAM have never been doubtful. The Public Land Committee of the House of Representatives has neglected the public interest by its failure to report and urge action upon the Yellowstone National Park Bill, which passed the Senate unanimously, but Congress can hardly avoid acting on this appropriation bill, which from the Senate will go to the conference committee.

The movement for the establishment of a National Zoological Park has been set on foot none too soon, but if Congress appropriates the funds necessary for the beginning of the work there is yet time to secure specimens of almost every form of American life which may be desired. Washington, at present the scientific center of this country, is clearly the place for such a living collection. We have the best reasons for believing that when the authority for doing this work is had from Congress those put in charge of it will push it forward with a vigor that will soon make this, in its special province, the first zoological collection in the world.

ADIRONDACK "CUSTODIANS."

IN the year 1872 the Board of Land Commissioners of New York, which at that time had control of the State forest lands, created an office known as "Custodian of State Forests." This was for the benefit of a class of wealthy men with influence. The duties of the "custodian," as exemplified in practice, were to select the choicest and most picturesque locations on the people's land, erect luxurious "camps" or cottages, warn every body else off, and proceed to enjoy themselves at the dictation of their fancy, after the fashion of dukes in their dukedoms. The chosen sites were in the Adirondacks, on the Lake George islands, and elsewhere.

When the State Forest Commission was appointed in 1885, succeeding the Board of Land Commissioners, some two hundred of these "custodians" had been appointed and were holding their possessions, including many beautiful points on the Adirondack lakes and some of the fairest islands of Lake George; and the Commission was at once appealed to by numerous complainants, "citizens of the highest worth and respectability," who protested against the usurpation of these rich squatters, and urged that no more "custodians" should be appointed to take up the remaining choice locations. The authority of the Board of Land Commissioners to make such grants was questioned. Attorney General O'Brien gave it as his opinion that the Land Commission had exceeded its powers, that the "custodians" had no exclusive privileges, nor any right to build private residences on the public lands, in short, that their legal status was in no respect different from that of the humblest squatter on State lands.

The favored individuals, who saw the enjoyment of their peculiar and extraordinary privileges thus threatened, set about devising a scheme to retain their summer-houses. By the terms of the law of 1888 no State forest lands may be sold. A bill was introduced at the last session of the Legislature to empower the Forest Commission to lease tracts of land in the Forest Preserve for a term of years. The bill was designed to benefit the "custodians" and numerous other men of wealth, who stood ready to gobble up the remaining desirable sites and tracts. The measure was defeated.

At a meeting of the Forest Commission in this city on Wednesday of last week this subject came up for consideration. Judge N. A. Sheldon, of Glens Falls, appeared before the board in behalf of the squatters. He argued that "the custodians held rightful authority from the Land Commission to build upon and occupy the land upon which their summer resorts were situated, subject only to the pleasure of the Land Commission, and that they should continue to hold them during the life of their appointments. The Land Commission had not revoked their appointments, but had, on the contrary, given such assurances as led some of his clients to build expensive residences, and make costly improvements to the grounds. The custodians had been a positive benefit to the State, for they had prevented serious depredations from timber thieves, and had protected the forests from devastation by fires. For these reasons their occupation should not be interfered with by the Forest Commission."

In spite of this argument Commissioners Knevals, Basselin and Cox decided that the appointments of the "custodians" had been irregular and without authority of law and should be canceled, together with all special rights and privileges assumed to have been conferred by such appointments. This means that the summer houses and the improvements on the 200 choice sites selected by the custodians must revert to the State—unless the matter be carried into the courts, or a bill be railroaded through the next session at Albany. And if the "custodians" are removed and the islands and delectable spots now occupied by them restored to their rightful owners, common citizens who go to Lake George, the Adirondacks and the Catskills, will have the privilege of enjoying, equally with others, camp sites which belong of right to the people of the State in general.

SNAP SHOTS.

GAME laws in other lands do not always reflect wisdom on the part of their makers. We note that the Calcutta *Gazette* announces a close season for birds from April 1 to Sept. 30. If this applies to the Himalayas also it will leave scant opportunity for moonal shooting, as no one goes up before April 15, or stays later than Oct. 15. If it does not apply to the hills it is a dead letter, for no one shoots on the plains between April 15 and Oct. 15.

The success which may attend the planting of wild rice in this latitude has been demonstrated in a way fairly startling at one point on Long Island. Some years ago Hon. R. B. Roosevelt sowed wild rice in Brown's Creek, a stream which extends from Mayport to Sayville; his purpose was to attract reed birds there to shoot. The rice flourished and grew with such luxuriance that it has fairly choked the current of the stream, effectually impeded navigation, and become, as is complained, a common nuisance. The aggrieved residents of that region, having failed in an attempt to have Brown's Creek included in the River and Harbor Bill, are now seeking the adoption of some other measures to reopen the stream. Meanwhile Mr. Roosevelt has had shooting galore.

The Utica, N.Y., Fish and Game Protective Association is an organization which has been formed to "tend strictly to business." Its business is to influence game and fish legislation, to enforce the laws, to detect and punish violators. The plan and purpose of the association are worthy of support. In another column we print a letter from the secretary, suggesting that the influence of the Utica association may be extended by co-operation of sportsmen throughout the State. If there were some central organized body of earnest and determined men to whom appeal might be made, it could be employed as a most useful adjunct to the game protective system instituted by the State.

In an address before the Wisconsin Editorial Association in Milwaukee last Tuesday, Mr. Chas. A. Dana, of the New York *Sun*, explaining what he thought was legitimate news, said that "Whatever Divine Providence permitted to occur he was not too proud to report." From the frequency and alarming nature of the snake and bear stories printed in the *Sun* one would naturally infer that Mr. Dana is not too proud to report even some things which Divine Providence does not permit to occur.

The latest discovery is that an eel's tail makes a good bait for bluefish. Now we may confidently look for some genius to "discover" that angleworms make good bait for trout.

Quail are reported to be hatching out well this season and the supply is generally reported to be good.

Our kennel columns show an extraordinary number of bench show fixtures.

The Sportsman Tourist.

SAM LOVEL'S CAMPS.—XII.

THE cobwebs of mist on the marshes had not caught a sunbeam when the camp was astir next morning, for the smoke of its fire arose earlier than the sun, that had only gilded the treetops above it when breakfast was ready. The meal was eaten in unwonted silence. There were no plans proposed for the day's sport, for there was to be no sport, and no one attempted to joke, for though the prospect of getting home was pleasant to men who had seldom been so long away from it, there was some heaviness of spirit attending the last of these days of carefree life, days without beginnings and endings of chores, nor filled with worry nor weary toil, days of hand to mouth living and such primitive unthought of to-morrow as the heart of the best-tamed man loves and yearns for when its last drop of old, wild blood awakes as it sometimes will, and tingles through his civilized veins. This uneliminated atom still holds us to kinship with nature, and though it may not be the best part of us, without it we should be worse than we are. He who loses all love for our common mother is indeed a wretched being, poorer than the beasts.

When breakfast was eaten the frying pan, kettle and tin plates were cleaned as they had not been before since leaving the home cupboards, for they were soon to undergo the inspection of housewifely eyes, that the glamor of a hundred pickerel would not blind to the imperfections of man's careless or unskillful scullionry.

"I tell ye what," said Joseph Hill, as he scraped away with a clam shell at the bottom layer of a week's accumulation of burned grease, "I'ser agoin' tu tell M'ri 'at we hedn't got no soap, an' the water here is hard, 'nough out an' tew much, but it's hard an' won't take a holt o' grease, no mor'n it does yer stomerk."

"The way 'at oliogernous grease conjoles in a dish when it ketches it away f'm hum is suthin' beyond my misapprehension," said Solon while he swabbed a plate with a stick of firewood. "It's suthin' 'at nothin' but the female mind o' womern c'n rassle with. Dum the dishes! Let's sink 'em in the crik, accidental."

"Then we'd ketch it wus," said Joseph as he began scouring his frying pan with a stone. "I druther send this an' stay myself, 'an tu go hum wi'eout it. M'ri's allers tellin' how 't her gran'ther, I don't know but 't was her gran'mother, fetched it from C'nnect'cut an' cooked basswood leaves in 't in the scase year.* Sam Hill, you take it, grease an' sut an' all, an' leave me here!"

Antoine, on his knees scouring knives and forks by thrusting them into the earth, said:

"Wal, Ah don' care for me, 'cause you see, boy, Ah'll was be de cook an' Ah'll ant risponsibilitee for de clean, hein, Solem, ant it?"

"Wal," said Sam, wiping out the kettle with a handful of leaves and packing a dirty shirt and a pair of socks in it, "I haint responsible tu nobd'y."

"But your time's a-comin', young man, an' you wanter be gittin' ready for't. H. P. is the fust letters of her name, an' she haint thick under the nail an' won't be when the's a L. sot tu 'em. You'll see!" said Joseph, and his words had a portentous ring as he delivered them into the frying pan held close before his face while he anxiously inspected its interior. "I r'aly du b'lieve 'at I c'n see iron, leastways I've got daown tu signs o' the fust breakfus. If folks only hed sense 'nough tu du the cookin' on sticks an' coals an' hot stuns an' eat off'm chips an' birch bark, they 'ld take more comfort in livin', seems 'ough they would. If they didn't hev quite so much present enj'y'ment, they wouldn't hev so much dread o' the futur'. Anyways, I wish't this dum'd ol' fryin' pan hed staid in C'nnect'cut if M'ri's gran'ther an' gran'mother 'd hed tu eat the' browse raw. Seems 'ough I did, most."

To Sam occurred the happy thought of taking the dishes down to the lake shore. There, with the abundance of sand and water, the labor of cleansing went on more satisfactorily to the men, but greatly to the discomfort of as many sandpipers. These flitted back and forth past them on down-curved wings or stood atilt in the shallow verge, jerking out cries of alarm with every beat of their wings or tilt of their slender bodies.

About the middle of the forenoon, Sam looking upstream from the camp, where he was busy packing blankets and outfit and more odds and ends than he remembered bringing, descried a boat in the furthest bend. At first it seemed stationary, with oars rising and falling in purposeless strokes, like a great waterbug waving its antennæ for the mere sake of motion. But it was drawing nearer; the red flannel back of the rower's vest could now be made out, and the rise and fall of his straw hat and the thump, squeak and splash of his oar could be heard, and the surge of the water before the broad bow of the scow. And then forsaking the long curve of the channel and striking right across the marshy cape, that is half water and half weeds, it headed for the mouth of the creek. Sam was certain enough of the rower's identity to shout to his comrades that Uuncle Tyler was coming.

They went to meet him at the landing, when gaping with his deaf stare at his course, though he who is known as Time was steering for him, he sent the scow ashore with a final stroke. Time's salutation shouted at the top of his voice was, "Any of you fellers got any terbarker fer this ol' critter? He begged the last mossel 't I had an hour ago."

Uncle Tyler took his pipe from the seat beside him, knocked the ashes out on the gunwale and came rheumatically ashore with his left hand extended.

"Good gosh a'mighty! I sent up tu the store for some by Sargent's boy, but he forgot it! That tarnal boy can't never remember nothin' an' I'd orter knowed better'n tu sent by him."

"I'm dum'd glad it wa'n't you 'at forgot for oncte," said Joseph, who by a lucky chance had at the first attempt hit upon the right pocket and handed over his last depleted paper of long-cut. Uncle Tyler was soon comforting himself with what most mitigated his chronic unhappiness, a pipeful of what it pleased him to call "borrered terbarker."

"Naow hurry up an' be spry," he said, "for I'd orter be tu hum a workin' in my gardin."

Time explained that he had come to steer for Uncle Tyler and to get his own boat which he was willing to steer up the creek if some one would row it. As for his rowing that was out of the question, for it made him sweat to row. Sam freely offered him the services of Solon or Joseph, either of whom would certainly do their share of sweating at the oars.

"Them fellers?" asked Uncle Tyler, who could hear some things much better than he could others, and now glared balefully on his companions in the previous voyage hither, "Good gosh a'mighty! They'll row ye int' the woods or cross lots wi' the' hawin' an' geein'! Do' know one eend of a brout f'm t'other!"

"Haow is anybody tu, special in the case o' one o' these 'ere femaline boats which one end 's the fact smile o' t' other?" Solon demanded, for he would rather suffer the pains of rowing than such disparagement of his skill and knowledge. But Joseph did not resent it, and only said regretfully:

"I'm 'feared you're right, Uncle Tyler. We can't row. We wanter awf'l bad, but we can't; leastways, I can't wi'aout studyin' on 't more. Ha' some more terbarker, won't ye?"

It has not been told who rowed that boat up the Little River of Otters, nor whether it ever reached its home port.

Brother Foot's camp-meeting tent had been taken down and packed, and with all their other effects and the box of salted fish put on board the scow, and they were ready to depart; but Sam had forgotten something, which obliged him to revisit the site of the camp. He was ashamed to tell it was only for a last look.

The downfall of noontide sunlight splashed the floor of the woods with gold around silhouettes of branches, twigs and leaves, bent over the rocks and crinkled along the last year's leaves they were laid upon. Between leaves, branches and tree trunks, were shown, in frantic shapes, patches of sky and lake and all the sunlit outer world. Birds sang blithely of their happy life, and mingled with their songs came from far away sounds of the life and stir of the world, and yet this place seemed lifeless.

How lonesome and forsaken it was. The carpet of old brown leaves worn by frequent footsteps down to the black mould of dead years, strewn with tobacco paper, broken pipes and fish bones, the cast-away ridge pole of the tent lying like a fallen roof tree athwart the matted bed of cedar twigs whereon they had dreamed dreams pleasanter than life, so deserted now that a chipmunk ventured to explore it. It seemed to Sam almost like the ruins of a house wherein he had dwelt for years.

For old acquaintance sake he tried to light his pipe in the ashes of the fireplace, but the last ember was dead and only exhaled a faint ashy odor.

"But I'm comin' agin!" he said, and as he hurried down the steep footpath a vireo sang behind him as if to call him back.

ROWLAND E. ROBINSON.

FERRISBURGH, Vermont.

*A season when all crops failed and the early settlers of Vermont were reduced to pitiable straits, was long remembered as the scarce year.

IN THE VALLEY OF THE SERPENTINE.

(Concluded from page 510.)

THE next day we didn't wake as soon as we ought to have done. For my part I never do; and consistency is to be commended, as the copy book headings say. But after breakfast we found our way down to the river, and also discovered our Siwash dugout was missing. It was a derelict to commence with, and having its character to keep up, it had also gone in for consistency. But we borrowed a boat from a settler, who confessed it was rather leaky. This should have put us on our guard, for rather leaky, with the accent on the rather, is what even a Welshman might confess himself to be on St. David's day.

We rowed up stream, and we paddled and drifted down for miles, with varying luck. That is for general confession. As to particular, there's the rub. This blessed boat sprung leaks like spring onions. But for bailing it would have sunk every fifteen minutes, and we had nothing but an old frying-pan without handle to bail with. Did you ever go ducking under such circumstances? Every ten minutes we lay by and all hands to the pumps. As for the noise of the waterfall, read Wordsworth's "How Does the Water Come Down from Lowdore?" and you'll get a faint, a very faint idea of it. Our lucid intervals worked something this way.

Fortunately the Serpentine is a very serpentine river. Cautiously rounding a bend we see certain continuations, wagging as nothing but ducks' tails and ladies' trains, which have "weight for the wagging," can wag, round the next turn. Ladies luckily are out of the question, so ducks it must be. And ducks it is, sometimes mallards, sometimes butterballs, and sometimes others of intermediate size, with Mr. Drake always in the rear. We creep down warily, not generally too warily, to where he lay; but the water in the boat wearily creeps up. But before we reach the next bend the question arises: "Ducks or a ducking?" The river is 16ft. deep, and none of us is born to be hanged, nor innocent enough to stand trial, so we decide to bail out. Immediately the frying pan is brought into requisition, whir-r-r go the finest, fattest mallards that ever were eggs. Our agony is excruciating and our score that time a duck egg. But 'twas not ever thus. Luckily they fly short, generally only over the intervening land, to the next bend, and we come across them again with more success, *i. e.*, less water ballast.

I have confessed that one of us was a dog. Sorrowfully I add another confession. He wasn't the only puppy, because another of us was a boy. Hereby hangs a tale, which proves the proposition. On one occasion, drifting round a bend in more than half ballast, we saw three or four mallards within 20yds. of us. Up jumped the boy to his feet and fired wildly. He missed his fire, and more by good luck than good management we missed our water. How the boat righted I cannot tell. I incline to the belief that, after all, one of us was born to be hanged. It must have been the boy. We did not see another duck for a quarter of a mile.

Multitudes of little streams (sloughs) run into the Serpentine. Exploring some of these, we were sure to come across two or three beaver dams. We never found the family at home, so, leaving our cards, we backed out. On several occasions our proceedings aroused the suspicions of enormous eagles, who kept their eyes upon us. Possibly we raised their ire, for their wings expanded and raised them higher.

Drifting past some willows that crowned a dyke which some enterprising squatter had raised along his river front, we heard an immense rustling of wings. I believe the boy was afraid to fire lest he should kill an angel; like the other boy who carried home a large owl, and cried, "See! see! father's shot a cherubim!" We could see nothing for the bushes; but when we cleared them we spied within rifleshot an enormous pair of wings lazily wafting a large body with legs across the prairie. It was a crane, without doubt; for it would require a crane to lift those continuations.

At the lower bridge we were glad to leave our boat and walk back by the road through Surrey Center. The ladies met us on the ridge, and we crossed the Serpentine Flats, not to be too flattering, in pretty fair company, with eager anticipations of mid-day lunch.

The richest land in the Lower Fraser district unfortunately, when not dyked, is subject to flooding. On the Fraser itself this occurs in June, being occasioned by the melting of the snow in the mountains. In the Serpentine, however, which has a low-lying watershed, the flooding comes only in the winter or rainy season, being caused by inability of the winding river, when backed up by the tide, to carry off the surface water. There is no better sport, from November to March, than while paddling in a canoe from one clump of willows to another, over the submerged flats, the ducks being plentiful especially during a cold snap, which drives them up from the bay. Steps are being taken, however, to stop this flooding, by straightening the course of the river; and if, as the Government propose to do, a dyke with flood-gates be constructed across the estuary, the finest land in B. C. will be workable all the year around.

A little boy was recently drowned trying to raft across a submerged part of the road by the bridge, and a local poet recorded the circumstance in the following verses, which are quoted as illustrative of the literary culture of the neighborhood:

TEDDY WADE.

Deep lie the waters in the vale,
The Serpentine is out;
And not a yard, but you may sail
And tack and turn about.

The cypress swamp is dark and still,
Save bluejay's screech so harsh:
A lonely crane, all legs and bill,
Stands dreaming in the marsh.

Above the flood, the willows bend,
As though by sorrow swayed,
Reminded of the mournful end
Of little Teddie Wade.

His parents' eldest born was he,
A bright and clever boy;
Just getting old enough to be
His father's help and joy.

One day he sent him to Holmroyd
To borrow Buck and Bright,
And never feared nor felt annoyed
To see him not at night.

To stay till morn he might be pressed,
As he would often do,
A well-known and a well-loved guest:
The oxen knew him too.

The morning came, but never more
Came Teddie home again,
Until there entered by the door
A melancholy train.

They found him 'neath the swollen tide
Laid in the river bed,
They left him by his own bedside,
All that was mortal—dead.

In Christ Church yard, in mother earth,
He sleeps upon the breast
Of Mother Church, by second birth,
With all the saints at rest.

And when the floods came o'er the land
And winter 'gins to fade,
While standing sadly on the strand,
We think of Teddie Wade.

W. J. W.

On our present excursion we narrowly escaped a far worse tragedy. Our boy's escapade in the boat has already been recorded. But this was destined to be surpassed, affording a warning to all sportsmen when they set off on an excursion to leave all two-legged puppies at home. In order to prevent accidents it was from the first an established rule at Holmroyd, to keep all weapons loaded. This was always understood, and was found very convenient in sudden alarms of a hawk or a wildcat being seen in the vicinity. Of course no sportsman ever handles a gun without looking to see if it be loaded; and no gentleman touches another man's shooting irons without "By 'r leave." But the boy picked up in my absence my favorite .45-bore six shooter. It is well sighted, both fore and aft, and he must needs try it by pointing at one of the ladies. Possibly, two or three generations ago, there was a gentleman in the family, and the influence of his breeding suggested that pointing a weapon at a lady was not exactly "good form" for him nor good for 'em. So he immediately slewed round to a window, sighted an object outside, and pulled the trigger. There was a bang and a shriek. The revolver kicked up and hit him in the mouth, unfortunately not knocking his head off, or the average of B. C. intelligence would have been by so much the higher. And an area of half an inch diameter less of pane in the window was not altogether wasted, but was counterbalanced by a certain amount of pain in a boy's head. But boys require a deal of killing or the supply of men would run short; and he was little worse in body, though, I trust, much improved in mind by the circumstance. And the revolver justifield its owner's literary tastes by proving itself an accomplished head hitter. Still, it was a narrow escape.

The remainder of the afternoon was expended in exploring the neighborhood. But I have already trespassed too much upon your forbearance, and you must by this time be weary of my uninteresting gossip. I had intended lugging in a real panther story, for the truth of which I can vouch; but there is no room. If the circulation of the FOREST AND STREAM be not sensibly diminished by the publication of my articles, may I send it at some future time.

A YORKSHIRE HALIGONIAN,

NEW WESTMINSTER, B. C.

SALT-WATER SKETCHES.—II.

A MEMORY OF WAR TIMES.

IN the old days of 1861-65, when the whole southern coast of these United States was held in the relentless grasp of a close blockade, those of us who were in the naval service saw and participated in many stirring scenes. It was my fortune to see a good deal of service on the west coast of Florida. It was at that time, and doubtless still is, the paradise of sportsmen, and I look back to many a pleasant hour spent with gun and fish line, and rewarded with rich trophies of game and finny beauties. My most pleasant memories are connected with several months' service in Charlotte Harbor on the southwest coast, a bay at that time abounding in everything to delight the sportsman, and yet, at first sight, most disappointing in appearance. This spacious bay is formed by, and is studded with, islands having beautiful sand beaches, and densely overgrown with mangrove and other bushes, while here and there the cabbage palm rears its lordly head. The entrance, or to speak correctly, the main entrance (for there are several) is called Boca Grande, and has a depth of about three fathoms in its shallowest parts. Like most of the Florida harbors parallel bars extend about three miles from the shore on each side of the entrance, and at the end of these is a bar connecting them. On first entering this beautiful bay in 1862 the solitude seemed unbroken. Not a house was in sight. The verdure appeared almost uniform in height, and it seemed as if we had been banished from civilization, and alas! from markets. The civilization we never found, but my mouth waters yet as I think of the rich and bounteous repasts that nature furnished almost for the asking. The desire of my life since has been to visit that charming spot again in a yacht, with a few choice spirits, and spend a winter there. Rod and gun would find full employment. I hear that a large hotel has been erected near the harbor since my time, and probably the birds have been hunted away from their haunts, but in 1862-63 and '64 it was superb, and prolific in all that makes sport.

If I had the able and ready pen of some of your contributors I could describe in glowing colors some of our experiences there, but I will try to give you some idea of its richness in my own way. First, the alligator seemed everywhere. We never left the ship without arms, and frequently we found the huge reptiles sunning themselves on a sandy beach, or swimming slowly in the lagoons, with only the top of the head visible. I am proud to say that we always gave them a shot when we could, but am equally sorry to be obliged to say that we never killed one. They were of immense size, and looked very disagreeable to us amateurs, who had none of us lost any alligator.

Bruin showed himself frequently on the mainland, and on some of the islands, but I never could find any of our people who had lost any bear, so we never considered it necessary to hunt for him. We had all the "bar meat" and venison, but this was supplied by two or three hunters who lived on islands some distance from the ship, and who were glad to exchange their meat for bread, pork and other supplies from the ship. Oyster beds of great extent were found within a short distance, and splendid single oysters could be had by the shipload for the mere trouble of picking them up. In a small lagoon we found an inexhaustible supply of quahaugs. These were of great size, but very tender and good. The bay was literally alive with fish. Boat-loads of grouper, red-snapper, kingfish and other large salt-water beauties could be caught at any time, and the lovely mullet were innumerable. A schooner came in at one time, and having been granted permission to fish, her seine was run around a school of mullet, the ends taken ashore, and the seine staked up so that the fish could not jump out. The crew then proceeded to salt down one hundred tons of the fish, gave us all we wanted for a crew of 140 men, and when the seine was taken up it was estimated that about three-quarters of the original catch was released. How is that for a fish story? I am not ambitious, and don't want the belt. The wonderful silver tarpon were plenty. The sturdy jewfish could be had for bait.

The game kingfish gave great sport, and twice during our stay magnificent ones jumped into our boats and remained there. The first one came flying over the stern and struck one of the fishers in the stomach, and doubled him up like a jack-knife. The second instance occurred one calm day. The dingey was lying idly astern of the ship, and Joe, a little darky, one of the wardroom boys, black as charcoal, slid down the painter, and seated himself comfortably in the stern, and put his line over for fish. He was doubtless engaged in a fisherman's revery, everything being very still, when an immense kingfish came like an arrow from the water astern, just grazed Joe's head, and fell in the boat. The fish was doubtless stunned, and lay quiet for a few seconds, but how shall I describe the effect on the little darky? His wool seemed to rise from his head. He dropped his line, rose slowly from his place, with his eyes intently fixed on the fish, and began carefully to make his way toward the bow of the boat. When he arrived there he took a firm hold on the painter ready to shin up, and still keeping his eyes on the fish, remarked in a hushed, awe-stricken voice, "If I had seed dat thing move I'd a gone right out ob dis boat." I think Joe absolutely blushed at the laugh that arose at that time from the observers above.

The islands each side of the entrance were favorite nesting places for magnificent sea turtles in great numbers. All that were required for food were taken with ease, and during the laying season a boat was sent ashore every morning with the mess cooks "to market." Supplied with bags and steel ramrods they would thrust the latter into the sand until a nest was found, and just enough eggs were taken for the wants of the day, and no more. These eggs made delicious omelettes, and were not unpleasant when used to make cake. The fine Florida gopher, a little land turtle, considered by some as equal to terrapin, could be found on any of the islands. They dig their holes about three feet into the ground, in a slanting direction, and then run them at right angles to the first on a level. The men soon became very expert at finding the direction of the hole, and could thus tell where to dig to find the gopher.

Coons were "frequent." They are great lovers of oysters and other shellfish. On moonlight nights they would come out on the beach in search of the delicious morsels so dear to them. The hunters, secreted in the bushes, would rush out and knock them over before they could recover from their surprise. I will tell you how two old sailors did it. They asked permission one bright night to go on shore after coon. The executive officer incautiously permitted them to take two rifles with them. Proceeding to the beach they secreted themselves in the bushes a short distance apart and waited. Soon Mr. Coon came out foraging for his supper. Both men rushed for him, each clubbed his musket, both struck at the same time—the muskets came together, and broke both stocks off short, and that coon is now probably telling his grandchildren somewhere in the Florida woods, how to fool sailors. When the two old salts came on board the next morning coonless, and with two broken muskets, they were jeered at; but after that ask either of them "Where's your coon," and a free fight ensued. Baked coon, stuffed and dressed, is good enough for the poor, the rich might not like it.

But the shooting. I remember some of the birds we used to get. Pink curlew (spoonbill), Spanish curlew, brown curlew, white curlew (with green tips to the wing), oyster plover; these were the common ones. I wish I could give you the Latin names of all these. It would look very learned, and sound well, but seafaring people don't have time to get posted on all of them. One day I had the rare luck to kill a magnificent scarlet flamingo. Held up by his bill he measured 6ft. 3in. in length. I would like to meet once more the white-chokered individual who persuaded me to give him the wing that I had treasured for my little cabinet at home, saying that he wished to present it to a lady in Washington, whom we all delighted to honor in those days. She never received the wing, and I lost it. I fear that I shall never get another.

We occasionally varied our sport by picking up some small blockade runner that was trying to convey aid and comfort to "our friends the enemy" on the mainland. The small chases with ship or boats were frequently quite exciting, and kept us on the alert. Mess bills were small, for nature was so bountiful that we did not have to buy much from the supply ships that visited us monthly. They brought us fresh beef and ice from the North, as well as our mails, and their coming was quite an event. They always wanted oysters, turtle and gophers, and we always laid in a supply for them when they were expected. One of the hunters had a fine banana plantation, and orange, lemon and lime trees on one of the islands, and nature gave us a profusion of berries in their season. A delicious wild fruit like a plum grew everywhere, and made fine table preserves. The cabbage palm has a fine cabbage in its top, and so our natural market was a grand one. The climate was very healthy, and our sick list very small.

There is one wild animal, however, that I have not mentioned. It is the Florida mosquito. He is the most utterly depraved insect on the face of the globe. Many times, after a sleepless night in the harbor, we have been forced in self-defense to get underway, and leave the harbor to get clear of these pests. On going just outside the bar, about three miles from the shore, they would all instantly leave the ship, and return no more until we went inside. They could conquer an army, and for bitter, persistent, unremitting work I have never seen their equal. They keep rigidly to their own time of year, however, and when they go the paradise is again sweet. The pelican, with ludicrous dignity, sits on a log, or clumsily dives for his dinner. The cormorant flies swiftly through the air, and tries to pass himself off for a duck. The gentle Seminole from the Everglades comes near to sell deerskins and bead ornaments. The pensive shark, of enormous size, comes hastily to the surface on the least chance of a bite at something, and the apparently still and solitary bay is full of life and variety as soon as its mysteries are unlocked. CHATHAM.

Natural History.

BULLS ON THE TEXAS RANGE.—II.

RECENTLY I wrote you of bulls; but fearing lest the paper should grow too long, some things were left out which are desirable to enlarge on. Thus I wished to call attention to the extremely cautious and sensible way in which the bulls mentioned by me fought. There was no headlong, blind fury, such as we often see when men fall together by the ears, but each behaved coolly, meditatively, like veteran strategists, in every movement of attack or defense. Each knew well that if he left out any precaution which common sense or the art of good fighting would demand, he would be surely killed, or be able to escape only by a most precipitous and shameful flight. Each knew that the danger lay in his adversary's horns, and to ward off and lock these was his supreme care. Then came the terrible trials of strength, in which the effort of each was to overwhelm the other. Here also the same careful watching and instant preparation for emergencies were apparent. Each knew how to adjust his strong neck and plant his feet so as to get out of them the best muscle. Though brutes, it was a battle of science, fortifying and sustaining fearful force. Blind fury was dismissed, or completely held in and directed by a deliberate, cold-blooded art of war. Therefore these creatures are evidently endowed with great sense to meet the demands of this case, and their reasoning faculties in this sphere seem nearly perfect. It is human to err and make great blunders, but it seems not much to be so in the case of bulls, in whatever affairs they undertake. Had one succeeded in throwing the other his plan would have been to hurl himself upon him with a great burst of force and plunge his weapons to the hilt into his body before he could recover. And there an end to him.

However, unless the bulls are very angry they do not usually seek to kill their adversary when he is thrown. They are often magnanimous; stepping backward a little, looking with an eye of satisfaction upon the prostrate foe, shaking the head at him, as if saying, "Now, if you have enough, go; if not, behold, my good horns await thee." And the vanquished one is always sensible enough to surrender the palm to the victor when he knows he is whipped, if permitted to do so, and will continue to acknowledge him as superior during the rest of the season of roaring. Then when he wishes to roar, he will take care that the victor be not near, or if he be near, he will, out of his great respect for him, roar very softly.

When a bull perceives that his adversary is too much for him, and that the battle, if continued, must bring him great disaster, he will often, if he be a bull who would rather run than be killed, manifest great terror of mind, but never lose his sense. Thus, he will watch his opportunity and step backward from his adversary, keeping his eyes fixed on his. If he now perceives that his adversary means mischief and will not be satisfied except with blood, he breaks out with cries of mingled terror and rage, but mostly of terror; and this because he knows that should he turn tail, the adversary would plunge on to him and probably disembowel him before he could get out of reach. This is the point of greatest danger to the vanquished bull. But he continues to step backward cautiously, and when he calculates that he is far enough to have some chance of escape, he suddenly bounds away, tail up and head down, usually with the foe thundering at his heels. It is then a race for dear life, and the vanquished nearly always escapes, as the victor has not so much at stake, and is, therefore, willing to call off after a while.

It usually happens that when two bulls of the same herd or walk fight a great battle and one is forced to take to his heels, the cows take after him and pelt him with blows as he runs. I cannot understand this, unless they have a pride, an *esprit du corps*, that no bull shall become the sire of their calves except he be a great bull and conqueror. They want the other sort well out of their way. Perhaps they obey a general law which looks to the survival of the fittest. I am told, however, that cows of inferior spirit and of the baser sort do not use this discrimination, but are content with any bull who may roar.

I have noticed the singular pride and care which bulls have of their horns, as a good warrior or sportsman has of his sword or gun. When alone they often plunge them to the hilt in the sandy hills or ravines, repeating the operation several times. Then they move forward to a bush or low tree, which they worry and twist into all manner of shapes with their horns, roaring as they do so. The plunging their horns into sandy earth seems to be with intent to sharpen the points, and the rubbing against brush seems to be with intent to polish them. When they have wrought some time at this business, they start forth hunting a herd, roaring at every step in a very terrible manner, as if full to the brim of war. Persons unacquainted with them would be frightened to meet them on such occasions; but I have met perhaps hundreds, and never received anything from them but a most disdainful look at me from their eyes, as if they thought I were too small game to vex about. However, I am free to say that I do not like to meet them unless on horseback. I have sometimes had them stop in their march and shake their heads at me in a very impudent way, but only when I chanced to be on foot. Then it is comforting to have a good tree at hand into which one may climb hastily in case of emergency. When in their herds, engaged in matters which appear greatly to their satisfaction, they show very little disposition to be impudent either to the footman or horseman. Still I do not account them good creatures to go among at any time on foot, unless trees are plentiful and handy.

The Texas cow-ponies have great terror of bulls when fighting, and it is difficult to spur them on to such scenes. They look on with amazement and trembling, watching every movement of the bulls. Should one make a break to get out of the way, they make a break also; their notion seeming to be that the pursuing bull in his fury will plunge his horns into anything that happens to be in his way. Therefore they think that the safe place is the remote one and act accordingly.

ELIASVILLE, Texas.

THE WILD PIGEONS.—*Editor Forest and Stream:* I noticed in a recent issue that a correspondent wanted to know what has become of the wild pigeons once so plentiful. It is hard to say whether they have been entirely annihilated or not. I think your theory published in the next issue of your paper is about correct, viz., the fluctuations of the mast supply on which they chiefly exist. This may in a great measure explain their absence in districts where they were once numerous. Last fall while shooting in the northern part of Victoria county my companion had the luck to kill one of these beautiful birds, it being the first one taken in that district for several years, although they may be seen occasionally.—W. C. L. (Toronto, Ont).

QUAIL DOMESTICATION.—A number of farmers in Johnson Lane, Middletown, Conn., and vicinity are trying the experiment of domesticating quail. Mr. Wellington Johnson, a short time ago, succeeded in hatching a brood of them under a bantam hen from some eggs which he found while working in the fields, and the naturally wild young fowls seem in a fair way to content themselves to the confines of the farm yard. While engaged in mowing last week Wm. Harris uncovered a nest full of the eggs, some of which he placed under a setting hen, and now awaits anxiously the result of his experiment.

LARGE BLACK-TAIL DEER ANTLERS.—J. D. Condict, of this city, shot and killed a black-tail buck weighing 350 lbs. on the headwaters of the Savery River in Carbon county, Wyoming, in September last. The antlers were in the velvet and measured across the widest spread 38¼in. He brought on the head and hide, and has the trophy mounted at Orange, N. J. Is not this the largest head on record? The prongs number twenty-two, and are perfect in contour and size on each side.

QUAIL IN THE CITY.—New York, July 18.—Some time since a quail flew on to the fanlight of an importing house on Worth street. It proved to be a male bird, and is now in the possession of a friend of mine, and is almost thoroughly domesticated. My friend wants to try the domestication of quail, and if some of your readers can put him in the way of getting a hen bird both he and I would be greatly obliged.—E. K. LEFFINGWELL.

THE NIAGARA COUNTY PROTECTOR.—Lockport, N. Y., July 18.—Mr. Charles Ripson, the newly appointed game constable, resides at Youngstown, Niagara county, and was appointed on the representation of Daniel Millar, Esq., president of the Niagara County Anglers' Club.—J. L. DAVISON.

NATIONAL PARK AND ZOOLOGICAL PARK.

PROTECTION AND IMPROVEMENT OF THE YELLOWSTONE NATIONAL PARK.

For the construction and improvement of suitable roads and bridges within the Park, under the supervision and direction of an engineer officer detailed by the Secretary of War for that purpose, thirty thousand dollars.

A NATIONAL ZOOLOGICAL PARK.

SEC. 4. For the establishment of a zoölogical park in the District of Columbia, two hundred thousand dollars, to be expended under and in accordance with the provisions following, that is to say:

That, in order to establish a zoölogical park in the District of Columbia, for the advancement of science and the instruction and recreation of the people, a commission shall be constituted, composed of three persons, namely, the Secretary of the Interior, the president of the Board of Commissioners of the District of Columbia, and the secretary of the Smithsonian Institution, which shall be known and designated as the commission for the establishment of a zoölogical park.

That the said commission is hereby authorized and directed to make an inspection of the country along Rock Creek, beginning at the point on that creek where the Woodley road crosses said creek, and extending upward along its course to where said creek is crossed by the Klingle road, and to select from that district of country such a tract of land, of not less than one hundred acres, which shall include a section of the creek, as said commission shall deem to be suitable and appropriate for a zoölogical park.

That the said commission shall cause to be made a careful map of said zoölogical park, showing the location, quanity and character of each parcel of private property to be taken for such purpose, with the names of the respective owners inscribed thereon, and the said map shall be filed and recorded in the public records of the District of Columbia; and from and after that date the several tracts and parcels of land embraced in such zoölogical park shall be held as condemned for public uses, subject the payment of just compensation, to be determined by the said commission and approved by the President of the United States, provided that such compensation be accepted by the owner or owners of the several parcels of land.

That if the said commission shall be unable to purchase any portion of the land so selected and condemned within thirty days after such condemnation, by agreement with the respective owners, at the price approved by the President of the United States, it shall, at the expiration of such period of thirty days, make application to the Supreme Court of the District of Columbia, by petition, at a general or special term, for an assessment of the value of such land, and said petition shall contain a particular description of the property selected and condemned, with the name of the owner or the owners thereof, and his, her, or their residences, as far as the same can be ascertained, together with a copy of the recorded map of the park; and the said court is hereby authorized and required, upon such application, without delay, to notify the owners and occupants of the land and to ascertain and assess the value of the land so selected and condemned by appointing three commissioners to appraise the value or values thereof, and to return the appraisement to the court; and when the values of such land are thus ascertained, said values shall be paid to the owner or owners, and the United States shall be deemed to have a valid title to said lands.

That when the said commission shall have obtained the land for a zoölogical park, as herein provided, it shall have power to lay out the same as a park and to erect such building or buildings thereon as may be necessary for the scientific purposes to which the park is dedicated and proper for the custody, care and exhibition of a collection of animals.

That when the said commission shall have established a zoölogical park in the District of Columbia under the provisions of this section, by acquiring the necessary lands and by laying out the same as a park and by the erection of the necessary buildings thereupon, it shall be the duty of said commission to turn over the said zoölogical garden, with all its buildings and appurtenances, to the custody and care of the Regents of the Smithsonian; and when such transfer of the custody and care of the zoölogical garden shall be made, the duties of said commission shall cease and its existence terminate.

That when the said commission shall tender to the Regents of the Smithsonian Institution the care and custody of the zoölogical park provided for in this section, the Regents of the Smithsonian Institution are hereby authorized to assume the care and custody of the same; and the said regents of the Smithsonian Institution are hereby authorized to make such rules and regulations for the management of the park, and of the property, appurtenances, and collections of the park, as they may deem necessary and wise to secure the use of the same for the advancement of science and the instruction and recreation of the people.

That the said commission is hereby authorized to call upon the Superintendent of the Coast and Geodetic Survey, or the Director of the Geological Survey to make such surveys as may be necessary to carry into effect the provisions of this section; and the said officers are hereby authorized and required to make such surveys under the direction of said commission.—*Sundry Civil Service Bill.*

Game Bag and Gun.

A CARIBOU HUNT IN PISCATAQUIS.

"GOOD-BY, boys; bring us a roast of venison," was the parting salutation of a dozen or more old friends, as we steamed away from the wharf in Belfast, Me., for the Carritunk region, Piscataquis county, for a week's outing.

There were three of us, the Judge, the Doctor and myself. Our route was by steamer to Bangor, thence by railroad to Blanchard, thence to the camp. We reached Blanchard without let or hindrance at 3 o'clock P. M., where we procoured stout horses and a buckboard which had apparently done service before the war; we were a little doubtful about the vehicle, as it seemed loose and rickety in all its parts, but Brown, our driver and man of all work, assured us that that was just the way it was made, and it would carry us safely as far as we could go by team. From Blanchard to Carritunk township is one perpetual ascent for eight or nine miles. We then came to a strip of table land about one mile wide, ending at the base of Mount Bald, or Pond Mountain, as it is sometimes called. Here we went into camp for the night, intending to get an early start in the morning for Harmony Camp, on the top of the mountain and about four miles distant. We found comfortable quarters in a lumber camp, and while our guide was making things pleasant for us about the camp we took our fish tackle to try the trout in Thorn Brook, which was but a short distance from camp. We soon found that we had not misjudged the capacity of the stream. It was nearly dark, but in half an hour or so we were able to count up twenty-three trout, some of them weighing nearly half a pound. We had them fried for supper and enjoyed them immensely. We were up and ready to start the next morning at daylight, transferred our luggage to the backs of our horses, and commenced the ascent near where the old Skowhegan road crosses Thorn Brook. The ascent was tiresome. We reached the summit at 9 A. M. and took up quarters in Harmony Camp, situated on the shore of a beautiful lake of about four square miles in extent.

Here for several years Captain Nickerson and a few of his friends have spent a few days during the hunting season, and it was through his kindness that we were invited to occupy this camp. Marvelous stories are related by some of the Captain's friends "of caribou brought down at long range, and of huge antlers that were taken but could not be brought out for certain and various good reasons." Certain it was that we found nailed up over the door of the camp a very fair-sized pair of antlers.

We settled ourselves comfortably, occupying the remainder of the forenoon. After dinner we started out to look for signs; made the circuit of the little pond and found plenty of deer and caribou tracks, and one that the Judge decided to be that of a moose. Returning we took a wide circuit, observing landmarks and noting the general lay of the land, in order that we might not lose our bearings when hunting singly, a precaution which it is always safe to take, but in this place it was hardly necessary, as the mountain itself afforded us a conspicuous landmark, and plenty of hard climbing would bring us to camp from any direction. We returned to camp just at dusk, highly pleased with the outlook and feeling quite certain that we should have a successful hunt on the morrow.

We started out the next morning as soon as it was light enough for us to see our way. The Doctor went to the north, I to the west, the Judge proposed to station himself conveniently near a runway leading to the pond, where to all appearances the game went down to drink and feed upon the lily pads. The morning was most propitious for stalking game, it having rained a little during the night, so that our walking through the brush was almost noiseless. For guns, the Doctor carried a long range Ballard .38-caliber; the judge and myself .44-caliber Marlins. About two hours after leaving camp I came upon fresh caribou tracks going in the direction of the pond. I followed them without difficulty, expecting to see my game on reaching the pond some half a mile distant. My carelessness lost me a favorable shot and taught me when tracking game of this kind to be always on the alert, expecting to see game at any moment and especially in the most unlikely places, for after following the tracks for 40 or 50 rods, a sudden cracking of brush a few rods in advance, caused me to look ahead just in time to see a large buck bounding away down the mountain and out of sight in a moment.

Deeming it useless to follow him now that he was thoroughly startled, I kept on to the pond, hoping that by secreting myself I might during the day get a shot. Selecting a covert on a point running out into the pond far enough to give me a fair view for some distance on both sides, I resolved, as I have often done before, that I would stick to that spot until I saw game at all events. So making myself as comfortable a stand as possible, I began my tiresome waiting. Hour after hour passed by and no game appeared. I had become chilled and cramped, but still resolved to stick as long as I could see to shoot. At last, just as dusk began to settle down upon the lake, I heard the crackling of brush upon the right, which warned me that game was approaching. In a moment the blood was coursing through my veins, and instead of the chill I was hot with excitement. I imagined from the sound that the game could be nothing smaller than a moose, and began to speculate on the chances of my stopping him at my first shot. The animal had stopped before coming into view in a thicket of birch bushes; this gave time to get my nerves steadied for the fatal shot. Soon the bushes parted and a caribou leisurely walked out into full view about fifteen rods away. I was much disappointed in the size of the animal, but there he stood quietly nipping the twigs that grew in the edge of the water. He was about the size of a large buck deer, and had it not been for his immense head, I should at first glance have considered him a deer and nothing more. I study him for some minutes to determine if possible what food it is he seems to relish so much. At last the right chance for a favorable and certain shot presents itself, and at the crack of my rifle the caribou, with one convulsive bound, falls dead to the ground; I hasten to bleed him, and with no small degree of satisfaction contemplate my first caribou.

I hang him up and start for camp, concluding to follow the shore of the pond, as it had now become quite dark. As I drew near the camp I heard my comrades talking over the events of the day, and as I had heard several shots from their rifles during the day I was feeling somewhat disgusted at my stupidity in not getting a telling shot at the game I started in the early morning. I was not so exultant over my first caribou as I anticipated. Both the Judge and Doctor had shot at and missed the same caribou in the forenoon, and as no more game came in sight of their stands they got tired of waiting and returned to camp. In the afternoon they had amused themselves shooting at ducks on the pond; they had secured three and one large loon, and were congratulating themselves that they were high line for that day at least. I related to them the story of the day's hunt and informed them where the game was hanging. They would not be convinced that I was not hoaxing them, and after supper I proposed that we take the canoe and go up and bring the carcass to camp, remarking to them that a breakfast of caribou steak would doubtless inspire them with more perserverance in hunting next day. We found the caribou as I had left him.

The sky was becoming overcast with every appearance of snow, and on arriving the next morning we found that about two inches had fallen and the weather had moderated sufficiently to dampen it, everything was propitious for a successful hunt. We started early, the Doctor and myself keeping together, the Judge preferring to hunt alone. We hoped to come upon a family of caribou, and after traveling some three miles we found fresh tracks, where at least three had gone along. With the utmost caution we followed the tracks for about two hours, stopping every few minutes to listen (we had taken the precaution to put on our white frocks and caps so as to make as little contrast as possible between the snow-laden trees and ourselves). At last we came upon two caribou, a bull and a cow, both full grown. We cautiously worked our way along toward where they were feeding until near enough for certain shots, the Doctor aiming at the bull, myself at the cow, our rifles cracked simultaneously and both animals bounded out of sight. We heard them crashing through the brush on right and left. The Doctor was nonplussed, thinking he had again missed his game. I felt absolutely certain that I should find mine not far off, and knew from the convulsive spring of the Doctor's that it was hit to kill. I thought that most of the noise was made by other caribou which we had not seen.

On reaching the places where the animals stood we found blood and plenty of it, and I soon heard the Doctor shout that he had come upon his game. I had found mine about ten rods from where he stood, the ball had passed through the neck, severing the carotid artery. The Doctor had hit his in the shoulder and lodged the ball in or near the heart. The game had run some thirty rods before falling. After dressing the animals we made a circuit of the ground and found there must have been at least seven caribou within a few rods of us when we shot, and doubtless, had we brought our game to the ground at once, we might have got shots at others, but the snorts of the wounded ones put the whole family to flight. We were well satisfied, however, with our first four hours' work. While we were considering whether to follow the startled animals or look for other tracks, we heard two shots in rapid succession from the Judge's rifle, and decided to go in that direction, as it took us to the pond and camp, not doubting we should see other game before getting in. We were disappointed, however, although we found plenty of tracks. On arriving at camp we found the Judge had not returned, but we beheld the largest buck's head we ever saw suspended to a limb in front of the camp, and as our toboggan was gone we concluded the Judge had gone for the carcass.

As the snow was rapidly melting we concluded to go back and bring our game to camp. We found a small horse sled in the hovel where we kept our horses, which, with a little fixing, we thought would do for us. Soliciting the assistance of Brown we soon had it in readiness and one of the horses harnessed into it. We followed an old logging road nearly to where where we left our caribou, which saved us much hard packing. We judged the combined weight of the two caribou to be about 650lbs. On returning to camp we found the Judge with his game, which consisted of the buck before mentioned and a young caribou. The buck could not have weighed less than 275lbs. alive.

We were all completely tired out, but in the best of spirits. It was a weariness that brings no languor. We had already accomplished what we had hoped to do, which was to secure five venisons to take home with us. We decided to break camp at once.

The trip, considering the time, had been one of the most successful ones we have ever made. We were the first party on the ground, and the game was more abundant than usual, notwithstanding the fact that numbers of both deer and caribou are ruthlessly slaughtered in this region every winter, after the snow becomes deep, to furnish meat for the lumbermen. Were it not for that custom of slaughtering (which should merit the contempt of every respectful citizen of the county) this region would soon become one of the most desirable in the State for hunting moose and caribou. BIG GAME.

EARLY DAYS ON THE MISSOURI.

I.—GAME AND HUNTERS.

THE Missouri River valley in Montana was, twenty-five years ago, a paradise of game. Words will scarcely convey to the ordinary person the prodigality with which nature had supplied that section with buffalo, elk, antelope, mountain sheep, deer, wolves and bears. I have ridden on one trip for five hundred miles in a direct course, and during daylight was never out of sight of vast herds of buffalo; as far as I could view with glasses they were scattered in the same huge profusion. The simile that presented itself to my mind was as if some Brobdingnaggian pepper box had been heavily shaken over the immense plains and each gram a buffalo. The Gros Ventres interpreter, who had just returned from a trip to Milk River, tersely and with but little exaggeration expressed the impression of a view of these thickly scattered herds. Being questioned about the buffalo, he replied, with an appropriate accompanying Indian sign expressive of the words, "The country is one robe."

The buffalo never had a special range like other game. These vast herds were continually on the march. If undisturbed, they appeared to loiter and dally for days without movement. Although the herds were scattered for hundreds of miles and appeared motionless, the trained eye could readily discern the direction of their line of march; scattered as these grass-eating columns might be, yet if any outlying or detached buffalo or herd became alarmed, no obstacle could permanently turn them from their instinct-driven course.

In hunting buffalo on horseback, this peculiarity was taken advantage of. A few boys would be sent to start a herd. The hunting party, stripped naked, mounted on their best horses, were cached four or five miles in advance of the route of the startled herd. A buffalo can run an immense distance if his speed is not crowded, so the boys who start them, put them to their utmost speed from the commencement of the run. On come the rushing herd with starting eyes, heaving flanks and lolling tongues. Now the hunters rush in, their blood-curdling yells, and the wild dash of the frantic horses spur the terrified buffalo to their supremest effort. But it is all in vain. The speed of the fresh horses quickly exhausts their remaining strength; their laboring breath comes in gasps clogged by their swollen lolling tongues. The bison's relentless enemy is alongside of him; can almost touch him. The sharp cracking revolver and the silent deadly arrow commence their work, his vitals are reached; the blood gushes from his mouth and nostrils: he sways; he reels; with a last look at that grass-covered prairie home the shaggy monarch falls, butchered that his robe may purchase a few trinkets for a savage.

As a buffalo hunt was conducted by Indians it was a mere butchery. It was no uncommon thing for from one to two thousand buffalo to be killed in a single surround. Of this number of the killed, not five per cent. of the meat would be taken, and oftentimes many would not be even skinned. I have ridden for several days through a country strewn with buffalo carcasses, where not a pound of meat was taken except the tongues, and a very large proportion were not even skinned. Neighboring tribes, insanely jealous of each other, would strain every nerve to forestall their rivals for the buffalo.

The flesh of the bull buffalo more than three years old is seldom palatable and his robe more difficult to tan; when it is dressed it is worth less commercially than the cow buffalo robe. The finest, fattest cows were always killed first. Aged bulls were seldom molested, except from wantonness, when there were any other to be killed.

The buffalo had many forces to contend with. In the spring, when they were weak, they appeared to have an insane desire to cross the Missouri River. The shelving bar of a Missouri River bottom is almost always opposed on the opposite side of the river by a very high bank. The buffalo coming in vast droves to cross the river would start from the low bar, swim directly across and blindly endeavor to ascend the perpendicular bank. The river would be animated with the struggling, impulse-driven animals. The strongest would crawl to the front, and with unreasoning pertinacity strive to ascend the directly upright bank. With an almost cat-like climb they might reach half way, then down they would fall on their struggling companions in the river below. With added rage and obstinacy they would renew the climb, again and again, until after hours of inflexible persistency they would finally succeed in the seeming impossibility of tearing a trail up the wall-like bank. Hundreds of the weaker ones would succumb in this struggle in the river and their floating carcasses would collect in vast numbers in the river eddies. Many of the weak cows, which succeeded in getting out of the river, died in calving on the bank.

The color of the buffalo is a dark brown, but the calf is red until about three months old. These little fellows, when their mothers are dead or separated from them in any way, will when very young often follow the first moving object they see, and I once had two of them follow me to my camp.

Another enemy of the buffalo was the wolf. Mingled through the herds were packs of gray wolves. Ordinarily these animals appeared to be on good terms with the buffalo. They came and went without creating any excitement; it was only when they intruded through the outguard of old bulls and approached the vicinity of calves that hostility was displayed. It was to the wounded buffalo, driven out of the herd by his fellows, that the fiendish wail of these furies of the plains sounded the death knell. In the night could be heard a long, melancholy, blood-curdling howl, quickly followed by others equally terrifying. It was the death song of some buffalo. If it was a cow or young buffalo, all was over when a despairing, bellowing shriek was heard high above the fierce yelp of the victorious destroyers. But with an old bull the struggle was different. When the howling chorus was summoning every fanged fiend in the neighborhood, the snorting bull could be heard charging his assailants. Then followed the sharp carnivorous yells, as the snarling pack precipitated itself on the raging bull, whose fierce, furious bellows told of Titanic courage and fortitude. Even the lance-like fangs of his fell foes cannot tear his thick hide; their weight cannot drag him down while he preserves his Cyclopean force. He shakes off his enemies, but his wounds are ebbing his giant strength. The smell and taste of the gore madden the frantic pack; their maniac yell tells of another onslaught. The doomed bull is covered and weighed down by his furious assailants, and his hoarse, monotonous bellowing tells of pain and suffering such as only giants can endure. Amid the hoarse, pain-racked moaning of the dying bull can be heard that snap and snarl of the blood-boltered victors quarreling over their struggling spoil. The tenacity of life in a buffalo bull is such that he can be partly eaten up and be still alive.

The belief is generally that the white hunter is largely responsible for the extinction of the buffalo. The truth is the exact reverse of this. The untanned robe was worthless to him; he could trade for a robe outright cheaper than he could hire one tanned. The white hunter seldom skinned a buffalo. He took what meat he wanted without reference to the robe. If he killed one for wolf bait, he opened it, severed the quarters so that they would lie flat on the ground, mixed one bottle of poison with the blood, made slight incisions all over the carcass, lightly sprinkled each gash with poison; the scrap meat, liver, lights and tripe were thrown into the poisoned blood, some of which was smeared over the poisoned carcass. For a full-grown buffalo one-half ounce of strychnine would poison it well, and would serve as bait to catch about sixty wolves. When the bait was frozen it would serve to kill a great many more, as they could not eat it so fast.

This wolfing was at one time very remunerative; I have known wolfers to make as much as three thousand dollars during a single winter. A wolf skin readily brought from one and a half to three dollars at any trading post on the Missouri River. By killing off the wolves the white hunter saved far more buffalo lives than he destroyed.

When the Indian merely killed buffalo for food and clothes these animals were probably on the increase in spite of the forces arrayed against them. But when the trader came and dangled before the longing eyes of the savage glittering trumpery gewgaws, a market was furnished for his robe and the fate of the buffalo was sealed. The whites did more toward killing off the other game. To hunt buffalo successfully expert horsemanship was necessary, but marksmanship was not required. The Indian is a poor shot, and has neither the endurance nor application necessary to make a good hunter of other game.

Elk, when banded up, usually numbered from one hundred to fifteen hundred head. The bulls shed their horns about March, and live solitary until re-armed. The pregnant cows go off by themselves and calve the first part of June. At this period the herd is composed of the younger members. During July the bulls, whose horns are then in the full velvet, lie in sunny coulees, turning their soft, tender antlers to the ardent sun to be hardened. The horns are actually hardened by a bony ring forming at the base of the horn, which cuts off the blood vessels which supply it with nutriment. The band usually feed during the night along the foothills of the mountains, retiring at the rising of the sun to the timber. Their ordinary gait is a swinging trot, but when pressed they will break into a fast gallop, which, however, they cannot long maintain. An early morning in September is the pleasantest time to hunt elk. The cows are then in fair order and the bulls are in their best condition. The bulls emit a trumpetlike squeal, somewhat similar to the bray of a mule, and this shrill signal on the mountain air is a certain guide to the elk hunter. All game animals are keen of scent, and the hunter should never place himself where the wind blows from him directly to the game. The hunter for hides never attacks elk until they are in good position to make a large killing. He will patiently wait until they enter a cañon or open glade. Always keeping out of sight, he fires at the leader ahead of him. The band stops and bunches. The hunter keenly watches for and fires at any elk which attempts to lead out. After a few of the bolder spirits are thus shot down or turned back the herd becomes dazed; they "mill" around, and the rapid deadly firing sweeps the dismayed band.

An enraged bull elk is to my thinking the most dangerous looking animal in the mountains. I remember once on a hunt, I suddenly came on a magnificent looking bull elk, which was lying in a slight depression. I fired from the horse and wounded him. He bounded away and I after him on the horse. After a short run I caught up with him, and he savagely turned on me. He was about a quarter of a mile from where a wagon could be got to him, and I conceived the idea of aggravating him so that he would chase me to where I could have a wagon brought to him. I put several rocks in my pocket, rode up to him again, and threw one at him. He made a dash for me in the direction I wanted him to go, and it put my horse to considerable trouble to keep out of his way. We repeated the maneuver until I finally got him where I wanted him. By this time he was a picture of incarnate rage. Every hair stood on end like a cat's; his mane stiff with ire, stood forward like a ruff; his gigantic antlers trembled with passion; his mouth frothed with fury; his eyes were moulten lakes of green fire, gleaming with frenzy. He dressed over six hundred pounds.

Antelope were the easiest game killed. These beautiful animals are cursed with an insatiable curiosity. Anything unusual attracts their attention. The hunter could sit down on the prairie, and in a short time he would hear the peculiar whistle of an antelope, which would bound and skip coquettishly around its would-be destroyer. If too coy to come within easy range, the hunter could readily overcome this diffidence by standing on his head or lying on his back and kicking up his legs. Only the male antelope have horns, the sheaths of which are annually shed and developed. Their rutting season commences about September 10, when the bucks in their encounters with each other often interlock their horns and perish in this anything but loving embrace. Late in the fall and winter, antelope bunched in bands from a hundred to two thousand or more. This was the period in which they were slaughtered for their hides, and I have known one man to kill more than two thousand in a single winter.

Many white hunters had scruples against killing game for their hides; I knew a professional one who would scarcely speak to a person who wantonly killed game. This man, whose athletic figure, dressed in buckskin, his cartridge belt hung with knives and revolver; with stern, grave, rugged, virile features, covered with a shaggy mane for a beard, and with a heavy bass voice, that sounded like the rolling of muttered thunder, looked the personification of the ideal pirate. Yet no dreaming maiden possessed a more genuinely tender heart.

I recall a hunting trip we had together. We were on the divide of the Belt Mountains. He wished to have a smoke, and we sat down in the edge of the timber, facing an open glade through which ran a game trail; in a short time a she bear appeared, following along the trail close to which we sat, accompanied by a couple of cubs. We instantly cached ourselves, and waited until they should come close enough to make a certainty of killing all three of them. The cubs would run ahead and play back and forward to their plantigrade mother; occasionally she joined in their cubbish antics. Once she stood upon her hindfeet and one of her shaggy darlings jumped into her outstretched arms, and was clasped and fondled with almost human attitude and affection. I glanced at John; tears were coursing down his rugged features as he said in his deep bass voice: "Mack, that lets me out." We left.

HENRY MACDONALD.

VACATION TALK.

THE days of rest are here. People are forsaking as generally as circumstances will permit their ordinary avocations, and devoting themselves to having a good time, and to providing a good time for those dependent on them. The growth of the vacation idea during the past dozen years has been enormous. The family in moderate circumstances which does not take some kind of an outing in the summer is now the exception. "Where do you go this summer?" is the familiar question of the day. Closed houses in town contrast strikingly with the well-filled summer homes at seaside and spring, and emphasize the reason for the crowded boats and trains.

There is both good and evil in this growing idea that to go away for the summer, or a part of it, is a necessity. Evil, because it sometimes involves expense beyond one's means, or exertion greater than one's strength, or inconvenience which outweighs any possible gain. But the good is vastly greater in the aggregate than the evil. It is not easy to over-estimate the advantage to most men and women of a complete change of location, surroundings and occupation once a year. Modern life is complex and exciting. It demands intense and constant application. The strain is relieved and the system recreated by the annual change. How each one shall spend it is a question for each to decide. Two things it is usually safe to prescribe: First, complete change; second, occupation. Idleness is a mistake, and it nearly always fails to afford true recreation. An active man or woman does not long enjoy inaction. And there is no need of it. The occupations for vacation are as numerous as the individual tastes. One finds in a summer school what another gains from a yachting cruise, and his friend from a tramp in the Tyrol. To dig clams and catch bluefish will rest one, when another can find his best stimulus in a rifle or a tennis racket.

There is no worker who does not need rest, and who will not work the better for it. If the longer vacation is impossible, as it is for many a man and woman, even in prosperous Cambridge, there is the piece-meal vacation to fall back upon. The Saturday half-holiday gives its blessing to some of these people. The Sunday horse cars are available for those who have no other respite from grinding labor. Charity, with its country week, its fresh air funds, and its generous gifts of horse car tickets, helps those who cannot help themselves.

Vacation days are here. Let us use them to make the coming year of work fruitful—more fruitful than its predecessor.—*The Cambridge (Mass.) Tribune.*

AN ADIRONDACK TRACT OF LAND on which are sites favorable for game and fish clubs, is advertised in our advertising columns.

"LET HER GO GALLAGHER."

PHILADELPHIA, July 20.—*Editor Forest and Stream:* I notice on p. 513 of FOREST AND STREAM, under the altogether novel and original heading of "Let her go Gallagher," a mention of the Gallagher carbine. As the correspondent does not seem to know much about it, I take the liberty of sending you a word. The Gallagher was one of two or three styles of weapons made during the transition from muzzleloaders to the breechloaders, using a complete cartridge; that is to say it used a cartridge with a detached percussion cap. The breach action was peculiar, being operated by a finger lever, which constituted the trigger guard, the barrel dumping. I am unable to give date and place of manufacture.

I might add that the style of cartridge was also peculiar. It was, as I have said, of brass, but had no fulminating cap. It was center-fire, the ignition being effected through a recess in the base of the cartridge, which fitted into a projection in the base of the breech, in the center of which was drilled the passageway leading to the nipple. The finger lever, through about one-half the distance required to open the breech, pushed the barrel along in the line of the axis of the bore and then dumped it. This was rendered necessary in order to get out the exploded shell from the recess of the breech (about ⅛in. deep from base of breech to joint with barrel). It had no shell extractor, and must have been altogether a most unsatisfactory style of weapon.

When I used the specimen I had one—picked up by a cousin (a lieutenant in the 14th Infantry) on the field at Antietam—I used it with loose powder and shot; and I have a very distinct recollection of having my left thumb shot full of powder on one occasion; for when my edition of Gallagher went off, she generally let go both at breech and muzzle.

This may seem like a good deal of space to ask for a description of an entirely obsolete weapon. Yet you can attribute it to the remnants of great enthusiasm in the gun and ordnance line on my part, saturated by a somewhat clear recollection of a feeling not unlike that of a dozen needles forced into my thumb the time that Gallagher let her go backward. D. G.

FOREST AND STREAM GUN TESTS.

RED HOOK, N. Y., July 19.—*Editor Forest and Stream:* It is with a great deal of satisfaction that I read in your last issue that we are to have a thorough and authoritative test of shotguns and the various charges in use. Like the trajectory test it will prick some great bubbles and correct some widely prevalent errors in loading. Another important matter, it will establish a standard for testing penetration.

At the risk of being considered officious I would urge the consideration of the test recommended in Alexander's "Game Birds of the United States," book-binders' millboard No. 60. After a considerable experience in testing I can strongly recommend this article. The expense can be very much reduced (and the result just as satisfactory) by reducing the size of the "penetration sheets." In my tests I make twelve pieces, 6½x7in. of each sheet of 22x27. After counting the number of pellets (of Tatham's No. 8, standard, chilled) penetrating the second sheet, I then ascertain the number of sheets penetrated by half that number of pellets, which is set down as the penetration for that particular charge and gun.

In the matter of fixed rests it appears to me the manufacturers make a mistake. The sportsman does not shoot his quail and grouse from a "fixed rest." The nearer the conditions of the test to actual business in the field the more accurate will be the information thus obtained. If the shooter is in the sitting position and simply steadies his left arm by leaning it against some support, he can aim sufficiently accurate and yet allow the gun to recoil (and throw the muzzle to either side) so as to show where the center of the charge is thrown in actual service.

A point of considerable importance is the measure used. As measures from the same manufacturers were found to vary considerably, I found the only satisfactory way was to weigh the charge, both powder and shot. We will watch for the reports of your tests with a great deal of interest. R. J. C.

EXPRESS train No. 101, west bound on the Duluth, South Shore & Atlantic Thursday morning, with conductor Sims and engineer Dave Watts in charge, encountered a big black bear between Sage and Sault Junction. Dave had seen that bear many times before near the same place, but this time he came up on bruin just as he was leisurely crossing the track. Confused by the sight of the oncoming train the bear hesitated a second, then turned and dashed down the track, which is as straight as an arrow there. Dave had been making up time, as 101 was a little late in pulling out from the point, but he saw at once that the bear was striking the ties a few notches faster than he was, so threw his engine wide open, accepting the bear's challenge. Then followed the strangest railway race ever seen on a Michigan railroad. Steam and iron are more than a match for wind and muscle and in a minute or two the pilot caught bruin and threw him off the track, rolling over and over like a great black rubber ball. As the train swept by those on board caught a glimpse of the bear as he rolled into the ditch by the side of the roadbed, but they could not tell whether he was injured or not. Conductor Sims says that his train has struck many deer in the seven years he has run on the Mackinaw division, but he scored his first bear Thursday.—*Marquette (Mich.) Mining Journal.*

IF THE alligator hunters keep up the warfare they have inaugurated against the reptiles the streams hereabouts will be bereft of them. When the business first commenced some time ago there were only two or three at it, but now their name is legion and they find it no longer profitable to hunt on the lake and outlet, and are going gradually further and further down the river. The business is paying, as two men get on average fifteen to twenty 'gators a night, and the hides bring from 50 cents to $1.25 each, according to length.—*Panasoffkee Correspondence Jacksonville (Fla.) Times-Union.*

THE MASSACHUSETTS SPECIAL POLICE OFFICER appointed to enforce the game and fish laws, under provision of the law passed at the last session, is William H. Proctor, of Swampscott. He is a member of the Massachusetts District Police. Chief Rufus R. Wade, Commonwealth Building, Boston.

THE UTICA ASSOCIATION.

UTICA, N. Y., July 21.—*Editor Forest and Stream:* Apropos your articles on violations of game laws in the Adirondacks, it is kindly suggested that there is a means at hand which, if availed by the sportsmen over the whole State, will practically end the evils you mention. The Utica Game and Fish Protective Association was expressly organized to meet this want, when it was found that the State Association had lost sight of protection and degenerated into a mere prize tournament. It is intended to cover the whole State, most especially the Adirondacks; and if those interested in pure protection and good laws will join and contribute a moderate fund, say a membership of 1,000 at $1 each, there will be no difficulty in accomplishing the desired end.

This association was incorporated in 1880 solely for detective purposes in protection of fish and game. It is purely a legal organization, composed of our most mature and influential citizens, among whom are a majority of our most eminent lawyers, skilled in the management and conduct of legal matters. All festivities, prize tournaments, and the like, are expressly discarded. It is in no sense a holiday affair, as you will see by copy of by-laws sent herewith.

In detective matters, special secret agents are sent out; employed and paid for special work in special cases under the supervision of its officers. When necessary, rewards are offered. The cases when worked up are handed over to the protectors and district attorneys for prosecution with a success very gratifying. It is not boasting to say that it has accomplished more, even with a most limited amount of means, than all the glass ball clubs and State associations put together in the way of better laws, better enforcement, and better observance in the matter of fish and game. This is because we have made it a business, by business men, instead of pastime. If it had more funds its operations could cover more territory, and with more completeness and dispatch. Its operations have been over the whole State as far as resources will admit, especially in regions where we have a membership, and in many cases where we have none. Thus far it has been limited to about $100 or $200 a year; but it is thought that if its merits were better known the sportsmen of the State would interest themselves to see that it would be to their own, as well as to our advantage, to increase it to a fund of $1,000. Such a fund under such management would be ample to clear the Adirondacks of the existing game pests. With this amount, secret expert detectives could be placed at all the points with such effect that there scarcely could be a violation of game laws without detection and prosecution. This certainty of detection would at once of its own force command a most general observance and respect of law, where now observance is the exception.

As you will notice, its membership dues are $1 for each current year, which commences in April, with privilege to any one of taking as many memberships as may be afforded. It would seem as if there are at least one thousand sportsmen in the State who would cheerfully take interest in the matter and contribute $1 each per year toward protection, especially when they would invest ten times as much in outfit for a day off.

It will be noticed that our treasury is fully guarded against any but proper expenditures. There are no salaried officers except the detectives, and there are no honorary members in this business matter. To become a member it is only necessary to remit the dues to the secretary with name and address. In some cases parties contribute without becoming members. The members are then bound under the by-laws to observe all game laws and report violations when they come under notice. There is no election of members. More properly the membership is a contribution of funds to be managed by the board of directors, who render an annual account of stewardship. In remote regions where there is membership, special executive committees of members there are appointed by the directors to look after and supervise the general affairs of that region. Records are kept of violations and of the violators, of how the law works, what their defects, and how evaded.

Now if upon investigation you think well of our operations, you may lay the subject before your readers as an honest, economical, and efficient method of preserving the Adirondacks. It is found that $1, in such a combined and systematic effort, is worth more than $10, or even $50 in a scattering way. A spasmodic effort, with here and there a conviction, is of little avail, and soon forgotten as an object lesson. Certainty and persistence alone command observance and respect. Practically and so far as consistent all members are detectives and reporters. The list of members entire is only known to the secretary and directors. Members are scarcely known to each other.

The home office is located here at the very gates of the Adirondacks, and it has records and information of about all that happens in that whole region, although unable in many cases to work up the evidence to convict, for want of resources. It accomplishes what in many cases game protectors cannot, because it employs secret detectives in cases where the protectors are known and avoided. There is no other association like it in the whole State. Its completeness and efficiency would entitle it to a hearty and generous support from the whole sporting public in this combined effort to clean out the game destroyers, the worst of whom come here from other States.

JOHN D. COLLINS, Secretary.

NEW YORK PROTECTORS.—The report in some of last week's papers, that Mr. Francis Endicott had been appointed game and fish protector for Long Island and Staten Island, was incorrect. The appointments published in the FOREST AND STREAM of July 12 are all that have been made up to this date, July 23. The districts have not been laid as yet; they will be determined when the chief protector is appointed.

THE NEW YORK DEER LAW.

SECTION 1. Section one of chapter five hundred and thirty-four of the laws of eighteen hundred and seventy-nine, entitled "An act for the preservation of moose, wild deer, birds, fish and other game," as amended by chapter one hundred and ninety-four of the laws of eighteen hundred and eighty-six, is hereby amended so as to read as follows:

Sec. 1. No person shall hunt, kill, chase or take alive any wild deer in any part of the State, save only from the fifteenth day of August to the first day of November in any year, nor shall any one person during such time, kill or take alive more than three deer. No person, corporation, association or company shall have in his or its possession in this State, after the same has been killed, any wild deer or venison, save only from the fifteenth day of August to the fifteenth day of November in each year. No person, corporation, association or company shall sell, or expose for sale after the same has been killed, any wild deer or venison, save only from the fifteenth day of August to the fifteenth day of November in each year. No person shall, at any time, in this State, kill any fawn, or have in possession the carcass or skin of any such fawn after the same shall have been killed. No person shall, in any part of this State, set any trap, spring gun or other device at any artificial salt lick or other place for the purpose of trapping or killing wild deer. It shall not be lawful to hunt or pursue deer with dogs in any county of this State, except from the first day of September to the twentieth day of October in each year, except in the counties of Queens and Suffolk, when it shall be lawful during the first ten days of October each year, exclusive of Sunday. It shall not be lawful to pursue deer with dogs in the counties of St. Lawrence and Delaware at any time. It shall be lawful for any person to shoot or kill any dog while in actual pursuit of any deer in violation of the provisions of this act. No person, common carrier, corporation, association or company shall at any time carry or transport in this State, or have in possession for the purpose of transportation, any wild deed* or venison, taken, caught, killed or captured in the counties of this State, or in either of them, except the counties of Queens and Suffolk, and any person, common carrier, corporation, association or company which has in his or its possession any such wild deer or venison, taken, caught, killed or captured in any of the said counties of this State as aforesaid, or in either of them, except the counties of Queens and Suffolk, shall be deemed to have them in possession in violation of this act, except, however, that they may transport or have in possession for the purpose of transportation from the fifteenth day of August to the fifth day of November, not more than one carcass of wild deer or venison, taken, caught, killed or captured in said counties as aforesaid, or either of them, for each owner of said carcass as aforesaid, provided that such carcass be accompanied by the owner. This section shall not apply to the head or feet of wild deer when severed from the carcass. Any person offending against any of the preceding provisions of this section shall be deemed guilty of a misdemeanor, and in addition thereto shall be liable to a penalty of one hundred dollars for each wild deer or fawn so killed, hunted, pursued or trapped, or for each carcass or part thereof transported or had in possession for transportation in violation of this act, and for every spring gun set, or wild deer or fawn skin, or venison, had in possession, and may be proceeded against therefor in any county of this State in which the offanse was committed, or in which the offender or prosecutor may reside, or have an office for the transaction of business.

§ 2. This act shall take effect immediately.

(Approved June 4, 1888).

* So in the original.

HOT WEATHER STORIES.

From the Iowa Falls Register.

MR. THOMAS had a large farm on the Missouri bottoms near Sioux City. It was all fenced with barbed wire, there being two miles of such fence on the place. He happened in Sioux City just about the time that the gorge up the river had dammed the water to such a prodigious height. Foreseeing that when the gorge broke it would be likely to raise the water to such an extent as to flood the farm, he rode hastily home and made preparations accordingly. His stock and all that was movable was transferred to higher ground. Then he and his hired men proceeded to impale small chunks of meat on every barb of that wire fence. It was a big job, but it was finished just as the river began to cover the low pasture lot. For 26 hours the water stood five feet above the top of the highest post fence, and when it receded the most remarkable sight was revealed. From every barb, except three of that two miles of fencing, hung a fish. There were pickerel, bass, pike, suckers and every other imaginable variety. A simple calculation will show precisely the size of the haul. It was a five-wire fence, each wire having 36 barbs to the rod, making, as any schoolboy can tell you, a total of 115,200 barbs to the two miles of fencing. There were three barbs that had caught nothing, so that there were only 115,197 fish. Perhaps the most remarkable part of the story is to come. From that day to this in all parts of the Missouri River there have been caught just three fish, the exact number that didn't get caught on our friend's barbed wire fence.

From the St. Louis Globe-Democrat.

On the farm of Jacob Groff, who lives near Zodiac Springs, in the southern part of this township, is a large pond where cows are in the habit of standing during the day. One of the cows acted so strangely when at the pond that she attracted the attention of Mr. Groff and the farm hands. She would go into the water an hour or so before the other cows, and, after wading out a certain depth, would stop and commence lowing, as though calling to a calf. Immediately after she would remain perfectly quiet and seem contented. No cause could be assigned for her strange conduct, although on several occasions she was closely watched. Recently the water in the pond became low, scarcely reaching to the cow's knees. She made her usual daily trip, however, and took up her old position. One day last week she was watched very closely, and it was discovered that when she ceased calling a large catfish would come to the surface of the water, and suck milk until its appetite was satisfied. The fish was caught by Mr. Groff in the Sac River a year ago, and was thrown into the pond.

Answers to Correspondents.

☞ **No Notice Taken of Anonymous Correspondents.**

V. F., New York.—See the game seasons in our issue of July 5.

W., New York.—Try Good Ground, Long Island, and its vicinity.

A. P. VAN BUREN.—Woodcock shooting in most of the counties of New York opens August 1.

W. D. H., Fall River, Dak.—We will print the laws in the FOREST AND STREAM as soon as practicable.

M. M. F., Foxburg, Pa.—Will some reader of FOREST AND STREAM who has hunted in Wisconsin kindly report in its columns favorable locations in that State for November hunting?

T. S., New York.—Will you please inform the writer if a brook trout has ever been caught with a spear? Ans. Yes, hundreds and thousands of them. The practice is in all civilized communities tabooed.

J. M. A., Sandy Hill.—We are not aware of any systematic attempts to raise frogs for the market. The New Jersey swamps have been denuded of all marketable stock, and the New York market is supplied with dressed frogs only, which come from Canada, Michigan and elsewhere. We doubt the feasibility of cultivating them profitably under other than favorable natural conditions. Marketable frogs are worth about five cents apiece.

THE SALE OF FISHING TACKLE.—Thirty years ago the places where fishing tackle was sold in New York city might be numbered on one's fingers, while to-day they are found on most of the business streets. This, more than any other sign, points to the fact that angling as a pastime is gaining in popularity. Even the large dry goods firm of R. H. Macy & Co. has added fishing tackle to their numerous departments, as will be seen by their advertisement in another column.—*Adv.*

MASKINONGE AT BEAR LAKE.

I WAS sitting on the side stoop of my Roman villa one breezy morning lately endeavoring to reorganize a kite that I had been flying for my children's amusement and that had come to grief through the canting of her bellyband to leeward. She had shifted her load, so to speak, and pitched badly. She was a chromo issued by Messrs. P. & G. in consideration of the purchase of $11.50 worth of leather in the form of boots or shoes. It was a sort of Americo-Japanese arrangement, with a tail like nothing on earth, and a ball of string thrown in that was stout enough to tie up a half-pound of cotton batting. As I was deeply engaged in this entertainment, and meanwhile recalling the sports and griefs of my childhood in connection with this particular amusement, my friend Geo. M. loomed up suddenly in the foreground with a cheery "Good morning!" and after a little explanation on my part of my business in hand, he asked, "How many chicks have you hatched?" Now, George is what is termed an "enthusiastic sportsman." He loves a gun and rod with a love "passing that of woman," in which respect he is much like some other people I wot of not far from home. I didn't see what connection his question concerning incubation had with fishing, but I replied, "I haven't hatched any, but my old hens have. Come and see them." So we walked to the hen yard and talked hen awhile, viewing meanwhile forty or fifty little yellow puffs in all the cuteness and animation of downy chickenhood. After we had discussed the question satisfactorily and preferences in the matter of breeds had been named, the conversation naturally drifted to the subject of fishing. There didn't seem to be any abruptness in it. It was easy enough, and perfectly agreeable. We talked over Lake Erie and its bass and pike, and other resorts, among them Bear Lake; for this among a thousand other localities in this country has a Bear Lake. I had been to Lake Erie several times for bass with my kind neighbor H. H., with varying success and much enjoyment, but neither of us had fished Bear Lake, quite a noted place for muscallonge, or maskinonge, and bass. Of the former several specimens have been taken within a year or two, weighing 8 or 10lbs., and legends are not wanting of fish weighing 20lbs. and over having been brought to gaff. Said George, "How would Bear Lake suit you?"

Quoth I, "I think it would be a fit, if we could go. We can tell better after we try it on," and then the question of ways and means came up, resulting, of course, in a decision to go, and the following day was selected and 5 A.M. the hour of departure, as we had an eight mile drive before us and the weather it was hot. George sauntered down town and I went to see how much tackle I could muster that would be fit for the monsters of the depths of Bear Lake. I didn't find a very good assortment, for my big spoons had met with disaster among the bass and bonnets of the Florida waters, years gone by, but I managed to pick out enough to amuse the bass with and possibly entertain a "lunker" if I hooked him. H. H. loaned me a gaff, his son-in-law a landing net, and my outfit was from fair to middling.

The alarm clock went to pieces next morning at sharp four, raising me nearly to a perpendicular, with my hair all over my head, (which latter is more than some folks can say) and I got into my clothes in short order, went out and viewed the heavens, which were clouded, and promised rain, gave my horse his oats, brushed him off, and then proceeded to search the pantry for something to sustain and comfort my own physical organization. This was not as hard a job as might be selected, and by the dim light of early morn sifted through the blinds I sampled the eddibles my wife had been so rash as to leave unhidden. This done I selected such few fragments as remained for lunch, got my plunder together and before I had hitched up George walked into the barn. Now that's the kind of business I like. Deliver me from a man who when he agrees to be on hand at a certain time will, as like as not, keep you waiting half an hour or longer. This always upsets me completely. But there have been occasions when by failure to keep appointment possible misfortune, not to say tragedy, has been averted, and with your permission I will digress a little and give an instance in point.

After years of residence in Florida I had sold my home and orange grove, possession to be given a month or so hence. In the interim I took occasion to more frequently than usual indulge my propensity for fishing and hunting, and a day or two after the sale had gone over to a lake some ten minutes walk from my house, where I kept a boat, to catch some bass. As I pushed out from shore a horseman rode out of the woods and hailed me. He was a young Englishman who had recently settled in the neighborhood, and who had bought my Maynard rifle only a short time previous, and knowing that I hunted considerably had come to my house and then followed me to make arrangements to go turkey hunting in a hamak some few miles away, where I had frequently bagged that kind of feather. I agreed to go with him two days hence at 11 A. M., so as to be in time for the evening hunt and then camp out. At the hour on the day I was ready and swinging in my hammock on the verandah. Five, ten, twenty minutes passed and no appearance. A half hour passed. Three-quarters. I put my gun and traps away and went to work, disgusted. In something more than an hour from the time appointed he drove up and wanted to know if I was ready. I told him I was, an hour ago, but now I was not, and he must excuse me from going at all. He drove off rather huffy. Shortly after my removal from Florida a friend of mine, and neighbor to this Englishman, sold his place, and was shortly afterward robbed of a large sum and murdered near this Englishman's house, which he had left after taking supper with him. The head and body, severed, were sunk in the lake. The body rose and disclosed the crime. The Englishman was lavish with money about this time, though usually short, and was arrested. Some of the effects of the murdered man were found in his possession. Circumstantial evidence was as strong as it is ever likely to

be, but through influence of much money sent by relatives in England, and the law's delay, he escaped and fled the country. When I heard of the tragedy, I hardly doubted that he had some such intention in my case, thinking that probably I carried money on my person, as there was no bank in the county at that time. At least I have always been satisfied that, out of patience with his lack of fulfillment of agreement, I refused to go with him.

But to return to our fishing excursion. At three minutes after five o'clock we were under way for the lakes in quite good humor with things in general and enjoying the fresh cool air of the morning as we put the miles behind us in a leisurely way, while George pointed out occasionally a favorite cover for woodcock, and again a piece of woods where he usually got a squirrel or two, or a good place for partridge (grouse) or a place where a hundred or two years ago somebody's great or great great grandfather shot, O, I won't begin to tell how many deer in a day or year, I forget which. Some of the farmers were just coming out of doors, looking as though they wished they didn't have to at all that day, and the cows were working up to the barnyard gate from the pasture to get relieved of their milk. If I'd had a chance and a pail I could have helped them considerably. Some of the cornfields had dead crows swinging from poles as a warning to their living thieving brethren to "look a leedle out," and some had long lines of string stretched this way and that as a protection to the corn. What train of thought or reasoning this induced in the black pilferers I cannot imagine, but I can easily understand how a bird as sharp as a crow should be suspicious on slight provocation. How cool the shadows of the woods were and how natural it was to expect to see an early gray or black squirrel on the rail fences or whisking up a tree as we drove by. But we were not gratified excepting by the sight of a red squirrel that had got on the opposite side of the road from the woods and didn't dare cross, but kept just ahead on the fence, evidently in great trouble and perplexity as to how he was to dodge that thing in the road that would keep along about as fast as he did. He finally hid in the bushes on the lower rail until we passed. A good part of our way was up hill and we didn't put on much steam, but at seven we drove into Mr. Turk's yard on the bank of the lake and our ride was over. Mr. T., who has a very pleasant home, fine picnic grounds adjacent, boats on the lake and ample stable room, appeared. "Good morning. You must have got an early start," and proceeded to assist in unhitching, which done and the horse put up we soon had ourselves and traps in the boat and a trolling line out.

It was a lovely morning for sport, cloudy, cool enough and just enough wind to ripple the water nicely. We took a turn around the lake and drew a blank. We didn't expect much from the "pickerel," as the maskinonge is invariably called here, but did expect to interview a few bass. So we drew to shore and proceeded to prospect for minnows in a creek near by, but former fishers had skimmed the cream, leaving none but inchlings or so, of which we got a few and returned. All the forenoon we fished, here, there and all around, but not a bite did we get, so I put a very small phantom on and with my rod played it along shore at the edge of the lily pads, deceiving two or three little bass of half or three-quarters of a pound each. Then the region below the belt began to complain of neglect, so we turned the bow Turkward and lunched under the beautiful maples, Mr. T. bringing out ice for our lemonade. In speaking of lack of good bait, he told us of a creek that emptied into the lake from the swamp on the opposite side, where possibly we might secure good minnows. So, having finished lunch, we took boat again and crossed to a point where we landed and began search in the dense swamp for the creek. George carried his .22 Stevens rifle for any stray elk that might have got lost, and I toted the minnow bucket and net. The trees and bushes were dense, the breeze was elsewhere, mosquitoes were on hand and hungry as we poked around in search of that creek that we didn't find. We found its bed, however, which it had left and gone off to the lake to get cool and rid of the mosquitoes. Here and there was a warm and uncomfortable pool in the bed, tenanted by nought but bugs and insects. This satisfied us, and we hunted for the boat this time.

Reaching the point, and having failed to find the elk as well as the minnows, we practiced on a target a while. I was ahead on the first string, but George beat me badly on the second, so my head ached and I didn't want to shoot any more. Then we took the boat again and I rowed while George put out his trolling line. Forward and back, around and around, but no bid. Then he took the oars and I waited for a call, feeling how good it was to see him row. After a season of exercise he reluctantly gave me the oars again, and shortly afterward shouted, "I've got him," and began to haul in lively. I stood ready with the gaff, for by the stretch of the line I saw there was no fingerling on the end of it, but there was no time for gaff, for as he got him up to the boat, with one fell swoosh he landed him inside, considerably astonished and making things lively all round. It was our first maskinonge, and was a beauty, weighing 5½lbs. that evening on our arrival at home.

After killing him we got under way again, agreeing to gaff the next one and prevent possible loss. Half way across the lake the line stretched again, and George ejaculated, "B' George I believe I've got another," and proceeded to see how much line he could stow away in his end of the boat, but before he had got it half in he heaved a melancholy "sough" and said, "He's off," and sure enough he was. Then I took the line and George played propeller again, but somehow it was of no use when I held the line, the fish refused to catch on. After I thougt George had exercise enough I took hold again, and in less than ten minutes he had another fish fast and coming to see us nilly willy. Along he came until we could see him plainly, about the size of the first one, and said I, "Easy now, lead him alongside until I introduce the gaff to him." So he did, but the gaff was a little dull, and as I put it under his neck and struck upward he gave a flop, the gaff tore out or slipped off, or something or other, I shouted to George, "Let him go;" he held on to the line, the fish turned a handspring, skinned the cat, shook the hooks out of his mouth, and made his adieu with considerable haste, leaving us standing gazing speechless at one another. As soon as George could find literature he exclaimed with some asperity, "Why in the dickens didn't you jam it into him with all your might," and then he groaned in agony. I told him that if it would help things any I would see his groan and go several better, but 'twould save time if we went to work for another fish.

So we did. For a time no luck. Every once in a while George would fetch a sigh from way down, and I know what he was thinking of. Then I took the line and we worked around the lake, but 'twas a foregone conclusion that when I took the line George had his labor for nought so I said, "Here George, you catch another," and took the oars. Hardly had he got the line out again when it grew as taut as though it were made fast to a log. Said I, "Is it a snag or what?" and answer came, "It's a mighty lively snag or what, I tell you; here, you handle him." I couldn't refuse such a liberal proposition as that, so I stepped aft and began to reel in. He came hard. Now and then I could feel him shake his head and attempt to go the other way, but my avoirdupois was too much for him and steadily I reduced the interval. As he came near the boat I played him a little and then drew him up ready to gaff him, when he got in some very lively work and came near getting the line fouled around the oar, so I gave him line and let him run a little and then drew him alongside and gaffed him, lifting him into the boat, when we both sat down on him, a beautiful "lunge" that weighed eleven and a half pounds that evening at dark. Then we didn't sigh or groan or lament but straightway headed for the landing, for it was time to start homeward. Beautiful in death and the wagon those fish lay bedded in fresh grass as we jogged homeward in the pleasant evening, and beautiful and toothsome they lay in their respective platters the next day at dinner, which being Sunday left plenty of time to eliminate the bones. O. O. S.

THE RANGELEY FISHING.

Editor Forest and Stream:

I understand that Mr. Kit Clarke says in the FOREST AND STREAM that the fishing in the Rangeley waters is all played out. I think he is mistaken, for myself and another man in seven hours' fishing caught 500 trout weighing from ¼ to 4lbs.

These fish were all caught on the fly. I think we have had as good fishing here this summer as we have had for several years. W. A. ROBINSON.

RICHARDSON, Me., July 15.

Editor Forest and Stream:

I have made inquiries about the catch which Robinson handed me and which is inclosed. I think there is no doubt that it is true, although perhaps it will sound like a fish story to you. They tell me that 440 were put back, and that the sixty that were killed weighed 75lbs. The fishing on the Richardson, Mooselucmeguntic, Cupsuptic and Rangeley Lakes surely has not been better for many seasons past than it is the present one. This afternoon a party of ladies and gentlemen who are stopping at my camp went trolling on my small steamer; they were out five hours and brought in thirty-four trout from ¼ to 2lbs. weight. F. C. BARKER.

CAMP BEMIS, Me., July 19.

Editor Forest and Stream:

I am very sorry to be forced into a controversy with Mr. Clarke in regard to the fishing at the Rangeley Lakes, for the reason that I have not the time to spare, but since Mr. Clarke persists in his false statements, I feel that it is my duty to continue to deny them, not only in the interest of those of your readers who have not visited the magnificent chain of lakes in question, but also in the interests of truth. The readiness and ease with which Mr. Clarke makes misstatements, is amply illustrated in the article in your paper of July 19, signed "Salmo Fontinalis," who seems to know quite as much about Lake Edward as Mr. Clarke. But personally I know nothing about Lake Edward, while I think I do know almost as much about the Rangeley Lakes as Mr. Clarke.

I think it hardly necessary to say that I do not "run the steamer on the Richardson Lakes," as Mr. Clarke puts it, nor have I done so for seven years. All the steamers between the Upper Dam and Errol Dam are owned and run by a company, in which there are between thirty and forty stockholders, I being one of them. Since the formation of the company I have found enough to do in looking after the business, without running on the steamers, except occasionally when some of our employees were sick or away, but as most of your readers know of my connection with the business at the lakes, it is needless to speak further upon it.

Mr. Clarke cannot expect to make such statements as he made in a former number of your paper, and which he repeats under date of July 19, without having them contradicted, unless he is really possessed of less sense than I gave him credit for. He constitutes himself both judge and jury, without any witnesses to back him up. It will need something more than his bare assertion or suppositious estimates to make any unprejudiced person believe it. I very much doubt whether, if 2,400 persons fished Lake Edward during the season, they could each catch 50lbs. of trout, giving the enormous amount of 60 tons of fish, which Mr. Clarke expects the Rangeley Lakes to furnish. Such figures are ridiculous.

It is a well-known fact to all fishermen that in visiting their favorite resorts sometimes they have good and sometimes bad luck. This is true of the Rangeley Lakes as of other places, but that "good fishing at the Rangeley Lakes is really a thing of the past" I deny, and there are plenty of other people, both ladies and gentlemen, who can deny it from their own experience if they choose. Will not Mr. Clarke favor us with the name of the "enthusiastic angler" who had such an unfortunate experience at the Upper Dam, and let him speak for himself?

It is true that "Special" says, "that the fishing is not what it should be," but he follows up the statement with an explanation, that it would be well for Mr. Clarke to commit to memory. Farrar does not howl for the State of Maine to stock the waters with large numbers of small trout, nor did I state that the "waters are already crowded with fish." What I did say was, "In my opinion there are more trout in number and more larger ones taken from those waters now than there were twenty years ago," and I believe it. And my reason for that belief is that where one person fished in those waters twenty years ago, fifty persons fish in the same waters now. And the large numbers of trout and landlocked salmon that have been hatched and turned into the lakes almost every year have made such fishing possible, and have kept up the supply. I proposed for the State of Maine to appropriate money annually to stock the Rangeley Lakes with trout and landlocked salmon, not because there are not plenty of fish in the lakes now, but to continue the supply. And this is what is being done at Grand Lake Stream, at Moosehead Lake, also in the Megantic Lake district, and Mr. Clarke knows it very well, and he also knows that in the State stocking the lakes yearly, it is making a wise provision for the future, but he is ready to distort and change every fact in connection with the Rangeley Lakes for the purpose of bolstering up his mistaken opinions.

Mr. Clarke's own acknowledgment of his "throwing epistles in the waste basket" that were made in opposition to his statements, shows how much honor or courtesy there is in him, and if he had a particle of shame in his composition he would not father such an act. It speaks ill of his cause that he dare not allow the opposition a hearing, and bears out what I said before, that upon this question he intends to constitute himself judge and jury. It also shows the character of the journals which he chose to champion his rotten cause, for there is no respectable paper in the country but what in a case like this would give both sides the courtesy of a hearing. Still we should not overlook the fact that the daily papers Mr. Clarke alludes to had received a large amount of advertising from him at different times, as agent for variety shows, which in a measure accounts for their one-sided action.

If I had not a particle of business interest at the Rangeley Lakes, I should still deny Mr. Clarke's assertions, from my love of that region. I first visited it when I was a young man, several years before I was at all interested in its business, and some of the happiest hours of my life have been passed at the lakes, and I love the country. Those romantic sheets of water, whose ripples kiss the base of the grand old mountains by which they are surrounded, will ever hold a loving place in the warmest corner of my heart, and they will be visited by thousands for their pure air and fine scenery, if for nothing else, years after Mr. Clarke and myself have gone to that bourne from which no traveler (or fisherman) returns. CHAS. A. J. FARRAR.

JAMAICA PLAIN, July 20, 1888.

FISHING IN THE UPPER HUDSON.

THAT the Hudson River is not as good a river for the angler as most of the large streams of the Atlantic coast is well known, but why this is so has not been explained. We fished the river in boyhood days, some forty or more years ago, from the Troy dam down to Castleton, a distance of about fifteen miles, and then considered 20lbs. of miscellaneous fishes a good day's catch. These, named in the order of their value as measured by the boys were: Yellow perch, catfish or bullheads, mud pike (*Esox fasciatus* DeKay), rock bass, eels, sunfish and chubs. The black bass had come down the Erie canal some years before, but were not plentiful and were so rarely caught that they did not enter into the schoolboy's calculations and were known by name to but few.

The cream of the fishing then was to take striped bass in the channel below Albany with sturgeon roe for bait, and the fish would average half a pound. Rarely a two-pounder was taken and its captor was the hero of the hour. The changes in the character of the river of late years have been great. The cutting off of the northern forest has caused great freshets in the spring when the snow goes off, and correspondingly low water in midsummer. To remedy the latter evil stone dykes have been built to keep the water in the channel, and these form comparatively still water behind them, which should afford breeding places for some species, but do not seem to be well populated.

Why the black bass have not multiplied more than they have is a question. They are there yet and can find almost any kind of bottom or water, yet they are small and not plenty. We have been led to these remarks by a recent visit to the upper Hudson. At Troy we learned that the net fishermen are taking striped bass of a pound or less below the dam, while an occasional black bass is captured among the perch and sunfish. Between Troy and Mechanicville we saw a few boats out in the nine miles of still water between the dams, and learned that black bass were captured with hook and line, a fish of a pound and a half being considered a big one. On Friday last we took five black bass, three yellow perch and some small fish between Albany and Castleton, the largest bass weighing a trifle over a pound. And several fishermen who saw the fish called it a fair catch. We tried several flies without success, and to fairly test the fishing changed to small minnows. There is a theory among the fishermen that food for the black bass is lacking, but the net men say that suckers are plenty in the river and they are good bass food.

BASS FISHING IN CANADA.—A correspondent writes us very enthusiastically from Brockville, Ontario, as to the bass fishing on the line of the new Brockville, Westport & Sault, St. Marie, R. R. He says: "I never had such black bass fishing in my life as last Monday. I went to Newboro on the new railway, and there had Massie take me out on Rideau Lake with a steam yacht, anchored off an island, and afterward rowed around it. I don't think it an exaggeration to say that I saw a hundred large black bass at one time around my boat. I brought home a box full that weighed about three pounds each."

STRIPED BASS OFF NEW JERSEY.—These fish have been taken along the New Jersey coast to a limited extent during the past week. At Asbury Park a gold medal has been offered by Mr. Bradley, proprietor of the pier at that place, for the largest striped bass taken there this season. On Saturday last Mr. J. H. Birch, of Hoboken, caught one which weighed 19¾lbs., and heads the list so far. At Barnegat a few have been taken, but no large ones. The fishing at Atlantic City has not been up to the average this season.

LAKE TROUT IN PUTNAM COUNTY, N. Y.—Carmel, N. Y., July 23.—*Editor Forest and Stream:* Several anglers have recently been fishing in Lakes Glenuda and Mahopac with leaded spoons and live bait for lake trout. A dozen or more years ago the lakes were stocked with these fish, but nothing has been seen of them until this spring, when a nine-pounder was found dead in Lake Glenuda. This has encouraged us to believe that they have lived here, but so far none have been taken.—PUTNAM.

THE EAST COAST OF LONG ISLAND.

THE pound fishers and the hook and line committee have been very busy this season and good catches have been made. This year's fishing has been unusually early and successful, as the sea bass and blackfish are and have been plenty. From Montauk Point through Fort Pond Bay, Gardiner's Bay, Peconic Bays and Nayoc Bay, some three or four hundred pounds are set, a distance of fifty miles, and also from Orient Point to head of Peconic Bay, a distance of forty miles. These pounds capture all fish coming in from the ocean that follow the inshore line, and chief of the fish take that course—to their great destruction. These fish find a market at all the towns on the east coast, but the great body of them go to supply the New York market.

The fish are of great variety, the good fish (catable) consisting of weakfish, bluefish, sea bass, striped bass, Spanish mackerel, sheepshead, porgies and shiners (butter fish) and bonitas. They also take in vast numbers the uneatable fish, such as menhaden, sea robins, "old maids" (small skate), very large skate and stingarees, sculpins, swellfish and quantities of spider crabs. All these latter fish are sold to farmers to enrich the land, at a rate of $1.50 per thousand. The menhaden are sold also to fish factories, and together with the sea robins are ground and pressed for oil and scrap. But comparatively few menhaden were caught in June, as the fishing steamers generally, by mutual agreement, postponed their work until the month of July. This is owing to this fact, probably because the menhaden fishing last season proved a decided failure and great loss to the owners of steamers, yachts and factories, many of whom employ as many as sixty men at considerable expense. But the early withdrawal of so many steamers will probably have the good effect to allow a large increase of the fish, in their being able to reach their spawning grounds.

We have never found better fishing for sea bass than during this season, and the blackfish (tautog) also have been plentiful. These latter fish reach these waters early, and before the sea bass are here, but then they disappear into deeper waters, returning early in October. We are located with our boat and shanty within ten rods of the Sound shore, and so can watch the winds and tides and know when to launch the boat. At our little shanty we can at leisure read, smoke, practice with rifle and revolver, and write occasional articles for the sportsmen's journals, many of which have appeared for years in those excellent publications.

For sea bass we use menhaden and clam bait; for blackfish we use fiddler crabs and clams. But in this hot weather the bunker bait soon spoils and becomes soft, and the dainty fish will not snap at them, or if they do so, they steal the jelly-like lure at the merest nibble; so it is a good plan to salt them down in brine, and then they make a hard and attractive bait. We have been out for them some seven or eight times for two or three hours' sport with two lines out, and have taken 476 good specimens of sea bass, ranging from one pound to four. We hope they will continue all the season to be as numerous and hungry for food. Small sharks and big dogfish are often taken in the pounds on the Sound, but the porpoises never come in near enough to be caught. We see daily large schools of these great, tumbling creatures careering in the Sound, but they take their course a mile from shore. We often see the big, silvery sturgeon leaping in the Sound, but we know of but one instance where one was in the pound, and he broke clean through the nets and escaped, to the great chagrin of the pound men.

ISAAC MCLELLAN.

GREENPORT, Long Island.

EXPERIENCE AT LAKE EDWARDS.

Editor Forest and Stream:

I have just returned from a trip of nearly three weeks' duration in the region of Lake St. John, P. Q.

Our party consisted of six, all but one of whom were quite familiar with lake fly-fishing in Maine. Our route was by Central Vermont R. R., etc., to Montreal; Canadian Pacific to Quebec; Quebec & Lake St. John to Chambord Junction on Lake St. John. The country north from Quebec abounds in lakes, large and small, a great number of which are seen from the cars as one rides through this wilderness of 190 miles. After passing Riviere-a-Pierre, fifty-eight miles from Quebec, the wilderness is absolutely unbroken for the entire distance to Lake St. John except by the railroad just opened to the public. This lake, or great inland sea, is about forty miles long and nearly circular in form. Its vast surface is almost unbroken by islands, and its depth is said to average 100ft. Near the Grand Discharge, which is the head of the Saguenay River, are a few small islands near the easterly shore, and we noticed two others off the southwest shore, not very far from the mouth of the Ouiatchouan River. The lake is fed by many large rivers, the Mistassinni and Peribonca being the largest.

We were much surprised to learn that the lake contained no trout. The only fish worthy of mention is the "ouinaniche" (landlocked salmon), only two of which we took with a fly during the three days we spent at that lake, where those fresh-water sharks, the pike and pickerel, are monarchs of all they survey, except the poacher's gill-nets. Other fish are there, such as suckers, dace, doré, cusk and eels, but the salmon is the only game fish in the lake, and I have no doubt that late in the season they may furnish fine sport for fly-fishermen on the rapids of any of the rivers entering the lake. Through the kindness of Mr. W. H. H. Murray we were, when at Quebec, introduced to Mr. William A. Griffith, who owns not only the land but all fishing rights at the Grand Discharge, which is said to be the best location for salmon fishing yet discovered about the lake. He kindly gave us permits to fish and camp on his property, but owing to the water being very much higher than usual, very few salmon were taken at any place, and we therefore decided to return to Lake Edward, seventy miles south from Lake St. John.

Lake Edward (or Lac des Grandes Isles) is about twenty-five miles in length with numerous islands of all conceivable forms and dimensions, cutting such antics with the water that one often thinks he has almost reached its end, when suddenly the boat rounds a point and shoots a narrow passage of perhaps not more than fifty yards in width or length, and finds himself at sea again, with miles of open lake before him, the distant shore of which will again deceive him like the last. If there is hidden away in this wild tract a more beautifully diversified sheet of water than this "Lake of the Great Islands," I have not seen it yet. The railroad follows the easterly shore at its upper and northerly extremity for a distance of perhaps two miles. The repair shops of the road are located at this place, also a store, hotel, boarding house and thirteen small houses. Good boats, guides, tents and supplies can be obtained here of Mr. Walter Hoolihan, local agent for the road. Permits for camping and fishing on this and all lakes owned by the railroad may be secured by applying to Mr. J. W. Barker, tourist agent for Quebec & Lake St. John Railway, opposite St. Louis Hotel, Quebec. We camped three miles from the railroad station on the southwest shore, where Mr. Murray and family were camped last fall and where he wrote the "Doom of Mamelons."

Here we enjoyed all the comforts and luxuries of camp life—the beautiful scenery of lake, island and mountain; the almost endless forests of spruce, balsam, cedar and birch, which lend their fragrance to the fresh, cool air of this wild region; the trout (*Salvelinus fontinalis*) existing here in such numbers and of such size that I dare not tell you the whole truth. I never dreamed that any water in the world was so stocked with trout as are these lakes. But we also endured all the horrors that flies and mosquitoes are capable of inflicting, and all the disappointment arising from the fact that we were unable to make any of the large trout rise to the fly; bushels, even boatloads, might be taken with bait, but only small ones responded to the fly. We saw no fish at Lake Edward but trout, dace and yellow perch; millions of the small perch furnish the trout with an unlimited quantity of food. With a small piece of dace or perch on a stout hook we could at any time in fifteen minutes supply our camp for the next twenty-four hours with trout weighing from 2 to 3½lbs. each, and of unsurpassed quality.

We were told by gentlemen there, that the trout rise greedily in July and August. If that should prove to be true, then Moosehead, Grand Lake and the Rangeleys will furnish but tame sport in comparison with Lake Edward, Kiskisink, St. George, Commissaires, Batiscan and perhaps fifty others of this wonderful chain. When we take into consideration the fact that the portion of country lying between this St. John railroad on the west, the Saguenay River on the north, and the St. Lawrence on the south and east, having an area of upward of fifteen thousand square miles, is little more than an unexplored wilderness, except just along the St. Lawrence River, probably as abundantly supplied with lakes, and the lakes with trout, as this narrow belt along the railroad between Quebec and Lake St. John, and that Canada has several more sections similar to the above, we may readily believe with Mr. Murray that many generations yet to come will enjoy the notable sport of "taking troute with ye flye."

I cannot close this hasty sketch of our trip without mentioning the untiring kindness and attention of the officers of the Quebec & St. John R. R. Nothing possible for our comfort was left undone by them.

GEO. F. GALE.

BRATTLEBORO, Vt., June 30.

Editor Forest and Stream:

In yesterday's Providence *Journal* appeared a letter from one of a party which included the Mayor of Providence which had just returned from a trip to Lake Edward. I cut it out to send to you but have mislaid it and can't find it. They went first to another lake, whose name I forget, and had bad luck; then at Lake Edward they struck it rich; three rods taking 40lbs. in two hours, several over 2lbs., one of 5lbs. PISECO.

JAMESTOWN, R. I., July 13.

A SCOTCH GILLIE.

THE London *Fishing Gazette* tells the following good story of a Highland "gillie," or "guide," as he would be called in America:

From Melvich Hotel, which is pleasantly situated on the green slopes of the Northern seaboard—and where near by is the Bay of Bighouse with its beautiful white sandy tracts and stupendous coast cliff scenery to the east, and whence on a clear day can be seen the Orkneys with the Old Man of Hoy looming out of the ocean—remarkbly good rock fishing for cuddings and seillocks and deep sea fishing for cod and ling, for which latter nice boats are provided by the hotel keeper, can be enjoyed without any distance of a walk, or expense other than the boatman's lunch and fee. As a hand to guide gentlemen engaging in this sort of fishing no one is better qualified or has a more intimate knowledge of the haunts of the fish, than Sandy Mackay "Skeira." Sandy is a rummy old blade, loquacious to a degree, but an adept withal at the fishing. He it was that many years ago dressed the flies that took the monster trout on Loch Baligall. The story of the capture of these wonderful trout Sandy yet relates with a keen relish.

A gentleman then fishing the loch had Sandy as gillie, and knowing that there were numbers of big trout, although he was not getting any of the very big fellows, he promised Sandy a handsome reward in the shape of a big drink if he would put him in the way of capturing a few. Sandy was equal to the occasion. Next morning, as the two plodded their way through the moor, Sandy took out and drew his shentleman's attention to a couple of huge tawdry flies with jackdaw wing, black hackle and blue worsted body, which he had dressed by candle the evening before. He assured Mr. C. that these flies would work the oracle. Doubtful Mr. C. looked at them, but said he would give them a good trial. Arrived at the loch he had rigged up and was just about to mount some of his own flies when Sandy interposed. "Na, na, man, ye maun jist try my flees; they'll tak' the troots, an' I'm nae to be deen oot o' my dram." Having no alternative Mr. C. slipped on a couple of Sandy's jackdaw flies, and fished the north end of the loch without a rise. Here they left bag and lunch-bag and went round to the rocks on the west side, where, it is well known, the big trout are wont to resort. Sandy seated himself high on the rocks to watch the operations, and Mr. C. down below waded in a little, and casting to a likely spot, third cast he had a thumper, which, jumping clear out of the water, showed a good 6-pounder! Overjoyed, Mr. C. shouted loudly in his glee, "Hi, hi, Sandy, run for the flask all your might!" Off like a deerhound went Sandy, and breathless after his half-mile run through the heather and up and down hill at high pressure, into the lunch-bag he dived for the flask; but, tell it not, flask there was none, and crestfallen, and with a rueful face, back sullenly paced Sandy, hot and dry, to tell that the well-filled flask was not, and at that moment, presumably, was lying in Mr. C.'s room at the hotel, three miles away. The fun got fast and furious, and big trout after big trout was landed, but Sandy was in the dumps. It was no enjoyment to him to see the big fellows pulled in one after another. He suspected Mr. C. of having played him a practical joke, and all the more reason had he for this suspicion, as after he got back to the hotel Mr. C., instead of giving him the much-boasted-of "big drink," only gave him a "mere toothful."

Sandy took it; in one sense, however, it was too much for him to stand. But Sandy was cunning and cute as the best of Hielanmen, and vowed, though he did not tell it, that one day he would have his revenge in some shape or other. He had only to wait till next year, when Mr. C. again turned up at Melvich. Gillied once more by Sandy, whom he had duly requested to dress a few more jackdaw flies, he set out for Baligall early one morning in high hope. On went the waders, and in went Mr. C., and only a few casts had he made when lo! a boil, a slight tug, and right out the water leaped a splendid trout—a good 4-pounder. But what was the matter? The line floated loosely, and reeling it in Mr. C. saw to his chagrin that the point fly was gone. Inwardly Sandy chuckled at this to himself, and assured Mr. C. that since the previous year he had lost the "hand of the master," in fact that he had lost the trout "by holding on too hard." Sandy loudly blamed Mr. C. as trout after trout was lost in a similar way till whole seven flies were gone, and not one was left. As disgusted as any one possibly could be, Mr. C. tossed the fishing up, hurried back to the hotel, fuming all the way, and next morning packed up hurriedly and left Melvich never again to return. Some weeks after Sandy let the cat out of the bag by telling how, hoaxed by Mr. C. the previous year, he had turned the tables on him by dressing the whole seven "jackdaws" so loosely that the trout, he was sure, would make off with every one of them without any ado. "Ye see," he said, "it was na' that he did na' gae me the whiska he promised, which he wad niver hae missed; it was that he hoaxed me; an as he hoaxed me wi' nae gaeing me th' whiska, I hoaxed him wi' nae lettin' him hae th' troots. I'm mebbe bit a puir Hielan' fisherman, but I've a' my wits aboot me when they're needit."

MARQUETTE, Mich., July 14.—The *Mining Journal*, whose editor is one of the best fishermen in this part of the State, reports that some very big scores are being made this season by the local anglers, and although the most expert users of the rod and line are usually the most secretive about their movements and catch, the reporter has found out a few of them. Late Tuesday night D. H. Merritt, F. W. Merritt and W. J. Stevens returned from a day on the rocks down the shore, bringing in forty-four pounds of elegant trout. The biggest was caught by F. W. Merritt and weighed a little over four pounds, several weighed two and a half pounds dressed. In the rivers the fishing appears equally good. E. B. Palmer and his son Louis came back from the Chocolay recently with two big baskets packed full, Ira C. Edwards came in Monday from Dead River with forty fine ones, the biggest one registering over two pounds on the scales, while Tuesday afternoon a three and a half pounder was captured from the bridge at the mouth of the river. This last fish made a big fight. The first thing he did was to smash the bamboo pole and make for the lake. The parties who are camping there at once got a boat and went out after him, and after a long chase the broken rod was recovered and the big fellow towed ashore, still full of fight. Other good catches are reported nearly every day. The best *Mining Journal* score to date is a twelve-pound basket filled even full in one hour and a half, though the Merritt haul exceeds that by a large majority.

THE NEVERSINK VALLEY.—July 19.—Friday and Saturday of the past week were spent in the Neversink Valley. Fished some small brooks running into the Neversink, but found fishing very poor. Saturday fished the Wi lowwemoc and got sixty fish, but they ran very small. Saw and heard a number of partridges on this trip along the stream, as I did also when there last May; prospect for fall shooting very good. A party of five went from the hotel where we were stopping and drove to Pleasant Lake, four miles from Fallsburgh, Wednesday, the 11th, and returned Thursday, having afternoon and morning fishing, and brought back 20 black bass, the largest weighing 5½lbs.; the others ran 2 and 3lbs. These were taken with crawfish and the big one on an 8oz. rod.

STRIPED BASS IN VINEYARD SOUND.—The bass fishing at the islands has been fair so far this season, but no one has taken a great number. The largest fish taken by the Cuttyhunk Club was caught on Friday last by Hon. Henry P. McGown. It weighed 44lbs. and was in splendid condition. The judge killed it on a light split-bamboo rod with light tackle, after a sharp fight of twenty minutes. The bait was lobster, no menhaden to be had there, but the club has sent to New York for them.

"A WEEK WITH THE TROUT."—The types, page 477, middle column, two-thirds of way down, made me say "and although some eighty pounds of trout," etc. I think the copy reads "some eighty trout." It renders the statement ridiculous as it reads, for with four rods a couple of hours' fishing would not return 80lbs. on any pond that I know of.—F. E. H.

UP THE OOSTANAULA.

THIS little city of Rome, Ga., stands in the triangle formed by the ruddy waters of the Etowah and the clearer waters of the Oostanaula, where they form the Coosa. There dwell a community of sterling people, who as well are devoted to the pleasures and sports of the field and stream. On the morning of the 18th of June he who stood upon one of the cross bridges saw the Wallick, a steamer of 35 tons measurement, steam away from her wharf on the Etowah, round the point of land, which marks the starting point of the Coosa, and make fast to a wharf on the Oostanaula, at the foot of Third avenue.

Presently five gentlemen and a dray made their way among the roustabouts. The dray was unloaded of boxes, bags and bundles, which were deposited in the custody of Dick, the champion steward and cook of the rivers of North Georgia. The gentlemen, who were the Captain, the General, the Sweet Singer, the Reporter and the Doctor, greeted the Pilot with a smile and good morning, and leaving luggage and superfluous apparel in the cabin chatted on the deck. There lay many a rod and tackle,

and in the pilot house could be seen three Colt's hammerless and a Winchester. The looker-on guessed a frolic, a fish, and a good time generally was being born, and his unspoken prophecy was true.

At 7 A. M. the call to breakfast was made and the order "cast away" came from the pilot house; and up the Oostanaula steamed the Warlick with as happy and jovial a company as could be, after breakfast, cigars and a social game of cards were indulged in. The motion of the steamer created a gentle breeze, and the beautiful banks of the Oostanaula, trimmed with the green of beech and gum and hemlock and many another tree and flower, made air cheerful and bright. Here and there great rocks hung over the stream with many a spring trickling or pouring thence the limestone. Here a meadow stretched away with its waving corn, or cotton, or scented hay, and there the trees mingled their branches over the river, making a green tunnel. The company in such contemplation became hushed, but the calm did not last, for the General was caught in the act of drinking a glass of a German beverage alone; escorted behind the pantaloons was arrested, tried, and sentenced at once to the flat end of a paddle, and the execution followed immediately. What trials! what executions! were had and made on that trip. The Captain was found guilty half a dozen times; the Sweet Singer six, and the Doctor ties without number was *minus*. Only the Reporter escaped by the spontaneous generation of an affection for the Pilot, and a close residence in the pilot house. The Sweet Singer deserved more than he received, and he sang that unique and plaintive ballad, native and peculiar to North Georgia waters, "Mr. Bullfrog," sometime to have a national reputation, with many a false note, a thing outrageous, and not to be tolerated on an Oostanaula steamer.

But alas! as the sun began to grow weary of his height and to settle down toward the hills, and while with a salute they were about to pass the watchers at Resaca, a miserable minion of the Western Union with an bail informed the Captain that a telegram was there held for the Sweet Singer; and a landing made, the message read, no with tearful eyes and dismal tune told the Company he was recalled to Rome. Long they plead with him not to go, and for some fifteen minutes kept him on the worm fence, one foot pointing to the boat, and the other aiming at the W. & A. R. R. But he would not yield, and fortifying him with two bottles of the effervescing German, they left him, standing a restless picture of unfeigned grief; his feet in his slippers, his shoes in his left hand, his grip and handkerchief, collar and cravat in his right; and the two bottles looking up at him from the sand, his only sympathizers and comfort. Sad, but recovering they left him, and away up the swift stream the bow opened the waters.

The General, in a spirit of wild generosity, undertook to supply the place of the Sweet Singer and opened song; but while it was a guileless song it much disturbed the drums of the Doctor's ears and failed to form a fitting note in that cadence which came from the river and the trees, and he was quietly but firmly informed that a further continuance of his seraphic course would necessarily involve a recourse to the blade of the paddle. He stopped.

The General was a noble man, brave and true, took life well as it came. His companions will not soon forget his and the Captain's narrow escape from a watery grave that afternoon, the General's heroism, and the wild yell with which he greeted the seeming approach of the pale rider of the pale horse. The boat was made fast at the foot of a ragged precipice of rock, whence came a tiny stream of sweet water, to replenish the water butts. The rocks, though, were partially covered with moss, which, however, beautiful to the eye, possesses one of the uncanny properties of the banana peel. While the deck hands caught the water, the General and Captain in a spirit of adventure jumped ashore, bent upon the capture of a beaver which the Captain saw go into a hole, and from which he said, he distinctly saw the "round rat-like tail" protrude. The Reporter with his note book and pencil immediately followed that the brave deed might have record. But the Doctor remained on the after deck, a quiet but unlikely spectator, not liking the character of the beaver's tail. With cautious steps the General and Captain advanced, the one on the left, the other on the right, stepping upward from one rugged point of rock to another, until they stood directly over the tail. The General gently extended his hand, caught it, and was hauling away on what seemed a beaver's tail attenuated into great similitude to a black snake, when the Reporter, who in his eagerness to see, was bent backward, with a great hole between his collar button and his neck, was struck on the Adam's apple by a miniature frog, whose slumber had been rudely disturbed by the Captain; and before he could recover from the shock, the animal had found lodgment between his lisle thread and that part of his anatomy which refers to the marine. It was an horrible note of awe that escaped him, and he left the rocks backward, tobogganing with speed, if not with dexterity, until he settled in the cool mud, where the swell from the steamer washed up to the height of his suspender buttons and submerged the waistband of his pantaloons. As that note went out to the river and the sky, the General at the same time becoming somewhat dubious of the caudal appendage of the bearer, let go his hold, and alas! left the moss upon which he stood likewise backward. Suffering, evidently, with some little trepidation, the Captain accompanied him backward. For a moment there was a maze of arms, legs, bodies, snake or tail, moss and rocks, after the order of the buzz saw, then the General caught the Captain by the neck, and presto, the Captain lodged his foot in the abdominal center of the General, they stood, turned one another partially loose, and from rock to rock, from patch of moss to patch of moss went on their way to the river. A ledge intervened, and the Doctor, greatly agitated, hoped that it would check their reckless, unhappy course. But no, they struck it with a three-foot bolt, and four feet lower down landed on a slight incline of marsh grass in the edge of the river, and plunket, plunkit, the river received them. Then it was that the General sped forth a cry that sounded like the last note of the death song of the great Indian chief. The Captain evidently intended to join his voice to the Generals, but the river, suspecting him a victim of an insatiable thirst, filled him with itself, and only a gurgle floated over the surface of the water. They went under. They rose. And brave and true the General was seen battling with the waters with his left hand and nobly supporting the Captain by the nether portion of his trousers with his right. He saved him and himself. It was a desperate situation; the river was 9ft. deep at that point. They were taken on board. The Doctor prescribed a beverage, not German. The Pilot mustered sufficient strength to slightly move the wheel, and sufficient voice to say, "Cast away!" The bell was rung, and under full head of steam, the Warlick resumed her way up the river.

As the sun went behind the foothills of the Cumberlands the pretty spot, wild as Nature made her prettiest haunts, where the Connasauga and the Coosawattee kiss each other and form the Oostanaula, was reached.

Leaving the Connasauga, the Warlick climbed (for other expression will not describe it) the dams and shoals of the Coosawattee, and at nightfall the steamer was tied up at Piney Chapel Landing, a place taking its name, so the Pilot informed the Doctor, from a chapel some quarter of a mile distant, and which he subsequently ascertained required an hour's walk to reach.

Dick soon had a splendid supper of ham and eggs, potatoes, chicken, coffee, etc., displayed. A hearty meal was made, then a walk to a cave and an examination of it by the Doctor and the Pilot.

Nothing of special interest occurred on the tour, except, indeed, when the General, while in the cave, sat down in a round pool, thinking it a smooth limestone rock. He afterward accounted for the wetness as profuse perspiration, but his explanation not being considered by the Reporter satisfactory, he admitted the mishap, and then congratulated himself upon it, as he said he could now locate chronologically the formation of the cave, the temperature of the water having clearly indicated a time during the glacial epoch. The road from the river to this cave is peculiar, being apparently up hill both ways; and the quarter of a mile of the Pilot's had the elasticity of rubber, it stretched out without stint.

Delightful spring cots were set about the boat upon the return, and under stars and blue vault, in the scented breeze, the Doctor and the General slept, and the Captain and Reporter gave forth noises that might have been a long-drawn-out requiem over the departure of the Sweet Singer, set to the mournful air of "Mr. Bullfrog" badly sung.

The next day found them among the Cumberlands, where Talking Rock Creek makes love to the Coosawattee. Then came fishing; the General, it is said, caught a doz. trout and a catfish, the Captain a terrapin and a bag, the Reporter two eels, small but of excellent flavor, and the Doctor, captivated by a spring cot under the shadow of the hurricane deck, killed a duck for dinner, two snakes and a kingfisher. There is not the slightest doubt that the Doctor was the hero of the expedition.

In the evening the rope, not the anchor, was weighed—weight not ascertained—and away the Warlick went like a thing of life, running away from care down the swift stream, turning many an angular bend, just escaping snag and rock. That night the Pilot insisted upon stopping for wood; he landed and was seen no more until morning. There are fair maidens in this section, it is said. About 10 o'clock the Captain, divested of what nature had not furnished, with one exception, laid himself down in bed with a companion which he subsequently learned was a wasp. The demonstration that it was a wasp was perfectly satisfactory to the Captain, and the accompanying circumstances did not allow one of his companions to doubt it. All the Captain is a lovable man, sweet tempered and genial. Few men are quieter in prosperity or in better voice—conditions permitting—in adversity.

Morning came, and down the caroling river the prow was pointed. Presently the whistle blew again for Resaca, the Doctor bade the party a sad, tearful farewell, jumped ashore to go southward on the W. & A., and the rest, wet only with tears—the German and that not German were gone—continued on to the Hill City, and gave the expedition to the custody of Memory, who now, in part, has given account of it to the FOREST AND STREAM.

Many incidents of heroism and daring occurred, which she has not here noted, but she may yet be induced to do so sometime during the summer of 1889. W. D. P.

MACON, Ga.

Fisheulture.

THE DISTRIBUTION OF FRESH-WATER FISHES

BY PROF. DAVID STARR JORDAN.

[Read before the American Fisheries Society.]

(Concluded.)

THE waters of the Great Basin have not yet been fully explored. The number of species known from this region is about seventy-five. This number includes the fauna of the upper Rio Grande, the Snake River and the Colorado, as well as the fishes of the tributaries of the Great Salt Lake. This list is composed almost entirely of a few genera of suckers *(Catostomus; Pantosteus, Chasmistes)*, minnows (*Squalius, Gila; Ptychocheilus, etc.)* and trout (*Salmo mykiss* and its varieties). None of the catfishes, perch, darters or sunfishes, moon-eyes, killifishes, and none of the ordinary Eastern types of minnows (genera *Notropis; Chrosmos, etc.)* have passed the barrier of the Rocky Mountains.

West of the Sierra Nevada, the fauna is still more scanty, but fifty species being enumerated. This fauna, except for certain immigrants (as the fresh water surf fish [*Hysterocarpus traski*] and the species of salmon) from the sea, is of the same general character as that of the Great Basin, though most of the species are different. This latter fact would indicate a considerable change, or "evolution," since the contents of the two faunæ were last mingled. There is a considerable difference between the fauna of the Columbia and that of the Sacramento. The species which these two basins have in common are chiefly those which at times pass out into the sea. The rivers of Alaska contain but few species, barely a dozen in all, most of those being also found in Siberia and Kamtschatka. In the scantiness of its faunal list, the Yukon agrees with the Mackenzie River, and the Arctic rivers generally.

There can be no doubt that the general tendency is for each species to extend its range more and more widely until all localities suitable for its growth are included. The various agencies of dispersal which have existed in the past are still in operation. There is apparently no limit to their action. It is probable that new "colonies" of one species or another may be planted each year in waters not heretofore inhabited by such species. But such colonies become permanent only where the conditions are so favorable that the species can hold its own in the struggle for food and subsistence. That various modifications in the habitat of certain species have been caused by human agencies is, of course, too well known to need discussion here.

We may next consider the question of water sheds, or barriers which separate one river basin from another.

Of such barriers in the United States, the most important and most effective is unquestionably that of the main chain of the Rocky Mountains. This is due in part to its great height, still more to its great breadth, and most of all, perhaps, to the fact that it is nowhere broken by the passage of a river. But two species—the red-throated, or Rocky Mountain trout (*Salmo mykiss* Walbaum [=*purpuratus* Pallas]), and the Rocky Mountain whitefish (*Coregonus williamsoni* Girard)—are found on both sides of it, at least within the limits of the United States; while many genera, and even several families, find in it either an eastern or a western limit to their range. In a few instances representative species, probably modifications or separated branches of the same stock, occur on opposite sides of the range, but there are not many cases of correspondence even thus close.

It is easy to account for the separation of the faunæ; but how shall we explain the almost universal diffusion of the whitefish and the trout in suitable waters on both sides of the dividing ridge? We may notice that these two are the species which ascend highest in the mountains, the whitefish inhabiting the mountain pools and lakes, the trout ascending all brooks and rapids in search of their fountain-heads. In many cases the ultimate dividing range is not very broad, and we may imagine that at some time spawn or even young fishes may have been carried across by birds or other animals, or by man—or more likely by the dash of some summer whirlwind. Once carried across in favorable circumstances, the species might survive and spread.

I have seen an example of how such transfer of species may be accomplished, which shows that we need not be left to draw on the imagination to invent possible means of transit.

There are few water-sheds in the world better defined than the mountain range which forms the "backbone" of Norway. I lately climbed a peak in this range, the Suletind. From its summit I could look down into the valleys of the Lära and the Bägna, flowing in opposite directions to opposite sides of the peninsula. To the north of the Suletind is a large double lake called the Sletningenvand. The maps show this lake to be one of the chief sources of the westward-flowing river Lära. This lake is in August swollen by the melting of the snows, and at the time of my visit it was visibly the source of both these rivers. From its southeastern side flowed a large brook into the valley of the Bägna, and from its southwestern corner, equally distinctly, came the waters which fed the Lära. This lake, like similar mountain ponds in all northern countries, abounds in trout; and these trout certainly have for part of the year an uninterrupted line of water communication from the Sognefjord on the west of Norway to the Christianiatjord on the southeast—from the North Sea to the Baltic. Part of the year the lake has probably but a single outlet through the Lära. A higher temperature would entirely cut off the flow into the Bägna, and a still higher one might dry up the lake altogether. This Sletningenvand,* with its two outlets on the summit of a sharp water-shed, may serve to show us how other lakes, permanent or temporary, may elsewhere have acted as agencies for the transfer of fishes. We can also see how it might be that certain mountain fishes should be so transferred while the fishes of the upland waters may be left behind. In some such way as this we may imagine the trout and the whitefish to have attained their present wide range in the Rocky Mountain region; and in similar manner perhaps the Eastern brook trout (*Salvelinus fontinalis* Mitchill) and some other mountain species (*Notropis rubricroceus* Cope; *Rhinichthys atronasus* Mitchill, etc.) may have been carried across the Alleghanies.

The Sierra Nevada constitutes also a very important barrier to the diffusion of species. This is, however, broken by the passage of the Columbia River, and many species thus find their way across it. That the waters to the west of it are not unfavorable for the growth of eastern fishes is shown by the fact of the rapid spread of the common eastern catfish (*Amciurus nebulosus* Le Sueur) or horned pout, when transported from the Schuylkill to the Sacramento. This fish is now one of the important food fishes of the San Francisco markets. It has become, in fact, a special favorite with the Chinamen—himself also an immigrant, and presenting certain analogies with the fish in question, as well in temperament as in habits.

The mountain mass of Mount Shasta is, as already stated, a considerable barrier to the range of fishes, though a number of species find their way around it through the sea. The lower and irregular ridges of the Coast Range are of small importance in this regard, as the streams of their east slope reach the sea on the west through San Francisco Bay. Yet the San Joaquin contains a few species, not yet recorded, from the smaller rivers of southwestern California.

The main chain of the Alleghanies forms a barrier of importance separating the rich fauna of the Tennessee and Ohio basins from the scantier faunæ of the Atlantic streams. Yet this barrier is crossed by many more species than is the case with either the Rocky Mountains or the Sierra Nevada. It is lower, narrower and much more broken—as in New York, Pennsylvania and in Georgia there are several streams which pass through it or around it. The much greater age of the Alleghany chain, as compared with the Rocky Mountains, seems not to be an element of any importance in this connection. Of the fish which cross this chain, the most important is the brook trout (*Salvelinus fontinalis*), which is found in all suitable waters from Hudson's Bay to the head of the Chattahoochee. A few other species are locally found in the headwaters of certain streams on opposite sides of the range. An example of this is the little red "fall fish" (*Notropis rubricroceus* Cope), found only in the mountain tributaries of the Savannah and the Tennessee. We may suppose the same agencies to have assisted these species that we have imagined in the case of the Rocky Mountain trout, and such agencies were doubtless more operative in the times immediately following the glacial epoch than they are now.

The passage of species from stream to stream along the Atlantic slope deserves a moment's notice. It is, under present conditions, impossible for any mountain or upland fish, as the trout or the miller's thumb (*Cottus richardsoni* Agassiz), to cross from the Potomac River to the James, or from the Neuse to the Santee, by descending to the lower courses of the rivers, and thence passing along either through the swamps or by way of the sea. The lower courses of these streams, warm and muddy, are unhabitable by such fishes. Such transfers are, however, possible further north. From the rivers of Canada and from many rivers of New England the trout does descend to the sea and into the sea, and further north the whitefish does this also. Thus these fishes readily pass from one river basin to another. As this is the case now everywhere in the North, it may have been the case further south in the time of the glacial cold. We may, I think, imagine a condition of things in which the snowfields of the Alleghany chain might have played some part in aiding the diffusion of cold-loving fishes. A permanent snowfield on the Blue Ridge in western North Carolina might render almost any stream in the Carolinas suitable for trout, from its source to its mouth. An increased volume of colder water might carry the trout of the head-streams of the Catawba and the Savannah as far down as the sea. We can even imagine that the trout reached these streams in the first place through such agencies, though on this there is no positive evidence. For the presence of trout in the upper Chattahoochee, we must account in some other way.

It is noteworthy that the upland fishes are nearly the same in all these streams, until we reach the southern limit of possible glacial influence. South of western North Carolina, the faunæ of the different river basins appear to be more distinct from one another. Certain ripple-loving types* are represented by closely related but unquestionably different species in each river basin, and it would appear that a thorough mingling of the upland species in these rivers has never taken place.

With the lowland species of the Southern rivers it is different. Few of these are confined within narrow limits. The streams of the whole South Atlantic and Gulf coast flow into shallow bays, mostly bounded by sand spits or sandbars which the rivers themselves have brought down. In these bays the waters are often neither fresh nor salt; or rather they are alternately fresh and salt, the former condition being that of the winter and spring. Many species descend into these bays, thus finding every faculty for transfer from river to river. There is a continuous inland passage in fresh or brackish waters, traversable by such fishes, from Chesapeake Bay nearly to Cape Fear; and similar conditions exist on the coasts of Louisiana, Texas and much of Florida. In Perdido Bay I have found fresh-water minnows (*Notropis cercostigma, Notropis xænocephalus*) and silversides (*Labidesthes sicculus*) living together with marine gobies (*Gobiosoma molestum*) and salt-water eels (*Myrophis punctatus*). Fresh-water alligator gars (*Lepisosteus tristœchus*) and marine sharks compete for the garbage thrown over from the Pensacola wharves. In Lake Pontchartrain the fauna is a remarkable mixture of fresh-water fishes from the Mississippi and marine fishes from the Gulf. Channel cats, sharks, sea crabs, sunfishes and mullets can all be found there together. It is therefore to be expected that the lowland fauna of all the rivers of the Gulf States would closely resemble that of the lower Missisippi, and this in fact is the case.

The low and irregular water-shed which separates the tributaries of Lake Michigan and Lake Erie from those of the Ohio is of little importance in determining the range of species. Many of the distinctively Northern fishes are found in the headwaters of the Wabash and the Scioto. The considerable difference in the general fauna of the Ohio Valley as compared with that of the streams of Michigan is due to the higher temperature of the former region, rather than to any existing barriers between the river and the Great Lakes. In northern Indiana the water-shed is often swampy, and in many places large ponds exist in the early spring.

At times of heavy rains many species will move through considerable distances by means of temporary ponds and brooks. Fishes that have thus emigrated often reach places ordinarily inaccessible, and people finding them in such localities often imagine that they have "rained down."

*Since the above was written I have been informed by Professor John M. Coulter, who was one of the first explorers of the Yellowstone Park, that such a condition still exists on the Rocky Mountain Divide. In the Yellowstone Park is a marshy tract, traversable by fishes in the rainy season, and known as the "Two-Ocean Water." In this tract rise tributaries both of the Snake River and of the Yellowstone. Similar conditions apparently exist on other parts of the Divide, both in Montana and in Wyoming.

Professor John C. Brauner calls my attention to a marshy upland which separates the valley of the La Plata from that of the Amazon, and which permits the free movement of fishes from the Paraguay River to the Tapajos. It is well known that through the Cassiquiare River the Rio Negro, another branch of the Amazon, is joined to the Orinoco River. It is thus evident that almost all the waters of eastern South America form a single basin, so far as the fishes are concerned.

*The best examples of this are the following: In the Santee basin are found *Notropis pyrrhomelas, Notropis niveus,* and *Notropis chloristius;* in the Altahama, *Notropis xaenurus* and *Notrop s callisemus;* in the Chattahoochee, *Notropis hysolepterus* and *Notropis cerystomus;* in the Alabama, *Notropis coeruleus, Notropis trichroistius,* and *Notropis callistius.* In the Alabama, Escambia, Pearl, and numerous other rivers, is found *Notropis cercostigma.* This species descends to the sea in the cool streams of the pine-woods. Its range is wider than that of the others, and in the rivers of Texas it reappears in the form of a scarcely distinct variety, *Notropis venustus.* In the Tennessee and Cumberland, and in the rivers of the Ozark range, is *Notropis galacturus;* and in the upper Arkansas, *Notropis camurus*—all distinct species of the same general type. Northward, in all the streams from the Potomac to the Oswego, and westward to the Des Moines and the Arkansas occurs a single species of this type, *Notropis whipplei.* But this species is not known from any of the streams inhabited by any of the other species mentioned, although very likely it is the parent stock of them all.

Once, near Indianapolis, after a heavy shower, I found in a furrow in a cornfield, a small pike (*Esox vermiculatus* Le Sueur), some half a mile from the creek in which he should belong. The fish was swimming along in a temporary brook, apparently wholly unconscious that he was not in his native stream. Migratory fishes, which ascend small streams to spawn, are especially likely to be transferred in this way. By some such means any of the water-sheds in Ohio, Indiana, or Illinois may be passed.

It is certain that the limits of Lake Erie and Lake Michigan were once more extended than now. It is reasonably probable that some of the territory now drained by the Wabash and the Illinois was once covered by the waters of Lake Michigan. The cisco (*Coregonus artedi sisco* Jordan) of Lake Tippecanoe, Lake Geneva and the lakes of the Oconomowoc chain is evidently a modified descendant of the so-called lake herring (*Coregonus artedi* Le Suer). Its origin most likely dates from the time when these small deep lakes of Indiana and Wisconsin were connected with Lake Michigan. The changes in habits which the cisco has undergone are considerable. The changes in external characters are but trifling. The presence of the cisco in these lakes and its periodical disappearance—that is, retreat into deep water when not in the breeding season—has given rise to much nonsensical discussion as to whether any or all of these lakes are still joined to Lake Michigan by subterranean channels. Several of the larger fishes, properly characteristic of the Great Lake region (as *Lota lota maculosa*, *Percopsis guttatus*, *Esox masquinongy*), are occasionally taken in the Ohio River, where they are usually recognized as rare stragglers. The difference in physical conditions is probably the sole cause of their scarcity in the Ohio basin.

The similarity of the fishes in the different streams and lakes of the Great Basin is doubtless to be attributed to the general mingling of their waters which took place during and after the glacial epoch. Since that period the climate in that region has grown hotter and drier, until the overflow of the various lakes into the Columbia basin through the Snake River has long since ceased. These lakes have become isolated from each other, and many of them have become salt or alkaline and therefore uninhabitable. In some of these lakes certain species may now have become extinct which still remain in others. In some cases, perhaps, the differences in surrounding may have caused divergence into distinct species of what was once one parent stock. The suckers in Lake Tahoe (*Catostomus tahoensis*, in Lake Tahoe; *Catostomus macrocheilus* and *discobolus*, in the Columbia; *Catostomus fecundus*, *Catostomus ardens*; *Chasmistes liorus* and *Pantosteus acrocrosus*, in Utah Lake) and those in Utah Lake are certainly now different from each other and from those in the Columbia. The trout (*Salmo mykiss*, et vars. *henshawi* and *virginalis*) in the same waters can be regarded as more or less tangible varieties only, while the whitefishes (*Coregonus williamsoni*) show no differences at all. The differences in the present faunæ of Lake Tahoe and Utah Lake must be chiefly due to influences which have acted since the glacial epoch, when the whole Utah Basin was part of the drainage of the Columbia.

To certain species of upland or mountain fishes, the depression of the Mississippi basin itself forms a barrier which cannot be passed. The black-spotted trout (*Salmo fario* L., in Europe; *Salmo labrax* Pallas, etc., in Asia; *Salmo gairdneri* Richardson, in streams of the Pacific Coast. *Salmo mykiss* Walbaum, in Kamtschatka, Alaska, and throughout the Rocky Mountain range to the Mexican boundary, and the headwaters of the Kansas, Platte and Missouri), very closely related species of which abound in all waters of northern Asia, Europe, and western North America, has nowhere crossed the basin of the Mississippi, although one of its species finds no difficulty in passing Behring Strait. The trout and whitefish of the Rocky Mountain region are all species different from those of the Great Lakes or the streams of the Alleghany system. To the grayling, the trout, the pike, and to arctic and sub-arctic species generally, Behring Strait has evidently proved no serious obstacle to diffusion; and it is not unlikely that much of the close resemblance of the fresh-water faunæ of northern Europe, Asia and North America is due to this fact. To attempt to decide from which side the first migration came in regard to each group of fishes might be interesting; but without a wider range of facts than is now in our possession, such attemps would be mere guesswork and without value. The interlocking of the fish-faunæ of Asia and North America presents, however, a number of interesting problems, for numerous migrations in both directions have doubtless taken place.

I could go on indefinitely with the discussion of special cases, each more or less interesting or suggestive in itself, but the general conclusion is in all cases the same.

The present distribution of fishes is the result of long-continued action of forces still in operation. The species have entered our waters in many invasions from the Old World or from the sea. Each species has been subjected to the various influences implied in the term natural selection, and under varying conditions representatives have undergone many different modifications.

Each of the 600 species we now know is making every year inroads on territory occupied by other species. If these colonies are able to hold their own in the struggle for possession they will multiply in the new conditions and the range of the species will become widened. If the surroundings are different new species or varieties may be formed in time and these new forms may again invade the territory of the parent species. Again colony after colony of species after species may be destroyed by other species or by uncongenial surroundings.

The ultimate result of centuries on centuries of the restlessness of individuals is seen in the facts of geographical distribution. Only in the most general way can the history of any species be traced. Could we know it all, it would be as long and eventful a story as the history of the colonization and settlement of North America by immigrants from Europe.

By the fishes each river in America has been a hundred times discovered; its colonization a hundred times attempted. In these efforts there is no co-operation. Every individual is for himself, every struggle is a struggle of life and death. Each fish is a cannibal, and to each species each member of every other species is an alien and a savage. Now all this has a practical side to it, although the practical side has been as yet little developed.

A leading feature of the work of the Fish Commissions must be to help the fishes over the barriers, to assist nature in the direction of colonizing streams and lakes with fishes which are good to eat, to the exclusion of the kinds of which man can make no use.

This help may be given by the introduction of vigorous kinds of fishes into waters into which they had been unable to find an entrance before. The work judiciously done may be of the greatest value to the people of our country. Numerous as the food fishes of the Mississippi Valley, it must be confessed that the rank of the great bulk of them is not high. Our rivers ought to raise something better than suckers, paddle-fish, drum and buffaloes. To bring in better fishes with success, it is necessary for us to know something of the habits and necessities of the species in question, and also something definite as to the character of the waters which are to be stocked. It is of no use to plant trout in a muddy bayou, or channel-cat in mountain springs of ice-water, or codfish in Lake Michigan.

Most of our information in these respects is still very vague, and most attempts at the introduction of species into new water are still of the most haphazard sort. The recent series of examinations of the Michigan lakes, lately undertaken by the Michigan State Fish Commission, ought to yield some results in this connection, yet as the character of the waters of the State is essentially uniform, what is true of one of the little lakes in the way of supporting fish life, must be largely true of all. For this reason, desirable as an extended exploration is from an economic standpoint, it can be made more important to the science of ichthyology than to the art of fishculture. To ichthyology, as has been said, a sculpin is as valuable as a codfish, but fishculture prefers the codfish.

The results of a careful survey would give us facts regarding the distribution of minnows, darters and sunfish, facts of the greatest interest and importance in science, but of no value to fishculture to which one minnow is as good as another and both useful only as food for bass, still a thorough survey in the hands of intelligent men, of the waters of any region cannot fail to throw much light on the habits and needs of the various food fishes, and we shall look with much interest for the final results of the work in Michigan.

The other work of the Fish Commission is in the direction of fish hatching, the protection of the young of valuable kinds until they are able to take care of themselves. The value of this work is most great, now fortunately beyond question, and its methods are reaching a high degree of perfection.

I need only say that my deepest interest in science lies in the direction of the question of the distribution of organisms and in their adaptation to their surroundings, and I should be glad if I were able to contribute even a little to making our knowledge of this subject practicably available in the direction of causing two big fish to grow where one little one grew before.

INDIANA STATE UNIVERSITY, Bloomington, Ind.

SHAD IN THE HUDSON.

NEW YORK, July 16.—*Editor Forest and Stream:* In your last issue you publish an article from "W. E. H." on the shad in the Hudson, in which he speaks of the habits and races of shad in such a positive manner that would lead one to suppose that the life history of the shad, from the egg to the gridiron, was perfectly known. Let us examine the case.

"W. E. H." objects to "the system of shad culture followed by the New York State Fish Commission on account of their confining operations to the sluggish water of the Hudson at Catskill Creek for the setting free of the shad fry, instead of their liberation in the highly-aerated water of the Upper Hudson." The facts are that the shad do not spawn in rapid and highly aerated waters, but in eddies, usually behind islands, where a gentle current keeps the eggs from sinking, and these places are all below the dam at Troy, where the fish naturally spawn.

In speaking of some plantings of shad fry by the U. S. Fish Commission as high up the river as Glens Falls, he says: "And here again comes another question as to whether this procedure has resulted in any benefit to the stocking of the Hudson at all; if it has or not depends entirely upon the fact whether the young shad turned loose by the United States Commissioners belonged to the Hudson River family of this fish, or the Potomac, the Chesapeake or Delaware rivers. If they belonged to either of the latter they would affiliate with their family on their return the following year, and while it might help the Potomac, Chesapeake or Delaware rivers, it would do but little for the Hudson." It is true that it is impossible to tell just how many, if any, of these fish lived to be caught in the lower river, but the statement that fry from eggs taken on the Potomac, or other rivers, would "affiliate with their family," needs confirmation, or at least more knowledge than we now have. If this is so, how is it that shad have been established in some rivers which were barren of them, and why do not the Penobscot salmon, planted in the Hudson, return to that river?

We read that Col. McDonald has said that there are two races of shad, one north, and the other south from Albemarle (see report of the conference of Fish Commissioners in FOREST AND STREAM, May 24), and it is doubtful if a Delaware River shad can be distinguished with certainty from a Hudson River fish, or, if it cannot be, by a mere shade of color, or slight change of form, whether it would not assume all the characteristics of the Hudson fish if reared in that river. Certainly there is no structural difference.

That shad and salmon will return to the place where they are planted and spent their early days, if all the conditions are favorable to their doing so, has been, I believe, fully proved. It is true, as "W. E. H." says, that fish from one branch of a river can often be distinguished from its kind inhabiting another branch, and that they will naturally go where they belong, but will not the fry from eggs taken from one branch assume all the characters of the other if hatched and planted there? All the evidence seems to prove that they will. SHAD FLY.

FIXTURES.

DOG SHOWS.

Aug. 22 to 24.—Third Annual Show of the American Fox-Terrier Club, at Saratoga Springs, N. Y. (Including all terriers.) Entries close Aug. 22. H. P. Frothingham, Secretary, 2 Wall street, New York.

Aug. 27 to 31.—Toledo Dog Show, Toledo, O. H. E. Cook, Superintendent.

Sept. 4 to 7.—Second Annual Dog Show of the Michigan Kennel Club, Detroit, Mich. H. E. Cook, Superintendent.

Sept. 11 to 14.—First Dog Show of the Buffalo International Fair Association, at Buffalo, N. Y. C. W. Robinson, Secretary.

Sept. 18 to 21.—First Annual Dog Show of the Syracuse Kennel Club, at Syracuse, N. Y. Howard B. Rathbone, Secretary.

Sept. 24 to 27.—Fifth Dog Show at London, Ont. C. A. Stone Superintendent.

Sept. 25 to 28.—Second Annual Dog Show of the Bristol Park Agricultural Society, Bristol, Conn. Entries close Sept. 22. C. F. Barnes, Secretary.

Oct. 9 to 12.—First Dog Show of the Virginia Field Sports Association, at Richmond, Va. B. H. Grundy, Secretary, Room 26, Shafer Building. Entries close Oct. 1.

Oct. 23 to 26.—Second Annual Show of the St. Paul and Minnesota Kennel Club, at St. Paul, Minn. J. E. Stryker, Secretary, Room 98 Globe Building.

Nov. 6 to 10.—Dog Show of the Richmond County Poultry and Pet Stock Association, in connection with Augusta National Exposition at Augusta, Ga. H. Madden, Superintendent.

Feb. 12 to 15, 1889.—Fifth Dog Show of the New Jersey Kennel Club, at Jersey City, N. J. Geo. L. Wilms, Secretary, 142 Monticello avenue, Jersey City, N. J.

Feb. 19 to 22, 1889.—Thirteenth Annual Show of the Westminster Kennel Club, New York. James Mortimer, Superintendent.

Feb. 26 to March 1, 1889.—Second Annual Show of the Rensselaer Kennel Club, Troy, N. Y. Alba M. Ide, Secretary.

March 5 to 8, 1889.—Second Annual Dog Show of the Albany Kennel Club, at Albany, N. Y. Geo. B. Gallup, Secretary.

March 12 to 15, 1889.—Second Annual Show of the Fort Schuyler Kennel Club, Utica, N. Y. James W. Dunlop, President.

March 19 to 22, 1889.—First Annual Dog Show of the Maryland Kennel Club, at Baltimore, Md. W. S. Diffenderffer, Secretary.

March 26 to 29, 1889.—First Annual Dog Show of the Massachusetts Kennel Club, at Lynn, Mass. D. A. Williams, Secretary.

April 2 to 5, 1889.—First Annual Show of the Rochester Kennel Club, at Rochester, N. Y. Harry Yates, Secretary.

FIELD TRIALS.

Sept. 11.—Third Annual Field Trials of the Manitoba Field Trials Club. Derby entries close July 1. All-Aged entries Aug. 1. Thos. Johnson, Secretary, Winnipeg, Manitoba.

Nov. 1.—Second Annual Field Trials of the Indiana Kennel Club, at Bicknell, Ind. P. T. Madison, Secretary, Indianapolis, Ind.

Nov. 19.—Tenth Annual Field Trials of the Eastern Field Trials Club, at High Point, N. C. (Members' Stake, Nov. 15.) W. A. Coster, Secretary, Saratoga Springs, N. Y.

Dec. 3.—First Annual Field Trials of the Southern Field Trial Club, at Amory, Miss. T. M. Brumby, Secretary, Chattanooga, Tenn.

Dec. 10.—Second Annual Field Trials of the American Field Trials Club, at West Point, Miss. C. W. Paris, Secretary, Cincinnati, O.

Jan. 14, 1889.—Sixth Annual Field Trials of the Pacific Coast Field Trial Club, at Bakersfield, Cal. N. P. Sheldon, Secretary, 320 Sansome street, San Francisco, Cal.

COURSING.

Oct. 15.—Third Annual Meeting of the American Coursing Club at Great Bend, Kan. F. K. Doan, Secretary, 1210 Olive street, St Louis, Mo.

A. K. R.—SPECIAL NOTICE.

THE AMERICAN KENNEL REGISTER, for the registration of pedigrees, etc. (with prize lists of all shows and trials), is published every month. Entries close on the 1st. Should be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (50 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription $1.50. Address "American Kennel Register," P. O. Box 2832, New York. Number of entries already printed 6435

THE NATIONAL DOG CLUB OF AMERICA.

Editor Forest and Stream:

I have observed in the various sporting papers a letter written by Dr. Perry, President of the National Dog Club, which is in substance an attempt to explain away the impression which the Buffalo International Fair Association had given out through its Secretary that "a fight had begun" between the N. D. C. and the A. K. C. Dr. Perry endeavored to impress his readers that such is not the case and that the same harmony is prevailing as was indicated would exist when he addressed his club upon its formation.

The time has come when the A. K. C. should take a stand against the misrepresentations which are constantly circulating respecting its aims and methods, and also to make clear to all breeders and exhibitors the fact that it has good reason to believe, and does believe, and will in course of time prove, that the N. D. C. from the beginning contained among its principal promotors men who had no other object than a still-hunt against the A. K. C. The A. K. C. accepted Dr. Perry's inaugural address forecasting good will and harmony and entertained for the N. D. C. the kindest feelings, but in view of its recent adoption of rules governing dog shows, its assumption of authority over dog matters, through a constitution which cannot fail, and is really intended, to bring them in conflict with the A. K. C., the latter has now concluded to declare that it does not consider the object of the N. D. C. in any other light but antagonism and will so treat it. It further prefers to have the open enmity of the N. D. C. rather than the incessant secret plottings which are being conducted against the A. K. C. through the N. D. C. by such parties as Mr. James Watson, your own paper, the disgruntled associates of the Hornellsville Club and the embittered individuals and kennel clubs who ineffectually resisted the enforcement of the compulsory registration rule.

Nobody denies the right of clubs to exist and organize independently of the A. K. C., but it is neither proper nor to be permitted that a club should enter the field intrusted to the A. K. C. by an immense majority of the dog interests of the country under false pretenses and with objects so utterly at variance with those avowed by its promoters. Discord is not what the breeders and exhibitors nor the public want, yet in reality that is all the N. D. C. can hope to offer its members.

We thus warn the breeders and exhibitors of the country against what they are invited to support in the National Dog Club. AUGUST BELMONT, JR., Pres. A. K. C.

NEW YORK, July 24.

Editor Forest and Stream:

The plan of forming a club to be made up wholly of breeders was not original with me. I have good reason for believing that there are very few men in the country having kennels of any considerable size who have not always favored such a club, and during the past few years more than ever before felt its need, not only to reform certain existing defects in general management, but to stimulate and give fresh impulse to canine interests here, manifestly on the decline. Knowing well these facts, after due consideration I wrote some fifty breeders, and while asking them to join in the movement I also sought their opinions on the subject. Some forty joined at once. I carefully studied their communications, and at the first meeting of the National Dog Club outlined its policy. I gave expression not only to my own sentiments, but also to those of the majority of my forty associates. On the subject of our relations to the American Kennel Club I said:

> Perhaps it is but natural for some to think that we are starting in opposition to it. Whoever has that idea should abandon it at once. Why should we not be a support to it? Both clubs are working for identically the same ends. Their ways may not be our ways. They may be open to criticism—who is not? That we have the same end in view should be sufficient to guarantee good fellowship. I feel sure that you will permit me to say to the American Kennel Club, We are not only ready and willing, but anxious to aid all your laudable efforts. We will labor with you if you desire it. If you do not, then there will be no quarrel between us. In our own way we will go on with the work before us, each happy in the consciousness of doing what we feel to be duty.

Among all who were then members of our club I do not now recall that there was a single one who expressed himself as positively unfriendly to the American Kennel Club. A few appeared indifferent and had no opinion to express; for or against it. The great majority felt that that club had done very little indeed in the interests of breeders generally, that it was not only apathetic but altogether too sluggish in its movements; and yet a spirit of fairness actuated my associates and they advocated a peaceful policy. Hence I said that we were not starting in opposition to the American Kennel Club, and were friendly to it. At this point I will make clear my rendition of the word opposition. Perhaps its selection by me was an unfortunate one, since it opens the door to invidious criticism. If there is any blame attached to its use I, alone, am the one to bear it. I am quite ready to acknowledge that in a recently published courteous criticism of our club, what is generally accepted as one practical definition of the word has been given. And, yet, there is another definition having no less wide acceptance—*hostility*. So construe the word and again read the statements made by me and the true meaning will appear. The National Dog Club was not only *not hostile* to the American Kennel Club, but was *ready, willing, and even anxious to aid all its laudable efforts.*

This spirit then, actuated the founders of our club. But did any one for a moment suppose that it would not have an individuality of its own? Could they interpret from what was said by me that the National Dog Club was formed to be simply the servant of other clubs—to be a mere puppet and "move only when the string was pulled?" Let the would-be critics glance over the names of those who make

up the club, and then ask if any such idea is possible. There has been no promise made that we would do nothing that the American Club had done or attempted to do. We simply said that we were not in opposition—not hostile—to it, and we were ready to co-operate with it if our aid was desired. In every branch of sport honorable rivalry is desirable as a stimulant. Here too monopoly is unhealthy and tends to degenerate into indifference.

The National Dog Club started out at peace with all, and not only willing but anxious to aid all working for the interests of breeders in this country. How was it received by those who have identified themselves with the American Kennel Club? We were distrusted from the first, and every effort made to crush us. All breeders who would answer the call were whistled to "heel." Prejudice, where possible, was at once excited. Some who contemplated joining us were dissuaded from doing so; a few members yielded to the weight of influence and resigned. There has been much said of war between the two clubs being inaugurated. But it requires two parties to maintain a conflict. While the National Dog Club has been *assailed in a cowardly fashion from the night of the first meeting*, it has made no move to repel the attack.

Let us contrast with the treatment administered to us the course which we have pursued toward the American Kennel Club. At our first meeting a committee was chosen to nominate officers, formulate constitution and by-laws, and perform other duties attendant upon organizing. For weeks that committee labored to secure an executive board in which the club would have implicit confidence, and to which it would willingly trust its general management. Did that nominating committee, which was kept fully informed of the efforts made to defeat them, allow themselves to be influenced by feelings of resentment? Did they seek men to fill the offices in the National Club among those who were *unfriendly to the American Kennel Club*, as would be no more than natural considering the treatment which they had received? Most assuredly they did not. They never swerved from the policy of the club as outlined at the first meeting. *Not only did they not seek those who were unfriendly to it, but they even went into the American Kennel Club and invited its prominent members to enter the new club, take official positions, and so help mould its future and keep it in harmony with their own.* One who was invited and accepted, a few days later—after a meeting of his club in New York—sent us his resignation: *he had been appointed to a high office in the American Kennel Club.* Another prominent breeder whom we invited, before rendering us his decision *was given even a higher position in that same club.* It is certainly a remarkable coincidence that the fitness of both those gentlemen for official positions should have been recognized by the American Kennel Club *immediately after we had selected them.*

Were the executive of our club polled to-day it would be found that the majority are favorably disposed toward the American Kennel Club. Now is not this evidence that we have been peacefully inclined from the first, notwithstanding the exasperating assaults made upon us? The National Dog Club was formed to advance the interests of the breeders of America. As one means to that end they have formulated a set of rules for dog shows, and placed them on record as what in their opinion such a set of rules should be. It has not held a show under those new rules, nor has it urged them on others. Doubtless the club from time to time will take similar steps toward reform, for what other way is there open for its accomplishment? "Hope long deferred maketh the heart sick." They have waited long; although a snail may encompass the earth there are none who desire to follow in its course.

Now in regard to those rules which our club has adopted. They constitute certainly the only argument which can be brought forward to sustain the claim that we are in opposition to the American Kennel Club. The matter can soon be adjusted. If the new points not covered by the rules of that club are recognized to be of value, it has only to adopt them, and then, without doubt, associations will prefer to show under the auspices of the older body. Feeling as it did the need of the changes, the National Club having made them will naturally do what it can to promote the interests of those who elect to use them for their bench shows. When the American Kennel Club adopts them, that part of our work will have been accomplished. It can lay no claim to the right to dictate to us, nor have we aught to ask from it. It gave us no opportunity to prove the honesty of our purpose. We were condemned on the instant. And yet, notwithstanding all this we have no revengeful feelings to satisfy; *we are not in opposition—hostile—to it.* We are ready to "aid all its laudable efforts."

There are doubtless some men in the National Club who will be alarmed at the attack upon it. As President of the club I say to you, we have no desire to dragoon members into it; if you are afraid to remain, pray you send in your resignation. If there are any who feel that they have been unduly influenced—that they were deceived—their withdrawal also will please us. As for the future of the club, no one need be apprehensive. Under its constitution its management is intrusted to an executive committee of fifteen. On the one at present existing there are many of the best known breeders in America. Their names should be a sufficient guarantee that the National Dog Club will ever be found on the side of right. J. FRANK PERRY.

GORDON SETTERS.—Baltimore, July 20.—*Editor Forest and Stream:* Now the American Gordon Setter Club is formed, I wish to inform all those who are now members, and those who will be, that I place my Gordon setter dogs Stubble and Whip at their service, free of stud fee, for two years, excepting November and December, to serve their bitches that they may desire to breed, and secure pure Gordon setter blood. My only object in working up the Gordon Club was to keep this noble dog from being imposed upon by those breeding the cross bred imposter, and in so doing deceiving the amateur by erroneously calling them Gordons.—H. MALCOLM.

POINTER CLUB.—Jersey City, July 21.—*To the Members of the Pointer Club of America:* In pursuance of the power given me at our first meeting I hereby call a meeting of the members of said club, to be held in the city of Richmond, Va., on the 9th day of October, 1888, at 4 o'clock on said day, the same being the first day of the bench show given in said city by the Virginia Field Sports Association. The said meeting will be held in the building used by said association for their bench show. All members and all others who are interested in the pointer and who desire to join are requested to attend.—C. J. PESHALL, Chairman.

THE LONDON DOG SHOW.—We have received the premium list of the dog show to be held at London, Ont., Sept. 24 to 27. The prize in champion classes is $10. In the important open classes $10, $5 and diploma, with $7, $3 and diploma for puppies and remaining classes. The American Spaniel Club's classification No. 2 is adopted. Valuable kennel and special prizes are also offered. Entries close Sept. 15. The judges are Messrs. John Davidson, Monroe, Mich.; Jas. Mortimer, Babylon, L. I., and J. F. Kirk, Toronto, Can. The address of the secretary is F. C. Wheeler, 157 Dundas street, London, Ont.

ROCHESTER DOG SHOW.—*Editor Forest and Stream:* Please claim April 2 to 5, 1889, for the first annual dog show of the Rochester Kennel Club, instead of dates sent you in previous letter.—HARRY YATES, Sec'y.

THE POODLE.

STANDARD OF POINTS ADOPTED BY THE POODLE CLUB OF ENGLAND.

THE BLACK POODLE.

General Appearance.—That of a strong, active, and very intelligent dog; cobby in build, and profusely coated with curls or long ropy "cords."

Head.—Long; the skull large, and with plenty of room for brain power; wide between the ears and a slight peak; the parts over the eyes well arched; the whole thickly covered with curls or cords.

Muzzle.—Long, (but not "snipy"), strong, square, and deep; the "stop" should be defined, but not to a very great extent. The teeth should be perfectly level, strong, and white.

Eyes.—Small, dark, and bright, with a very intelligent expression; they should be set at right angles with the line of the face.

Nose.—Large, and perfectly black in color, with wide, open nostrils.

Ears.—Very long, close to the cheek, low set on, and well covered with long ringlets or "cords."

Neck.—Well proportioned, and very strong to admit of the head being carried high and with dignity.

Chest.—Fairly deep, but not too wide; strong, and well covered with muscles.

Legs.—Forelegs, perfectly straight, very muscular, and "set on racing lines;" they should be long enough to raise the body well from the ground, but without legginess. Hindlegs very muscular, but fairly bent, with the hocks well let down.

Feet.—Large, strong, and rather wide, but standing well on the toes, and of good shape. The nails perfectly black, and the pads capacious and hard.

Back.—Short, with body well ribbed up; the loins very strong and muscular, but without fat.

Tail.—Carried at an angle of 45 deg., having long ringlets or cords, hanging down.

Coat.—If corded, thick and strong, and hanging in long, ropy "cords." If curly, the curls close and thick, and hair of good quality.

Weight.—Large, 60lbs.; medium, 40lbs.; small, 20lbs. and under.

THE WHITE POODLE AND THE RED POODLE.

All the foregoing points hold good for these varieties of the breed, with the following exceptions:

Eyes.—Yellow or wall-eyes (light blue), free from black rims round the eyelids.

Nose.—Red or liver color.

Nails.—Red or pink.

Back.—The ticks (spots) on back should be red or liver, and the whole body should be free from black ticks.

Only these three colors (black, white, and red) are admitted, and they should be without mixture.

N.B.—*Clipping or Shaving.*—We very strongly recommend that only one-third of the body be clipped or shaved, and that the hair on the forehead be left on.

SOUTHERN FIELD TRIALS CLUB DERBY.

CHATTANOOGA, Tenn., July 14.—*Editor Forest and Stream:* I herewith inclose you a list of the entries in the Southern Field Trials Club Derby. I would have mailed this sooner, but there were several entries sent me by express to Marietta, Ga., which delayed matters. We think this list of fifty-six proves that a trial can be gotten up without the consent of Mr. Rowe. The All-Aged Stake we feel certain will be the largest stake ever run in America, as we think by that time all will understand the situation. Our list of entries is very gratifying to us. Thanks for your kindly interest in the club.

T. M. BRUMBY, Sec. Treas. S. F. T. C.

ENGLISH SETTERS.

MILDRED (Edward Dexter), lemon and white bitch (Dashing Rover—Muriel), Feb. 25.

COUNT PIEDMONT (Edward Dexter), black, white and tan dog (Count Noble—Belle of Piedmont), Aug. 9.

GLEN PIEDMONT (Edward Dexter), blue belton and tan dog (Count Noble—Belle of Piedmont), Aug. 9.

BOI GLADSTONE (G. F. Hodgson), black, white and tan dog (Gladstone—Ruby II.), April.

LADY PIEDMONT (G. F. Hodgson), black, white and tan bitch (Dashing Rover—Ranee), March.

DAISY'S HOPE (R. M. Dudley), lemon and white dog (Gath's Hope—Daisy F.), April.

FELIX M. (G. Knapp), lemon and white dog (Gath's Hope—Daisy F.), April.

LA BELL (J. R. Henricks), black and white bitch (Count Noble—Nellie Sting).

DIMPLE (Fred Myles), black, white and tan bitch (Gordon—Blanch), January.

CAPT. BUTEL (J. M. Foster), black, white and tan dog (Gordon—Blanch), January.

GLEAM II. (H. M. Cotingham), orange and white dog (Gleam—Mamie), May.

BOB'S BOY (C. L. Stewart), black and white dog (Bob Gates—Hustling Hannah), January.

NOT NAMED (R. P. McCargo), black and white bitch (Bob Gates—Hustling Hannah), January.

NOT NAMED (C. R. Jones), black and white bitch (Bob Gates—Hustling Hannah), January.

YAZOO (Whyte Bedford), black and white dog (Bob Gates—Hustling Hannah), January.

DELTA (Whyte Bedford), black, white and tan bitch (Bob Gates—Hustling Hannah), January.

ALMO (W. H. Blanchard), orange and white dog (Gleam—Doe), January.

BREAKSPEAR (F. H. Hyed), orange and white dog (Gleam—Doe), January.

OLIVER TWIST (B. F. Wilson), black, white and tan dog (Count Noble—Fannie W.), January.

FASHION (J. F. Hart), black, white and tan bitch (Count Noble—Lit), June.

TUBE ROSE (W. E. Venable), black, white and tan bitch (Count Noble—Lit), June.

LINDO (S. L. Boggs), black, white and tan dog (Gladstone—Flounce), January.

HOPE'S LASS (J. H. O. Denny), black, white and tan dog (Gath's Hope—Lady May), July.

GAY NOBLE (J. I. Case, Jr.), black, white and tan dog (King Noble—Queen Vashti), January.

RESOLUTE (J. I. Case, Jr.,), black, white and tan dog (King Noble—Queen Vashti), January.

LOTTIE C. (J. I. Case, Jr.,), chestnut and white bitch (King Noble—Queen Vashti), January.

NETA NOBLE (J. L. Case, Jr.), black and white bitch (King Noble—Nellie Noble), January.

FLORENCE GLADSTONE (J. L. Case, Jr.), black and white bitch (Gladstone—Flounce), January.

MCCONKEY (J. W. Renfroe), black, white and tan dog (Count Noble II.—Chicago Girl), January.

AMELIA RIVES (F. I. Stone), black, white and tan bitch (Bob Gates—Ruth DeT.), April.

QUICK STEP (F. I. Stone), black, white and tan bitch (Dan Gladstone—Dido II.), January.

THE BARD (T. R. Moody), black, white and tan dog (Gath's Mark—Dell), May.

THE CORSAIR (B. M. Stephenson), black, white and tan dog (Dan Gladstone—Haidee).

LADY OLIVIA (B. M. Stephenson), black, white and tan bitch (Bob Gates—Lady Glady), September.

JAY VEE (A. F. McGehee), black, white and tan bitch (Bob Gates—Ruth DeT.), April.

TAIT'S BEN (W. M. Tait), black, white and tan dog (Rebel Wind'em—Dashing Grace), July.

ALVIN (B. W. Bedford), black, white and tan dog (Rebel Wind'em—Dashing Grace), July.

DIOMED (C. Tucker), black, white and tan dog (Gladstone—Ruby II.) April.

RUBY'S GIRL (C. Tucker), black, white and tan bitch (Gladstone—Ruby II.), April, '87.

PAUL NOBLE (J. W. Murnan), white and black dog (Count Noble— ——), Aug. 7.

BESS OF HATCHIE (W. J. Cannon), black, white and tan bitch (Chickasaw—Belle of Hatchie), Aug. 13.

JESS (W. J. Cannon), black, white and tan bitch (Chickasaw—Belle of Hatchie), Aug. 13.

POINTERS.

ROSWELL (John S. Wise), liver and white dog (Robert le Diable—Young Beulah), March.

BASS (C. E. Michel), liver and white dog (Osborn's Ale—Keswick II.), May.

KESWICK'S DAN (J. R. Dougherty), liver and white dog (Osborn's Ale—Keswick II.), May.

STELLA (F. R. Hitchcock), liver and white bitch (Naso of Kippen—Boski), January.

GLAMORIGAN (L. A. Biddle), liver and white dog (Robert le Diable—Tuck), June.

JOYCE OF HALL'S ISLAND (O. W. Donner), liver and white dog (Lad of Bow—Bloomo), March.

BELLE OF KENNESAW (T. M. Brumby), black and white bitch (Brown Stout—Fayette), October.

HI LO JACK (C. P. Smith), black dog (Joe Pape—Queen), January.

VIC G. (T. H. Gibbs), liver and white bitch (Meteor, Jr.—Mamie), April.

GALLINA (John E. Gill), liver and white bitch (Trinket's Bang—Cremorne), April.

BLOOMO II. (Jas. L. Anthony), Liver and white bitch (Lad of Bow—Bloomo), March.

SLANDER (Jas. L. Anthony), liver and white dog (Donald—Revel III.), August.

DUKE OF MAIN (H. F. Farnham), liver and white dog (Beppo III.—May F.), June.

SANCHO (John A. Greenleaf), liver and white dog (Beppo III.—May F.), June.

AMERICAN KENNEL CLUB MEETING.

A SPECIAL meeting of the executive committee of the American Kennel Club was held at their office on Monday. The president, Mr. A. Belmont, Jr., occupied the chair. The following clubs were represented: American Fox-Terrier Club, T. H. Terry; American English Beagle Club, H. F. Schellhass; Cincinnati Sportsmen's Club, P. C. Ohl; Cleveland Bench Show Association, L. G. Hanna; Hartford Kennel Club, C. J. Peshall; Maryland Kennel Club, H. Malcolm; Massachusetts Kennel Club, Robert Leslie; New Jersey Kennel Club, C. J. Peshall; Philadelphia Kennel Club, J. H. Winslow; St. Paul and Minnesota Kennel Club, H. F. Schellhass; St. Bernard Club of America, Lorenzo Daniels; Westminster Kennel Club, F. R. Hitchcock.

Six new members were admitted: Syracuse Kennel Club, Virginia Field Sports Association, Albany Kennel Club, Washington City Kennel Club, Southern Field Trials Club, and American Gordon Setter Club. The Tennessee Poultry and Pet Stock Association also applied for admission, but as a copy of their constitution and by-laws had not been received, the matter was laid on the table until the next meeting. A letter from the Winsted Kennel Club declining to accept their election to membership on account of irregularity in proceedings was, at the request of Mr. Peshall, laid on the table. The resignation of the Stafford Kennel Club was received. We did not learn that any action was taken, although some one suggested that they be dropped from the list.

Mr. A. C. Collins, for the Hartford Kennel Club, wrote a letter calling attention to the case of J. F. Campbell in regard to the exhibition of the Yorkshire terrier Bertie for Sir Colin at the last New York dog show. Mr. James Mortimer also wrote demanding an investigation of the case. It was voted that a committee of two be appointed to investigate the matter, and the president appointe dMessrs. J. H. Winslow, of Philadelphia, and H. Malcolm, of Baltimore.

Mr. Belmont gave notice that he would offer an amendment to Rule 16, that dogs winning a prize after the closing of the entries of any show should not be transferred to the champion class.

Mr. Belmont advocated that the plan of associate membership in use by the English Kennel Club be adopted, and that a monthly kennel gazette be published by the club, and he agreed to guarantee the club from loss in the publication of the gazette for five years in the sum of $5,000. A vote of thanks was tendered Mr. Belmont for his offer, and the matter was placed in the hands of a committee consisting of Messrs. Belmont, T. H. Terry and L. Daniels, to report at the next meeting. Mr. Peshall said that he was in favor of publishing the gazette, but thought it advisable that it should be devoted solely to matters of record without any comment, as he deprecated antagonizing the press by competition. Mr. Belmont replied that some of the press would criticise in any event, and that one paper was supporting the National Dog Club, and it was time that the American Kennel Club took it up. Breeders, he continued, don't know how or for what the National Dog Club was got up; it has not been started in harmony, but was organized in direct opposition to the A. K. C. Had they desired harmony they could have joined the A. K. C. or appointed a committee to consult with that body. Breeders, he said, had been duped and would not have joined had they known the principles of the new club. He alluded to the difference in the rules of the two clubs, and suggested that a circular containing a full explanation of the matter should be sent to every breeder in the country. Mr. Peshall said that the entire opposition was by the *American Kennel Register*, and as long as it exists we may expect opposition from FOREST AND STREAM. He thought that a little diplomacy would harmonize everything, and suggested that a committee be appointed consisting of the president and two others to confer with the publishers of any private stud book, with a view to its purchase. Mr. Belmont said that breeders should be informed that overtures had already been made for the purchase of the *American Kennel Register*. He added that he had nothing against FOREST AND STREAM, but he wanted it to represent things as they are. The report of the Boston show was falsified in that paper, as it was represented to have been a first-class dog show, when such was not the case. A committee consisting of Messrs. Peshall and P. C. Ohl was appointed to confer with the publishers of any private stud book, with a view to its purchase. Messrs. Belmont, Peshall and Vredenburgh were appointed a committee to prepare a circular as mentioned above to be sent to breeders.

AMERICAN FIELD TRIAL DERBY.—*Editor Forest and Stream:* I see in the list of A. F. T. Derby entries that Mr. Edward Dexter's three setters are described as mine, and that Mildred is described as liver and white instead of lemon and white; I wish to correct these errors.—C. E. MCMURDO, Manager Field Trial Kennels.

THE NEW JERSEY DATES.—*Editor Forest and Stream:* By what and whose authority were the dates claimed for the next show of the New Jersey Kennel Club?—A MEMBER. [The dates were given to us by the president of the club.]

THE AMERICAN PET DOG CLUB.

THE following are the constitution, by-laws, etc., adopted by the American Pet Dog Club:

The name and title of this club shall be The American Pet Dog Club.

Officers.—The officers of this club shall be president, two vice-presidents, secretary and treasurer. They shall be elected at the annual meeting to be held the second Wednesday in November, and shall hold office for one year, or until their successors are elected. A majority vote shall elect officers. President.—The president, when present, shall preside at all meetings. In the absence of the president one of the vice-presidents shall preside. In the absence of both, any member of the club present may be voted to fill the chair by a majority of a quorum. Nine shall constitute a quorum. Secretary.—The secretary shall keep a record of all proceedings of the club, and present the proceedings of the last meeting to be approved at the next. He also shall have charge of all correspondence relating to the club. He shall notify the members of all meetings to be held; and no meeting shall be legal or regular without such official notification. Treasurer.—The treasurer shall have charge of the club's funds, and shall present a report at every meeting of all moneys received and disbursed, and balance remaining in the treasury.

No one person shall hold two executive offices at the same time, only in the event of the resignation, deposition or prolonged absence of one, in which event the duties may be performed by another executive officer by election. The vacancy to be filled at the next meeting.

No person who is a member or executive officer of another club of a kindred character to this, shall be eligible as an executive officer of this club, or of its executive committee, excepting such as are or may be members when these rules, etc., are adopted.

To constitute an active member, he or she shall be proposed at one meeting and voted upon at the next. In the election of active members, from the adoption of these rules and by-laws, the vote shall be by ballot. One negative vote or black ball shall disqualify a candidate for membership.

The dues may be increased or diminished at the annual meeting of the club, of which proposed change notice must be given at a previous meeting. No person shall be considered a member of the club till his or her initiation fee is paid.

To alter or change any of the adopted rules of the club, will require the vote of a majority of the active members. Absent members may vote proxy on all questions, the requests of the members so voting to be made in writing and addressed to the secretary. An honorary member shall not be entitled to a voice or vote.

There shall be an executive committee of five, of whom the vice-presidents and secretaries shall be members; the other members to be elected by the club. The executive committee shall have power to transact the business of the club, subject to the approval thereof.

A majority of the executive committee shall have power to call a meeting of the club whenever, in their opinion, the interests of the club demand it.

The members of the executive committee are to be considered, in their capacity, as distinct from the executive officers of the club.

A member may be expelled for cause by a two-third vote of a quorum. Such expulsion to be valid must be approved at the next meeting of the club.

An expelled member may be readmitted by a three-fourths vote of the club. A two-thirds vote of a quorum may suspend a member for cause.

A member having been absent three consecutive meetings will be required to write to the secretary, stating cause of absence, otherwise the club may impose a fine, or such other discipline as the majority of a quorum may determine.

OBJECTS OF THE CLUB.

1. To encourage the breeding of all dogs, especially those breeds recognized by this club as belonging to the pet dog classes, to the highest standard of perfection, and thus discountenance the presence of mongrels at dog shows.

2. The general protection of pet dogs, and the punishment of persons discovered abusing them.

3. The protection of such owners of pet dogs as are members of the American Pet Dog Club from the depredations of dog thieves. This to be effected by the club exercising its influence in the prosecution of such thieves as may be detected, and of persons in whose possession the stolen or lost dogs of members may be found.

4. In order to carry out the objects of the club, to give annual bench shows in New York and other cities, at which shows, although all dogs entitled to pedigree will be admitted, pet dogs will be made the special and first object of the club's care and consideration.

5. In any and all bench shows given by and under the auspices of this club, the standard of merit as laid down by "Stonehenge" shall be inflexibly enforced by the club, and observed by the judges in making awards. No person shall be appointed a judge who shall not subscribe to, and agree to be governed by such standard, and not by his own peculiar ideas of what a dog should be. The dog having the highest aggregate of meritorious points shall be the winner.

6. Should the judge err as to the relative merits of the dogs, his decision shall not be considered final. Upon protest of the exhibitor claiming to have been wronged, the dogs in dispute shall be rejudged by competent persons mutually agreed upon by the owners or their agents. Each side to select one judge, and these two a third. Should the disputants fail to select judges as above, then the executive committee shall appoint one or more whose decision shall be final. In no case shall the judge whose decision has been appealed from rejudge.

7. To be considered, the protest or appeal must be written, and addressed to the executive committee of the show; and the points of merit upon which the judge has erred must be stated.

8. The appeal must be accompanied by a deposit of five dollars. If the decision of the judge is sustained, the deposit shall be forfeited; if reversed, it shall be refunded.

9. Every appeal so entered shall be considered; and if the exhibitor entering the appeal so demands, the dogs shall be rejudged.

(Addenda—A competent judge of dogs can no more, in reason, be offended at his decision being reviewed by other judges, than a judge of one court, when his decision is reviewed by the judges of a higher court. A judge who is not willing to have his acts reviewed by other competent judges need not accept the position. At shows given by the American Pet Dog Club, merit, and merit alone, shall secure the prize; and no rule shall be made or adopted by the club which might in any wise exclude honest exhibitors from full justice, and the right of appeal.)

10. The standard or points of merit of each class will be displayed on a tablet in the judge's ring when that particular class or breed is being judged. Thus, all present may be judges of the judge's acts. All dogs to be judged in daylight.

11. This method, heretofore unknown at dog shows, will prove a mutual protection to judge and exhibitor.

12. Every member of the American Pet Dog Club will be entitled to the privilege of entering one dog free of charge in every show held under the auspices of the club; and will also be entitled to an exhibitor's season ticket, and an additional season ticket for any friend whom he or she may name.

13. The initiation fee shall be five dollars for the first year ending November 14, 1888, and no assessment shall be made without the consent of all the active members. Fifty dollars will constitute a life member.

ORDER OF BUSINESS.

1. Calling of the roll. 2. Reading of the minutes. 3. Election of new members or officers. 4. Reports of officers. 5. Reports of committees. 6. Unfinished business. 7. New business. 8. Adjournment.

List of breeds and classes recognized by the American Pet Dog Club as house or pet dogs:

Pugs up to 17lbs., pugs 17 to 25lbs. (bitch not to exceed 17lbs.), King Charles spaniels, Blenheim spaniels, Prince Charles spaniels, ruby spaniels, Japanese spaniels, Yorkshire terriers (blue and tan), Yorkshire terriers (other than blue and tan), Maltese terriers, Skye terriers, Dandy Dinmonts, black and tan terriers up to 7lbs., black and tan terriers over 7lbs. (two classes), Italian greyhounds up to 14lbs., Mexican hairless, fox-terriers not over 10lbs., black poodles, poodles other than black, spaniels under 28lbs., Irish terriers, Scotch terriers, bull-terriers not over 10lbs., Bedlingtons, beagles.

All correspondence should be addressed Secretary American Pet Dog Club, Box 1569, N. Y.

AMERICAN KENNEL REGISTER.

FOLLOWING are the numbers of the dogs entered in the July number of the *American Kennel Register*:

BEAGLES.

6353. Kate W., Hornell-Harmony Kennels.
6364. Royal Krueger, Hornell-Harmony Kennels.

COLLIES.

6365. Bessie My Darling, E. C. DeLander.
6367. Lassie Nevis, C. V. W. Fish
6368. Prince IV., B. Chambers.
6366. Flora Maze, E. C. DeLander.
6369. Rubie, A. F. Byrd.

GREAT DANES.

6370. Colonel, J. E. Hudson.

MASTIFFS.

6371. Beech Grove, J. B. Haley.
6372. Boss II., T. P. Amoss.
6373. Cordova, W. H. Smith.
6374. Crawford, J. Lane.
6375. Dougal, E. P. Comins.
6376. Duke of Kansas, J. C. Burnett.
6377. Empress of Wacouta, Wacouta Kennels.
6378. Hector, L. M. Aitken.
6379. Lemona, W. H. Smith.
6380. Lord Raglan, Wacouta Kennels.
6381. Milo II., J. Gardner.
6382. Princess, N. E. Haley.
6383. Rex V., R. T. Perine.
6384. Tigrenes, C. W. Warner.

NEWFOUNDLANDS.

6385. Fritz, S. F. Biddle.

POINTERS.

6386. Dan's Trump, G. D. Alexander.
6387. Don Juan, J. W. Biddle.
6388. Jack, M. A. Case.
6389. Jill, M. A. Case.
6390. Judge, W. M. Williams.
6391. Kaiser, F. H. Peck.
6392. Mikado, F. H. Peck.

PUGS.

6393. Mussette, D. A. Nichols.

ST. BERNARDS—ROUGH-COATED.

6394. Fanchon, C. D. Cugle.
6395. Juno, W. Booth.
6396. Rhona B., S. G. Beals.

SMOOTH-COATED.

6397. Bess, B. J. Schorr.
6398. Bettie, W. W. Davis.

SETTERS—ENGLISH SETTERS.

6399. Dash Bondhu, F. R. Wing.
6400. Forest Anthracite Kennels
6401. Mona Bondhu, A. Lewis.
6402. Nina Laverack, B. Keenan.
6403. Whyte Bedford, T. C. Robertson.
6404. Zeno, E. C. Lathrop.

GORDON SETTERS.

6405. Duke of Kent, E. Kline.
6406. Gypsey, H. W. Woodrow.
6407. Macbeth, S. H. Stockman.
6408. Nell, J. H. Mackin.
6409. Ruby Royal, J. S. Gans.
6410. Sarah M., W. A. Marple.
6411. Viola, E. Kline.

IRISH SETTERS.

6412. Galore, W. J. O'Hara.
6413. Grace, J. F. Campbell.
6414. Juliet, F. T. Weatherill.
6415. Red Rory, G. Drummond.

SPANIELS—FIELD AND COCKER SPANIELS.

6416. Beau, H. H. Graff.
6417. Brownie, G. P. Buchanan.
6418. Florence Obo, E. P. B. Southworth.
6419. Gipsey, G. A. Cluett.
6420. Lady Floss, J. T. Carson.
6421. Sancho, J. R. Chapman.
6422. Shaun Rhue, T. J. Drummond.

TERRIERS—BLACK AND TAN TERRIERS.

6423. Vortex, J. F. Campbell.

BULL-TERRIERS.

6424. Daisy Graham, C. T. Donovan.
6425. Grity, C. T. Donovan.
6426. Lady Bolckow, C. T. Donovan.
6427. Mark Antony, C. T. Donovan.
6428. White Puss, E. A. Woodward.

FOX-TERRIERS.

6429. Smart, J. C. Hutchinson.

SCOTCH TERRIERS.

6430. Drake, Jr., J. H. Hertzler.
6431. Euchre, J. J. Nussbaumer.
6432. Glencho, Jr., W. E. Hoff.
6435. Jeppa II., D. A. Raif.
6434. Trixy, W. E. Hoff.

YORKSHIRE TERRIERS.

6435. Dandy Dick, J. W. Merriam.

DOG TALK.

THE English consul in Manchuria tells in his report of a curious industry which flourishes in his part of the world, writes a *Sun* correspondent. It is breeding dogs for their skins, which go to make dogskin rugs. The market is not supplied by catching stray animals in the streets, but from regular dog ranches, with which Manchuria is dotted by thousands. A ranch produces from 10 to 100 rugs yearly, and it takes eight skins to make a good rug. Dogs which grow fine fur in that country are strangled in the winter time, when the fur is best, before they are a year old, and their skins are sent, frozen, to be prepared in some town. The bodies are eaten, so that nothing is lost. This industry may not be expected to flourish outside China, as we are told that it is necessary for the dogs to be eaten, in order that the ranches may make both ends meet, as skins of good quality and carefully prepared only fetch three taels, or about $3.50, at Bristol.

The subject of trimming dogs, especially terriers, is just now agitating the British dog world. At the recent Kennel Club's show at Barn Elms, the judges were instructed as follows by the secretary of the committee: "I have to call your attention to the prevalent practice of unfairly treating the coats of certain classes of terriers, and to ask you to pass over and call attention to all dogs that in your opinion have been so dealt with." According to the report of the show in the *Stock-Keeper* several dogs in the wire-haired fox-terrier classes were penalized on this account and considerable dissatisfaction was consequently manifest among the exhibitors.

The Boston *Journal* is responsible for a dog that shells peas in an orthodox manner and eats them like a Christian. It is very singular that our esteemed contemporary has no sense of the eternal fitness of things. It would have taken but one more letter to have made it beans.

The New Haven *Palladium* says: "A well known resident of Wallingford has for several years owned a valuable bird dog, which has been the pet of the family. Recently a small spaniel has been added and has in a manner crowded out the larger dog as a family pet, causing jealousy on his part. A few days ago both dogs were missing for a time and upon search being made it was found that the old dog had dug a deep hole in the ground and had put the unwelcome intruder into it, and when discovered was covering up the hole as fast as possible. The spaniel was rescued, much to the discomfiture of his rival in the affections of the family."

The Brant Cocker Kennels have purchased from Mr. J. P. Willey the well-known cocker spaniel bitch Blackie III. She is a noted brood bitch, and will undoubtedly be a valuable acquisition to the kennels.

In addition to the St. Bernard bitch Lady Wellington, purchased by Mr. E. B. Sears in England, we learn that he has also bought the mastiff bitch Countess of Dunsmore. She is by Beaufort and out of Holda.

DEATH OF LILLIAN.—The Syracuse Kennel Club has met with a great misfortune in the loss by death of their well-known setter bitch Lillian. She whelped July 10 a litter of thirteen, and shortly after contracted a cold which took the form of pneumonia, causing her death July 14. Lillian was bred by Messrs. P. H. and D. Bryson, and was whelped August 31, 1883. She was by Gladstone and out of Sue. She was a winner both in the field and on the bench. In '84 she divided third in both the Derby and All-Aged stakes at the trials of the N. A. K. C. and the trials of the Southern Sportsman's Association. In 1885 she divided second at the Western Field Trials Association's trials, and in 1886 she divided third at the National trials. Her winnings on the bench were: First, Cleveland, 1886; first, Pittsburg, 1887, and first, Cincinnati, 1888. She was just in her prime, and her loss is a severe one to the club. The puppies, we understand, are doing well.

ST. PAUL DOG SHOW.—St. Paul, Minn., July 16.—*Editor Forest and Stream:* The St. Paul and Minnesota Kennel Club will hold its second annual bench show in St. Paul on October 23, 24, 25 and 26, 1888.—J. E. STRYKER, Secretary.

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope of large letter size. Sets of 200 of any one form, bound for retaining duplicates, are sent for 30 cents.

NAMES CLAIMED.

☞ **Notes must be sent on the Prepared Blanks.**

Grousecker, U. by D. and Beaufortina. By Dr. W. F. Spring, Bridgeport, Conn., for liver and white pointers, two dogs and one bitch, whelped July 17, 1888, by Clifton Kennels' Sachem (champion Beaufort—Zuba) out of Belle of Winchester (Captain Fred—Lady F.).

May B. By Geo. W. Lovell, Middleboro, Mass., for black, white and ticked pointer bitch, whelped Feb. 25, 1888, by Glen Graphic (A.K.R. 4388) out of Jeanette (Glenmark—Zanetta).

Brake C. By Geo. W. Lovell, Middleboro, Mass., for lemon and white pointer dog, whelped Jan. 18, 1888, by Glen Graphic (A.K.R. 4388) out of Jennie (champion Fritz—Bird).

Joan III. By T. C. Edwards, Chicago, Ill., for lemon and white Clumber spaniel bitch, whelped Jan. 22, 1888, by Johnny II. (Johnny—Nell III.) out of Joan II. (Johnny—Jill).

Elknoor Hunt. By J. M. Fronefield, Wayne, Pa., for his pack of beagles, and the prefix Elknoor for anything emanating from his kennels of English setters and beagles.

BRED.

☞ **Notes must be sent on the Prepared Blanks.**

Guess—Doctor. W. S. Bidwell's (Monterey, Mass.) pointer bitch Guess (A.K.R. 6317) to his Doctor (A.K.R. 6316), May 22.

Cute—Duke. L. Gardner's (Mt. Vernon, N. Y.) pointer bitch Cute (A.K.R. 2632) to his Duke (Glendale—Spotless), July 19.

Belle—Gloster. Chas. Caroll's (Hempstead, L. I.) setter bitch Belle to James L. Breese's Gloster (Dashing Rover—Trinket), June 27.

Juno W.—Brant. Chas. M. Nelles's (Brantford, Ont.) cocker spaniel bitch Juno W. (Obo II.—Darkey) to his champion Brant (Obo II.—Blackie III.), June 24.

Flirt—Brant. A. Watts's (Brantford, Ont.) cocker spaniel bitch Flirt (Guy—Flirt) to Chas. M. Nelles's champion Brant (Obo II.—Blackie III.), June 13.

Blackie III.—Obo II. Chas. M. Nelles's (Brantford, Ont.) cocker spaniel bitch Blackie III. (Brush II.—Blackie II.) to J. P. Willey's champion Obo II. (Obo—Chloe II.), June 12.

Bonita—Brant. Chas. M. Nelles's (Brantford, Ont.) cocker spaniel bitch Bonita (Brahmin—Ouida) to his champion Brant (Obo II.—Blackie III.), June 10.

Flirt—Little Red Rover. H. B. Palmer's cocker spaniel bitch Flirt to C. M. Nelles's Little Red Rover, June 9.

Duskie—Mike. Chas. M. Nelles's (Brantford, Ont.) cocker spaniel bitch Duskie (champion Brant—Mollie Brant) to his champion Mike (Frank—Nellie), June 2.

Meg—Brant. R. P. Anderson's cocker spaniel bitch Meg to C. M. Nelles's Brant (A.K.R. 5389), June 27.

Lady Pluto—Doc. Geo. H. Whitehead's (Trenton, N. J.) cocker spaniel bitch Lady Pluto (Obo II.—Blackie III.) to American Cocker Kennels' Doc (A.K.R. 3795), July 19.

Miss Topsy—Doc. American Cocker Kennels' (Wm. Penn, Pa.) cocker spaniel bitch Miss Topsy (A.K.R. 5968) to their Doc (A.K.R. 3795), July 21.

Queen Obo—Doc. American Cocker Kennels' (Wm. Penn, Pa.) cocker spaniel bitch Queen Obo (A.K.R. 3032) to their Doc (A.K.R. 3795), July 13.

Lucy—Doc. American Cocker Kennels' (Wm. Penn, Pa.) cocker spaniel bitch Lucy (A.K.R. 4470) to their Doc (A.K.R. 3795), July 15.

Bedlam—Scarsdale. A. Perrin's (Cambridge, Mass.) fox-terrier bitch Bedlam (A.K.R. 3698) to E. C. Coney's Scarsdale (A.K.R. 1212), July 17.

Lady—Bradford Harry. Fred Noble's (Pawtucket, R. I.) Yorkshire terrier bitch Lady (Banks's Royal—Lady) to F. H. Coombs's Bradford Harry (Crawshaw's Bruce—Beale's Lady), July 9.

WHELPS.

☞ **Notes must be sent on the Prepared Blanks.**

Dame Trot. J. M. Fronefield, Jr.'s (Wayne, Pa.) imported beagle bitch Dame Trot, July 16, six (one dog), by his The Rambler (Marchboy II.—Lizzie).

Maud. Chas. Woods's (Philadelphia, Pa.) beagle bitch Maud, July 3, six (four dogs), by H. F. Schellhass's Trailer (Racket—Fly).

Belle of Winchester. Dr. W. F. Spring's (Bridgeport, Conn.) pointer bitch Belle of Winchester (Captain Fred—Lady F.), July 17, seven (six dogs), by Clifton Kennels' Sachem (champion Beaufort—Zuba).

Ruby. J. P. Swain, Jr.'s (Bronxville, N. Y.) pointer bitch Ruby (A.K.R. 4893), July 19, nine (ONE dog), by W. M. Williams's Judge (A.K.R. 6390); three bitches since dead.

Apollona. John Keevan's (Brooklyn, N. Y.) St. Bernard bitch Apollona (A.K.R. 6347), July 11, eleven (nine dogs), by Essex Kennels' Essex (A.K.R. 930); three since dead.

Lillian. Syracuse Kennel Club's (Syracuse, N. Y.) English setter bitch Lillian (Gladstone—Sue), July 10, thirteen (seven dogs), by their Dad Wilson (Cambridge—Dido II.).

Lit II. Syracuse Kennel Club's (Syracuse, N. Y.) English setter bitch Lit II. (Roderigo—Lit), July 17, eight (four dogs), by their Dad Wilson (Camoridge—Dido II.).

Narka Noble Gladstone. Dr. L. M. Thompson's (Mahanoy City, Pa.) English setter bitch Narka Noble Gladstone (A.K.R. 6264), July 1, eight (five dogs), by Anthracite Kennels' Forest (A.K.R. 6400); four black and white, two lemon and white and two white.

Tees Chloe. J. H. Hammett's (Newport, R. I.) cocker spaniel bitch Tees Chloe, July 5, five (four dogs), by Fay & Baxter's Ned Obo.

Busy. Chas. M. Nelles's (Brantford, Ont.) cocker spaniel bitch Busy (Mike—Nancy), June 13, five (three dogs), by his champion Brant (Obo II.—Blackie III.).

Turpur. Chas. M. Nelles's (Brantford, Ont.) cocker spaniel bitch Turpur (Silk, Jr.—Brantford Flirt), June 24, seven (four dogs), by his Little Red Rover (Obo II.—Woodstock Dinah).

Woodstock Dinah. Chas. M. Nelles's (Brantford, Ont.) cocker spaniel bitch Woodstock Dinah (imported Tippo—Toronto Jet), June 17, eleven (seven dogs), by his champion Brant (Obo II.—Blackie III.).

Beauty. J. T. Campbell's (Montreal, Can.) Yorkshire terrie bitch Beauty, July 18, three (two dogs), by P. H. Coombs's Bradford Harry (Crawshaw's Bruce—Beale's Lady).

Belva. M. H. Dailey's (Bangor, Me.) Yorkshire terrier bitch Belva, July 9, five (one dog), by P. H. Coombs's Bradford Harry (Crawshaw's Bruce—Beale's Lady).

SALES.

☞ **Notes must be sent on the Prepared Blanks.**

Lassie Rippon. Sable and white collie bitch, whelped May 4, 1886 (A.K.R. 6212), by Palmetto Kennels, Charleston, S. C., to J. G. Vose, Orangeburg, S. C.

Scotilla—Gem whelps. Collie bitches, whelped April 12, 1888, by Chestnut Hill Kennels, Philadelphia, Pa., one each to Mr. Yendall and W. D. Hughes, both of same place.

Bonnie Knowe. Sable collie bitch, whelped March 17, 1886, by Red Gauntlet out of Brenda, by Robert McEwen, Byron, Ont., to Chestnut Hill Kennels, Philadelphia, Pa.

Nightthorpe. Sable collie bitch, whelped Aug. 16, 18886 (A.K.R. 4248), by Chestnut Hill Kennels, Philadelphia, Pa., to I. H. Wilson, Charleston, S. C.

Nullamore. Sable collie dog, whelped Aug. 11, 1886 (A.K.R. 3715), by Chestnut Hill Kennels, Philadelphia, Pa., to W. D. Hughes, same place.

Juanita. Black cocker spaniel bitch, whelped June 24, 1887, by Brant out of Bonita, by Chas. M. Nelles, Brantford, Ont., to Walter C. Hately, Chicago, Ill.

Little Rover—Monie Brant whelp. Black cocker spaniel dog, whelped March 2, 1888, by Chas. M. Nelles, Brantford, Ont., to J. Otis Fellows, Hornellsville, N. Y.

Ben. Black cocker spaniel dog, whelped Feb. 22, 1888, by Brant out of Bonita, by Chas. M. Nelles, Brantford, Ont., to M. F. Suydam, Hawley, Pa.

Blackie III. Black cocker spaniel bitch, whelped May, 1882 (A. K. R. 428), by J. P. Willey, Salmon Falls, N. H., to Chas. M. Nelles, Brantford, Ont.

Breda Jim—Breda Tincy whelps. Irish terrier dogs, whelped April 25, 1888, by Chestnut Hill Kennels, Philadelphia, Pa., one to Griffiths Coit, San Francisco, Cal., and one to W. H. Johnstone, Chestnut Hill, Pa.

KENNEL MANAGEMENT.

☞ **No Notice Taken of Anonymous Correspondents.**

READER, N. Y.—A Gordon setter's hair has fallen in places from his legs and thighs, which look sore; his eyes discharge a large amount of yellow matter. Ans. Give 5-grain pill of quinine every morning. Keep bowels open with syrup of buckthorn in teaspoonful doses, and give 5 drops of Fowler's solution of arsenic in the food night and morning.

B. J. L., Elmira, N. Y.—I have a setter pup 5mos. old, who two weeks ago began to break out in sores along the belly, especially about the hindquarters, along back and sides. He seems to be all right. Sores start with a yellow head and dry in a day to scab like iron rust. He also runs considerable at the eyes. Nose seems right, damp and cold. Appetite good. Ans. One form of eczema or mange. Cleanse the dog with warm water and castile soap and apply zinc oxide ointment every morning. Keep the bowels clear and give 5grs. quinine night and morning in pill form concealed in a morsel of meat.

K. C., Phoenixville, Pa.—I have a Newfoundland bitch with pup due Aug. 11. I notice to-day for the first time a very large lump on left elbow about the size of an apple. I also notice one has commenced to grow on other arm. Will you kindly inform me what is the cause of this growth, and what can be done for it, and if curable. When felt it does not seem to be painful to the dog. Her general health is excellent. Ans. Often comes in old dogs. It is similar to corns or bunions in the human race. It may be due to bad position in lying down, irritation coming at this point. Nothing can be of much benefit unless you can remove the irritation.

E. R. K., Philadelphia, Pa.—An Irish setter, twelve months old, two or three weeks ago was taken sick and ever since that time he has been afflicted with nervousness; this is so bad at times that he cannot be induced to take food in the presence of any one. He has a very good appetite and I give him mostly bread and milk. He has a hot, dry nose and his coat is in very poor condition. Ans. Look for worms in the passages; if found, give 30grs. of areca nut powdered and made into a large pill; repeat this in three hours. If you do not discover worms, give a teaspoonful of the following in water three times daily:

℞ Syr ferri quin. et strychnin. phosph..... ʒiv

E. G. S., Braddock, Pa.—About four weeks ago my Irish setter and water spaniel pup about four months old took the distemper, from which they seem to have recovered all right except a little running at the eyes. About two weeks ago the water spaniel seemed to grow weak in the hind parts and his head turn on one side. About a week ago my other pup was taken the same way; still running at the eyes and shakes; will start to run and fall down and can hardly get up. They seem to eat well. Can you tell me what to do for them? Ans. Give a compound cathartic pill hidden in a small morsel of meat. See that there are no worms. Give 5grs. of quinine morning and evening, also concealed in same way. If dogs do not improve report again.

H. E., Hammonton, N. J.—My setter bitch at the age of five months became afflicted with mange. A month later warts, resembling seed warts on the human cuticle, but soft and pendulous, made their appearance on the tongue, lips and mouth. The bitch died from distemper and its sequences one month after the warts appeared. The rest of my dogs have the warts coming in the same manner. Could they have taken them from her, and what will remove them? Also, what causes them? Ans. It is hard to say what causes these growths, often some local irritation. They can be removed by application of fuming nitric acid on a match or pine stick. By means of a small stick of soap too extensive action of the acid can be stopped. Lunar caustic will also eradicate, but is slower in action.

L. S. E., Sedalia, Mo.—An English setter, 15 months old, in April had distemper, and came very near dying. I nursed him for a month, when he began to improve and stopped coughing and fattened up. I thought him entirely well, when one morning going in the yard he could scarcely walk, seemed to give way in his loins very similar to a hog with kidney worms. I did nothing for him as I thought it might be caused by a lick received during the night. In a few days he got almost over it, when he seemed to stop improving, and now he has little use of his right hindleg, though he does not seem to suffer any from it, but all the time when he is lying down this leg jerks at regular intervals about every second. Ans. A very common sequel of distemper. Keep the bowels open with syrup of buckthorn in teaspoonful doses, and get the following:

℞ Ferri et strychnin citrat..... .....grs. xxx.
Fit pil. No. 10.

Give one taree times daily concealed in a morsel of meat. Rub the affected parts with some stimulating liniment morning and evening. Look for worms.

A wonderful story has just made its way hither from Cannes; but, as your readers will presently perceive, it would be rather rash to guarantee its strict authenticity. It would, perhaps, be more prudent to class it, pending its verification, among the "things that might have been." Be this as it may, the tale is worth relating, if only as a novel specimen of Munchausen literature. It happened in this wise: In the forest of Esterel a man and woman were at work, and not far off their babe—an infant 6 months old—was lying in the cradle, which had been moved to the front of their cottage in order that the little cherub might inhale the fresh air under the watchful gaze of its fond parents. Suddenly a noise was heard, and an enormous eagle swooping down from the cerulean sky, seized the babe with beak and claws, and began to soar once more toward the sun, when the distracted father, rushing madly into his hut, took up a gun. Without a moment's hesitation the man pointed his weapon at the cruel bird and fired. The eagle dropped earthward as dead as a door-nail, and its slayer now achieved another feat which would have won him any amount of applause at Lord's. He held out his hands and caught the child as it fell, the little one escaping without so much as a scratch, and returning from its journey into mid-air as "bright as a button." So Tell of immortal renown has now a rival. The only drawback is that a skeptic has hinted that if it were carefully examined the majestic bird might prove after all to be only a cauard.—*London Telegraph.*

Rifle and Trap Shooting.

RANGE AND GALLERY.

WASHINGTON HEIGHTS AND ALGONQUINS.—New York, July 19.—*Editor Forest and Stream:* Noticing in to-day's issue of your valued journal that Washington Heights G. C. had defeated a rifle team from the Algonquin G. C., I wish to correct a wrong impression that may be therein conveyed. The team from Algonquin was in reality a scrub team, whereas the Washington Heights Club have been preparing for this rifle match for an indefinite period. When our friends of the W. H. G. C. meet a representative rifle team from the Algonquin G. C., and fairly defeat them, then we will not dispute their right to assert their superiority over us with the rifle, but until such a time arrives, would it not be well to spare the printer's ink? We propose at our next meeting to discuss the advisability of having a rifle range on our club grounds, which are admirably situated for a 100yds. range. Once this is successfully accomplished, as no doubt it will be, and that very expeditiously, we will be pleased to hear from the riflemen of the W. H. G. C., or of any other club in the locality. We have among our members several fine rifle shots, who are a little "oil" for want of practice. They will be heard from later. I hope you will insert this in next issue of your journal, as we feel that an injustice has been done our club.—BLUE ROCK.

SUFFOLK, Va., July 11.—The members of the Colts Amateur Rifle Club met at their gallery last night for the first regular practice. The lights were badly arranged and very poor shooting was the result. Possible 120, 75ft., .22-cal. rifles:

W N McAnge	9	9	11	11	10	9	12	9	11	7	—98
John Pipkin	8	9	9	10	6	11	10	10	9	9	—92
P I Winborne	10	7	9	6	11	11	7	12	8	9	—90
H E Smith	9	11	5	9	10	8	10	9	6	10	—87
J H Newton	8	9	9	8	7	12	8	6	12	6	—85
Wiley Knight	10	4	9	8	10	7	12	3	6	11	—80
John F Lotzia	12	0	7	10	11	11	2	4	6	4	—67
W H Jones, Jr	4	2	7	7	4	10	6	8	7	7	—62
John Monell	5	2	11	5	5	8	3	6	1	3	—49
R E Jones	0	0	0	8	4	8	10	5	7	4	—48

CREEDMOOR, July 21.—It was a splendid day for shooting at Creedmoor to-day. The a tendance, however, was not large, but the shooting for gold, silver and bronze medals and cash prizes was spirited. The gold medal was captured by J. D Foot, of the 7th regiment, who made 47 points out of a possible 50, at distances of 200 and 500yds. The following are the winners of silver and bronze medals at the same distances:

	200yds.	500yds.		200yds.	500yds.
Lieut John Shephard	23	—46	G S Scott	21	—44
Capt M H Palmer	22	—45	A Stein	22	—44
C A Jones	23	—44	O E Dudley	23	—44
E F M Wendelstadt	21	—44	G F Hamlin	22	—43

Cash prizes were won by the following: G. L. Stebbins, 7th Regiment, 46 points out of 50; Major G. L. Shorkley, U. S. Army, 46; John F. Klein, 17th Separate Company, 44; W. J. Underwood, 7th Regiment, 44; R. McLean, 7th Regiment, 43; A. McDougall, 7th Regiment, 43, and W. L. Frost, 12th Regiment, 43.

LONDON, July 19.—The shooting contest to-day for the Elcho shield at Wimbledon resulted in favor of the Irish team. The scores were as follows: Ireland, 1,352 points; England, 1,642; Scotland, 1,563.

BOSTON, July 21.—The regular matches were shot to-day at the Massachusetts rifle range, and below will be found the best finished scores:

Rest Match, 200Yds.

S Wilder	12	11	11	11	9	12	9	12	12	11	—110
H Severance	11	10	10	10	10	12	10	9	9	12	—103

	r	10	7	9	10	9	7	9	10	10	10—91

GARDNER, Mass., July 19.—Yesterday a team of seven men, members of the Heywood Guards, Co. F, 2d Regiment Infantry, M.V.M., went out to Hackmatack Range. The shooting was off-hand with Creedmoor target, distance 200yds. The result follows:

Private G W Bishop	33	Captain C O'Neal	28
Private A E Knowlton	32	Private F White	28
Lieut C N Edgell	31	Private F B Edgell	26—207
Sergeant B F Thrasher	29		

There were also individual five-shot scores with the following results:

G W Bishop	22	24—46	F B Edgell	21	21—42	
A E Knowlton	22	23—45	F White	22	20—42	
C N Edgell	22	23—45	F L Proctor	20	10—10	
B F Thrasher	22	22—44	C O'Neal	16	20—36	

TORONTO VS. BOWMANVILLE.—The telegraphic match between the Bowmanville Rifle Association and the Toronto Association took place Saturday afternoon, July 14, on their respective ranges and resulted in a victory for the Toronto team by 47 points. The weather with the winners was very trying, owing to the haziness and changing winds, while the Bowmanville men experienced considerable smoke, owing to bush fires in that locality. Following are the respective scores, 7 shots per man per range:

Toronto Team.	200	500	600	T'l	Bowmanville Team.	200	500	600	T'l
T Mitchell	30	28	24	92	J B Mitchell	29	27	24	80
G Thompson	32	33	25	90	W S Russell	29	29	21	79
R McVittie	31	44	25	89	McLaughlin	29	24	25	78
A G Ronan	26	31	24	81	D Beach	30	24	24	78
Wm Harp	28	30	20	78	J Sando	28	29	20	77
A Cartwright	28	23	25	76	W S Young	27	28	21	76
A D Cooke	26	28	21	75	W C King	30	26	16	72
G M Donnelly	24	22	27	73	J Curtis	22	13	23	67
	225	228	201	654		234	200	173	607

The return match was set down for July 21.

OTTAWA, July 10.—The Metropolitan Rifle Association held their annual meeting this evening, President G. B. Pattee presiding. The treasurer's report shows the funds to be in a satisfactory condition. The following was the result of the election of officers: Patron, Sir Adolphe Caron; Vice-Patron, Mayor McLeod Stewart; President, Mr. G. B. Pattee (re-elected); Vice-Presidents, Col. Bacon and Mr. Allan Gilmour (re-elected); Secretary-Treasurer, Mr. J. W. Taylor; Assistant Secretary-Treasurer, Mr. R. E. Watts; Auditor, Mr. J. McJanet; Managing Committee, Major Todd, Capt. Harwood, Lieut. Winter, Mr. J. Grant, Mr. J. A. Holbrook. The annual prize meeting will be held on Aug. 24 and 25, unless the Quebec provincial matches are held that week, in which case the Metropolitan matches will be held on the 17th and 18th.

PORT ELGIN, July 20.—A very interesting match was shot between the Port Elgin and Owen Sound Rifle Association to day on the Port Elgin Range. The weather was very favorable and good shooting was done. The match was practically a tie till the last three men shot their number of rounds, and resulted in a victory for Port Elgin by 10 points, seven rounds at each range. Following is the score, 7 shots per man per range:

Owen Sound.	200yds.	400yds.	500yds.	Total.
Dr C M Lang	30	30	24	84
Lieut-Col Telford	29	27	23	79
C K Grigg	23	29	25	77
J O Ott	25	29	13	67
W Wilson	25	30	20	75
C C Pearce	28	30	25	83
A Campbell	32	33	22	86—551
Port Elgin.				
L F Mitchell	37	31	26	88
D J Izzard	28	32	26	86
A Smith	25	27	25	77
A Pilter	27	29	25	81
A Merriam	16	29	23	68
J Erdt	30	25	28	83
H Smith	30	27	21	78—551

TORONTO, July 16.—The long-deferred Rifle Association match for the challenge cup came off to-day on the new range at Mr. Alexander Hamilton's grove. The coveted prize had been twice won by Mr. J. J. Glover, of Beaverton, and had he been successful at the late meeting, the cup would have become his own property. He, however, had to make way to a better marksman. The terms of the match are: 200 and 400yds., 5 shots at each range; Snider rifle; at shorter range, kneeling or standing; longer range, any position, no artificial rests; open only to members of Beaverton Rifle Association; 25 gentlemen competed. At the conclusion of the 200yds. contest, Mr. J. Williamson, of Lindsay, led, being 17 out of a possible 20. He was followed by Mr. John Calder, of Beaverton, by 16. The balance were composed of 15, 14 and one 12. Mr. Glover was a 14 man. At the long (400) range the difference was seen, Mr. Williamson only placing 13 to his credit and Mr. Calder 12, but Mr. McNeil, of Gamebridge, headed the list by adding 17 to his previous one of 15, thus making his total 32. This score was not beaten, so he becomes the possessor, for the time being, of a very handsome cup. The gentlemen competing were Messrs. C. A. Patterson, H. Westcott, D. McMillan, J. C. Jennett, J. Leslie, A. F. Burchard, P. McMillan, J. Burchard, J. J. Glover, A. K. Cameron, John Calder, John Brown, A. Dobson, A. McRae, W. Curran, Don McMillan, R. White, A. Campbell, D. McNeil, J. Williamson, J. H. Oliver, W. Dobson, R. F. Killaly, D. A. McKinnon, Dun. McRae.

NEW ORLEANS, La., July 15.—The Orleans Rifle Club gave a prize shoot to-day at Magnolia Garden. Only members of the club participated, and they did some good shooting, as will be seen by the following score: Possible 25—First, Carl Coonenberg, 19 points; second, J. Weinol, 19; third, B. J. Hagstette, 18; fourth, E. Eilzen, 18; fifth, E. Klotz, 18; sixth, G. Schmidt, 15; seventh, J. J. Egloff, 15.

SAN FRANCISCO, July 15.—To-day's superb weather attracted large crowds to Harbor View Park where the rifle section of the Verein Eintracht gave a prize shooting match, at which the sum of $240 was distributed. The contest was open to all comers, and lasted from 10 o'clock in the morning till 6 in the evening. The company's special contest, under the management of Capt ain F. A. Kuhls, was also decided. The following made the highest scores. A. Stamer, E. Forst, Captain F. A. Kuhls, Leo Klutz, J. Cron, P. Fueller, T. Wolff, C. Tapken, C. Schuck and E. Streuber. The first bullseyes in the morning and afternoon were got by L. H. Kauffung and J. Helm.

WIMBLEDON, Eng.—Despite a wretched opening, so far as weather went, the old Common range has been magnificent. In the first stage of the Queen's match shot over the 200, 500 and 600 yards ranges, military rifles, 7 shots at each, making a total possible of 105, there were no less than 9 who made 95, and in making up the list of 300 to shoot in the second stage a number of the 86 scores were counted out.

CAMILLUS, N. Y., July 14.—W. B. Bucklin, in a match to-day, made a score of 112 on the standard American target at 200yds, rest.

CONLIN'S COLLECTION.—James S. Conlin, the shooting master at Thirty-first street and Broadway, has a big collection of all manner of exhibits on marksmanship, but he is desirous of getting more, and has sent out a circular asking for photos, targets, etc. He says: "The records of shooting, photographs of marksmen, targets, etc., which I have been gathering together for the past twenty years, form a collection which is admitted to be the best in existence. I have at my gallery a special room devoted to the above mentioned collection, and many gentlemen from all parts of the world who are interested in shooting, have, while in this city, called and inspected same and found much to interest them."

NEWARK, July 19.—The appearance of the Shooting Park today was very different from that of the previous week. The extra 30 targets, the shooting-house, prize temple, booths and other extras had all been removed, and the grounds once more assumed their old-time look. The rain to-day kept the majority of the marksmen away, and only four members of the Newark Shooting Society reported for their weekly practice. The finest work was done by Hayes, who secured an average of about 221 for eight strings. If the weather is more favorable on Thursday next all the society's shooters are expected to be on hand. The International Sharpshooters' Union ran behind about $3 500 on the recent festival. The shooting portion paid big money, but on account of the bad weather the receips at the gate and bars were small.

FITCHBURG, Mass.—The following are the best scores shot on range of Fitchburg Rifle and Gun Club, July 18, off-hand:

F Harvey	8	9	8	9	9	7	9	10	10	6—85
W V Lowe	4	7	9	10	7	9	9	7	8	9—79
A B Small	8	8	8	7	7	9	8	8	9	4—76
Rest.										
F Harvey	10	10	10	10	9	10	10	10	10	9—99
W V Lowe	10	7	9	10	9	7	9	10	10	10—91

July 21 the conditions were favorable for good scores, and some fine shooting was done. The best scores of each shooter are as follows, off-hand:

A B Small	7	10	8	7	6	8	8	10	8	8—81
C H Brown	8	5	9	7	10	8	5	7	7	3—70
F Harvey	9	8	7	7	5	5	9	6	4	7—67
E Newton	8	7	10	7	8	7	5	4	6	4—66
F M Patch	8	4	6	6	4	6	3	6	10	7—61
L R Stanley	9	3	7	3	5	5	8	7	7	5—59
Rest.										
A B Small	11	10	11	12	12	12	10	9	8	12—107
C H Brown	9	9	12	11	9	11	9	10	10	11—101
F Harvey	12	10	8	10	11	9	12	8	9	11—160
L R Stanley	12	7	10	11	10	10	10	9	9	4—92

ST. LOUIS, July 20.—F. A. Fodde made the best score at the regular weekly shoot of the St. Louis Pistol Club. Following are the scores out of a possible 120:

F A Fodde	116	M Summerfield	111
G W Alexander	114	A E Bengel	110

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

FACILITIES FOR MARKSMEN.

THERE are just now two projects under formation in New York, each aiming at the promotion of trap-shooting. One aims to provide a ground so near the city and so convenient of access that no one who wishes to take a few shots need be debarred from visiting the ground because of cost or time outlay. This is the New York Suburban Shooting Grounds Association. The other project is the formation of a league of shooters for the shooting of test matches, to determine records of individual shooters and the relative standing of clubs. Matches will be shot at various times and telegraphic reports sent in. The work of the league will be to see that the matches are properly fought, and as far as may be the league will be fashioned upon the base ball bodies. Local pride will be stimulated and a mass of data gathered which will be valuable in striking general averages.

CLEVELAND, O., July 19.—The competition for the badges at the East End Club shoot to-day was more strongly marked than at any badge contest held by the club this year. Twelve members competed for the badges, and D. R. June won the first prize, breaking 21 out of a possible 23. The conditions were 15 Peorias sprung from five traps at 18yds. rise, and four pairs. The scores follow:

J Held	1091100301100001	10	01	10	10— 9
Levi Wherry	0000011010101101	00	11	10	01—10
A G Harburg	0101011010111111	10	10	10	11—15
A B Jones	1011110111111011	01	11	11	10—18
O H Henry	1100001010101100	00	10	11	10—10
C C Hogan	1101111111111101	11	11	01	10—18
T Haycox	0100111011011111	11	11	10	01—16
C Elford	0000110111011010	10	10	10	10—11
Sweatman	0019011101101111	01	10	10	11—14
D R June	1111010111111111	11	11	11	11—21
C Conger	0100011001000001	00	00	10	11— 8
F C Hogan	0010011110011110	10	10	01	00—11
Mr Weaver	1111011010000010	10	11	11	10—14

C. C. Hogan and A. B. Jones tied on 18 for the second badge, and the former won in the shoot-off at doubles.

FACTORY AMMUNITION.—"Doctor F." writes from Troy, Ohio, that he had long had a prejudice against the shotgun ammunition loaded by machinery, but this has been overcome by his witnessing the high scores attained by trap shooters who use the loaded cartridge.

TORONTO, July 4. The final contest for three gold medals given by W. McDowall & Co., took place at their shooting grounds this afternoon. The event comprised three classes, a medal and four cash prizes going to each class. There were three fortnightly shoots at 16 Peorias each day, the best average score taking the prizes. Messrs. C. Kemp in the first, S. Wilkinson in second, and A. E. Romain in the third class won the medal. The weather was splendid, with a slight wind prevailing, and the sky was just cloudy enough to take the glare off the polished Peoria, thus leaving the shooter without an excuse. The scores in the shoot are as follows, First class, 16 blackbirds, 18yds.:

C Kemp.....1111111110011011—13 G Jones.....0101111100011101—10
D Blea.....1111101110110110—13 G Pear.....0001110010111111— 9
W McDowall.1111011101001011—12

Second class, same conditions:

T Sawden, Jr.1101111100101011—11 S McClure....0111101101110100—10
G Wilkinson.1001101010101111—10 J Swift.....0100011000111110— 8

Third class, same conditions:

T Tomson... .1011111111101110—13 A E Romain..0011111010101111—11
J S Bayles....1010101101111110—11 R Barrett....0000111000010111— 8

The total scores in the three shoots are as follows:

First Class.

Kemp	14	14	13—41	Jones	10	15	10—35
Blea	14	12	14—39	Pear	6	11	9—29
McDowall	13	13	12—38				

Paul, Rickley and Townson retired.

Second Class.

Wilkinson	12	13	10—35	Swift	10	9	8—27
Sawden, Jr.	10	11	11—32	Pearson	7	12	7—26
McClure	9	12	10—31				

R. Wilson, Kipp, Smith, Beatty, B. Wilson, J. Barrett, Walton, Jackson, Harrison and Longley retired.

Third Class.

Romain	11	9	11—31	Bayles	7	5	11—23
Tomson	10	5	13—28	McCready	6	10	7—23
Gardiner	7	13	6—26	Barrett, R.	8	7	8—23

Austin and W. Blea retired. As the above competition has proved in every respect a success, it is the intention of Messrs. McDowall & Co to start another shortly.

J. C. H. R. & G. C.—The Jersey City Heights Rod and Gun Club will hold a five days' tournament at Marion, N. J., in the latter part of September.

WORCESTER, Mass., July 20.—The classification shoots, under the auspices of the Worcester Sportsmen's Club, were continued at the Coal Mine Brook Range this week. In the classification score there are 6 strings of 5 birds, in the prize score a string of 10 birds. No ties were shot, the men dividing. The work in detail follows:

Classification Score—Class A.		Prize score
E F Swan	334542—21	10
M D Gillmore	555455—29	9
G W Wheeler	543535—25	9
A R Bowdish	454454—26	9
C R B Claflin	553254—22	8
H W Eager	544555—28	8
G J Rugg	533544—24	6
G W Russell	444355—25	4
Class B.		
L R Hudson	343332—18	9
Geo Sampson	233323—16	8
V D Kennerson	353352—19	7
L S Killburn	333234—18	6
A B Franklin	222243—15	6

Dr Frank	032122—10	5
H Colvin	111133—10	4
C H Morse	102022— 7	2
C R Holman	241141—13	2

NEWARK, N. J., JULY 19.—The Old Essex Gun Club is again in grand shape and prepared for business. The arrangements for the shooting at Erb's Park were broken up early in the year for causes not necessary to mention here, and in looking around for new grounds affording both convenience and quietude, Mr. A. Heritage (Old South Paw), of the Jersey City Heights Club, let down the bars and bade the club welcome to the acme of shooting grounds at Marion. Not only this, but he volunteered to furnish birds, trappers and every facility and attention required, and to make the bargain cheap to the club whose interest he has at heart—being a co-member—he mortgaged himself and offered a valuable special prize to the best man at the first shoot on his grounds. To-day being the regular day for meeting in competition for club and individual prizes, fourteen members put in an appearance, and had it not been for the threatening weather a greater number would have been present to have given Mr. H. a grand ovation. The shoot was seven times interrupted by heavy showers, but the boys stuck to it till dark, and a more generally pleased lot of gentlemen never left a shooting ground. The two objects in view in this writing, is, first, to express publicly the gratitude of the members of the Essex Gun Club to Mr. Heritage, and, second, to let the shooting fraternity know that the Essex still lives since its encounter with the Eastern Club during the blizzard, and that its flag still flutters. The appended scores speak well for the first shoot on strange ground, and although it has not been customary to publish the doings of the club, it may in future show the members up in cold type regularly. The membership is divided into three classes; each class has its own club fund and individual subscription subdivided, all of which is for the season, and five scores are necessary to qualify. Each member is credited with the five best scores made during the year, the aggregate of which determines his place in the competition.

Regular monthly competition, 10 birds each, Hurlingham rules, except as to gun, Class A 30, Class B 28, Class C 26yds., voluntary entrance $1:

Class A.

Breintnall	1111111111—10	Ford	0111010111— 7
Yeomans	1111111111—10		

Class B.

C M Hedden	1111111111—10	Leddy	1111001111— 8
C R Hedden	1110111111— 9	Nicholas	1111111111—10
Heritage	0111111110— 8	Unger	0111111111— 9

Class C.

Terrill	1111000111— 7	Still	1001011110— 6
Siggins	1111111111—10		

Back Scores.

Breintnall	1111111111—10	C R Hedden	1111110111— 9

Total, 123 out of 140. Ties on 10 for first shot off in first sweep, second and third divided.

First sweep, 4-birds class, handicap rise, 50, 30 and 20 per cent.:

Unger	1111—4	Yeomans	0110—2
*Nicholas	1111—4	Siggins	1110—3
C M Hedden	0111—3	*Breintnall	1111—4
Still	0011—2	Heritage	1111—4
C R Hedden	1111—4	Terrill	1011—3
Leddy	1011—3	Ford	0111—3

*First in regular shoot. Ties divided.

Second sweep, same conditions:

Still	1011—3	C R Hedden	1011—3
Herritage	1101—3	Siggins	1010—2
Yeomans	1110—3	Terrill	0100—1
C M Hedden	1110—3	Leddy	1101—3
Breintnall	1111—4		

Breintnall first, Yeomans and Hedden second, Siggins third.—FORD.

ST. LOUIS, July 20.—The contest and tournament of the Indian Lake Gun Club of East St. Louis aroused considerable enthusiasm among sportsmen in that locality to-day. A large representation of sportsmen from various suburban towns were present, all of whom had gathered to witness a friendly contest for supremacy between the Indian Lake Gun Club of East St. Louis and the Empire Gun Club of St. Louis. The contest was held on the grounds of the Indian Lake Club, about three miles from East St. Louis. The contest shoot was 20 American clay birds. The following is the result:

Indian Lake.		Empire.	
Daniels	5	Meyer	15
Cash	8	H Stein	12
Malone	9	Steffen	12
Roc	5	Haggerty	10
White	8	Roser	13
Baugh	8	Lenhart	11
McElroy	3	F Stein	12
Winstantley	10	Blank	12
M Heim	10	Greisendeck	16
Bridges	11	Westhus	11
F Heim	9— 96	Burg	10—134

The regular programme shoot having been decided, sweepstakes shoots were indulged in the remainder of the day, which resulted as follows:

Shoot 1—Sweepstakes, free to all, 5 American clay birds; entrance 25c.; two moneys:

Weston	4	Cash	5
Roe	3	F Heim	3
L Baugh	3	White	3
Haggerty	5	Winstanley	3
Greisendeck	3	Steffen	4
Scribe	4	Delice	3
Blank	4	Labardy	4
Stein	4	Jameson	3
M Heim	5	Meyers	5

In the shoot off for first money Meyer and Heim divided. Weston, Scribe, Blank and Stein divided second money.

Shoot 2—Ten American clay birds, four moneys; entrance 50c.

Greisendeck	8	Brides	6
Meyer	8	Malone	8
White	8	Westhus	10
Blank	6	Haggerty	7
F Stein	8	Jameson	7
Labardy	5	F Heim	7
M Heim	5	Winstanley	8
Roser	5	Steffen	7
Thornton	7	Jones	8
Baugh	7	Roe	6
Burg	8	Cash	8
Daniels	8	McElroy	9
Fink	6		

Westhus won first money, McElroy second; Meyer, H. Stein, Winstanley and Cash divided third money. Haggerty and Thornton divided fourth money.

Shoot 3—10 American clay birds, entrance 50 cents, four moneys:

Bridges	6	Baugh	6
Jameson	6	Daniels	10
Malone	6	Burg	7
Westhus	8	White	6
H Stein	9	Roser	5
Meyer	9	Roe	7
Winstanley	7	Blank	7
Labardy	6	F Stein	10
Steffen	9	Linhart	9
Haggerty	8	Jones	7
M Heim	5	F Heim	7
McElroy	9	Thornton	10

All divided.

Shoot 4—10 American clay birds, entrance 50 cents, four moneys:

Roser	5	F Stein	8
Bridges	7	Greisendeck	7
Linhart	7	Baugh	7
McElroy	9	Meyer	10
Steffen	9	Labardy	8
H Stein	7	Westhus	10
Daniels	8	Jones	7
Burg	9	Malone	5
Fink	5	Roe	9

All divided.

SAN FRANCISCO, Cal., July 15.—Lincoln Gun Club, fourth monthly medal shoot, at Alameda Point; weather terribly hot; 15 single blue rocks, 5 traps, 18yds. rise; Parks, Edler, Bruns, Dunshee and Campbell 21yds.:

First Class.

C Cate	1101011110111110—11	Potter	1001010111001111— 9
H Venker	0111010101000000— 6	Scovern	0101111001110111—10
Parks	0111100111101010—10	Bruns	0101011110000010— 7
Edler	1010000010110101— 6	Dunshee	1010101011011110— 9
Wenzel	1010101010101011— 9	Campbell	0110101111111111—12
Mellish	1110011000111111—10	Fanning	0110001010011111— 7
Schendel	0000110101011000— 5	Ford	0000110000010000— 3
Schaff	1100111000000010— 6		

Second Class.

F Cate	0110100100011110— 7	Horber	0000001000011000—2
Karney	1011110111011100—10	Cohen	0100000100010000—3
Venker	001000w.	Quinton	0000001010010010—4
Holmes	1011000000100101— 6	Brown	0110010001111001—7

Gold medal in first class won by Campbell, in second class by Karney.

A few votaries of blue rock shooting assembled at Bird's Point to-day and shot some half dozen matches. In each instance the competitors were limited to three and there was no money at stake, the shooters only competing for the price of the discs. Most of the gentlemen, though good at live birds, proved tenderfeet at the inanimate targets, their scores being ridiculously low in many instances, Mr. Baker in one event breaking only three out of twenty singles. Hart was most successful, smashing twenty-one out of forty shot at. Appended are full particulars:

First shoot, 20 singles, 18yds. rise, 3 screened traps, international rules:

Hart	12	Arnold	7	Baker	8

Second shoot, same conditions:

Hart	9	Arnold	8	Baker	6

Third shoot, 5 pairs of blue rocks, 15yds. rise, 3 traps:

Reynolds	4	Brown	3	Baker	3

Fourth shoot, 10 singles, 18yds. rise:

Reynolds	4	Brown	2	Baker	7

Fifth shoot, 20 singles:

Reynolds	8	Brown	8	Baker	8

Sixth shoot, 10 singles:

Reynolds	3	Brown	7	Baker	2

WINCHENDON, Mass., July 20.—At the last two regular meets of the Winchendon Gun Club at their range, the members present have each shot a string of ten clay-pigeons, with the following result:

A D Lawrence	1011111001—7	F E Mann	1001010101—5
H J Lawrence	1100001111—6	J Sutherland, Jr	1100010110—5
P W Davis	1100110011—6		
H J Lawrence	1011111111—9	J Sutherland, Jr	0101110101—6
A D Lawrence	1111111110—9	P S Davis	0100000111—4
L F Martin	1010110111—7	F E Moss	0011000110—4
F F Hapgood	1001001111—6		

CLEVELAND, O., July 18.—The event of the week in the local shooting was the twenty bird race to-day between T. G. Haycox and F. C. Hogan, both members of the East End Gun Club. The match has been talked of for several weeks, but terms and the time of the contest were agreed upon only a few days ago. The conditions were twenty Peorias at eighteen yards. When ten targets had been sprung per man Haycox led the race by one bird, and at the close he was declared the winner, the score standing 17 to 16. The score:

T. Haycox.....00110111111101101011110101—17
F. C. Hogan.....11011100100010111111101011—16

WAYLAND, Mo., July 19.—A clay-pigeon shooting tournament attended by marksmen from Iowa, Illinois and Missouri, was held here this afternoon. The weather was pleasant and the sport was fine. The principal shoot was the contest for the Collier trophy, a handsome silver cup, which was won by R. G. Callahan, of Kahoka, Mo., who made a clean score of 20 clay-pigeons, if Callahan wins the trophy another time it becomes his personal property. Scores that are considered above the average were made in the several shoots.

CLEVELAND, July 20.—The Cleveland Gun Club held a special meeting this evening in the Garfield Club rooms for the purpose of taking action on the organization of the proposed Central Gun Club. The prevailing sentiment favored the scheme, and W. R. Huntington, E. H. Wallace and Fred Wheal were appointed to co-operate with similar committees of the other gun clubs in the organization of the new club. The Cleveland Club is almost a unit in favor of arranging a match with the Stark county shots. The new club will take up the matter.

WELLINGTON, Mass., July 21.—There was a good attendance at the grounds of the Wellington Club to-day, and some good scores were made in the new merchandise match. Following are the winners in the several events: Six clay-pigeons, Melcher, Perry, Bond and Schaefer; 6 blue rocks, Snow and Melcher; 6 clay-pigeons, Chase, Hutchins and Melcher; 6 blue rocks, Adams, Perry and Newhall; 5 pairs blue rocks, Miller, Schaefer and Wardwell; 5 pairs clay-pigeons, Stone; 12 clay-pigeons, consolation match, Perry, Bond, Brown and Snow; 13 blue rocks, Wardwell; 6 clay-pigeons, Grimes' match, Melcher and Chase; 6 blue rocks, Snow and Schafer; 6 blue rocks, Snow. Nichols won the Grimes prize. Following are the scores made in the merchandise match at 25 birds: Perry 21, Conant 14, Hutchinson 21, Snow 19, Bradstreet16, Wardwell 24, Shumway 19, Stone 17, Melcher 18, Charles 17, Richards 17,, Savage 15, Schaefer 14, Durand 14, Newton 13, Bond 21, Brown 22, Adams 16, Miller 17, Chase 19, White 15, Sanborn 13, Grimes 14, Nichols 12.

SAN DIEGO, Cal., July 14.—The San Diego blue rock tournament, under the auspices of the Selby Smelting Company, came to a conclusion to-day, after a most successful two-days' meeting. All the shoots were governed by the Chamberlin rules, and only the Selby standard cartridges allowed. The "Standard" medal, valued at $100, with $25 added, was won by Dr. Britton, of Los Angeles, who thus takes rank as blue rock champion shot of Southern California. The medal shoot was at 50 single and 25 double blue rocks, sprung from 3 screened traps, the rise being 18yds. for the singles and 15 for the double birds. Dr. Britton broke 46 singles and 39 doubles, winning the trophy, with a total of 85 out of a possible 100. Hamilton, of San Diego, won second money ($37.50), with 42 singles and 39 doubles, totaling 81. Third money ($22.50) was annexed by Martinez Chick, of Los Angeles, with 37 singles and 42 doubles, making 79. Morse and E. Chick tied for fourth prize and divided $15. Morse and Dr. Britton had the best luck over the sweepstake shooting.

Canoeing.

Canvas Canoes and how to Build Them. By Parker B. Field. Price 50 cents. Canoe and Boat Building. By W. P. Stephens. Price $1.50. The Canoe Aurora. By C. A. Neidé. Price $1. Canoe Handling. By C. B. Vaux. Price $1. Canoe and Camera. By T. S. Steele. Price 1.50. Four Months in a Sneakbox. By N. H. Bishop. Price $1.50. Canoe and Camp Cookery. By "Seneca." Price $1.

Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signal, etc., of their clubs, and also notices in advance of meetings and races, and report of the same. Canoeists and all interested in canoeing are requested to forward to FOREST AND STREAM their addresses, with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

AMERICAN CANOE ASSOCIATION.

OFFICERS, 1887-88.

Commodore: R. W. GIBSON.....} Albany, N. Y
Secretary-Treasurer: F. L. MIX.}

Vice-Com.	*Rear-Com.*	*Purser.*
Central Div..R. W. Bailey	W. R. Huntington	J. K. Bakewell, 140 Diamond St., Pittsburgh.

A CANOE.

BY KATE HUDSON.

EMBODIMENT of buoyant grace,
So seeming frail yet strung with strength
Throughout thy slender tap'ring length
To brave the waves' mad race.

A lyre whose tightened cordage sings
With the weird wind-spirits' strain,
Fit prelude to the wild refrain
Each surging billow brings.

But nought to thee the tempest's might,
Resting on ocean's restless breast
Thou poisest on each foaming crest
As sea-birds ease their flight.

Or, drifting on the woodland lake,
Like leaves the airs of autumn blow,
Scarce the faint ripples from thy prow
Thy mirrored image break.

For not alone by idle chance
Thy gently flowing lines were planned,
But moulded by some reverent hand
To match the current's glance.

Thy sails, that o'er the waters flit,
Seeming like some wraith swallow's wings
So far removed from earthly things,
The wind's fair shoulders fit.

Shaped afar nature's high decrees
In thee—like all true works of art,
Wrought not in pride, but from the heart—
Her foster-child she sees.

A CHALLENGE FOR THE NEW YORK CUP.

MR. STEWART, who was here in 1886, wrote last spring to a member of the N. Y. C. C. that he expected to challenge for the New York C. C. cup, but nothing was heard by the club until Friday last, when the following cablegram was received from the secretary of the Royal C. C.:

"Challenge sent in May returned and delivered. Will you accept? WINSER, Royal Canoe Club."

Com. Munroe cabled an acceptance at once. It is not probable that any one but Mr. Stewart is included in the challenge. The race is likely to take place early in September, after the A. C. A. meet.

NEWBURGH C. AND B. ASSOCIATION, JULY 21.

THE annual regatta of the Newburgh Canoe and Boating Association was held on Saturday, five races on the programme. The canoes and boats were started together over the same course, 3½ miles, the canoes being: Rat, Grant E. Edgar, Jr.; Pixie, F. B. Smith; Dido, Alfred Kane; Cal-loo, William T. Hilton; Whim, Harry A. Marvel; Iolas, C. D. Robinson. Rat led easily, but did not finish on the proper line, so was compelled to recross. Whim took first place and Rat second. The prize was a cork canoe mattress.

The entries for the boat sailing race were as follows: Rambler, James T. Van Dalfsen and Wm. G. Van Dalfsen; Scylla, Fred and Harry Bartlett; Bob, George W. Shaw and Harry M. Waring; Doricha, Charles S. Williams and Robert King. The race was won by Scylla in 1h. 28m. 39s. Rambler, second, in 1h. 33m. 10s. The prize was a copy of "Small Yachts."

The single paddling race for canoes was over a half-mile course southward to the boathouse, from a point opposite the Cotton Factory. The entries were as follows: Rat, Grant E. Edgar, Jr.; Pixie, F. B. Smith; Whim, Harry A. Marvel; Dido, F. W. Bartlett. This race was very close and was won by Pixie, in 12m. 40s. Dido was second. Time, 12m. 41s. The prize was a pair of Walsh's paddles.

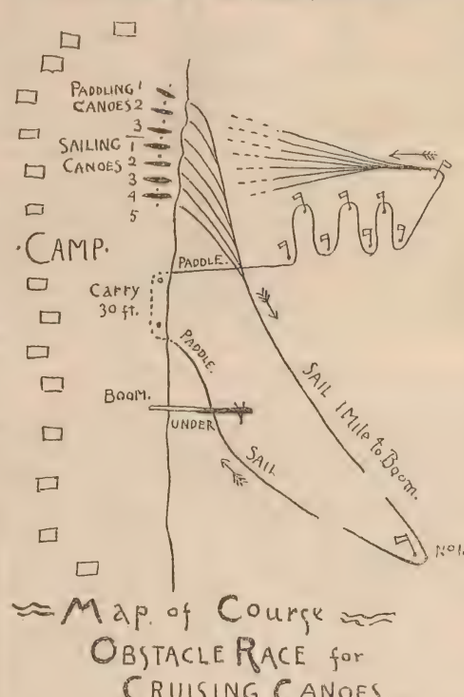
The next event was a half-mile rowing race for boats, over the same distance and course, the entries for which were as follows: Argo, rowed by W. C. Scott and R. G. Hilton; Bob, H. E. Shaw and C. H. Low; Scylla, Harry and Fred Bartlett; Billy T., Charles Harrison and Robert Johnston. The race was won by Scylla in 4m. 25s. Prize, a pair of Tim. Donoghue's best oars.

The last event of the regatta was a half-mile tandem paddling race, over the same distance and course, the entries for which were as follows: Whim, F. W. Bartlett and Harry A. Marvel; Pixie, Nathan S. Smith and Fred B. Smith. The race was won by Pixie in 5m. 40s. The prize was a handsome lantern.

BIRCH BARK CANOE BUILDING.

MR. C. H. FARNHAM, a canoeist known to many of our readers through his contributions to the magazines, has an article in the August number of *Harper's Monthly* on the Montagnais Indians, in which he gives the following description of the birch canoe and its manufacture. Mr. Farnham has used the American decked canoe for many years as the aid and companion on the many long voyages of exploration he has made on the waterways of New York and Canada.

"The bark canoe is the Indian's *chef d'œuvre*. It seems to me not only a beautiful object, but a suggestive emblem of his life. It is the most natural boat in the world; to make it he peels the bark from a birch, splits a cedar for timbers and planks, binds it together with roots, and closes its seams with pitch from the pines. His tools are an ax, a crooked knife and an awl made of deer bone. No compass and square cover his weakness, for every piece tells the exact truth of his hand and eye; not even a bench removes him from the earth, nor a roof covers him from the sky; he kneels at his work. And the women embody their attachment in the pitch they press into the cracks. It is nature's model made by the wild man, in the woods. The life of the bark canoe is equally poetic; it floats through mountain lakes with the beaver, and runs rapids with the otter; indeed, all of its companions are creatures of the forest; it is faithful to nature to the very last, when it retires to the shore of some lonely pond, to mould under its mound of feathery moss. I never met this most poetic of wrecks without recalling its romantic human interests. It was the home of a family, it was the scene of the whole tragedy of life, from the beginning to the end, strange with untamed characters, and intense with real storms, real misery, joy or love, passing in the isolation of the wilderness.



"Canoe building is the chief industrial event of the Indian's life. As the craft lasts in hunting only two or three years, about one-third of the tribe build canoes here every summer. This important work is intrusted only to men of experience. And although they have here some civilized tools, yet the whole operation is full of the Indian's originality; you see men at word sitting on the ground holding a stick perhaps between their feet to shave it or on their knees to plane it, and they do it mostly by the eye, without measures, in shaping their symmetrical, beautiful craft. I often loitered about the canoe built by Paul St. Onge, the patriarch of the tribe. Although he is one hundred and five years old, yet he is quite erect and sprightly, and still skillful with his ax and crooked knife. 'Paul, how many canoes have you built?' 'I don't know, about 175; but I shan't build many more; the Lord will soon give me another job. I am waiting for him every day,' and straightening up to his full height he looked off to the horizon with a very expectant and practical expression. 'You must have traveled a good ways in these light craft in a hundred and five years?' 'Yes,' said he, turning over his stick on his narrow bench, 'I've been everywhere; all over,' swinging his long arm toward every point of the compass. Then as he went on shaving and shaping his sticks I kept him telling me how he makes a canoe. The birch bark canoe might be called a cedar or spruce canoe, for two-thirds of its material—the timbers and planks—are of wood. The timbers, or knees, are split out of green stuff and shaved down to a quarter of an inch and a width of two and a half to three inches. In the woods this is done with a knife, but here a rude bench and a drawing knife facilitate the work. The timbers, after soaking a week or two, are bent in pairs over the knee, and bound in bundles to season in the sizes and shapes required at various parts of the canoe. The gunwales are also bent to the desired sheer, and seasoned in shape on the ground by the help of props and weights. After seasoning the crossbars are mortised into them. The planks or battens are long strips, from an eighth of an inch thick to a quarter along the bottom, and 3 to 4in. wide. The choice of bark is made with care to secure one that is tough and free from knot holes. A canoe generally requires three pieces of bark, the main one covering the bottom and bow and stern, and a smaller one sewed on to the main one on each side to reach the gunwales. After they are peeled from the trees they are tied up in rolls for transportation; and if they have been peeled some weeks before use, they are soaked several days to make them pliable. The loose layers on the outside are stripped away to leave only the tight layers, and the rough grain on the inside is scraped off to make it smooth. The bark is then set up in the general shape of a canoe, to be cut and sewed in the following manner: The main bark is laid on a smooth level ground, the inside surface downward, and a flat frame—shaped like the gunwales, but without any sheer—is laid on the middle of it and weighted with stones to keep everything in place. The bark is bent up along each side of this frame and stakes are driven in to hold it; the gunwales are set up inside the stakes, and supported by props under the crossbars and weighted to keep them in position; strips inside and outside the bark keep it flat along the sides. Each edge of the bark is then cut off to receive the additional pieces put on to reach the gunwale; the fullness of the bark along each side is taken out by cutting gores; the additional pieces are cut and pinned in places. Then the squaws come with their split spruce roots, their thongs of deer's hide and awls, to sew up the seams, excepting those at the bow and stern. The long seam of each additional piece has a half-round spruce root laid along the outside, under the stitches, to protect the rawhide from splitting the edge of the bark; the edges of the gores, not lapping but meeting, are held by a stitch here and there. The edge of the bark is then trimmed off all around, bent over the gunwale, and sewed fast to it with roots. After the canoe is otherwise finished a lighter gunwale or strip is nailed or wrapped on top of the main gunwale, to cover this wrapping and the edge of the bark, and the crossbars are lashed to the gunwales by roots rove through holes near their ends. When the seams have been sewed and the gunwales finished, the stem and stern seams are sewed up, thus: A pair of light cedar strips, a quarter by half an inch, are bent to the desired curve of each end of the canoe, a strip is laid on each side of the bow, as a kind of welt, the rawhide thongs, passing through the bark and over these strips, draw the two barks closely and firmly together. The bark is then trimmed off along these curves.

"The weights at the bottom frame are now removed and the inside of the canoe is covered with a coat of pitch—resin and grease—and this again is covered with some thin pieces of bark. The bark has now been cut to the general shape of a canoe and secured to the gunwales and the seams have been sewed up, it is ready to receive the planks and timbers that are to hold it in the desired form. Beginning at the bow, the long thin planks or battens are nicely fitted into the canoe, forming a lining running fore and aft. The peculiarly shaped stem post is slipped into place. The gunwales have been beveled on the under and outer corner to form a groove between them and the bark to receive the ends of the timbers. Beginning at the bow again, the first timber is cut of the proper length, the ends are slipped under the gunwale at their proper place, and the timber is driven at the center, forward over the lining until it stands plumb. It thus stretches the bark taut and keeps its place. Thus the timbers are successively fitted in, working from the bow and stern toward midships; they are the moulds that decide the shape of the canoe. And as they are a series of inverted arches springing from the gunwales across the bottom and standing about ½in. apart, they form the strongest lining of the canoe. The craft is now capsized, the seams are packed full of warm pitch mixed with a dry red pigment and those of the bow and stern are moreover covered with a strip of muslin. The bark canoe is a remarkable invention for beauty, lightness and strength; I doubt that the most learned inventor could make anything better adapted to its uses."

CRUISING AT THE MEET.

THE cruisers certainly will have no grounds for complaint this year, as their interests have been considered in the local as well as in the regular A. C. A. programmes. Both the Eastern and Atlantic Divisions have tried the cruising meet, and special races for cruisers are now a matter of course. The following programme has been prepared by the committee on cruising, appointed last winter by Com. Gibson. The committee has wisely decided not to take a long cruise, but to condense all the leading points of cruising into a cruise of 24 hours, with first and second prizes for the highest number of points, as given below, covering camp equipment, rig, cooking and other important points. If this experimental cruise and competition is as successful as it deserves to be, it will lead to a more extended cruise next year. In the obstacle race first and second prizes will be given for both sailing and paddling cruisers.

The cruisers, ladies and gentlemen, will assemble at the Commodore's tent at 9:30 A. M., Friday, Aug. 17, and embark from the

Map of Course
OBSTACLE RACE for
CRUISING CANOES.

main camp at 10 o'clock, proceed by sail or paddle to —— Bay, where lunch will be eaten upon the water at 12:30 o'clock. At 1:30 P. M. all will head for —— Island, where they will begin to make camp for the night at not earlier than 4:30 P. M. At 5:30 o'clock they will begin the preparation of supper. Camp-fire at 8 o'clock, "all being wood." Breakfast shall be ready at 7:30 A. M.

The launch for the homeward voyage shall commence not earlier than 9 o'clock. The cruise will end on the beach in front of the commodore's tent at 12 o'clock noon, Saturday.

Points will be given for—

1. Best and dryest stowage.
2. Best canoe tents and arrangements of details.
3. Best supper and time of preparation.
4. Best breakfast and time in washing dishes.
5. Best set cooking utensils.
6. Best breaking camp and stowing ready for launching, neatness and dispatch.
7. Best rig, cruising sails.
8. For compactness, simplicity and inexpensiveness of entire cruising outfit.

OBSTACLE RACE FOR CRUISING CANOES.

Contestants will have their canoes on shore in positions assigned them, tents up, crew inside with one bundle of clothing and one bundle of bedding. At the second gun the crew will appear, strike tent, launch and sail around flag No. 1 to a boom placed 2ft. above the water, pass under it and paddle to the carry; land canoe, passing around the two carry flags on the land side; launch and paddle to flag No. 4, leaving it to port, No. 5 to starboard, and in the same order to and around No. 11 to the place of starting, each landing at his own berth. Shoes, clothing and bedding must be kept dry.

Paddling canoes will start five minutes after the sailing canoes. A first and second prize will be awarded sailing canoes, and a first and second prize to the paddling canoes.

The committee will be glad to have a large number of entries in the obstacle race, and they extend an earnest invitation to lady and gentlemen canoeists to go on the cruise, as it will undoubtedly prove delightful.

W. L. PALMER,
GEO. L. PARMELE,
L. W. SEAVEY, Chairman.

IANTHE C. C. RECORD RACES.—The Ianthe C. C. held its first sailing race for record points on Saturday, July 21. The start was made in a strong S.E. wind, which shifted to S. and became very light before the finish. The flood tide, however, retained all of its force, and as it was running in the same direction as the wind, prevented most of the canoes from finishing. The entries were:

	Start.	1st.	2d.	3d.	4th.
Atalanta, L. B. Palmer, Ianthe	1	1	1	1	1
Will o' the Wisp, W. Anderson, Essex	2	2	3		
——, P. Hogan, Ianthe	3	3	2		
Old Ironsides, G. P. Douglass, Ianthe	4	5	5		
——, W. Scott, Essex	5				
Falcon, H. S. Farmer, Ianthe	6				
Batchelor, B. Fredrichs, Ianthe	7	4	4		

Just after the start Falcon fouled Old Ironsides and withdrew.

A. C. A. MEMBERSHIP.—Atlantic Division: Dewitt Bailey, John Sage Fiske, George Snyder, Fred N. Snyder, Brooklyn; Barron Fredricks, Newark; H. B. Willard, New York.

QUAKER CITY C. C.—Officers, 1888: Com., J. A. Barten; Vice-Com., C. H. C. Cunningham; Sec.-Treas., S. C. Fox, 131 South Second street, Philadelphia, Pa.

WESTERN CANOE ASSOCIATION MEET.—The report of meet and races was received too late for insertion this week.

She (well up in yachting terms)—Do you think it is safe to jibe? He (who doesn't know a jib-boom from a tiller)—Depends on whom you gibe at.—*Burlington Free Press.*

AMERICAN Y. C. REGATTA, JULY 21.

WHETHER or no steam yacht racing can be made popular is a problem yet to be decided. Thus far the efforts made abroad have not attained any great success; but the American Y. C. is at least determined to make a fair trial and to neglect nothing that may contribute to the desired end. The success of the steam yacht is an established fact, it fills a decided want, and it is bound to increase in numbers and in quality every year; but, at the same time, the very nature of the sport is such that the steam yachtsman is independent of clubs and club houses to a far greater extent than his sailing brother; his yacht, from its size and appointments, offers every accommodation for his guests as well as his family, and has no need to seek companionship on shore at a club house. Thanks to the added speed and certainty of steam, he cruises over a far wider range, and is much less tied down to any one spot than the sailing man; his yacht drops him at some city pier in the morning and picks up in the afternoon for a night afloat. All of these conditions are so different from those of the sailing yacht that it is impossible to draw any analogy, or to say whether racing under steam will prove more or less successful than racing under canvas. Certainly the keen enjoyment of a hard fought bout to windward or a close run under spinakers is entirely absent; but, on the other hand, there is an increase of speed, of excitement, and also of danger, that should add much zest in these rapid times.

In its efforts in behalf of steam yachting the American Y. C. has started out with a fine house and anchorage, a good racing course, a fine fleet, and valuable prizes; in fact it has done all that a club can do, the rest remains with the individual owners. The house is a very handsome structure on the extremity of Milton Point, three miles from Rye station, which is one hour by rail from New York. It is fitted up with every convenience, dining-rooms, kitchens and bedrooms for the permanent entertainment of members, while on each Saturday the building and grounds are open to ladies, a band being in attendance during the afternoon and evening. This experiment has proved a great success, the attendance is always large, and the new club is one of the most popular institutions along the Sound. Already a number of its members have purchased property adjoining the club grounds, and have built handsome cottages, and the whole character of the Point is likely to change within a year or two. The course of the club is from off the Point straightaway to a markboat anchored about 11 knots to the eastward of Stratford Shoal Light, and nearly on a line south from Branford Point. The distance is 40 knots, the yachts returning to the starting line, making 80 knots in all. At the markboat the yachts are timed as they pass out and back, which time of turning is deducted from the elapsed time of the run, providing it does not exceed 15 minutes.

The prizes offered this year were the Atalanta's cup, presented last October by Mr. Jay Gould, open to any sea-going yacht over 100ft. l.w.l. belonging to an organized yacht club of the United States, to be given for the fastest time over the course, and to be won by the same yacht for two successive years, irrespective of ownership, before becoming the permanent property of the yacht. The race must be made at a speed of 16 knots in order to take the cup. The Commodore's cup was offered for the fastest time over the course, with no restrictions. There were also three cups under the time allowance proposed by C. E. Emery, Ph. D., one for each class, as follows: First class, exceeding 150ft. l.w.l.; second class, all over 85 and not over 150ft.; third class, all over 50 and not over 85ft. This time allowance is based on the rule that the speed of a yacht in knots per hour should equal two and seven-tenths times the cube root of the length of the yacht in feet on the waterline. There was also one cup under the rule submitted by Mr. Chas. H. Haswell: "The velocity of a vessel is assumed as the cube root of the quotient of the product of the area of her grate surface, and the constant due to the character of combustion, divided by the cube root of the square of her gross tonnage. The constants being for natural draught, 1; jet, 1.25; blast and exhaust, 1.6."

The above prizes were offered under the following conditions: "All yachts entered will be considered as contesting for all possible prizes, unless parties entering specify a limit. No yacht, however, will be entitled to claim in addition to the Atalanta's challenge cup more than one prize, and the party entering any yacht winning more than one race will have to elect, within three days, by notice to the regatta committee, for which race he claims the prize. The committee will then award unselected prizes to the yachts next in order. No prize shall be given in any class unless two or more yachts of that class start."

All the prizes were open to yachts enrolled in any yacht club, except as stated for the Atalanta cup, which is limited to clubs of the United States.

In spite of the value of the prizes the entries were small in number, many yachts which were expected being absent, while some that were present did not start. In the harbor in the morning were the flagship Tillie; the Narwhal, Vice-Com. C. H. Osgood; Inanda, Rear-Com. E. M. Field; Susquehanna, Mr. Jos. Stickney; Sagamore, Mr. J. W. Slater's handsome new barkentine; Norma, Horace Daniels; Stranger, Mr. Geo. S. Scott; Restless, Mr. Wm. Singerly; Viola, Mr. J. P. Kennedy; Orienta, Mr. A. J. Bostwick; Oneida, Mr. E. C. Benedict, and Puzzle, Mr. Jordan L. Mott. At the club landing was the little flyer Buzz, a 50ft. launch built last year at Amesbury, Mass., by C. D. Mosher, one of the fastest of her class afloat. She is an open launch, with a ram bow and narrow round stern, 50ft. on deck and 6ft. 6in. beam, with a horizontal boiler of the locomotive type and a two-cylinder compound engine. The shaft is below the keel at the sternpost, while the balanced rudder is directly under the aft end of the keel, a metal blade about 3ft. long and 8in. wide, set in a vertical shaft. The screw is two-bladed, 30in. in diameter. The hull is entirely open,

save a short deck at each end and also over the boiler, the bunkers being on each side of the latter. The Buzz was entered in the third class, and the fame of her doings scared all the other entries off, but after losing all the morning in repairs at the dock she did not start at all; so the race fell through in this class. Just before noon a curious craft came into the harbor, a yacht with very high freeboard, a rather short overhang forward, a long and fine counter aft, and with very light spars for schooner rig. Her sides were of varnished mahogany, and her great freeboard gave her the appearance of a rather small boat, but she was 115ft. on l.w.l., in spite of her appearance, being the new Herreshoff yacht Say When. She was not entered, but ran out with the racers at the start, traveling very fast. The starters were:

FIRST CLASS.

	L.W.L.	
Stranger	173ft. 5in.	Geo. L. Scott
Tillie	137ft.	Com. W. H. Starbuck
Susquehanna	95ft.	Jos. S. Dickney

SECOND CLASS.

Orienta	117ft.	J. A. Bostwick
Restless	110ft. 6in.	Wm. M. Singerly
Inanda	87ft. 8in.	Rear-Com. E. M. Field

As stated, there were no entries but the Buzz in the third class, and she did not start.

The Viola, Mr. J. P. Kennedy, was used by the regatta committee, and at 11:30 A. M. she ran out to the start. The preparatory signal was given at 11:48 and the start at noon exactly. The fleet lay about half a mile above the starting line, and as the time expired all came for the line under good headway, Orienta crossing just after the waistle, with the others so close that the six were timed within a minute and a half. They were hardly over before the were well toward the horizon, and in a very short time they were all hull down, and nothing was left to the spectators but to wait for their return in some five or six hours. The water was perfectly smooth, there was hardly any wind, and the tide was with the yachts, both out and back. Stranger and Susquehanna soon took the lead, with Orienta in third place, but when about half the way out had been covered the latter blew out a gasket and was obliged to withdraw. Stranger was the first in, being less than four minutes over the limit of five hours, thus failing to win the Atalanta Cup. Susquehanna was second, close astern of her, and then followed a long wait for the others. The official times were:

	Start.	Finish.	Actual.
Orienta	12 00 01	Did not finish.	
Tillie	12 00 03	6 09 49	5 54 39
Susquehanna	12 00 41	5 14 30	5 06 32
Stranger	12 01 09	5 08 10	5 05 50
Inanda	12 01 20	6 57 50	6 43 45
Restless	12 01 24	6 14 00	6 10 09

Stranger wins the Commodore's cup. Susquehanna wins the Emery cup in first class, and Restless wins the Emery cup in second class. The estimated time consumed in turning the Stratford Light stake was Stranger, 3m. 11s.; Susquehanna, 7m. 17s.; Tillie, 15m.; Restless, 2m 27s., and Inanda, 12m. 27s. The Haswell cup probably goes to Stranger also, but the times have not been calculated.

The rowing races of the club will be held on July 28, over a mile course off the club house. The first race will be for cutters with two pair of sculls, the prize being the Bateman challenge cup, now held by the Inanda, with badges for the winning crew. The second race will be for dingeys with one pair of sculls, and the third for gigs and cutters with four oars and coxswain. A special cup for naphtha launches is offered by Mr. Clement Gould. The regatta committee for the year includes Messrs. George W. Hall, Ezra S. Connor, Thomas L. Scovill, Edward S. Innet, William Weeber.

ATLANTIC Y. C. CRUISE.

THE Atlantic Y. C. cruise, which terminated on Friday last at New Bedford, was a most successful affair in spite of light winds; the only break in the general enjoyment being that caused by the sudden death of Capt. Coffin at Shelter Island. The rendezvous was made at Whitestone on the afternoon of July 13, sailing next day for Black Rock and lying there over Sunday. On Monday a start was made for New London, reached in the afternoon, on Tuesday the fleet raced across to Shelter Island, lying in port all of Wednesday, and on Thursday the cruise was continued to Newport. The last day's run was to New Bedford, where the fleet disbanded. The start from Whitestone was made at 10:30 A. M. in a very light breeze, the wind being light and fluky all day. The fleet was timed at Black Rock:

Enterprise	5 44 05	Ariadne	6 24 00
Anaconda	5 47 30	Gevalia	6 44 00
Nimrod	5 52 25	Rival	6 44 30
Olga	5 59 45	Amaranth	6 46 30
Wayward	6 13 30	Haze	7 26 10
Nirvana	6 22 20	Domino	8 03 00

The Azalea, Wivern, Roamer and Iris were already at anchor, awaiting the fleet and others came in late at night and early Sunday morning.

The first event in the morning was the sailing of some of the smallest, Olga, Amaranth, Gleam, Frolic and Nimrod for Thimble Islands, thus dividing in two the long run of 65 miles laid out for Monday. The rest of the fleet lay at anchor in Black Rock Harbor all day, service being held on board the Haze by Fleet Chaplain W. H. Thomas of Worcester, Mass.

Early Monday morning a start was made, the smaller boats being sent away at 4:30 A. M. The day was clear with light and variable winds, and the fleet was scattered over both sides of the Sound, the yachts straggling in to New London after dark. As a race the run was in no way interesting. The fleet which left Black Rock included the Enterprise, Stella, Wivern, Fanny, Rival, Domino, Ariadne, Olga, Azalea, Haze, Nirvana, Vidette, Roamer, Anaconda, Gevalia, Athlon, while Shamrock joined the fleet just after the start, coming over from the Long Island shore. The only times taken at New London were:

Shamrock	6 51 00	Roamer	9 35 00
Fanny	7 30 00	Gevalia	10 03 00
Anaconda	8 00 00	Haze	10 10 31

Gleam, Iris, Arab, Nimrod and Frolic came in also, the latter having touched among the Thimbles but getting off easily. Owing to the late hour at which they arrived, most of the yachts anchored in the lower harbor, coming up early in the morning. Awaiting the fleet were the Clio, Katrina, Winona, Venitzia, Phantom and Daisy, with the steam yachts Lagonda and Satellite.

The start for the race was set for noon, the course of 24 miles being from off the Fort Griswold Hotel at New London, to the Prospect House at Shelter Island, passing through the Race and to the eastward of Little Gull Island, all yachts to sail in cruising trim. The wind was light, S. by E., making a beat as far as Little Gull Island. At 12:21 the preparatory signal was given, the start for schooners being at 12:26, for the larger single-stickers at 12:31, and the smaller at 12: 6. Fanny, Katrina and Shamrock went away well together, the former in the lead, Katrina hung under Fanny's lee for a time, while Shamrock was sailing alone, but the steel boat finally managed to shake off Fanny and took the lead. When the trio passed Race Rock Katrina led by ¼ mile, with Fanny second and Shamrock on the latter's lee beam. The next in order were Roamer, Anaconda and Clio. The leaders were timed off Little Gull Light as follows: Katrina, 2:40:3; Shamrock, 2:27:31; Fanny, 2:29:42. Balloon jibtopsails were set and carried until Gardiner's Bay was reached. The only times taken were as follows, the rest of the fleet being delayed by the tide and light wind:

	Start.	Finish.	Elapsed.	Corrected.
Katrina	12 30 40	4 02 30	3 28 50	3 28 50
Shamrock	11 34 10	4 05 50	3 31 40	3 30 15
Fanny	12 33 05	4 14 50	3 41 45	3 37 58
CLASS 4.				
Anaconda	12 35 00	7 24 35	6 49 35	6 49 35
Roamer	12 31 05	7 32 00	6 55 00	6 51 47

Gevalia finally drifted in and finished, winning in her class.

It was just after the finish that the sudden death of Captain Coffin took place. As was his custom for years he had accompanied the cruise, and when the Fanny's party landed he came ashore with them, going to the telegraph office. After handing in a part of his story he sat down to finish the remainder, and died in his chair almost instantly. His body was embalmed and forwarded in charge of friends to New York.

The intention had been to sail on Wednesday for Stonington and on Thursday for Newport, but the plan was changed so as to allow a day of rest on Shelter Island, and the fleet lay at anchor until Thursday, when a start was made at 6 A. M. for Newport. There was a fresh breeze from S. E. until noon, when it dropped, coming up later and taking the fleet in to harbor. The times on the run were:

CLASS 3—SCHOONERS. 50 MILES.

	Length.	Finish.	Elapsed.
Azalea, E. Blunt	61.00	2 39 50	8 14 50
Haze, J. Hogan	62.09	2 56 00	8 31 00
Gevalia, H. W. Coots	56.00	2 59 20	8 34 00
CLASS 4—SCHOONERS.			
Vidette, E. O. Williams	52.00	3 24 30	8 59 30
Wivern, Benj. Atha	48.04	3 25 30	9 00 30
CLASS 4—SLOOPS.			
Anaconda, J. G. Prague	53.00	2 24 00	7 59 00
Roamer, P. G. Williams	48.10	2 42 00	8 17 00
Venitzia, A. Colburn	53.04	3 03 00	8 35 00
CLASS 5—SLOOPS.			
Enterprise, H. H. Hogan	44.02½	3 05 30	8 55 30
Wenona, Guy Loomis	43.10½	3 13 00	9 03 00
Stella, J. L. Marcellus	41.11	3 16 06	9 06 00
Domino, J. Fearon		3 27 00	9 17 00
Amaranth, A. R. Hart	42.00	3 50 00	9 40 00
CLASS 6—SLOOPS.			
Ariadne, H. W. Banks	41.00	2 59 25	8 49 25
Rival, Hope & Copman	38.03	4 00 00	9 50 00
CLASS 7—SLOOPS.			
Daisy, Hugh Boyd	32.09	Not timed.	

Friday morning broke with a fog, but a strong S.W. breeze, and at 10 A. M. the fleet was under way from Newport, bound for New Bedford. Anaconda did not start, owing to the illness of a guest, Mr. Seaver, of New York. The yachts which made the run were timed as follows in the official summary:

CLASS 3—SCHOONERS, 35 MILES.

	Length.	Finish.	Elapsed.
Azalea, E. Blunt	61.00	3 04 45	5 06 45
Haze, J. Hogan	62.09	3 16 29	5 16 29
CLASS 4—SCHOONERS.			
Vidette, E. O. Williams	52.00	3 00 25	5 00 25
Wivern, Benj. Atha	48.04	3 14 50	5 14 50
CLASS 2—SLOOPS.			
Fanny, T. P. Fiske	65.00	2 29 38	4 29 38
CLASS 4—SLOOPS.			
Roamer, P. G. Williams	48.10	2 53 00	4 53 00
Venitzia, A. Colburn	53.04	2 45 25	4 45 25
CLASS 5—SLOOPS.			
Enterprise, H. H. Hogins	44.02½	2 50 07	4 50 07
Wenona, Guy Loomis	43.10½	3 09 00	5 09 00
Stella, J. L. Marcellus	41.11	3 06 45	5 06 45
Domino, J. Fearon		3 18 00	5 18 00

After the arrival at New Bedford the fleet was formally disbanded by the following order:

FLAGSHIP STELLA, NEW BEDFORD, July 20, 1888.

GENERAL ORDER, NO. 6.

The Commodore presents his compliments to the members of this club accompanying the fleet and to their guests, and congratulates them upon the success of the annual cruise of the Atlantic Yacht Club for 1888. Upon receipt of this order the fleet will be disbanded and the yacht owners relieved from further squadron duty. By order of the Commodore,

CHARLES T. PIERCE, Fleet Captain.

Some of the yachts returned at once to New York, while a number started out to cruise about the Vineyard, Nantucket and Newport.

THE LAKE Y. R. A. ROUND.

BELLEVILLE, JULY 16.

OUR annual regatta, which took place yesterday, would have been, but for a regrettable piece of luck, as told below, a fine test of type in light weather. There were only four entries, two each in the second and third classes, but all were good ones, those in the latter class being the very cream of their size on fresh water. The competitors then were: Second class, cutter Madge, Rochester, corrected length 44.16ft., and too well known to need description; sloop Cygnet, of Toronto, a beamy centerboarder of moderate draft, built by Mr. Trisirau, but having had a new overhanging stern put on since, corrected length, 48.1ft. Third class, Burgess's sloop-cutter Merle, of Oswego, 38.32ft. corrected length; sloop Iolanthe, of Belleville, centerboarder, of moderate draft, corrected length 37.23ft.

The course, which was a triangle of 10 miles, gave the yachts a broad reach of four miles, a run of 2 miles and a close jam of four miles, thrice around for second class and twice around for third class.

The wind was so light that all could carry everything that would draw, Madge setting an enormous clubtopsail which projected 24ft. above her truck. In reaching, Cygnet had considerably the best of Madge; in running the sloop had a little the advantage, but to windward Madge was greatly superior. She did very little, if any better in the windward work than Iolanthe or Merle, the former of which proved faster than her competitor in reaching; little if any better in running, but considerably faster to windward and, it seemed to me, pointing a trifle higher.

In the first round it was very pretty, the wind varying but little in force during its continuance. Madge led off 3 minutes in advance, Cygnet, by some blundering, being handicapped 2 minutes by her late start. The first mark was turned with the cutter two lengths in advance; and on the run Cygnet passed her, but only to be passed in turn, and the Scotch flyer led into the home stretch. There she showed her weatherly qualities, as she lay through to Nomank, while Cygnet had to make a short stretch. The rest of this race is hardly worthy of description, as the succeeding rounds were similar in nearly all respects, and the cutter finally crossed the line 2m. 15s. in advance. The Cygnet was, however, badly handled, and had the worst of the work. She is not considered fast in her class, and Madge will meet a very different boat when she sails against White Wings of Hamilton.

Iolanthe, starting 43s. before Merle, raced away from her in the reach, and led around first mark 8m. in advance. Three-quarters of a minute of this lead was lost on the run, the rear boat having rather the best wind. Both did splendidly close hauled, pointing high enough to lay through; but Iolanthe, who here seemed to get rather the most favors from the zephyrs, added 3m. to her lead. This advantage was increased on the reach, but all ran into a calm a mile or less west of the first flag. Merle, who had held to windward of the mark in company with Madge, here got a number of cat's-paws which carried her along to and around the mark, where she found about the best breeze of the day, and started off with spinnaker set for the next turn. Iolanthe, who had been in company with Cygnet, now got a puff, but it was dead ahead, and she had to make two stretches to weather the mark, which she did some fifteen minutes after her competitor. She then dashed off in pursuit and made up about half of the lost time. Had the wind held true and steady she would, no doubt, have beaten Merle from fifteen to twenty minutes, and would probably have led the fleet home, as in the first round she gained 4m. 30s. on Madge. The time, as officially taken in the race, was as follows:

SECOND CLASS.

	Start.	Finish.	Elapsed.	Corrected.
Madge	2 44 00	7 30 00	4 46 00	4 46 24
Cygnet	2 15 00	7 32 15	4 47 15	4 47 15
Merle	2 57 43	8 07 30	5 09 47	3 09 47
Iolanthe	2 57 00	6 15 30	3 18 30	3 17 28

Our Oswego friends are such a fine lot of fellows that nobody grudges them their good luck.

The old-time racers, Peerless (now Argo), of Belleville, Surprise, of Trenton, and Katie Gray, of Oswego, who have had many hard races over our course, met yesterday as spectators on at an event in which they would not even figure to advantage.

The disqualification of their yachts at Kingston for crossing the line wrongly at the start, and the loss of yesterday's race by a fluke, are circumstances which would disgust ordinary men, but the owners of the Iolanthe are gentlemen of pluck and thorough sportsmen, and will send their craft to the Oswego and Rochester meets, where it is to be hoped that, if beaten, it will not be by luck. PORT TACK.

OSWEGO, JULY 20.

The third day's racing found the fleet small in numbers, only six yachts coming to the line. The regatta was under the management of the Oswego Y. C., the course being laid off Oswego, five miles to windward and back, the first and second classes sailing 3 rounds and the third class 2 rounds. The prizes were: First class, $90 and $60; second class, $80 and $40; third class, $80, $40 and $20. Three boats were to start to insure a second prize, and 4 for a third prize. Prize flags were also given to the winners, while the yachts of the Oswego Y. C. also sailed for the Mott championship pennant, the time being taken over the third class course. White Wings, of Hamilton, was on hand, fresh from her victories on Lake Erie, while Atalanta also was present, but had no competitor. The start was timed:

FIRST CLASS.

	L.W.L.	Start.
Atalanta, W. J. Eyre	64.00	9 04 35
SECOND CLASS.		
White Wings, A. E. Jarvis	41.00	9 00 40
Cygnet, McGarr & Ewing	43.05	9 01 43
Madge	38.09	9 00 45
THIRD CLASS.		
Merle, Allan Ames	33.00	9 12 50
Iolanthe, W. H. Biggar	35.00	9 13 45

White Wings is a Cuthbert boat, 41x15ft. 6in., and drawing nearly 5ft. Merle is the new Burgess compromise built last year, a centerboard Pappoose.

Madge and White Wings crossed together, but the latter soon took the lead and continued to gain. The wind was light and dead ahead on the first leg. Near the first mark Madge sprung her topmast and withdrew, being then the last of her class. In the second class Merle led over the course, beating Iolanthe easily. The full times were:

FIRST CLASS.

	Elapsed.	Corrected.
Atalanta	3 7 30	3 7 30
SECOND CLASS.		
White Wings	3 10 15	3 6 15
Cygnet	3 40 9	3 40 9
Madge did not finish.		
THIRD CLASS.		
Merle	1 10 3	1 10 3
Iolanthe	3 40 9	1 18 20

Oriole, schr., did not enter, while Ariadne arrived too late.

ROCHESTER, JULY 23.

The fourth race of the circuit was sailed on July 23 at Rochester, being the first event of the kind yet held there. The greatest interest was shown by the townspeople, several thousand persons being present. The wind was moderate in the morning, dropping a little as the day advanced. When near the first buoy Madge, then second boat, carried away her topmast, previously sprung at Oswego, and withdrew. Three of her crew were thrown overboard but were picked up. The full time were:

SECOND CLASS.

	Start.	Finish.	Corrected.
Cygnet	9 51 07	3 18 07	5 25 00
White Wing	9 51 00	2 58 43	5 00 50
Madge	9 51 15	. . .	. . .
THIRD CLASS.			
Iolanthe	10 07 00	2 03 50	3 55 42
Merle	1 07 55	2 03 40	3 55 45
Coquette	10 06 40	2 29 40	4 18 60
Modjeska	10 06 50	Withdrew.	
Fascination	10 07 40	Withdrew.	
Lois	10 10 00	Withdrew.	
Gem	10 09 15	Withdrew.	
Amelia	10 08 40	3 10 03	4 50 42
FOURTH CLASS.			
Mollie	10 21 06	12 33 00	2 11 54
Mary	10 21 12	12 45 25	2 24 08
Velnette	10 22 17	12 31 25	2 09 08
Florence	12 22 17	1 17 07	2 53 48
Grace	10 25 00	. . .	. . .
Lottie	10 25 00	1 57 45	3 03 55

A protest was filed by Merle on the ground that Iolanthe was not correctly measured. In the evening a dinner was given to the visiting yachtsmen.

LURLINE AND AGGIE.

THE interest in yachting, which was once quite keen in San Francisco, has declined so during the last three years that the racing is dead, save among the smallest craft. The large schooners have diminished in numbers, while those still in the fleet have given up all racing. This summer, however, a match was arranged between Lurline and Aggie, two of the largest, for an ocean race of 550 miles, San Francisco to San Diego, for $1,000 per side; the start being made on July 1. Lurline is a keel yacht, designed and built in 1882, by Matthew Turner, for Mr. J. D. Spreckles, her present owner, being 72ft. 3in. l.w.l., 21ft. beam, and 8ft. 3in. draft. Aggie is a centerboard boat, built by Hall Bros. in 1881, owned by Mr. Daniel McFarland, and is 73ft. 7in. l.w.l., 23 ft. beam, and 6ft. 9in. draft. The start was made at 10:20:30 A. M. on July 1, with a 12 mile breeze abeam, and light sails were set. Aggie led at the start, but after 3 hours' work Lurline began to pass her. The sea was high and the wind increasing, blowing 24 miles on shore at 11 A. M. Aggie was not properly fitted out, and at 3 P. M. she lost her foretopmast, being delayed some time in clearing the wreck, as her balloon jibtopsail went overboard; Lurline in the mean time gaining a couple of miles. The wind and sea held during the night, both yachts making good time, Aggie's run for the 24 hours being 264 miles. At dawn she had passed Lurline and led by about a mile. The second day passed with haze and light airs, the pair making little headway, being off San Miguel Island at night. Next morning brought a light breeze, but the haze continued until afternoon. Lurline was about 7 miles further out than Aggie and a mile ahead when it lifted, and with the first of the breeze she soon increased her lead. Aggie managed to rig a jury topmast, so as to set her balloon jibtopsail. On the morning of July 4, Lurline was about 6 miles from San Nicholas Island, with Aggie 6 miles astern of her. When the breeze came, both caught it at the same time, but Aggie was in for more bad luck, her jury topmast going over the side and carrying the balloon jibtopsail with it. Both yachts were sighted from the shore at 3:50 on July 5, Lurline still ahead, the wind being very light. She finished at 4:55 A. M., with Aggie at 5:26 A. M., the full time being:

	Start. July 1, A. M.	Finish. July 5, A. M.	Elapsed.
Lurline, keel	10 30 40	4 55	90 25 30
Aggie, centerboard	10 30 30	5 26	90 55 30

Considering the length of the course, the finish is remarkably close.

CORINTHIAN Y. C., MARBLEHEAD.—The 2d championship regatta of the Corinthian Y. C. was sailed on July 21, off Marblehead, the wind being fresh S.W. at start but dying out as the race went on. The courses were as follows: For first and second classes, from judges' line to buoy on Cutthroat ledge, leaving it on starboard, buoy on Gooseberry ledge on port; Half-way rock on starboard, stakeboat anchored 200 yards southeast of Tinkers island on starboard; buoy off Tom Moore's rocks on port, to judges' line, leaving buoys 3 and 5 on port. Distance 10 miles. The course for third class was from judges' line to buoy on Eagle bar, leaving it on starboard; buoy on Gooseberry ledge on starboard; Cat Island rock on port, to judges' line, leaving buoy 5 on port. The times were as follows:

FIRST CLASS KEELS.

	Length.	Elapsed.	Corrected.
Saracen, W. P. Fowle	30.10	1 51 23	1 24 51
Elf, W. H. Wilkinson	29.02	1 58 04	1 30 07

Greta, S. G. Allen	19.06	1 31 31	1 08 03

The judges were W. W. Whitcomb, W. H. Clothey, William E. Waterhouse and E. T. Hodgkins.

NEW YORK Y. C. CRUISE.—A meeting of the New York Y. C. was held on July 19, at which the resignation of Mr. Alex. Taylor, Jr., from the regatta committee was accepted. It was also decided to prohibit clubtopsails on the cruise, except in the regular races, as the Goelet and Vineyard Haven cups. The flag officers will this year offer a cup in each class for the best average record of the runs from port to port. The rendezvous will be at New London on Aug. 8, a meeting being held on the flagship at 9 P. M. to decide on the details of the cruise.

The following invitation has been given by the E. Y. C., and in the event of its acceptance it is likely that a regatta will be sailed off Marblehead about Aug. 16 by the united fleet of the New York and Eastern clubs: "Mt. Desert, on board flagship Gitana, July 21, 1888.—Commodore Elbridge T. Gerry, New York Y. C.—Dear Commodore: The Eastern Y. C. invites the New York Y. C. to extend its cruise to Marblehead, where the members will be welcomed and prizes will be offered for a race, if desired. Hoping that you will bring your fleet around the cape again this year, I am very truly yours, WILLIAM F. WELD, Commodore Eastern Y. C."

BEVERLY, Y. C.—131st regatta; third open sweep, Monument Beach, July 21.—Courses, First and Second Classes, leaving Pine's Buoy on starboard, Bird Island Light Buoy and Scraggy Neck Buoy on port, and return, 11 miles. Third and Fourth Classes, leaving Pine's Buoy, Abeel's Ledge, judges' boat and Pine's Buoy on starboard, and return, 8 miles. Wind S. S. W.; good breeze.

FIRST CLASS.

	Length.	Start.	Finish.	Elapsed.	Corrected.
Mucilage	29. 5½	1 07 22	3 04 48	1 57 26	1 49 09
Surprise	27.03	1 05 52	3 03 08	2 00 16	1 49 43
Mattie	28.10	1 08 06	3 17 22	2 09 16	2 0 22

SECOND CLASS.

Mist	27.07	1 11 52	3 17 15	2 05 23	1 55 06
Wildcat	26.04	1 11 04	3 23 29	2 12 25	2 0 52
Tantrum	25.01	1 15 00	Withdrawn.		

THIRD CLASS.

Daisy	20.10	1 16 19	3 18 18	2 01 59	1 48 21
Dolly	22.08	1 17 47	2 24 25	2 06 38	1 54 55
Eleanor	23.08	1 17 18	3 24 27	2 07 09	1 56 25
Star	20.07	1 16 35	3 24 19	2 07 44	1 53 49
Petrel	20.07	1 15 31	2 24 01	2 08 30	1 54 55

Nymph entered in Fourth Classs but had no competitors. Petrel carried away gaff gooseneck after completing first round with a good lead, and lost much time. Daisy started reefed but shook out reefs. Winner first prize, Class One, Mucilage, Surprise second; Class Two, Mist, Wildcat second; Class Three, Daisy, Star second. Judges, C. H. Hardy, W. Lloyd Jeffries; judges' boat, Mollie.

MIRAMICHI Y. C. REGATTA, JULY 19.—Courses on Miramichi River, Chatham to Newcastle and back, 5 miles to windward and return. Distance 10 miles. Weather clear. Wind strong S.W. Tide flood.

FIRST CLASS.

	Length.	Start.	Finish.	Elapsed.	Cor.
Fisherman, A. L. Loggie	25.00	12 46 00	2 37 33	1 51 33	1 51 33
Kilbride, J. C. Miller	22.00	12 46 22	2 35 22	1 49 00	1 45 25
Kittoch, John Miller	22.00	12 46 33	2 45 32	1 58 59	1 55 04
Blandy, Wm. Gould	19.00	12 46 11	2 45 35	1 59 24	1 51 35

SECOND CLASS.

Mackerel, Geo. Watt	15.00	1 07 39	4 25 00	3 17 30	3 17 11
Annie, J. L. Stewart	15.02	1 07 40	4 26 00	3 18 10	3 18 20

Winners—Class 1—Kilbride, Class 2—Mackerel. With a strong breeze and fine weather the day was all that a yachtsman could desire for a race. A fine start was made, all going off on port tack. Much public interest was shown in the race, especially in a tussle between Fisherman and Kilbride, the former being a new comer in the club, while the latter had hitherto been its most successful racer. However, whether because the Kilbride's crew were better trained in racing than the new boat's, or that the boat herself had superior merit, she soon got ahead of Fisherman and rather increased her lead to the end. The Kittoch did not do nearly so well as usual, while the Blandy did much better. A very pretty race was also sailed between the second class boats and was closely contested. Regatta committee, C. Sargeant, P. Cox, E. Hutchcson, R. Gromley. Judges, R. R. Call, John Sadler, E. L. Street, L. J. Tweedie.—G. WATT, Sec.

SAVIN HILL Y. C. FOURTH REGATTA, JULY 14.—Course for boats over 15ft.—From starting line between float and flagboat, leaving Musnrcom Island on port, Cow Pasture Buoy on port, stake boat (off lumber wharf at Harrison Square) on port, Mushroom Island on port, to finish, 6 miles. Under 15ft.—From starting line, leaving Farm Bar Buoy on port, Cow Pasture Buoy on port, Farm Bar Buoy on starboard, to finish, same as start, 1½ miles. Weather fair, wind E. and S.E., tide full and turning:

	Finish.	Elapsed.
Jester, W. H. Besarick	5 29 00	1 24 00
Anemone, Shaw & Corr	Withdrew.	
Peri, W. E. Coffin	5 29 00	1 24 00
Avis, I. H Odell	5 35 00	1 30 00
W. E., W. P. Thayer	5 36 00	1 31 00
Moya, L. T. Howard	5 41 00	1 36 00
Rob Roy, J. D. MacBeath	5 47 00	1 42 00
Snag, W. Briggs	4 41 00	0 36 00
Sallie, E. B. Coleman	Withdrew.	
Willie, W. Scott	4 47 00	0 42 00
Ione, T. Hodgson	4 41 30	0 36 30

Anemone did not round the stakeboat on the return lap and was ruled out. As the time allowances would not alter the prizes it was not figured. Regatta committee, I. H. Odell, W. H. Besarick and J. L. Corr. Judge, F. J. Stark.

NEW JERSEY Y. C.—The postponed race of classes D and E was sailed on July 17 over a course from off Bedloe's Island dock to buoy No. 13 off Hoffman's Island, lower Bay, to buoy No. 16 off Coney Island Point to start, keeping to westward off buoy on Robbins Reef.

CLASS D—YACHTS 26FT. AND OVER.

	Start.	Finish.	Elapsed.	Corrected.
Charm	11 11 15	3 27 35	4 16 20	4 17 20
Eagle Wing	11 15 14	3 39 42	4 24 28	4 23 32
Growler	11 14 35	3 23 15	4 08 40	4 06 10

CLASS E—21 AND UNDER 26FT.

Minnie	11 14 16	4 21 10	5 07 00	5 07 00
Leader	11 14 10	4 22 11	4 08 01	4 07 08

Growler wins in Class D, beating Charm 10m. 10s., and Leader in Class E, beating the Minnie 1h. 8¼s., and making the best time over the course.

CUTTERS IN A GALE.—The little cutter Medusa, 54ft., distinguished herself in the gale off Cape Cod on July 12, and on the same day Bedouin, out in Massachusetts Bay under trysail and storm jib, picked up a disabled boat with five men on board and towed it into Boston. The boat was disabled, sails blown away and unable to make a harbor.

MONTGOMERY SAILING CLUB.—Tenth weekly cruise July 22. Norristown to Indian Creek and return, 5 miles; light easterly wind.

	Length.	Start.	Finish.	Corrected.
Sadie, canoe	16.00	1 34 40	4 01 15	2 24 15
Gracie, skiff	12.00	1 30 40	4 33 05	2 53 05
F. & W. Playford, tuckup	15.00	1 40 00	4 33 31	2 53 31
G. W. Bowers, tuckup	15.00	1 40 00	4 33 35	2 53 35
J. S. Frith, tuckup	15 00	1 40 00	4 37 20	2 57 20
Starlight, canoe	16.00	1 34 40	Withdrew.	
S. H. Querner, tuckup	15.00	1 40 00	Withdrew.	

THE DISMASTING OF THE VERVE.—Further particulars have been received as to the dismasting of the Verve on Lake Ontario, in the storm of July 11, while on her way to Kingston. She was south of the False Ducks under scandalized mainsail and jib when several heavy thunder squalls came up in succession. It was necessary to jibe her, and two men were stationed at the runners and two at the main sheet. Just as the sheet was hauled in a heavy squall struck the yacht, the sheet escaped from the men who held it, the boom struck the runner and the mast went over the side. An axe was used to cut away the rigging, as there was a heavy sea on and the wreck threatened to stave in the sides. The axe-head was loose and fell overboard, the crew finally completing the work with their sheath knifes, letting the yacht ride to the wreck as a drag. It was 7 P. M. when the accident happened and the yacht lay in the trough of the sea until daylight, the dingey towing upside down astern. The yacht made no water and was dry below, though taking some sea on deck. At daylight on Thursday some weight was shifted forward, bringing her head to wind and allowing her to ride easier. On Friday morning the stump of the mast was taken out, Mr. Bell and the skipper, Norman Dick, failing overboard while working at it, but getting out safely. A jury mast was fitted from a topsail yard, and the yacht finally anchored in 12 fathoms south of the Main Ducks. At 5 P. M. she was spoken by a steamer which sent a tug which towed her into Kingston on Saturday.

EASTERN Y. C. CRUISE.—The fleet of the Eastern Y. C. was very unfortunate in the weather encountered on the cruise, as eight days were spent in covering about 190 miles. The first day's run, as stated last week, was from Marblehead to Isle of Shoals on July 14, the next port, Portland, Me., being made on July 15, 49 miles in all. On the 15th the run was to Boothbay, 35 miles, and on the 17th to Seal Harbor, 20 miles. A heavy fog was met and on the 18th only 10 miles to Rockland, was covered. North Haven, 9 miles distant, being reached next day. On July 20 only 8 miles to Green's Landing, was made, and on the following day the fleet reached Bar Harbor, Gitana towing for the last few miles, while Rebecca was the first to arrive under sail. The fleet included also Volunteer, Iroquois, Adrienne, Peerless, Silvie, Clytie, Baboon and Actea; Marguerite and America, with Com. Gerry's steam yacht Electra were at anchor in the harbor.

ŒNONE.—The new keel schooner designed by Mr. Burgess for Col. Hugh Cochrane, former owner of the Tioga, was launched on July 19 at Burnham's yard, East Boston, where she was built by Wm. Mackie. The method of launching was peculiar, the cradle in which the yacht rested being drawn down at low water on ways and rollers in the same manner in which a house is moved, being left until she floated clear at high water, when she was towed to Fiske's wharf, where she will fit out, being in commission by Aug. 15. The Œnone is built of wood, oak frame, oak and yellow pine planking, and yellow pine ceiling. Her lead keel weighs 33 tons. Her principal dimensions are: Length on deck, 92ft.; l.w.l., 75ft.; beam, 19ft.; draft, 12ft. Her bowsprit will be 38ft. over all, mainboom 63ft. and foreboom 27ft.

A CAPSIZE NEAR BOSTON.—On Monday afternoon Mr. Frank Williams, of Boston, and Edward Delano, of Cambridge, started from Brant Rock, Marshfield, in a 15ft. centerboard dory for a sail, having two young ladies with them. When well out at sea the boat was capsized, the four clinging to the bottom for forty minutes, being finally rescued by the steamer Longfellow, the ladies being almost insensible.

UNQUOWA.—The steel steam yacht designed by Mr. Burgess for Mr. O. B. Jennings of New York, was launched on July 17 at the Atlantic works, Boston, being christened Unqu wa by Miss Emma Jennings. The new yacht is 138ft. over all, 116ft. l.w.l., 19ft. beam, 11ft. 6in. hold, and 8ft. 6in. draft, with triple expansion engines. Her keel and stem are 1¼×6in., frames 2½×2½×5-16in., and plating 5-16in. She will not go into commission before next season.

KNICKERBOCKER Y. C. CRUISE.—The fleet of the Knickerboker Y. C. sailed from the club anchorage at Port Morris on July 21 on the annual cruise, the first port being Black Rock. The following yachts started: Culprit Fay, Dora, Meta, Melvina, Valkyr, Yolande, Vision, Alice H. Black Hawk, Augler, Zena, Idalia, Rosetta, White Cap, Madge, Coronilla, and steam yachts Cozy, Mystic, Mary W.

SOUTHWARK Y. C.—A race for third class tuckups was sailed on July 16 for $150 sweepstakes over a 35-mile course from Mifflin street wharf, Philadelphia, to Chester Buoy and return. The winner was the Robert Patterson, beating the George Flick 14m. and the Thomas Ledyard 17m. The Patterson was sailed by a crew of three, one of whom was 73 years old.

MONTAUK, schr., Mr. J. E. Brooks, is now being altered under Mr. Burgess's direction, her head gear being replaced by a single horn 40ft. outboard. She will be ready for the Goelet Cup race.

CAPE ANN Y. C.—A race was sailed on July 21 for the Tappan Cup over an 8-mile triangular course, Black Cloud winning, with Trudette second and Atlantic third.

BISCAYNE BAY Y. C.—We have received a copy of the new book of the Biscayne Bay Y. C., the most southern club in the United States, its club house and station being at the lowermost extremity of Cape Florida. The club now numbers 18 members and 20 yachts from 50ft. down in size.

CAPTAIN COFFIN.—The funeral services of Captain Roland Folger Coffin were held on July 19 at his late residence in Brooklyn, a number of yachtsmen and newspaper men being present. The body was taken to Nantucket for interment.

ST. LAWRENCE Y. C.—A race was sailed on July 21 off Montreal by the St. Lawrence Y. C., Black Eagle winning from six others. Minnie A. capsized and withdrew. In the open boat race Mr. Young's boat won out of a fleet of six.

ORINDA.—Mr. Winslow has chosen the name Orinda for his new cutter, now nearly completed at William's yard, South Boston. She will start next month for a cruise on the Maine coast with her owner and several friends.

GLIMPSE, schr., Mr. Benoni Lockwood, of Newport, grounded and sunk on Little Captain's Island reef, off Greenwich, Conn., on July 18, but was raised by the Clapham Wrecking Company, and towed to City Island.

RHODE ISLAND Y. C.—The second championship regatta was sailed on July 16 over courses of 20 and 10 miles, with 16 starters, in a good breeze. Mignon won in first class, Diamond in second and Gladys in third.

YACHT RACING IN THE NORTHWEST.—On July 3 a race was sailed at Portland, Oregon, between six open boats, 20ft. and under, the Tidal Wave winning, with Pastime second and P. Austin third.

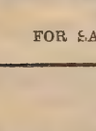
MARGUERITE, schr., Mr. W. F. Burden, will have her lead keel lessened considerably at Lawley's as soon as she returns from her cruise. It is intended to lighten her, as she is now too deep.

CATS AT BOSTON.—A race was sailed on July 21 over a 5-mile course on the Charles River, between the cats Isabelle Everson and Nautilus, the former winning.

PORTLAND Y. C.—The new book of this club shows a membership of 180 and a fleet of 30 yachts. The station is at Portland, Me.

NEW HAVEN Y. C.—The Ladies' Day sail of the New Haven Y. C. on July 19 passed off successfully, there being a good breeze.

STRANGER, cutter, Mr. Geo. H. Warren, sailed from Boston on July 20 for Liverpool, Captain S. Larkar was in command.



PLEON Y. C.—The father of Com. Wood has presented to the Pleon Y. C. a silver challenge cup for second class boats.

ALERT, schr., Mr. Henry Bryant, has had more lead added to her keel and her sails recut.

"There he goes!" Eyes bulging from their sockets responded to the exclamation. A 20lbs. salmon had been discovered in the fishway at Amoskeag Falls. "There goes another!" The excitement becomes intense. Men bend over the sids of the fishway until they are in danger of falling in, for the sight of a pair of live salmon plunging in and darting through the foam and waterfalls of the Merrimack is the sight to some men of a life-time, and causes the blood to thrill. Gradually the water in the fishway becomes less and less, for the hand of the chairman of the game and fish commissions of the State has shut down the gate which supplies it, until at last scarcely more than a foot and a half remains in the lower portions. Then the grand fish come into full view; a stout heavy dip-net is lowered into the water, there is a splashing, a struggle, a hoist of a 20lbs. monster into midair, and then another splash as the splendid fish is lifted over the stone pier and dropped into the canal which leads to the river. In a second more and the king of game fish is shooting up the main stream of the Merrimack toward the north. Four of these fish, weighing from eight to twenty pounds apiece, were taken from the fishway at Amoskeag, under the direction of Commissioner Riddle. It was the biggest school of salmon seen in Manchester in a single day for years, and besides these four, two others were netted during the day and helped over into deep and safe water. It was the privilege of a *Mirror* representative to capture a fifteen-pounder and send him on his way rejoicing, but the experience would have been far pleasanter had the gamy fish been fastened by a hook to the end of a well-seasoned fly-rod, with plenty of stout line and open water to play him in until exhausted, tired out, he had succumbed and been safely landed. But salmon fishing is a pastime unknown to the present generation in this vicinity, and there seems to be little prospect of its being followed successfully in the Merrimack for a good many years at least. Some fish go above the falls every year and deposit their spawn, and perhaps if the ambitious young angler lives long enough he may throw out a line into the rapids at some spot along the stream and feel a bite at his hook that he will never forget.—*Manchester Mirror.*

Names and Portraits of Birds which Interest Gunners. With Descriptions in Language Understanded of the people.

By GURDON TRUMBULL.

90 Illustrations and an Index. Pp. viii., 222. 8vo, ornamental cloth, gilt top, $2.50.

SENT ON RECEIPT OF PRICE BY

Forest and Stream Publishing Co.

The Forest Waters the Farm;

OR,

The Value of Woodlands as Reservoirs.

BEING THE LES ÉTUDES DE MAITRE PIERRE SUR L'AGRICULTURE ET LES FORETS.

PAR M. ANTONIN ROUSSET.

Translated by

REV. S. W. POWELL.

The introduction reviews the extraordinary movement of torrent taming in France, in preparing public sentiment for which the Studies of Master Peter played a noteworthy part. The book was written as a sort of science primer, setting forth the first principles of the relations existing between woodlands and agriculture. The principles and reasoning are not less applicable to the United States to-day than to France then.

Price in cloth, 75 cts.; paper, 50 cts.

FOREST AND STREAM PUBLISHING CO.

ANSWERS TO CORRESPONDENTS.

AN EMASCULATED BILL

THE Public Lands Committee of the House of Representatives has at last reported Senate Bill 283, but in such a ragged and tattered condition that we doubt if its own father will recognize it. They have reported it, but in their committee room it has been so emasculated that all its best provisions are gone.

The Senate proposed to enlarge the Park, so that it might be a permanent water preserve; the Public Lands Committee have seriously reduced this intended enlargement. The Senate proposed to keep railroads out of the Park; the Public Lands Committee authorizes the Secretary of the Interior to permit a railway to run directly through it. The Senate proposed to establish a form of government for the Park, so that rules might be enforced and crimes punished; the Public Lands Committee says there shall be no government there. The Senate proposed to have a small force of civil policeman to aid the troops; the Public Lands Committee decides that there shall be no such force. In other words, the Public Lands Committee recommends the passage of the Vest bill, but shorn of all its most important provisions and with one or two new features injected into it, which will do incalculable harm to the reservation. They might better have recommended the passage of the Senate bill with the enacting clause stricken out.

The FOREST AND STREAM places itself squarely on record as utterly opposed to the bill in its present shape. Although the bill which the Public Lands Committee recommends is known as Senate Bill 283, it is not the bill asked for by the friends of the Park, not the bill for the passage of which tens of thousands of our best citizens have earnestly petitioned, not the bill which we have advocated. On the contrary, it is a bill which pleases jobbers and land grabbers, a bill to hand over an important section of the National Park to a railroad corporation.

The fine hand of the managers of the Cinnabar, Clark's Fork & Cooke City Railroad is readily recognizable in this attempt to use the title of Mr. Vest's bill as a cloak under which to smuggle through Congress a scheme which has failed, and will continue to fail, on its own merits. For years these people have been hard at work to try to get for themslves a part of the National Park. They have always been bold and shrewd, but they have always been foiled. Never have they done anything more audacious than to try to use Senator Geo. G. Vest's name to help their schemes of robbery through Congress. These people recognize the fact that there is a strong public feeling in favor of the passage of Senate Bill 283, and that a great deal of earnest effort has been put forth to secure its passage by Congress. They reason that their railroad bill, after the knock-down blow it received at the last session, has no chance of passing, but that if they can quietly change the Vest bill to meet their selfish ends they may smuggle their schemes of spoliation through Congress.

There is an old proverb which says *Cucullus non facit* —the cowl does not make the friar. The title of this bill is not the bill itself. Under that title the measure when it came to the House was one which all who had the public good at heart could cordially approve. Since then, however, the bill has been utterly changed in character.

We do not believe that the House of Representatives will assent to the passage of the bill in its present form. The last time that the question came up of running a railroad—this same one—through the Park, the House, under the able and eloquent leadership of Mr. S. S. Cox, of New York, promptly crushed the proposition by a vote of 170 to 68. If the question shall come up again, the House, if it understands what it is voting on, will no doubt negative the proposition once more. The railroad schemers take a great deal for granted in assuming that the public are such donkeys as to be deceived by a device which, after it has been exposed, is so transparent.

We should be glad to see the bill as it came from the Senate passed by the House. It would be a most important measure, and would give the Park the protection it has so long needed. But we hope that in its present shape the bill will be defeated, and that even if it shall pass the House, it will fail in the conference committee.

We have before us the report of the Committee of Public Lands, which recommends the passage of the bill for the protection of the Yellowstone National Park. It is an interesting document in some respects and gives a good idea of the attention which has been given to the bill by those who have had it in charge for something over four months. This report was made July 26, by Mr. Wheeler. In the third paragraph of this report the following amendment to the first section is recommended:

Provided, That the Secretary of the Interior is hereby authorized to grant a right of way to a railroad to run along the bank of the Yellowstone River up to the river called the East Fork of the Yellowstone, and sometimes called Lamar River, thence up said river to the mouth of Soda Butte Creek. thence up Soda Butte Creek to the point where it crosses the line dividing the Territories of Montana and Wyoming, so as to permit the establishment of railroad communicatien between the town of Cinnabar and Cook City.

This is precisely the proposition that was defeated in the House, in 1886, by a vote of 170 to 68. Why should it receive any better treatment now? If passed a railroad will enter the Park, carrying with it a host of employes and loafers, settlements and whisky shops; carrying, too, locomotives breathing out sparks which would constantly fire the timber, trains which would transport hunters, who would destroy the game and carry out the carcasses of the slaughtered animals—if passed, an important area of forest land will be seriously endangered, certain natural wonders in the northeast corner of the Park will be much more exposed to defacement than they are now, and finally, the only winter range for great game in the northern portion of the Park will be thrown open to the hide butcher.

This railroad scheme is a purely selfish one, advanced by a railroad corporation to get a right of way to Cook City, a town which last winter boasted a bare dozen inhabitants. Besides this, two other railroads, one from the north and one from the east, are building in to Cook, a place which has no more use for three railroads than a cat has for three tails. It cannot now, and will not for many years, if ever, be able to support a single one. This is old straw and was threshed over years ago, and the situation has not changed a particle since then.

We have it on the very highest authority that if this provision become law, the Secretary of the Interior will regard it as mandatory, and not as a matter left to his discretion.

The last three pages of the Public Lands Committee report are copied word for word from Senator Manderson's report from the Committee on Territories on Senate Bill 283, presented to the Senate February 20, 1888. Now when it is recollected that Senator Manderson is fully aware of the needs of the Park and was speaking intelligently about the bill, which provided for adequate protection for the Park, and that the Public Lands Committee is speaking about the bill after all the essential provisions have been cut out, it will easily be conceived that the Public Lands Committee in copying the Senator's report may have put themselves into a position which is little short of idiotic. This committee after having stricken out of the bill the provisions appointing a commissioner and generally providing for the establishment of a form of government, go ahead and blindly and stupidly copy a page of Mr. Manderson's report which is devoted to nothing else but giving good reasons why this very section, which the committee has cut out, ought to become a law. In other words, the Public Lands Committee having cut out a section, gravely advance most cogent reasons for retaining and passing it. This is a good sample of the way much public business is done.

These in detail are the reasons given by Mr. Wheeler for the passage of the section providing a form of government for the Park, which section the Public Lands Committee have cut out of the bill. These paragraphs refer wholly to matters taken out of the bill by the Public Lands Committee, yet the report is made by that committee.

In 1872 the organic act establishing the Yellowstone National Park was enacted. This was afterward incorporated in sections 2474 and 2475 of the Revised Statutes. The only provision for the protection of the Park, or the enforcement of law within its borders, was that it should be under the control of the Secretary of the Interior, who should make regulations for the care and management of the same. No penalties were provided for the violation of such regulations, nor was jurisdiction vested in any tribunal for the punishment of offenses. For a few years succeeding the passage of the act this defect in the law was not seriously felt. At that time there were but few facilities for reaching the Park, and travel to it was exceedingly restricted. When railroad communication was established, however, a steady stream of travel set in toward the Park, and this has increased with each succeeding year, so that for the last few years thousands of citizens have visited this wonderful region every season.

With the advent of a large concourse of people, the necessity of law for the enforcement of order, the protection of the Park, and a clear determination of its boundaries become apparent. Rules and regulations have been made by different Secretaries of the Interior, which they could only enforce by the expulsion from the Park of persons violating the same—in most instances a very inefficacious remedy. Assured of immunity from punishment the offenders had only to return and repeat their offenses. The large game, the conservation of which is one of the main objects of the Park, has in many instances been slaughtered by skin-hunters and the pretext alleged that it was killed outside the boundaries of the Park. Great destruction has also been wrought by forest fires, either maliciously or carelessly started, while the acts of vandalism in breaking and destroying the beautiful formations have been frequent and have caused much injury. In some instances, too, crime of the most serious nature has bean committed and gone unpunished for want of power in any tribunal to take jurisdiction of the same.

This state of things, constituting a reproach on the national administration, has constantly been brought to the attention of Congress by various Secretaries of the Interior, and many scientific and other associations, as well as individual citizens from all portions of the country, have year after year memorialized Congress to pass some measure of protection.

In the Forty-eighth and Forty-ninth Congresses acts similar to the one now reported passed the Senate. The present act, like those which preceded it, seeks to afford to the authorities the means of protecting the forests, the game and the natural wonders—the three great objects which make the Park in every sense a national institution to be cared for as such.

The machinery provided by the act for the administration of justice within the Park is simple and inexpensive, being substantially the same as that contained in the act which passed the Senate at the last Congress, but involving much less expense. It involves only the appointment of a local magistrate, who shall reside in the Park and who shall try all violations of the rules made for its preservation. Indictable crimes may be tried in the district court of Wyoming, and the Park magistrate is invested with the power of arresting persons committing such crimes, and have them conveyed to within the jurisdiction of the Wyoming court. Adequate, but not too severe, penalties are provided for violations of the rules and regulations. The national laws applicable to places within the exclusive jurisdiction of the United States are made applicable to the Park, except in so far modified by the present act.

In regard to the government of the Park, the only important change from the act of last year is found in section 4. The civil establishment, consisting of a superintendent and assistant superintendents, which formerly existed, and for which provision was made in the act of last Congress, finds no place in the present act. Congress having failed at the last Congress to make any appropriation for such civil establishment, the Secretary of the Interior, as the only means of protecting the Park, requested the

Secretary of War to detail troops for that purpose. Accordingly a company of cavalry was ordered to the Park, under command of Capt. Moses Harris, who acts as superintendent of the Park, under instructions of the Secretary of the Interior. While in time it may be found more advisable to have the Park entirely under civil authority, we think the present condition of affairs meets the essential requirements of the Park.

If this bill should come up before the House we may may expect to hear from the Public Lands Committee their reasons for taking from the bill its good provisions and for their efforts to hand over the National Park to a railroad corporation. They must have had reasons for permitting the railroad lobby to twist them about its finger in this way, and these reasons will perhaps be disclosed in debate. We shall see.

"A BIT OF KENNEL HISTORY."

OUR relation of certain pertinent facts, under this heading, last week has called out two communications which are printed elsewhere.

One is from Mr. August Belmont, Jr. As we never accused Mr. Belmont of knowing anything about this matter, his denial is as superfluous and irrelevant as it is empty and valueless. Our candid advice to the American Kennel Club is to restrain the impetuosity and persistency with which its president precipitates himself into print. He can be made better use of by the No. 44 combination if permitted simply to "put up" for the projected organ.

The other communication comes from Mr. C. J. Peshall. He professes to have no recollection of having taken the course, which we alleged he did, with respect to securing Mr. Chas. H. Mason as editor of the American Kennel Club Stud Book. We hope that he will jog his memory, for we have no doubt that if he tries very hard he may find it possible to recall the facts as we stated them. The reason of our withholding the "English Gentleman" letter is immaterial, but as a matter of record, we say again that the letter was withheld at the personal solicitation of Mr. C. J. Peshall. Until we read it in the communication from Mr. Peshall printed to-day, we never knew that Mr. Hammond had given him his friendly advice not to print the "English Gentleman letter.

SNAP SHOTS.

MUCH solicitation was felt by some people about the quail and other game in the blizzard of last March, but later observation has demonstrated that the birds came through it. The storm was not of so destructive a nature as some other forms of winter storms, when instead of a tremendous fall of snow there is a heavy coating of ice. Snow covers the birds up, and they can "make out to live." A Connecticut gentleman, whose statements we accept without question, reports that in the blizzard a number of his domestic fowl disappeared, and they were found alive, but thin, two weeks afterward, when the drifts melted from the branches of the quince trees where the hens had gone to roost the night before the snowfall. If domestic fowl could survive the storm in this way it is reasonable to infer that the more hardy wild creatures would fare no less well.

A man to whom perhaps more than any one else we owe the existence of the Yellowstone Park as a national reservation, has just died. That man was Col. James Stevenson. He was one of the first scientific men to penetrate that hitherto mysterious region, and he came back from it to Washington full of enthusiasm for its wonders and its beauties. It is to his enthusiasm, to his appreciation of the importance of preserving this wonderful region as a possession of the whole people, and to the clear and forcible way in which he presented this importance to Congress that we owe the National Park to-day. Those who are familiar with the history of legislation in Washington in 1871 and '72 will be sure to give full credit to Col. Stevenson for his farseeing wisdom.

The papers descriptive of "Early Days on the Missouri," of which the second is printed to-day are worthy of special attention, for they are vivid and truthful pictures of wild scenes in that region in the time of the pioneers. He who took part in border life in those days must needs have an iron frame and a stout heart to do and dare. These chapters portray phases of American life which have already passed into history; they have no counterpart to-day on this continent, and Mr. Macdonald's papers therefore have a double value because of their historical accuracy.

It has come to our knowledge that most extraordinary measures of bulldozing and threatened boycotting are being employed to induce the Buffalo managers to change their bench show rules, even at this late date, when such a change would in all probability prove disastrous.

One hears a great amount of fish talk in the street cars and on the ferries and railroad trains in these days; and if one may believe all that he casually overhears unusually large strings of fish have been taken by the talkers. Talk is cheap, but it takes tackle to catch fish.

The Sportsman Tourist.

EARLY DAYS ON THE MISSOURI.

II.—A VISION OF MASSACRE.

VISIONS and presentiments have accomplished wonders. The visions of a St. Francis or a Catherine of Sienna have been apparently able to impress the stigmata on their living bodies; the visions of a shepherd girl drove the English out of France, and the visions of a Mohamed have changed the whole current of the stream of history. Though psychology has names for these aberrations, and the physiologist may be able to place his finger on the very nerve that occasions them, still the fact of their influence remains the same. They can nerve the weakest or appal the firmest mind.

I have had such an experience, which I will relate, and in order that the situation may be understood I will give a short history of the events which led up to it.

In the fall of 1868 I had, together with a party of four others, and afterward with a single partner, been killing wolves in the country tributary to the mouth of the Musselshell River. So many of us together attracted too much notice, as we were obliged to have horses or a team of some kind, and were consequently subject to constant attacks from hostile Indians. After several skirmishes and losing two horses, I determined to go it alone that winter. I took plenty of ammunition, coffee and salt, which I cached in different places. I had an overcoat for bedding, and followed the buffalo and lived and slept on the prairie like the other animals. In the worst storms I sought the shelter of the brush or some washed out cavern, common in the bad lands.

In March I met Joe Bushaway, a gigantic Frenchman, as gallant and brave a man as ever fired a rifle, and formed a partnership with him to cut wood and put up ice on the Missouri River, to sell to the passing steamboats. He had with him Dan Fitzgerald, well known in Benton, a stalwart, rollicking, jolly Irishman, but so awkward that he could scarcely run a hundred yards without falling, or cock a revolver without using both his huge hands.

We camped just below the mouth of the Fourchette, on the Missouri, and built a cabin and a stockade well supplied with portholes. There was a wrecked steamboat a short distance from us; we took the smokestack and formed a fireplace and chimney out of it, and of the lumber we floored our cabin and otherwise furnished it according to our notions in palatial style. We went up to Musselshell and hired three men, Long, Foster and Jordan, and returned to our camp,

A few days afterward we were almost out of meat and I went out to kill a buffalo. A band was in sight two or three miles off, and as I went toward them I noticed something running them, so I went back to camp and told the men I thought there was a war party close to us, and we had better stay in camp a day or two. We stayed in camp the next day, and as we saw nothing, we concluded they had passed. The others went out to chop; I took my rifle and started across the river to kill some meat. About two miles from our camp I saw a band of buffalo grazing and I approached them and killed one. I had barely fired when I heard a scattering volley in the direction of camp. I thought at first a band of buffalo or elk had come near our camp, and that Joe and the men had opened fire on them, but the more I thought of it the more it troubled me, and I determined to make for the brush on the river; follow it down to opposite our stockade, and from there watch our camp. I knew that if everything was all right I should see some one.

I waited all that day and did not see a living soul. When night came I determined to cross the river and find out the fate of my companions. The cabin formed a bastion on one corner of the stockade, and as I cautiously approached, I could perceive a faint glimmer of light through one of the portholes. I crept silently up to it but could discern nothing; presently I heard Joe's voice. I then spoke and told Joe to let me in. After what appeared to me an unusually long time he unbarred the stockade gate and I saw he was crippled. As I went into the cabin I saw Big Dan lying on the bed, and I asked Joe what had happened. He told me that after I had gone hunting, he had taken his axe and had started to chop. He was probably the best chopper in Montana, but that morning he had not been chopping more than twenty minutes when his axe glanced and cut into almost one-third of his foot. He went into the in, wrapped up his foot, and had scarcely laid himself down on his bed when he heard the firing. The men were chopping not over a hundred yards from the stockade and had already stacked up quite a number of cribs of wood. Joe's Henry rifle was hanging directly over his bed; he grasped it and hurried to the gate of the stockade. He saw at a glance several Indians; two were running after Big Dan and not more than a dozen steps behind him. The Indians fired, but in the nick of time Dan stumbled and fell, and his awkwardness saved his life. Two more Indians made a rush at Dan, but just then they caught sight of Joe with his leveled rifle. Joe was a dead shot, but unfortunately he had forgotten to work the lever of his Henry. The chamber was empty; his deadly aim produced only a dull snap and the Indians jumped behind the shelter of the wood cribs. Big Dan, in the meantime, had by means of running and stumbling reached the stockade gate, but not before two bullets had struck him—one in the arm, the other in the hip. Neither Joe nor Dan knew what had become of the other man. Joe had seen Long, and when he last saw him he was pursued by several Indian, but as he was a powerful runner and apparently unhurt, we had strong hopes that he had escaped and would bring us assistance.

The next morning Dan was unable to move, but Joe mounted on top of the cabin to watch the surrounding brush, and I went out to search for our missing companions. Not two hundred yards from the stockade I found the bodies of Jordan and Foster, lying beside the log they had been chopping on, stripped naked, but not mutilated. I searched for but could not find Long, and as the undergrowth of brush was dense, I did not care to run the chance of taking a very wide circuit, as we were almost sure he had escaped. I wrapped Foster and Jordan in blankets, dug a hole and put them in it.

Jordan had come on the river the preceding fall, and on his trip down from Benton had been attacked by Indians, one of his companions was killed, and he had only saved his own life by his expertness as a swimmer and diver.

Foster had several letters of introduction to prominent gentlemen of Denver; he was a born mathematician, his sole recreation was the working of problems in Algebra. I preserved the one he was working on the evening before he was killed:

$$\text{Given } \frac{X^2 - 12 = X}{6}, \text{ to find } X.$$

Poor fellow! In a few short hours he had solved the final problem.

We sat in the cabin for three days and nights, expecting a renewal of the attack at any time. How long and dreary it was, the strained waiting for either relief or attack! The excitement produced by the rustle of a deer or the tramp of a stray buffalo, followed by the reaction of a monotonous deadly silence only broken by the occasional ejaculations of the wounded Dan addressed to some favorite saint.

The fourth day, no assistance reaching us, we concluded Long must also have been killed. Again Joe mounted the cabin and I searched the surrounding brush, and this time found the dead body of Long. In my former search I had passed within a few feet of him, but owing to a large log that he laid beside had not seen him. He was shot through twice, but the Indians had apparently not found him, as he had not been stripped nor mutilated. He was a magnificent specimen of manhood, over six feet four inches; he had a daughter in the States, who was notified of his tragic fate.

Our last hope was now gone. Neither Joe nor Dan could travel, and I determined to go and get some help. Between our place and the Musselshell River three other men had a cabin and were engaged in chopping wood. I reached these men's place (I can't recall their names), and they accompanied me back. Joe had a yoke of oxen and wagon. The oxen generally fed among the dense willows and the Indians had not seen them. Our only means to get the wounded men away was to haul them, but the side of the river we were on was almost impassable for a man on horseback, and we were obliged to cross it. The ice on the river was too rotten to bear up the cattle, so we were compelled to wait until the river broke up, which it did in about a week. We then swam the cattle and rafted ourselves and the wagon across, and went up the river about fifty miles to a small settlement at the mouth of the Musselshell. We had only reached there when James Brewer and Capt. Andrews had a race for life across the Musselshell bottom, and a white woman—old miners will remember her—Jenny (of watery fame) and a young Crow squaw were walking a short distance from the houses, when a few Indians, who had crawled through the sage brush, commenced firing upon them. The squaw was shot through the lower part of the body; Jenny could have escaped had she abandoned the squaw; she clung to her and endeavored to drag her toward the houses, when a bullet creased her neck and stretched her on the ground. An Indian dashed toward her and tore two scalps from her head as she lay senseless. With the first shriek of the women several men rushed out of the houses and opened fire at the Indians. The whole thing scarcely occupied a minute. The women were carried in, the squaw making loud lamentations, but the white woman was supposed to be dead. The squaw I afterward saw in the Crow camp, dirtier than ever, but apparently none the worse for her experiences. Jenny had a horror of having it known that she had been scalped. She was afterward in Thompson Gulch. The ladies there once invited her to one of their houses, and when she came they wished her to show them where she had been scalped. She denied the whole affair point black, and when she afterward saw me, she said to me earnestly, "Mack, don't tell them pilgrims that that red devil took my hair." Poor Jenny! Many women may have excelled her in rigid virtue, but few in generosity, hospitality and womanly sympathy. She has been twice married since her scalping adventure, and may be now alive. May she flourish forever!

These little skirmishes continued almost every day, until they finally culminated in a battle, in which the Indians fell into their own trap, and the whites were possessed of thirteen of their scalps and only one out of ninety odd, according to their own account, reached camp without a wound. James Wells and myself received the war bonnets of their chiefs, but it would occupy too much space to enter into the details of this fight here, and I will reserve it for some other time.

The constant strain and excitement commenced to tell on me, and I determined to leave the river. I sold my interest to Cash Veits, a young man of as consummate coolness in the face of danger as I have ever seen, a dead shot and a magnificent oarsman. Joe Bushaway and Cash wished me to go with them down to our stockade, the place where Jordan, Foster and Long had been killed, for the purpose of putting up a sign notifying the steamboats to take wood and ice and settle for it at Musselshell. It was a frightfully dangerous trip, and I had a strong presentiment that I should never come through another Indian fight. I hesitated, but at last consented to go, and endeavored to shake off my gloomy forebodings. We started in the middle of the afternoon, so that we could travel the most dangerous part during the night. Out of bravado we stuck a mast up and hung my war bonnet on top of it, and lower down on a crosstree we strung some scalps we had.

Night fell, and we had now the most dangerous part of our route to traverse. The moon came up full and clear; the air was still and it was bright as day. Any one who has traveled up or down the Missouri River must have observed that the lower end of a point is always heavily timbered, the opposite bank being a bar or high bench. Joe was steering our light skiff, Cash was helping the force of the current with occasional oaring; it was chilly, and I sat wrapped in a buffalo robe in the bow of the skiff to look out for snags. There was a good stage of water, and we were floating on the timbered side of the river. The full moon made the opposite side as light as day; ours, owing to the shade of the timber, black as night. The dismal presentiment of my fate depressed me; the deadly silence, save the monotonous ripple of the water against our speeding skiff; the thoughts of the bloody horrors I had lately passed through, and may be thoughts of that flaunting war bonnet and those bloody scalps threw me into a reverie. I was not really awake, but I was not asleep, and the vision I saw was as plain to me as anything I ever had happen to me in my waking hours. I thought we had been attacked and killed, and I could

plainly see our naked dead bodies on that barren sand bar. I could distinguish the features of every Indian. I could hear every word they said. One burly brute, with hideous black and yellow stripes on his face, measured Joe's giant length; another ghastly, naked demon danced and sang on the body of Cash; and I could feel on my pallid cheek the hot and sickening breath of the grim and painted savage as he pulled the torn scalp from my bleeding head.

I was gazing on this vision as on a panoramic picture, when Joe said in a husky whisper, "Indians." I turned my startled gaze, and on the opposite bank I beheld the figures, that in bright moonlight looked gigantic, of a war party filing into the opposite bottom. My life had been of adventure and danger. Before I was sixteen I had carried a musket through more than twenty battles. When a boy, I was one of a charging column that rushed on a masked battery, and whose shattered ranks were mowed by a hell of shot and shell, and I lay wounded and senseless among the dead and dying; I, with four others, had been perched on a hill, under a burning sun, without ammunition, food or water, every horse killed and night coming on, amid the despair-inspiring howls of the wolves attracted by the blood of the shot horses; I had been ridden down, alone, a hundred miles from the nearest white man, by a naked war party—but until this moment I never realized what horrror meant. Had some Perseus turned the horrid glare of his Gorgon-headed shield on me, I could not have been more petrified with horror. My own blood appeared to freeze. I felt so sure that everything I had seen would come to pass.

Joe, after a few minutes, asked what we had better do. As soon as I could speak I suggested that we had better keep on the dark side where we were and float down to the mouth of the Fourchette, of which we were in the neighborhood, and turn up that stream and take to the dense brush. We were not certain whether the Indians had seen us, and we sat the remainder of the night in the brush. When daylight came we reconnoitered for some time, but could detect no sign of Indians. We took our skiff, continued our journey and in a short time reached our stockade. Cash staid in the skiff to be ready for accidents; Joe and I jumped ashore to reconnoiter the ground. The war party we had seen had camped in our cabin but were gone on. They had torn up our floor, I suppose to see if we had hidden anything. They had thought the graves of Foster, Jordan and Long to be a cache and had opened them, and the first sight Joe and I saw was the stalwart arm of Long, with a clenched hand, pointing upward out of his grave to the sky, stark and stiff.

HENRY MACDONALD.

THE SPIRITS OF GREEVER'S CAMP.

MURDER will out, they say. I believe it. To the sternest mind, concealing any crime, there must some day come the time when concealment is no longer possible. The soul must free itself. Age, anxiety, or approaching dissolution constitute potent incentives to confession of crime. Under such influences the burdened heart can endure the strain no longer. History of crimes or criminals offers frequent confirmation of this fact.

My life—if friends will so far as possible excuse the personal reference—has not been all good; to the contrary, it has in some cases been quite the reverse. I have committed a crime. This horrid knowledge has long dwelt hidden in my mind; and now, as my life totters to its end, I can withhold my confession no longer.

I have committed a crime. It was a peculiar sort of crime; in short, it was so very peculiar, that I feel as if I should be committing a second crime, and a greater, by keeping the circumstances concealed in my bosom.

It's about a friend of mine. And when I think of the kind of game we sprung on him; when I consider the heartless, unfeeling nature of our conduct—for there were accomplices—when I think of the trusting, unsuspicious nature of our victim, and reflect on the total absence of all mitigating circumstances, my heart misgives me, even now.

The deed was done in the rude cabin at Greever's Camp, by the lonesome Cimarron, in the far-off Indian lands. The chief conspirators were Buck, the cook; Red, the foreman; Jack, a trail rider; Ricker, and my guilty self. The victim was our mutual friend, Mr. A., a gentleman not unknown in these columns, a thorough sportsman, and as good a companion on a hunt as you will find, especially when he takes his pack of hounds. Yes, Mr. A. is still alive. I don't think he will be willing to die at all, now, until he has paid me out for telling about this. But I should die if I didn't tell it, anyway, so it will be just as well if he does kill me.

It was midnight. Cold and sharp the wind sang overhead. Outside, twenty greyhounds were quarreling on the porch; inside, a bright fire roared and crackled, and painted on the wall those rare pictures which none but hunters ever see; and back we lay on our blanket rolls, and dreamed, I suppose, of Annie Laurie, and smoked, and were silent, and may be dreamed again. Then some one scraped a bootsole on the floor, and the little noise broke the dam of silence and everybody said something, and two or three said the wind sounded like a soul in trouble. Spooks and spirits drifted into consideration, and long talk and wide discussion followed. It then became apparent—what some of us already knew—that Mr. A. was a firm believer in spiritualism.

Now, I am not a spiritualist, but I think none the less of any man for being one, provided other things be equal. I am ready to say with the one man of earth who has covered all earthly certainties and earthly speculations—

> "There are more things in heaven and earth, Horatio,
> Than are dreamed of in thy philosophy."

I am willing to allow any man his own belief, if he pays his taxes and ties up his dog of nights. I hardly know, therefore, why I took any hand in what followed. Shall I say that some evil spirit tempted me? Would that make my peace with Mr. A.?

Our talk, long and profitless, as such talks always are, grew animated and almost excited, Mr. A. stoutly meeting our joint protests with answers and hard questions. There was a lot of talk about planchettes, and tables, and slates, and rappings and magnetism, and electricity, and all the familiar stuff; and then, when the matter had begun to get down to the personal experiences, I felt a kick from Buck's long leg, and we whispered a little, and I nudged Ricker, and Ricker nudged Jack, and Jack whispered to Red when Mr. A.'s back was turned. After a brief pause, every villain pulled his face straight, and Buck said:

"Fellows, did you ever know I used to be a sort of medium myself.

None of us had known that. But Mr. A. jumped at the word, and said he had no doubt that with Buck's assistance he could make the table walk around the room. Then Ricker developed latent powers, and they all sat down at the table, lightly resting their fingers upon the top in the usual way.

Would you believe it? The table began to move!

Mr. A. became strangely excited. We all gathered about in eager interest. "I never saw the like before!" yelled Mr. A., "I never saw it start off so soon and strong before!"

Alas! my friend, no wonder you never did. That was owing to the peculiar nature of the spirits of Greever's Camp. Not all spirits have so facile a leg as Ricker's nor so innocent a face as Buck's.

The boys walked the table about shamelessly with their legs, and I lay on the floor and lied on the floor, and said I couldn't see anything, and Red stood it as long as he could, and exclaiming "I'm going to get out of here!" rushed outside and made that strange choking sound that men do when they are frightened—or want to laugh.

"Well, now then, what do you think?" asked Mr. A. in triumph. We didn't say.

The villainy of it! The disgracefulness of it! Surely, there are mad moments in a man's life.

Mr. A. went down to the barn to see if the dogs were all right. "Quick!" whispered some one, and there were hurried preparations. When Mr. A. came in we were all unrolling our blankets and unlacing our boots. A few moments later silence reigned, save for a gentle snore or so.

A little later yet there came a faint "Tick tock!" on the wall just above Mr. A.'s head. "Hush! what was that?" he said. He was lying awake. "Tick tock!" came the sound again. "Oh, I know; it's the door peg, the wind's blowing it around." "Tick tock!" solemnly came the sound again. Red sat up in bed. Mr. A. rose, looked at the door peg and found it fast in the hole.

"Don't you hear that noise?" he inquired excitedly of Ricker and me, who slept at the other end of the cabin. "Yes," we guilessly replied, we heard it, and it was directly over our heads, and it was a barrel hoop hanging on the wall outside. But exploration revealed no hoop, and still that solemn, muffled sound kept on.

"Are you a spirit?" yelled Mr. A.

"Yes," rapped out the noise, in three distinct knocks. The excitement grew intense.

At this moment, no man being near it, the table began to move! First it scratched on the floor hesitatingly; then it shook, then distinctly, unmistakably, it began to move. It started directly for the corner of the room where Ricker and I lay!

We rose from our blankets, we shrank back from it. Powerless, helpless, we cowered in the corner of the cabin, trembling, aye, even shaking under the emotions which assailed us. The firelight must have shown ghastly on our faces, for even to-day Mr. A. insists that we were deathly pale, and that our hair stood on end in sheer fright.

"It's coming for you! It's coming for you!" screamed Mr. A. "There's your proof! What do you think now?"

Well, what do you think? I think it was a shame. If a boy of mine were to go and play such a trick on a gentleman older than himself, and then go and tell about it afterward, I should break his back and then insert him in the cold, cold grave.

Slowly the muffled beats subsided. "I'm not afraid of any spirits," said Ricker. "Nor I," said Red. "I'm not afraid of any table," said I; and in the dim light I crawled out on the floor and displayed my valor by untying the twine string from the table leg, and throwing it under the blankets, where nobody could see it. And then we lay there, and talked and protested and lied, and got laughed at by Mr. A. until nearly morning. And when Mr. A. went out to the barn in the morning Ricker jerked down the leaden bullet which had formed his simple "tick-tock," and rolled up the black thread which had stretched across the rafters and hung down in the corner of the room where we lay. And at breakfast we were all ashamed, and treated Mr. A. mighty politely, but couldn't look him in the eye, and didn't want to talk about spirits, and wondered how he would take it when he found it out.

Life in the camp proceeded as life on a hunt will, and we conspirators daily grew more remorseful. For myself, I wanted a dozen times to make my confession, but never had nerve enough. At last, two days afterward, while we were riding out across the hills with the hounds, Mr. A. came up to me and said: "Say, H., I don't think I ever in my life saw such strong manifestations as we had the other night, and I've been attending sittings for some time, too."

"Now look here, A.," said I, "don't come and talk to me like that because I can't stand it. The boys put up an awful job on you that night."

"Job nothing!" exploded he. "Do you take me for a natural born fool? Do you think I can't see? Haven't I got ears?"

I explained to him that he might have the best ears in the world and yet not see into the workings of a black string of a dark night, and I further proceeded to read him a lecture on the follies of superstition, all the time keeping my six-shooter loose in the holster, because you can't tell always. Mr. A. laughed at me, laughed loud and long and deeply.

"Now say," said he, "it's all right to get scared at a little innocent table tipping, but to try to pass it off as a joke, when all the time you know you were frightened plum near to death, why that's what you might call a little too thin, I should say."

I protested and reasoned and explained, but it was no use. "Why, pshaw, man!" he said, "what's the use talking to me that way! Why don't you just own up that the whole lot of you were scared about out of your wits? You can't fool me. Wasn't Red all broke out in a cold sweat? Didn't I feel a cold wave pass over my face when the rappings began? I tell you you can't fool me. I've seen them influences before. I'm an old-timer, I am."

I told the boys what Mr. A. had said, and they all went and apologized, and got laughed at in turn. We began to think it pretty hard to tell where the joke came in. And not during that whole hunt did Mr. A. become changed in his belief. He only laughed the louder at our fright and at our flimsy explanation.

"You needn't think I'm going to have any mercy on you," said he, "I'm going to tell the boys all about it."

And I wish I may die if he didn't. He just circulated that story of the spirits of Greever's Camp all through Kansas, and kept us so busy explaining that life became a burden. A deuce of a practical joke this was! At last I went to him and said:

"Now look here, A., if you don't let up on this business, and confess that you were the worst fooled man in the great American desert, I'll give the whole thing dead away, and put the facts before the great American public—I will, now, and no mistake."

"Confess nothing!" said he. "What do you take me for? Think I'm a blasted tenderfoot? If you want to write that thing up, why go ahead, just as you give the facts, and don't lie about it. You need't think I'll care: but it'll make a spectacle out of you, now sure."

Therefore, and for reasons hereinbefore set forth, I have given thesefacts about our Walpurgis Night down on the Cimarron. It was rude fun, I do not question, and I abate not one jot of my confession of remorse. But the main question still remains. How shall we convince Mr. A. that those spirits were hand-made? E. HOUGH.

HUTCHINSON, Kan.

Natural History.

NOTES FROM A TEXAS PASTURE.

Editor Forest and Stream:

I had occasion some time since to travel from the town of Albany in a loaded wagon, and finding the roads very heavy from recent rains, I determined to lessen the burden upon the animals by setting out on foot. The soil of the prairies was of the black waxy sort, extremely sticky after a rain. On either side of the road the walking was good enough, from the great wealth of grasses and wild flowers which made it tolerably firm beneath the feet. A few miles from Fort Griffin the road led by a large pasture in which were many horses and kine, very sleek and beautiful. They had nothing to do but eat and be merry and beget their kind, and to thank God that he had given them life. I thought of King David's lamb, the perfect type of contentment and innocence. "The Lord is my shepherd; I shall not want. He maketh me to lie down in green pastures; he leadeth me by the still waters. * * Thou art with me; thy rod and thy staff they comfort me. Thou preparest a table before me; thou anointest my head with oil; my cup runneth over. Surely goodness and mercy shall follow me all the days of my life."

As the weather was showery, I wore a long and loose rubber coat which covered my body to the feet, causing me to look like a wandering monk of the deserts, or possibly a crazy woman of great size. As I strode by the pasture the horses took deep interest in me, lifting their heads and gazing intently, and sometimes blowing loud blasts from their noses. Those that were feeding apart hastened to join the others, so that there was soon quite a brigade before me. The nearer I approached them the greater grew their interest; becoming so filled with it in a little while that hardly any of them could be still a moment. Sometimes they turned their heads as if they would run away; then again confronted me with ears pricked up and eyes ablaze. I concluded it was my rubber coat, and the strange appearance it gave me, which excited them so much; it being probably the first time they had seen a man in such a costume. That I was a man none of them I guess, doubted; but it was plain that they held me as a very outlandish one, who might also be very wicked.

The inside of my rubber coat is of a rare combination of colors, and presents a grotesque appearance when turned inside out. Therefore I slipped behind a great live-oak, so the horses could not well see what was going on, and quickly turned my coat inside out and put it on again. Then stepping to the front I saw that their amazement knew no bounds. A great commotion had come among them. They lifted their heads higher than ever, and many of them turned tail to fly. If they suspected me to be a wicked person before, it now seemed that they had let go all doubt of it, and reckoned me at once as a monster and a terror, who could shift the color of his skin at will and so quickly. They could not stand it long. Presently they broke unanimously and flew over the prairie like a whirlwind, causing the kine in their way to break helter-skelter to clear the track. There were several high points in the pasture. To the top of one of these they sped in admirable and beautiful order, as if under military tactics; then stopped and gazed and blew blasts from their noses. But only for a short time could they stand this, so full were they of the strange creature. Suddenly down the hill they went like a tempest and swept away out of sight; to return in a few moments to another hill, where they again stood and gazed and blew their blasts.

In meantime the kine had begun to gaze and be seized with wonder. They began to collect from all sides, so that there was soon a large body. Very generally they began to shake their heads at the strange object, as if they wished to notify it that they had horns and understood the use of them. On the whole their behavior was audacious, yet with many signs that they thought it best to be discreet and not hastily to provoke the object. They soon began a general advance, not as if they would at once attack, but cautiously, as if they would first investigate what the strange thing might be. When within 50yds. all stopped to put their wits to work, gazing intently, evidently in profound and perplexed study. Some of the most audacious shook their heads and stamped the ground viciously, apparently by way of bravado. Now and then they turned their heads and looked at each other, as if communing what to do, or may be see if any had lost heart and were about to fly. At last a bull left the herd and advanced within two steps of me, so that I felt nervous lest the wire fence should not prove strong enough to hold him. But he stopped, and I saw from the expression in his great eyes that, however brave he may have appeared to his admiring herd he was in reality in much dread lest the strange object should leap upon him.

Suddenly I spread my coat out on each side, so as to

make it appear that I had in an instant swollen my bulk about twofold. This seemed to overcome him entirely. His eyes spread visibly till they were not far from the size of saucers, and his heart seemed to let go and fall dead within him. I dare say that he believed that at the next moment I should grow larger than a mountain and lay hold on him. He turned tail most ungracefully and trotted back to the herd in a loose, shambling manner, as if he were about to fall to pieces; his head high up in the air, looking backward, and his tail dangling nervelessly behind him. A more demoralized creature was never seen. For a moment he stopped with the herd, as if he said to them, "It is time to leave; that thing truly is the devil." Then his flight began in earnest, and all his herd went instantly after him, jumping, bounding, utterly without order, so that the smaller were likely to be run down and crushed by the bigger. It was a shameful rout; a devil-take-the-hindmost, *sauve qui peut* affair.

The horses had been watching the advance of the kine from a high hill, and when they saw their repulse and rout, a new dismay seized upon them. They too broke, eager to put as great a distance as possible between themselves and the mysterious creature. But when they reached the uttermost part of the pasture they could not stop. Dismay still spurred them on, and presently they appeared again, advancing upon me in full charge, when suddenly catching another view of me, they wheeled away to the left. So they together and the kine together ran round and round, lifting their heels to their mighty utmost, like Tam O'Shanter's mare with the warlocks at her tail. The horses being the fleeter appeared occasionally to be charging down upon the kine, when the latter would scatter before them in every direction, to reunite when the horses passed by. The clatter and roar of hoofs rose high. It was as though a cyclone raged in the pasture. I became alarmed lest the owner should come down upon me as a disturber of the peace. Therefore I walked on, with the clatter and roar sounding in my ears, somewhat consoling myself with the reflection that no rubber coat in the world had ever created so great a commotion as mine had. About a half hour after I left the pasture the wagon passed by it, whose driver reported that the excitement was still very great. He wondered what the matter was, and concluded that the animals had probably seen a Mexican lion.

Were these animals really frightened that they behaved so wildly, or were they merely putting on, out of their exuberant spirit? As to the kine I think there is no doubt they really believed they had seen Satan, or some other very wicked creature who had it in his mind to do them much evil. But as to the horses the case is not so clear; whereof we will discuss somewhat in another paper.

ELIASVILLE, Tex. N. A. T.

FRESH-WATER PEARLS.

IN reply to "N. A. T.'s" inquiries about the fresh-water pearls, I can give nothing of my own experience, but yet some information which I am sure is quite trustworthy, as it was obtained from one of the most experienced pearl fishers of the Winooski River, by my wife, while preparing an article on the subject for the *American Agriculturist* in 1872. I can do no better than quote such portions of that article as will interest "N. A. T.":

"Fresh-water pearls are found most abundantly in the Winooski River not far from its source and in its small tributaries. They are more frequently found in clams that live on stony or gravelly bottoms, as a grain of sand or some small foreign substance that has entered the shell forms the nucleus around which the layers of pearl are made, taking an unknown number of years to form even a small pearl. Sometimes they are taken from river beds of clay and mud. It is said clams must be seven years old before they begin to form a pearl. When open the pearl, if any, is at once seen in the small end imbedded in the "flap." The experienced hunter can usually tell before opening if there is a pearl inside, as only the deformed shells contain one. Often thousands of shells are opened and the inmates destroyed without obtaining a single pearl of value.

"Hinckley Stevens of East Montpelier, one of the most successful pearl hunters of that region, some years ago found the largest pearl that has been discovered in the United States. He says: 'The large pearl I found was in two feet of water where it ran swift. It was in the first shell I took out and I could see the place close to it where some one else had taken out another clam. The pearl is ⅝in. in diameter, round as a ball, and of fine lustre. I sold it for four hundred dollars, but it is valued much higher by its present owner. It was nearly in the middle of the clam by the hinge, the only one I ever heard of being found there.' For successful hunting a still day is necessary, as a slight ripple on deep water will hide the clams."

The clams were destroyed in such immense quantities as to almost exterminate them in the Winooski, and no pearls of any value have been found there for several years.

I have never heard of a pearl being found in the unios of Lake Champlain, nor in the streams near it, not even in its tributary, the Winooski further down than Montpelier.

Perhaps "N. A. T.'s" silent Texan acquaintances are as barren, but I wish him the luck of gathering from them pearls of great price, and the readers of FOREST AND STREAM the pleasure of reading many more of his delightful letters.

Writing of clams reminds me of another so considered uneatable, namely our fresh-water sheepshead. Though this fish when hooked makes such a valiant fight as promises good things on the table, he is generally held in light esteem and often thrown away as soon as caught. Now, if any of the brotherhood, fishing for better fish, chances to capture one of these opal-brained fellows, let him take him home, and having parboiled him, cook him in whatever way he chooses, and then having a good appetite, partake of him, and afterward report in these columns concerning the quality of the fish.

AWAHSOOSE.

DEATH OF COLONEL JAMES STEVENSON.—Colonel James Stevenson, one of the oldest and best-known members of the United States Geological Survey, died at the Gilsey House, in this city, July 25. He was born in Maysville, Ky., in the year 1840, and at an early age showed a strong predilection for wild outdoor life. Before he was fifteen years old he had been among the Indian tribes of the frontiers, and had begun to study their language and customs. He soon joined Dr. Hayden, and by his advice spent several seasons among the Sioux, whose language he learned to speak with fluency. Appointed his chief assistant by Dr. Hayden, he worked with him for some years, but at the breaking out of the war of the rebellion he entered the service on the staff of General Fitz John Porter, and was actively engaged in army work throughout the war. At its close he again joined Dr. Hayden, and thereafter was his chief assistant so long as Dr. Hayden had charge of the Survey. Col. Stevenson was the first to explore and map a great many regions in the West up to that time unknown, and his work on the Columbia and Snake Rivers, and in the neighborhood of the Yellowstone National Park, was especially noteworthy. When Major Powell was placed at the head of the Geological Survey, he appointed Colonel Stevenson as his executive officer. During recent years, however, Colonel Stevenson, at his own request, had been detailed on special ethnological research in connection with the Smithsonian Institution. The exceedingly valuable collection in the National Museum at the Institution, due very largely to his investigations and labors, shows how successful has been the character of his work. His most recent investigations have been given to the Navajo and Zuñi tribes of Indians, and in this work he has devoted much time and study to their mythological religion and customs. In connection with this work he has explored the habitations of the Cliff Dwellers, in Arizona and New Mexico, giving some valuable data and drawings to the Government as a result of his wonderful work there. There is no doubt of the value and importance of the scientific work done by Colonel Stevenson, but it is perhaps true to say that even more important to science, promoting in a high degree the success of the Survey, was his executive ability, his admirable management of the organization. Colonel Stevenson's death was caused by an affection of the heart, brought on, it is said, by much climbing of high mountains. His wife survives him.

MASSACHUSETTS.—Salem, July 24.—Uplands (*T. bartramius*) are reported as seen at Essex. A party recently shot two snipe (*M. griseus*) and some three dozen "peeps," not pups, as last paper said.

THE NAMES OF GAME BIRDS.*—I.

ORNITHOLOGISTS have been quite in the way of speaking with a certain contempt of the English nomenclature of our birds. The language of science professes to be precise; a plant or an animal has one name—a name which belongs to it alone, while the English names of many of our commonest forms of life are hopelessly confused. A single appellation in different sections is applied to animals of the most diverse character. A familiar and fantastic example of this is the term "gopher," which in different localities means variously (1) any one of the several species of ground squirrels, (2) a kind of pouched rat, (3) a species of snake, (4) a tortoise.

But is the language of science actually precise? It should be; it aims to be, but a glance at the list of synonyms in any work on ornithology will show that the scientific nomenclature of birds is constantly changing, and that most species have had at least as many Latin names applied to them as English ones.

Up to the present time the English names of our birds have been generally unknown. By this we mean that each name applied to a given species is known as belonging to that species only by persons inhabiting a limited area. A certain duck may be called at Falmouth, Massachusetts, a widgeon; in another part of the same State its name may be troop-fowl; in Connecticut, broadbill; in New Jersey, flock-duck; in South Carolina, blackhead; and in Illinois, bluebill. If, however, in South Carolina a widgeon is spoken of, it is supposed that the bird referred to is an entirely different species from that called widgeon at Falmouth in Massachusetts. In other words, these English names, having never seemed to ornithologists of sufficient importance to put into their books, have had no general currency, and for the most part each one is known only to a limited circle of dwellers in some particular section of the country. From time to time lists of local names from various localities have been published in FOREST AND STREAM, but these, while interesting in themselves, have necessarily covered but little territory. One of the best and most interesting of these is that by Mr. C. F. Brown, in FOREST AND STREAM, Nov. 9, 1876. Until now, however, the subject of the common names of American birds has remained practically untouched.

We have before us a book that is entirely new and curious, and utterly unlike anything that has heretofore been published, a book which possesses a very great interest for the student of ornithology, and which will be still more warmly welcomed by the man who is not a student but who loves to go shooting—who is in fact a plain, simple gunner. Mr. Trumbull has had the genius to break the soil in a field hitherto unworked. He has written a volume which, while not nominally an ornithology, is yet one in fact, but an ornithology entirely different in plan and purpose from any other that has yet been written, an ornithology which eschews the jargon of science and commends itself by its plain and simple language to that vast majority of people who are ignorant of the latinity of science, and who are appalled by the mysteries of its technical terms. This ornithology is confined to our game birds, and to our game birds east of the Rocky Mountains, but it can be comprehended throughout. There is in all this book not a single mention of primaries or remiges, gonys or culmen. The birds are described in plain, every-day English, "in language understanded of the people." It is hardly necessary to say that for such a book there is a place. If it contained only the common names of birds it would be a remarkably interesting and curious book. If it contained only the descriptions, accompanied by such excellent figures, it would be a most useful book, one which would enable every gunner of intelligence who can read English to identify the birds which he has shot. As to this view of the book Mr. Trumbull in his introduction says:

"I have thought that a book which included those birds only in which gunners and sportsmen are interested—pictures of the different species and plumages, descriptions in plain English, full lists of common names, as well as book-names—would, if decently constructed, be a peculiarly intelligible book of reference for those who go gunning. A good picture is worth more for the purpose of identification than all the descriptions ever written, and a picture in simple black and white is in many cases more useful than a colored one, that is to say, for birds whose plumages are entirely different at different seasons, and whose markings and colors necessarily pass through so many intermediate stages. It should be always borne in mind that a bird does not change its plumage as a snake does its skin; that it is impossible to describe each and every variation, and that it is better to leave a great deal to the intelligence of the reader, than to run the risk of hopelessly confusing him by too much detail."

The groups of birds are taken up in no regular order. The book opens with the geese and the ducks, rails, grouse and waders follow. To each bird is given a number and is identified beyond the possibility of a mistake by means of its Latin name as given in the Check List of the A. O. U. About sixty species are enumerated. Following this is a plain simple description in ordinary untechnical English, such as a child could comprehend. Then comes a figure of the bird, sometimes two figures, when the male and female differ in plumage, and then follows the list of English names, with the locality where each is used interspersed with all sorts of curious information, picked up by Mr. Trumbull in his travels.

The names given by Mr. Trumbull in this work comprise only those which are now in actual use, which has found employed by gunners in one section or another to which his wanderings have extended. We there find that some of the names given in the ornithologies but which appear to have become obsolete, do not appear in the present volume, but of those in actual use to-day Mr. Trumbull has no doubt recorded the great majority. Of course he has not been able to obtain them all, but looking over the book, we have been able to find only a single omission of a local name. This is the term "rail-crake" as applied to the Virginia rail.

The ninety portraits which serve to illustrate this book are singularly faithful likenesses of the species they represent. They were drawn by Mr. Edwin Shepard of the Academy of Natural Sciences of Philadelphia, who is well known by his admirable drawings of birds in Baird, Brewer and Ridgway's Water Birds of North America, and these are a credit to his pencil.

It is impossible to go into the subject of the local names as treated by Mr. Trumbull in such a way as to give a satisfactory idea of its magnitude and interest. Its points will be recognized by readers of the volume. To most people it will be a surprise to learn that a single duck (*Erismatura rubida*) has sixty-seven names. Even the woodcock has nearly as many.

The amount of labor required to bring together the vast number of local names here recorded can be appreciated by any one who has not given some attention to the subject. To have gathered together the names as have appeared in print would not have been difficult, but this would have been a very superficial way of handling a most interesting subject. It was not the author's way. Instead of this, Mr. Trumbull has given years to traveling about, visiting different shooting localities, making the acquaintance of the oldest and most reliable gunners in all sections, and learning from their lips the names applied in each particular locality to each species. It is the names used by these gunners and their fathers that are given us.

No word of defense or justification of such a careful and useful work as Mr. Trumbull has given to the public in this volume can be needed, and it is scarcely conceivable that any one should underestimate the value of the work. Its author, however, feels it necessary to speak a few words of justification for it and for the names which he has put on record. He says:

"I would remind any who may think it unwise to record provincialisms so simple and apparently full of meaning as some of these, that such a view of the matter is itself a provincialism most unreasonable. Many names which appear to us absurdly grotesque and outlandish are current mediums of communication between men as wise in their generation, though educated in a different school, and the whole nomenclature of those who shoot, not alone for sport but for their daily bread, should command respect. It is now painfully popular to misrepresent and ridicule the men called 'pot-hunters;' yet these dear old fellows have taught us pretty much all we know about hunting, and the science of ornithology has gathered its most important contributions."

We do not know of any reason why there should not be an English synonomy of birds as well as a Latin one, and for such a synonomy Mr. Trumbull has done the present work a broad foundation. We regard Mr. Trumbull's book as one of the most important that has appeared for years, and do not hesitate to predict that it will lead to more toward popularizing a knowledge of our birds than any that has gone before it for a number of years. It will serve as an introduction to the more technical works which without some easy approach such as this book and "Names and Portraits," would remain beyond the reach of the unscientific. The gunner by field, lake and the shore has here an easy means of learning what the birds are that he shoots.

For many years we have received inquiries for a book containing descriptions of our game birds by means of which they could be recognized, and we have been obliged to say that we knew of none which met the requirements. At last, however, we have a book, and it is the one just written by Mr. Trumbull.

*Names | and | Portraits of Birds | which | interest Gunners | with descriptions | In Language Understanded of the People | By Gurdon Trumbull | New York | Harper & Brothers, Franklin Square—1888.

PEQUEANSE.—Duluth, Minn.—*Editor Forest and Stream:* In a communication printed in your issue of July 19 entitled "Running the Brule" the word "Pequearise" in the article should be Pequeanse. As this is the name of one of the largest and most beautiful of the fountain-spring lakes that in a group give rise to the Brule, it seems not unimportant that it should be correctly named in your journal.—

THE PANTHER'S SCREAM.

READING in July 19 number of FOREST AND STREAM a short item about panthers by your British Columbia correspondent, reminds me of a circumstance in my own hunting days about thirty-five years ago.

I was camping alone in an open camp near the head of Sollychunkemunk Lake, say about twenty rods from the shore, in the woods, on a dark and stormy night in the fall of the year. I had worked hard the day before tramping through the woods, over mountains and through swamps, tending traps and doing some shooting, being chiefly in pursuit of fur game. I was very tired, had got to camp just at dark, and gathered in some wood, cooked and ate my supper, and lay down on my balsam bed, and was soon sound asleep. When I came to myself, I was on my knees, with my gun in my hands, peering out into the darkness, and the rain was pouring in torrents.

My fire was nearly out and it was a fearful night. I knew I had been awakened by some noise, for I had done the same thing once before, and I was in a frightened state of mind. On coming to myself my first effort was to start up my fire; and as luck would have it, there were some dry sticks by my side. While I was thus engaged there went out into the tempest and darkness one of the most unearthly screeches or yells I ever heard, a prolonged vehement howl, sounding as nearly as I can describe like a woman in distress.

My hair straightened and my hat came off, and I jumped back into camp, and there was lively work kindling that fire.

The animal, when I heard him, was on the shore of the lake, not more than one hundred yards from me. No doubt he had screeched before, which brought me out of sleep, on to my knees, with my gun ready to shoot; but after then and there was about as good a weapon as a stick of wood, for nothing could be seen outside, and a panther could have crushed me at one leap had he started a scrimmage. No doubt he smelled me, but at the same time saw some spark of fire, which kept him back and caused him give the frightful yell.

Be that as it may, I soon had a bright fire burning, but there was no more sleep for me that night. I sat with my gun in my grip ready to fire, and, as St. Paul when he was shipwrecked, "wished for day." The beast made off to the mountains to the east, every few minutes uttering the parting vehement yell, which grew less and less distinct as he receded, until all was still except the dripping of the rain.

In the morning I went to the shore of the lake and found the animal's tracks—a large round footprint with long claws that settled into the sandy shore as he traveled along, and when he came to a brook, which was about forty feet wide, he seemed to leap it with the greatest ease. This was what I presume to be a large panther.

J. G. RICH.

MATHEL, MAINE.

WINTER BURRO DEER IN OLD MEXICO.

ONE bright, clear, warm morning early in December, 1884, Joe, Steve and the writer bowled out of Tombstone, Arizona Territory, on our way to Ramsay's ranch, near the Mexican line, a distance of about 58 miles. There we expected to find John L., who rejoiced in the nickname of Bill Hadden. It was on his advice that we started on our trip. He had hunted at Ramsay's before, and reported that the surrounding country was full of fine deer of the biggest kind. Tombstone was soon left behind and we came to a wooden building on one side of which was stretched a huge cloth sign on which was painted in letters four feet high the words "Last Chance." On the other side was another sign with letters equally as large, which read "First Chance." A short distance further on we caught a glimpse of the white quarters at Fort Huachuca, distant about twenty-four miles, where we intended to stop the first day. We passed a number of freight wagons on their way to the smelter and stamp mills at Charlestown, distant from Tombstone twelve miles. Each team consisted of sixteen mules, and each team hauled two wagons, a lead and trail. They were loaded with from twenty to thirty tons of ore. Ten tons to the wagon was called a light load. There were two men with each team, one to drive and the other to brake, help grease, water, etc. All these teams were owned by Mr. Sidney Carr, of Charlestown, who has immense stables and stock there. Mr. Carr was at one time the largest freighter in the world. At that time he owned 200 wagons and 1,600 mules and horses, and had teams all over Arizona, but the railroads came and almost ruined his business. Mr. Carr is unable to write, but keeps his business in his head.

We soon reached Charlestown, which is very prettily situated on the San Pedro River. It had been very lively and prosperous at one time and lots had been staked off for a hundred, while speculation in real estate ran high. That story was past, however, for the mines at Tombstone had played out and then there was nothing for their mills to do.

We reached Huachuca early in the afternoon. Fort Huachuca is beautifully situated in a cañon of the same name in the Huachuca Mountains. It is built near the mouth of the cañon, where it is wide enough to give a fine parade ground. The sides of the cañon protect it from the heavy winds that sometimes prevail, and the live oaks that grow all over the post make it cool and pleasant during the warmest weather. The men's quarters are of wood, two stories high, and are models of comfort and convenience. The officers' row is built of adobe, two stories high, the outside of them being covered with a fine grayish cement. The cavalry stables are the best and most convenient that I have ever seen in the army. The post was chosen by Gen. Sherman as being the most healthful in the Territory for a large post. The post contains the finest system of waterworks, and its great elevation—over 5,000ft. above sea level—makes it cool and pleasant in summer. It is only seven miles from the New Mexico and Arizona R.R., and at the time I write was garrisoned by three companies of cavalry and one of infantry. As a stranger at the post, as I used to go over frequently and have a run after jack rabbits with some of the officers' fellows stationed there. They had some fine greyhounds, and many a good chase I have had after them on the prairie near the fort.

We started early next morning and as the greater part of our road lay over a very rough and mountainous country, it was late before we reached Mr. Ramsey's. We passed through a part of the Huachuca range, a region once famous for elk, deer, bear and wild turkeys, but the game has nearly all been killed off. Steve managed to bag a wild turkey, a big gobbler, and Joe knocked the heads off a half dozen California quail during the day. Mr. Ramsey's range is bordered on one side by the road which separates Mexico from the U. S., and joins the famous ranch owned by Senator Don Cameron of Pennsylvania, and Mr. Colin Cameron of Tucson, on the other. Our idea was to camp on the American side and hunt in Mexico. We were forced to do this by the absurd regulations of the Mexican customs house, which makes it difficult to get a hunting outfit into the country and still more difficulty to get it out again.

Bill joined us a short time after our arrival and we made preparations for an early start on the morrow. We had our breakfast long before daylight, and after talking the matter over we concluded to try our luck on the American side for the first day, as quite a number of deer had been killed there recently. We all hunted in the same general direction, but kept about a half mile apart. I tramped until pretty late in the afternoon but did not see a single deer, nor could I find any very fresh signs. The place must have been a regular paradise for game at one time for in all my hunting I never saw any strip of country that was better adapted to game than this, nor was I mistaken, for I met a ranchman by the name of Smith who had lived near there for several years and he told me that when he first settled there he never pretended to hunt with anything but his Colt's army pistol, and that he could go out any day and knock over two or three deer with it.

I had eaten nothing since breakfast and had got pretty hungry by this time, so I shaped my course for camp. I was hurrying along on the Cameron ranch, when I heard a most piteous bawling up in a little ravine to my right; and in about a half minute a small bunch of cattle came out with heads down and tails up, on a dead run. I thought that one of them must have fallen into a hole or something, and started up the ravine to find out what the matter was. I had only gone a short distance, when the bleating ceased entirely. About twenty rods from the mouth the ravine made a sharp turn to the west, and I noticed quite a clump of trees growing just beyond the bend. I had no sooner rounded the bend than I found out what was the matter, for there on the ground, about 50ft. from me, with his teeth buried in the neck of a good-sized steer was a big Mexican lion. We recognized each other at the same instant and were probably both equally surprised. He gave me no time to think, however, for quick as a flash he let go his hold, gave a hoarse growl, crouched down, and with his belly touching the ground and his long tail lashing the air, he commenced to creep toward me. I had been thinking at the rate of a hundred miles a minute and had come to the conclusion that if I intended to do anything or take a hand in the little game it was time I was about it, for the lion had tasted blood, his temper was up, he thought he had a winning hand and was bound to call me. I cocked my Winchester, brought it to my shoulder, sighted and fired, the whole business being done in one time and one motion. With a yell almost human in its agony the lion tried to raise himself from the ground and leap, but his hindquarters dragged, and it was evident that my shot had taken effect and broken his back. He tried and did drag himself toward me, his mouth was wide open, his ears drawn back so as to show the full length of his long, shining white teeth, while he emitted shrieks and yells that were simply earsplitting. He would run his long nails into the hard ground and then make a convulsive movement as though he was going to spring toward me, but he could only move his body a few inches at a time. I did not wait to watch him very long, for I kept my gun at my shoulder, took deliberate aim at his chest and gave him another shot. By this time he was only about 35ft. from me and I could hardly have missed him had I tried. My second shot settled him forever, for after a slight struggle he stretched himself out dead. I was busy examining him, when I heard some one running, and Joe came in sight over a little ridge that was in front of me. He was very pale and completely out of breath.

"I was about a quarter of a mile from you," said he, "and was trying to get a shot at a big deer, when I heard you shoot. I recognized the report of your gun, and when that infernal cougar commenced to howl and scream, I thought you might be in trouble, and so I hurried over so as to give you a hand if you needed it. I have had a couple of very unpleasant encounters with cougars, and I never hear one scream without feeling a kind of a shiver pass over me. He screamed and I tell you I felt considerably relieved when you fired the second time and everything grew quiet, for I knew from the time that elapsed between your shots that you were not hard pressed."

While we were talking Steve came flying up the ravine. "Are you all right?" he asked. "You see I was on a hill way back yonder; I heard you shoot and the lion yell, and in about a minute I saw Joe tearing along on top of the ridge, and I certainly thought you were in trouble, so I put on a full head of steam and here I am. Well, you are in luck," he continued, "I have spent ten years in California, Texas and Arizona, and have hunted a great deal, but I have never been able to kill a lion, while this is the third one that you have put out of the way. I have seen several, but it was when I had nothing but a pistol, and I did not dare to tackle them with that."

"I wish we had some way of measuring him," I said. "Oh, I can do that for you easy enough," said Joe, "the blade of my hunting knife is eight and the handle just four inches long. Each inch on the handle is notched, so there need be no guess work."

We stretched the lion out at full length, and Joe measured him twice carefully. It was a trifle over ten feet eight inches from the tip of his nose to the end of his tail. He was a perfect specimen, and I have always regretted that I did not have a tapeline so we could have taken exact measurements of all parts of his body. We took his skin off and carried it to camp. I intended to save it and have it tanned with the hair on, but the very first night the coyotes came and tore it all to pieces. To square matters we put out the head and neck of a deer which we got from Ramsay the next night, and when about fifty coyotes came barking and snarling about it, we opened fire on them and killed seven of the gaunt, hungry-looking cowardly creatures. Our camp was pitched about thirty rods from Ramsay's house, and we used to get fresh milk, eggs and butter from his wife every day, which made a great addition to our fare. Joe was elected cook long before we started by a unanimous vote, and as he was our artist in that line and liked to do it, everybody was satisfied.

That night, while all reclined about our bright camp fire, and Bill and Steve blew great clouds of smoke into the clear, cold air, I related to Bill how I chanced to meet the cougar. He had killed no less than thirteen of them, and had one chained up in his yard for a long time. He used to watch it and study its habits closely until it killed a pet setter for him, when he sold it to a Mexican showman.

"I caught that little lion when it was very small," said Bill, "and tried to tame and make a pet of it, but failed. I was living in southern California on a ranch at the time. I killed the mother and kept her two cubs or kittens; one of them got poisoned and died, and the other grew up to be a perfect whale of a fellow. He hated all dogs, and while I used to give him more than he could eat, he liked to dine on fresh dog meat in preference to anything I could feed him. He used to work all sorts of schemes to induce them to come in reach of him. I employed quite a number of Mexicans, and every one of them had from two to six dogs; and as is the case with all Mexican dogs, they were in a chronic state of hunger all the time. After the cougar had eaten all he wanted, he would lay a bone or piece of meat down near the end of his long chain, then he would retire back eight or nine feet, lie down, cover his head nearly up with his paws and feign sleep. The dogs would gather around, and keep coming closer and closer, while the cougar would never move a muscle; at last one of them would pluck up courage and try to seize the bone, when the cougar would leap for him quick as a flash. Sometimes the dog would get away, for the chain was heavy and interfered with the cougar considerably, but the cougar would usually leave his mark on him. I saw him jump for a big dog one day; and though it seemed to me that he hardly touched him with one of his paws, he took most of the skin from his shoulder as well as the side of his head. I was looking at him another time, when a dog tried to take a bone away; the cougar leaped for him, but the chain had become twisted and he failed to reach the spot. He seemed to be very much crestfallen and walked the full length of his chain several times as though he was pacing the distance. The kinks had come out of the chain by this time and he could reach the bone easily enough, and he was evidently puzzled to know why he could not reach it when he jumped. I kept him over three years, when he killed my pet setter Dash. I was going to kill him, but a Mexican offered me a hundred dollars and I sold him. I was out hunting quail with a shotgun on the same ranch when I saw a lion kill a fine young heifer for me. There was a fine grove of trees about a mile from my house, and during the warm summer months the cattle used to resort there during the middle of the day to get in the shade. It was early in the forenoon. I had killed a lot of birds, and, as it was very warm, I thought I would rest in the grove a while before carrying them home. I was only a few rods from a long-leaning, heavily-topped tree, under which several of the choicest animals of my herd were standing, when I caught sight of something moving among the branches. Before I could make out what it was a cougar leaped down on a good-sized heifer. He struck her with one paw right back of her horns, the other one hit her on the shoulder; he fastened his teeth in her neck at the same time. The poor creature went down as if shot, and we afterward found that her neck had been broken. I felt sure that it was the blow the lion gave her behind the horns that did this. I ran to where some horses were grazing, caught one, rode to the house without saddle or bridle, got my rifle and rode back, where I found the lion still gorging himself, and I killed him. In those days cougars were a regular nuisance round where I lived, and they killed no end of cattle and sheep for ranchers."

We started over into Mexico early the next morning, and hunted all day without seeing a single deer. The next day Steve killed a big burro deer; and we had quite an adventure with four of the Mexican guards, who ride the line to prevent smuggling. They rode over the same round twice every day. They passed our camp going east about 10 A. M., and came back about 3 P. M. As a general thing they are regular vagabonds, and some of them delight in causing innocent people all the trouble they can. Joe was going along searching all the little ravines for deer when he suddenly came out within a few rods of the road that divides the two countries. He had no idea that he was anywhere near the road, and as he looked down it he saw four of the guards riding along. As soon as they saw him they put spurs to their horses and came dashing down to intercept him. Joe got to the road as soon as they did and crossed over to the American side. "What were you doing over here?" said one of the Mexicans to him. "Hunting," was Joe's brief reply. "I believe you are lying," said another, putting his hand on his pistol and trying to draw it. Joe covered him with his Winchester, and told him to pull his hand away or he would shoot. "Ah, you are all right," said they in Mexican, "we just wanted to have some fun, and find out what kind of a man you were." "Well, you have found out, and you had better ride on," said he. "Buona," they replied, and rode on. Joe kept an eye on them meanwhile, and when they had got about 150yds. away one of them pulled his pistol and turned in his saddle to shoot, but Joe was too quick for him, and fired, knocking his sombrero off. This took all the shoot out of the Mexican, and all of them laid down on their horses' necks, plunged their spurs into their sides and dashed away. Joe fired two or three shots away over their heads to help them along, and then came into camp. If he had shown the white feather they would have held him up, taken everything he had, and then told him to go in all probability.

That evening we noticed three men dodging around among the trees, and we went out to investigate. We found that they were three deserters from the Fourth Cavalry at Huachuca. They had been paid there a couple of days before, and they had deserted after spending most of their money. I asked one of them, who seemed to be very intelligent, why he deserted. "Too much First Sergeant, and not enough to eat," was his reply.

Friday morning we went over the line again and had good luck, for Steve killed a big burro, and Joe a mule deer, while Bill and I got an antelope between us. We ran against it almost, and both of us fired at the same time. It went down in a heap, and we found two bullet holes not more than four inches apart. I have seen the statement that burro deer were ever found so far south as

Mexico denied, but the deer that we killed was certainly of that species. Steve and Joe had hunted from Washington Territory to Yucatan, and Bill and I had both killed many mule deer, and we all agreed on the question as to which family this one belonged to.

Saturday was to be our last day, and we concluded to go over into Mexico again and have an antelope hunt. A rancher by the name of Campeni went along with us. He was familiar with the country, and knew where the antelope came to get water. It was several miles and we drove over. Mr. Campeni very kindly offered to stay with the team and see that no wandering Mexican got hold of it. We hunted in pairs, Joe and Bill in one pair, and Steve and myself in the other. Steve and I had climbed up on top of a good sized mountain to see if there were any antelope in sight, when we were surprised to see what we thought was a big brown stone house standing on another still higher mountain about two miles away. We had no glasses, and we both became so impressed with the idea that it was a house of some sort, that we concluded to visit it and settle the matter. Before we got to it, however, we found it was not a building at all, but simply a huge mass of stone. It was a good representation of a house with doors and windows, and big columns or pillars in front. We could not see any game of any kind and returned to the wagon where Joe and Bill soon joined us. We were sitting in the wagon in the shade of a big tree, chatting and laughing, when Joe saw something bob up on a big ridge a few hundred yards away. Eight other somethings came in sight, and there were nine antelope within range of us. We all opened on them, but working our Winchesters made our spring wagon jump, so we could not get good aim, and we only got one of them.

We drove nearly to Huachuca on Sunday, and on our way Joe killed another deer. The next day we drove to Joe's ranch, and there we lived on venison until we would have been ashamed to look a live deer in the face.

VERITAS.

MY LARGEST GRIZZLY.

BOZEMAN, Mont.—During my annual bear hunt in the spring of 1886 I chanced to camp one night near the thoroughbred horse ranch of Engleman & McRoberts, which is located at the foot of the West Gallatin Mountains, twenty-five miles southwest of Bozeman. After caring for the horses, pitching tent and putting everything in good shape for the night, I concluded to spend the evening with my friends at their ranch. We had a social game of cribbage, in which mine host was done up completely. When the time came for me to go to camp, the snow was falling thick and fast, so I was easily persuaded to remain where I was until morning, when the sun shone bright and clear upon the fresh snow (which had fallen a foot deep), making the game trails on the mountainsides discernible for miles around.

With the use of my field glass I discovered that a bear had come off the mountain to my camp very recently, as his trail was fresh, having been made after the snow had stopped falling. Fearing my cayuses had been "taken in" by the hungry animal, I hastened to the place where they were picketed and found that bruin had come to within 20yds. of my saddle horse, sat down in the snow, watched his vain efforts to break loose, and passed on to my tent. After walking around that a couple of times, he had disappeared into the brush. There is no doubt that he was too modest to break into a house when every one was gone.

Following his trail down the creek about a mile, crossing and recrossing, crawling over down treetops and under logs, with an occasional bunch of snow falling down the back of my neck, I finally discovered that he had circled and gone back to my friends' horse corral, perhaps with a view of getting a young colt for breakfast; but being driven off by the stallions he had meandered up the mountainside to the heavy timber in defiance of both hunter and ranchmen. But alas for old bruin, he was "monarch of all he surveyed" by night, while I claimed the honors of the day.

When passing the ranch I asked my friend to join me in the chase, which he did willingly until the trail got hot and the snow too deep to ride our horses longer; but when I assured him that we wouldn't have to follow the trail much longer before finding the end of it, he concluded to stay with me and see the bear fight. Taking off my suspenders, I tied them around the dog's neck so as to hold him from going ahead and eating the bear up before I could get a shot at him. We advanced cautiously until we came to a bed the bear had just left, when the dog discovered he had missed his calling and went back to watch the horses until we should come.

Now everything was clear for us to go on, we being rid of the dog and the wind blowing from the bear toward us. We had not gone many steps when we found another bed (or place where the bear had lain down), and still another, each one being fresher than the last.

Turning to see if my partner in the hunt was as cool and collected as he would be in handling a wild broncho, I saw he had his gun full-cocked and pointed nearly toward me. Seeing this, and knowing that a monster grizzly was on the other side of me, made me wish I was with the dog watching the horse. But here the chase ended, for not ten steps away was the object of our quest. As he raised his head above the brush a bullet from my .45-75 Winchester caught him in the lower part of the brain, which crazed him, whereupon he struck and bit at everything in reach of him. When he appeared again, within about ten feet of me, I sent another bullet crashing through his brain and laid him out forever. Thus ended the career of one of the largest grizzlies ever killed in the Rocky Mountains. The weight of the animal was variously estimated at from 900 to 1,400lbs. His skin measured 9ft. 3in. from tip to tip, and is owned by Mr. John E. Burton of Lake Geneva, Wis.

BEAR HUNTER.

A DINING CAR LINE TO THE PACIFIC COAST.—The completion of the all rail line between Portland, Ore., and San Francisco gives the Pacific coast traveler an opportunity to patronize the famous Dining Car and Yellowstone Park Line, the Northern Pacific Railroad. The sportsman traveling in the West, whether a lover of the rod or gun, naturally seeks this road, penetrating as it does the lake park region of Minnesota, and running through the valleys of such trout streams as the Yellowstone, Gallatin, Hell Gate, Clark's Fork, Spokane, Yakima and Green Rivers, for a distance of fully 1,500 miles, as well as lying immediately contiguous to the finest hunting grounds in the United States, viz., The Big Horn, Snowy Belt, Bitter Root, Coeur D'Alene and Cascade Mountains. Information in regard to this region can be obtained by addressing CHARLES S. FEE, General Passenger and Ticket Agent, N. P. R. R., St. Paul, Minn.—*Adv.*

"ADIRONDACK ABOMINATIONS."

Editor Forest and Stream:

Regarding the article by Mr. John R. Spears on "Adirondack Abominations," in your issue of July 19, commenting on your editorial of the preceding week, let me say a few words. While fully agreeing with Mr. Spears that killing deer out of season by actual residents, for necessary food, is less culpable than killing them merely for sport or to sell to the near-by summer hotels, still I must emphatically deny that night-hunting in the eastern section of the Adirondacks (Franklin and Clinton counties, etc.,) is done solely by guides at the instigation of "city sportsmen," seduced by promise of a good bonus. There is more than enough of this; for example: A party of four young men and two guides went from Loon Lake hotel to Elbow Ponds, the head waters of the Salmon River, a few nights ago, for the avowed purpose of night-hunting, despite the fact that both sportsmen and guides knew perfectly well that they were breaking the law.

A party of four, one party of three and a party of two have within three weeks repeatedly night-hunted and killed deer on Barnum Pond, near Paul Smith's. In only one instance, the first party, were there city sportsmen, the others consisting wholly of guides and natives.

Another party, consisting of city sportsmen and "old and reliable guides," had everything prepared last week to leave Paul Smith's hotel and camp at Buck Pond, with the purpose, freely boasted of by the guides, to "fish and night-hunt." Many of the North Woods hotels are responsible for night-hunting by guides and natives; the fact that they buy the game from them for the tables furnishing the incentive.

No man, should he care to break the law, will have any trouble in finding a guide ready to accompany him, and in many instances the guides offer themselves for that service, although knowing it to be illegal.

But this practice becomes sheer wasteful butchery when ignorant bunglers among the natives go out and maim and kill deer that are left to die in the bushes a few rods from where they are shot; for example, who butchered that fine stag that lies rotting below the outlet of Loon Lake, and whose bloated carcass taints the air for a long distance? And yet this man and his accomplice are out nearly every night doing like work.

Do the "guides" at State Dam on the Salmon River, sixteen miles from Malone, never night-hunt? Ask Abe Lester. Possibly Adam might make some interesting statements. But to specify single instances or special localities is needless; this law-breaking is going on everywhere, and is not only not denounced by the guides and hotel men, whose best interests are served by having a close season, but is advocated and participated in by them.

Now, as to the trout hog, dynamiter, etc. There is scarcely a hotel in the North Woods that does not daily receive, cook and serve at public table trout less than 6in. long. The ponds are dynamited for market but by woodsmen and guides, or else, and most often—indeed in 90 per cent. of all cases—by railroad hands, who find easy access to blasting materials. Woe to any pond or stream near which a railroad hand camp has existed for a short time.

Not one man in ten in this country is educated up to the point where he believes in or will practice the course of returning carefully to the water all fish under six inches. They want fish now; they care nothing for the future welfare of the stream or the fishing of those who come after them. No more indeed than those who spear and shoot and net the fish on the spawning beds, fish for them through the ice, &c. The universal motto in this land where a day's catch of trout is by the ten or twenty pounds, "*Après moi le déluge.*"

It was fondly hoped that the law making railroads, express companies, &c., liable for carrying game out of season, would do much to limit the illegal butchery of deer. But the purchase of every carcass by hotel keepers in the vicinity keeps the thing going, and natives, guides, "river drivers," rail and wood hands and the like, swarm into the woods every night at this illicit work.

The usual "sportsman's" method of killing deer up here in the season is bad enough, but is not nearly so fatal, nor does it so quickly thin out the deer as the night-hunting now going on in every direction. Fancy a "city sportsman," whose guides have sighted a deer in a lake or pond, being rowed up to it, emptying his rifle's magazine at it twice at short range (10–20ft.), and then failing to kill it, the guide holding it firmly by the tail to prevent its sinking, the sportsman either batters its brains out with an oar or placing the muzzle of his rifle at its head, thus ends its poor life. This I have witnessed several times in all its brutal detail. This, I say, is bad enough, but it is in season and legal, and furthermore is the only way many a "dude sportsman" could possibly kill a deer. And it is a poor sportsman nowadays who can't kill one or more in the season.

K. NOO.

LOON LAKE, July 25.

Editor Forest and Stream:

Your editorial in last week's FOREST AND STREAM, relative to the exterminatian of game in the Adirondacks, was so true that I wanted to say to you, "Them's my sentiments." It showed so accurate knowledge of the way it is being done that I could hardly believe it was written anywhere but on the spot referred to.

In this week's paper Mr. John R. Spears refers to it, and appreciates the truthfulness of it, as every one must who is at all familiar with the facts.

I cannot quite agree with Mr. Spears in thinking the damage done by natives is insignificant, though I think very much of it is instigated by city sportsmen (so called).

I have known of dynamite being used in trout streams by natives who made no use of the fish they killed, and when there was no apparent reason for their act, except "pure cussedness." But the wholesale destruction of trout is usually done in the interest of some hotel. Three weeks ago I fished a stream I had known of many years, but never tried before and never wish to again, or until the "trout hog" can be kept away from it for a year or two. It was literally alive with trout; I could see in nearly every pool from twenty to fifty and they took the fly eagerly, but out of twenty I had to put back eighteen as they measured 5½in. I saved in an hour's fishing about thirty.

The next week a young man from the city went out to it with a guide and saved two hundred and sixty in an hour and a half.

We passed through a track now owned by the "Adirondack Reserve," who have done all they could for two years to protect the game on their property. I was glad to see the signs of deer much more numerous than in past seasons. But on returning to my boat, I found a skiff drawn up into the bushes. We recognized the boat as one belonging to a guide who wears the badge of the "Adirondack Reserve," and near the boat a quantity of blood, and every evidence that a deer had been killed by floating.

Many of the guides about here insist that the six-inch trout law has been repealed, and give as a reason that trout hooked always die, therefore there was no use for the law. I always stay long enough after putting a trout back to be sure if it recovers, and I am certain that not one in a hundred that I remove is any the worse after a few minutes. In fact, unless a trout falls and strikes a stone, I never lose any, and I have been very much surprised to see how much rough handling they will endure.

And in fishing the stream I refer to, I took many small trout that had been caught before and put back or escaped, many had lost an eye or the lower jaw was torn apart, but they appeared to be just as well and lively as ever. Whether that is the law or not, it will always be a law for me. And if I find any one with trout less than that size I shall enter complaint against them.

If you have any copy of the law in printed form, I wish you would do me the favor to send some to me. If you have not, if you will print a few I will pay for it, and post them in conspicuous places. I think they should be sent to every post office in the Adirondack region, that no one need plead ignorance.

R. M. SHURTLEFF.

KEENE VALLEY, N. Y., July 22.

[We have referred the request for printed copies to the Fish Commission, who advise us that they are now preparing a summary of the law.]

THE FOREST AND STREAM complains that despite the efforts, legislative and otherwise, to protect the Adirondack forest and the game therein from vandalism, the work of destruction goes steadily and contemptuously on. All classes, it says, railroad managers, landlords, guides, tourists and sportsmen, pay no attention to the legal restrictions, but do more mischief every year than all the preserving bureaus can replace in a decade. Game is killed in abundance out of season. That paper uses this severe language:

> The trout hog, the deer butcher, the dynamite-cartridge fiend, the night-hunter, the steel-trap deer stalker and the like are increasing instead of decreasing. * * * For the game protector or constable to stop a few days here and a few there, at the best hotels, riding around the country in the daytime and tacking his cards upon stumps is all nonsense. The law-breakers don't care a rap for him, and laugh at the mention of his name and methods. * * * If those whose business it is would establish some way to banish the trout and deer and timber thieves, some good might come of it; but until the bunghole is stopped up there is nothing short of lunacy in pouring in at the spigot.

This is a discouraging picture, but it is beyond a doubt substantially correct. The legal acts designed to keep the Adirondacks intact are honest enough, but the difficulty lies in their inefficient enforcement. This cannot be accomplished except through the employment of a much larger force of officials inspired in some way to put zeal and thoroughness into the matter of protecting the wilderness. The Adirondacks should be amply defended against the destructionists; and it would be done were they in almost any country in Europe. Forestry and game laws there are for use, not ornament.—*Troy Times July 25.*

FLIGHT WOODCOCK.

WHAT has become of the woodcock? As woodcock invariably return to the same coverts to breed, year after year, if not killed, it follows that the numerous birds found in the coverts in this neighborhood several years ago must have been killed to the south, either going or coming, or in their winter home. Now that the season for woodcock has been changed in most of the northern States, and those birds are forbidden to be killed before the 1st of August in some States, and the 1st of September in other States, we may possibly in the future have this splendid game bird more plentiful again. How pleased all true sportsmen must be that the killing of woodcock has been put a stop to on the 1st and 4th of July. At this season the young birds are only half grown, weak on the wing, and slow in flight, and therefore easily killed by very inferior shots. Any sportsman having shot an October woodcock, I am sure, would not care for a miserable little soft July bird. Our game laws in Ontario make the open season for woodcock commence on the 15th of August, which is a good thing, and amounts to almost doing away with summer shooting.

The woodcock in Ontario disappear in August, during the moulting season, and do not appear in any numbers until the latter end of September or first week in October, having made a short migration somewhere, but where that somewhere is I have never been able to discover. When the woodcock have returned, and the night frosts have killed all the nettles, then let the sportsman shoulder his gun and take his brace of spaniels along, they being the dogs of all dogs for woodcock, and repair to the covert, where, if fortunate enough to reside in a district where these birds abound, he will enjoy to my thinking the best of all sports, and if lucky, will carry home with him a bag of birds the most delicious for the table and the most difficult to shoot of all game birds, a bag of October woodcock.

When first I came to the country I hunted woodcock with a liver and white English pointer, a splendid dog and very steady; he would stand a bird an hour or more. He hunted the woodcock and I hunted him. The coverts in this locality are very dense and close, being mostly composed of alders and small cedars. It being difficult to see a dog 30ft. away, I find that I can kill twice as many birds by taking advantage of any little open space or cattle track, following the dogs through these dense brakes. My dogs are black, flat-haired field spaniels, and have such good noses and are so well broke that they rarely leave a bird behind them after having gone over the ground.

Last October I had the luck to light upon a flight of woodcock. Early in the month we had three or four inches of snow, which of course disappeared in a day or two. This snow was the means of starting the birds from the north. I had had the misfortune a few days before this flight took place, in jumping out of my buggy, to fracture one of the bones of the ring

or third finger of my left hand, close to the metacarpal bone; so, with my hand in a splint, I was not in the best form for shooting, but not being contented to let my favorite month of hunting pass without trying the birds. I hitched the mare to the buggy and started with the dogs for an afternoon's shoot. I had scarcely been a minute in the covert before the spaniels commenced to raise the birds. Being compelled to shoot with the gun barrels resting upon my arm just above the wrist, on account of my maimed hands, I, much to my disgust, made six clean misses, after which I immediately returned to my buggy, feeling very crestfallen and bemoaning my luck in being so handicapped when such an excellent opportunity offered of making a splendid bag. Having taken my gun apart and stowed it in the buggy, I called the dogs. They seemed very reluctant to leave such fun, and would come to me and then walk a few yards toward the covert, turn around, look at me in a most pleading manner and whine, so I concluded to let the dogs enjoy the sport, even if their master could not, and as it turned out it was a wise conclusion.

Returning to the ground I killed, much to my surprise, three birds clean without a miss, and bagged during the remainder of the afternoon seventeen woodcock and a ruffed grouse (or partridge, as we call them here). This was the 12th of the month. Knowing the uncertainty of a flight of woodcock remaining in the same place more than a day or two, I paid the covert a second visit on the following afternoon and killed twelve birds, after some pretty hard work and a number of falls, once into the muddy part of the creek, my gun going in ahead of me, and out of sight, still griped by my right hand. Had this been in the days of the old muzzleloaders my sport would have come to a sudden termination. On the afternoon of the 15th I tried the birds again, killing eight woodcock and a hare. The hare I killed in order to check the dog.

My spaniels always chase the hare whenever he crosses their path. At first when owning spaniels some fifteen or more years ago, I used to try to break them of this habit, but I remarked that it was my best dogs that invariably had this trick the worst, so I came to the conclusion that all good hunting spaniels will chase the hare, and for years I have not tried to check my dogs, always shooting the hare if I can, as the best plan of putting a stop to a rather disagreeable interruption of a pleasant cock shoot.

Most of the woodcock when flushed flew southward; they were all fine, large, strong, fat birds, with beautiful plumage. These birds had evidently been well peppered early in the season where they came from. Several of the ones I bagged had a short leg, well mended and strong.

HENRY B. NICOL, M.D.

COOKSTOWN, Ont.

MASSACHUSETTS QUAIL.—Taunton, Mass., July 29.—I drove from this city to Myricks, eight miles, on July 22, and saw in the road five different flocks of quail. They were about two-thirds grown. Partridges are very thick, and many farmers say that "they wintered well and are very thick just outside." Which is very welcome news to sportsmen in this State.—S. C. H.

ACCOMAC COUNTY.—Painters, Va., July 29.—Your friends may be nicking their flints for fine quail shooting on the eastern shore of Virginia this fall and winter. The crop never promised better. All mated off prettily. Rains not so excessive as to drown the broods, while all around you in early morning the familiar old Bob White resonates the very atmosphere. —T. G. E.

DUTCHESS COUNTY WOODCOCK LAW.—We are advised by Mr. Peter B. Hayt, of Poughkeepsie, secretary of the Dutchess County (N. Y.) Association for the Protection of Game and Fish, that the woodcock season in that county now opens July 1.

SALMON IN THE HUDSON.

Editor Forest and Stream:

I have just received a letter from Mr. A. C. Johnson, of Mechanicville, N. Y., from which I extract the following very gratifying information regarding the salmon in the Hudson:

"I write you because I know from reading FOREST AND STREAM that you are interested in fish protection. The facts are these: Quite a number of salmon have appeared at this place for the first time this summer. The water is very low and any one can see them below the dam. As the boys cannot catch them they wish to spear or shoot them. The salmon cannot get over the dam, and so swim around just below it in plain sight, and as they are very large it is quite a temptation. One was found dead last week which weighed 12½lbs. I saw five at once yesterday. I hope you can do something to have them protected. A fishway is needed in the dam. I will help you in any way you suggest. I have no desire to kill the salmon unlawfully and do not intend that any one else shall."

It is possible that these fish came over the Troy dam during the high water, but it is more probable they found their way through what I believe is called the old sloop lock and which I also believe is now rarely used. This lock was for the purpose of locking around the Troy dam. However the salmon got to the foot of the Mechanicville dam, it is encouraging to know that they are above tide water in fair numbers. The fish are still a long way from where they were planted and from proper spawning grounds; but the need of fishways is made more apparent and the success of the U. S. Fish Commission in its attemps to stock the Hudson is more pronounced. The Mechanicville dam is the first dam north of Troy, a distance of twelve miles.

A. N. CHENEY.

GLENS FALLS, N. Y., July 24.

A MORNING ON THE STREAM.

As we came out of the barn yard gate the birds were in full blast. May be their throats had been closed so long—through the overcast sky and cold mist of the previous week—that they now were prepared to make up for lost time. We were not surprised then that the first thing, by the meadow near the bars, a bobolink should get up, and as he flitted away, cast a side-long glance at us and sing, "*Going, going a fishing, a fishing; good luck, good luck; pleasant day, pleasant day;*" nor that a bluebird should warble to his mate from a fence stake near by as we went along, "*Jolly, jolly day;*" nor that a great crested flycatcher, in his harsh note, should call from a dead limb by the bridge, "*See here! see here!*"

But really we were in too great a hurry to pay much attention to these things just now. We were not studying birds at this time, and knew that the higher the sun got and the lower the stream, the smaller our chances. Here we can begin by casting a fly. Try below the bridge first. We try. No use, no sign of fish. "Is the stream too high?" we ask ourselves. On we go—still a chance for a fly among the trees—but no fish. "We always caught one here," we say as we come to a deep hole. "Have we mistaken the day?" At length we reach the last place before entering the alders and not one fish in the basket. We do not recollect such a thing before.

But now we must resort to the bait, and here commence our tribulations! We are changing our fly for a No. 4 hook (we never use a smaller size), and while we are doing this—a solitary wood thrush that has not sung himself out—commences his song just inside the edge of the alders. We have to cross a little slough to get to where he is. We cannot hear the whole of his refrain. Our ear only catches the louder notes and the sweet little trills at the end of each bar are lost in the distance. But we understand his song. It is this: "*Come along—steady-lee; they lie deep—we-re-lee; here they are, see-e-see.*

But now we are ready and the first cast brings us a nice fish that is landed down among brush and twigs that switch our face and scratch our hands. However, had it not been for this fish perhaps, we would hardly have had courage to go further. We make a second and third trial here—but no more fish reward us.

And now the slough has to be passed. The old moss-covered log that serves as a pathway through it is slippery with last night's rain, while the water that backs up from the stream comes nearly to the top of this treacherous way. A misstep here would signify over our boot tops in the black muck. The rod is pushed forward with the line drawn down it and the baited hook in our hand. We have passed over this worst part, guiding our rod and our steps at the same time, when just at the end of the log a stiff branch pushes us off and we sink nearly knee deep in the mud. We make two hurried steps, and now the reel catches, and when we give it a jerk out goes our line. This is untangled and drawn in, and at last we are standing just below the place where we caught our first fish. There was a deep pool in front of us and the water is bubbling up under some logs and brush that have formed a "jam" across the stream. The branches of the birch tree at our side are not more than ten feet above the water, and there is an opening of a few yards just below where we stand. We draw in the line almost up to where the leader is fastened on, and with a good deal of maneuvering drop the bait in. The moment it touches the water it is seized by a fine fish, and we strike at once. But we do not observe a small branch that extends out from a larger one directly over the end of our rod. This slackens the line, and in a moment he is gone, while we have to spend some minutes in getting our line free. When this is done we try again, but with no success. We now stoop down and work our bait up the stream. We have seen a fish jump just above us. He takes the bait at once, is hooked, and we think we have him. We are reaching out our hand to pull him in; but no, a limb interferes, and he drops back into the stream.

There is great difficulty in getting the bait in our hand now so as to proceed. The butt of the rod has to be pushed into the bushes and the line winds around everything before we have it secured. However, it is done at last, and again we are pushing our way along. Now the reel catches (it is on the extreme end of the rod) and the line is pulled out. Now our hat is off and something has pulled the line so that the hook pricks the hand. We learn how sharp it is and that the point is not covered. A branch draws itself across our mouth and something has caught the basket. And there, just see that lovely pool that we wanted to approach so quietly. But by patience and care at last we are freed. We draw back an alder and push aside a limb, and the hook is where we want it. It hardly touches the water again here before there is just a little swirl, a turn of the wrist and the fish is hooked. Cannot say anything about his size yet, but we know that he is as large as we can manage in this tangle. We reel in, part the branches, and lift out a half-pounder. Another one of half the size rewards us in this place. As we turn from here and are saying to ourselves, "We guess that thrush was right—"Come along, they lie deep, here they are"—we are just thinking this to ourselves when, as we turn, our foot goes into a hole by the root of a tree. Down it goes into the water below, and as we drop the rod for fear of breaking it, we are conscious of a smarting sensation on the shin. When the foot is drawn out we find that a large stone by the side of the hole, and covered with moss, has hit our leg as we fell forward and made quite a rent in the top of our boot.

The rod is picked up (it is uninjured), the line disentangled, and hat, coat and basket are adjusted. We see the gleam of another pool ahead. It looks encouraging. To this we worm and wedge our way. There is a better chance here to secure our fish if we can hook them. Here we take two more nice ones. But, oh, what a tangle is before us now! How shall we get through it? The reel bothers us again, and a branch or something is pulling at the strap of our fishing basket, and we cannot step over a fallen tree that is before us. This is the worst plight that ever we were in. However, the difficulty is mastered. There is no use in getting mad. It makes us hot, though, and we feel that stub or brier has hurt our knee. Before long we are ready for another cast.

This time we have a large boulder to fish from. It stands right by the edge of the stream and gives a fellow a chance to cast below it. We can look a little way up and down the stream from here and see the alders overlapping the water. Here two more are taken. We won't say anything about the line winding around a twig on the other side of the brook and how long it took to disentangle it, with the sun in our eyes and two dozen black flies assailing our nose and ears. You will have to imagine all this. It is beyond description. Then we have another fall, and this with all our care. We hear a crash, and see a man's feet and hands as he gets up. We did not see his face, but saw him rub his shoulder, and we heard him say, "Oh, you nasty branch!"

But here we come to a good place. We are getting out of the alders now and there is more room and better walking, though the walking is bad enough. Yes, try this hole, stand back by the tree and let the line down near the bank. It is done and in an instant we have a fish. He is determined to go under the bank and we are just as determined he shall not. He is 11in. long, another one of 10in. was also taken here. Now we have quite a little walk before what we consider a good place is found. It is where the stream comes together after it has been parted for twenty yards or so. It runs deep under the alders that reach out from the other side and hush the current. Of course we have to go through the usual tangling and catching of line before we are ready to throw in. We are used to that now. We have not lost a hook nor a leader yet and the tip of our rods is safe so far. There is no hurry. All day is before us. This is our consolation. A partridge flies up as we are preparing here and while we are looking to see where the line is caught a black and white creeper comes into view. Indeed there have been plenty of these and several migrants around us all the morning, but we are after trout, and now for another trial.

We select a position pretty well up stream and toss our bait down, keeping it as usual on top of the water and pulling it as we would a fly, toward us. It has been drawn, say, three feet, when we see a swirl around it, and the next moment the fish is hooked. He was a good one too, and determined to take rod, line, and even ourselves, it would seem, under the alders. The question is whether the line will bear such a strain. But the struggle does not last long. Poor fellow, it is hard for a fish to stand that pull upon his jaw. He soon yields. Gradually he comes up and is lifted out among the underbrush. This is the finest one we have caught, 12in. long. Below this we take three more, two of 10½in. and one of 11½in.

It is nearly noon now, and as we promised to be home at 12:30, here ends our morning's work. We are through the alders. As we come out at their lower edge a woodcock rises in front of us. The sun is shining in unclouded splendor and we do not feel unhappy. Our catch weighed 5½lbs., and when the bruises and scratches get well, we will think that "the last time" was as good a time as we have ever had.

STILLABOY.

MIRAMICHI SALMON.

Editor Forest and Stream:

Allow me through your valuable paper to give a brief account of a trip to the Miramichi River. I left New York June 23, and at Newcastle, N. B., I met two of my fishing friends. Two days were spent there visiting and sight seeing. I have done much traveling on this continent and in Europe, but never have received such hospitality as I experienced at Newcastle. Camp Adams was our objective point, situated seventy-five miles by water from the mouth of the Miramichi, called the northwestern branch, or thirty-nine miles by buckboard through the woods, which route we preferred. We started for our destination on June 26, 6 o'clock A. M. Twenty miles of our journey were over a first-class macadamized road, the balance was decidedly rough; but our long ride was not without pleasure, as the weather was delightfully cool, coupled with the grand forest scenery, which we all enjoyed very much. We caught sight of Camp Adams at 4 o'clock P. M., a pretty Gothic cottage, painted white, with red trimmings. The kitchen, 15 feet from the house, is a log cabin with every appliance for cooking, the great feature being the stove, one of the best ever made for camp life, called "the Forest Beauty." After looking around, we came to the conclusion that Mr. Adams had made a most judicious selection in placing his lodge in such a romantic and lovely spot. Within a radius of half a mile there are five pools, perhaps the finest in Canada.

The total catch during thirteen days for all hands, were forty-six salmon, four grilse and seventy trout, the weight of last named 180 pounds There are many flies used here, but the most popular are the Jock-Scot, Durham-ranger and silver-doctor. The scenery is grand in the extreme. A veranda around the house enables one to take in many views of the surroundings, which are really picturesque. Natural springs of excellent water are in abundance. The air is exceedingly light and bracing, and after a few days one's appetite becomes ravenous, and is met by a well stocked larder.

Our party was a jolly one, Hon. M. Adams, a large-hearted and generous man, superintending everything to its most minute detail. Mr. Tom Adams, of New York, a highly cultured gentleman, did much to interest us by his excellent readings. Jack Ferguson, better known in camp as the Refugee, a remarkably keen fisherman, he can be found on the river at all hours of the day and night. Bob Armstrong, called by his friends the Irish Songster, did much to enliven the time; he has a sweet tenor voice, and does full justice to his large selection of favorite ballads; and last, but not least, our faithful guides, three in number, also our cook, all natives of the forest, men of splendid physique, honest and obliging to a fault. July 3 we bid the dear old camp farewell, arriving in New York Friday the 6th, with twelve smoked salmon and one on ice.

Since my return I have received a letter from Mr. Adams, under date of July 17, in which he says: "Mrs. Adams and myself returned from the Camp on Saturday night, after spending eight days, and succeeded in doing good work. We made the record of the Camp for twenty-three days' fishing, sixty-one salmon, eighty-three grilse and seventy-five trout—not a bad season's fishing."

JOHN R. FRASER.

NEW YORK.

TOURISTS seeking rest and recreation during the hot summer months can obtain valuable information from the illustrated guide books entitled "A Summer Jaunt" and "Summer of 1888" issued by the Wisconsin Central Line. These books are descriptive of the summer resorts in Wisconsin and Minnesota, reached by the Wisconsin Central Line, and will be sent free to any address upon application to JAMES BARKER, General Passenger and Ticket Agent, Milwaukee, Wis.—*Adv.*

NOVA SCOTIA TROUT WATERS.

NEW GLASGOW, Nova Scotia, July 24.—*Editor Forest and Stream:* In late issues of your paper are some interesting data referring to the weight of several large trout taken at Rangeley lakes and elsewhere. I am prompted for the benefit of fellow-sportsmen to tell of a catch of sixty-five trout taken in a pond, (it can hardly be called a lake as there are less than 400 acres of water surface) situated some fifteen miles from here and seven miles from the line of the Inter Colonial Railway. On the 3d of June, accompanied by a friend, I started for the pond, arriving there at 4 P. M., in time for the evening fishing. Fished that evening and the following morning and left the pond at noon. Total catch, sixty-five trout; largest 4¾lbs.; two of 3lbs. 4oz. respectively, and six over 2lbs. each. Largest measured by rule 18¾in. long and 4¼ deep and tail 4¼ broad. A few days previous to our visit to the pond, a trout 5lbs. 2oz. was taken; and some days afterward a party from New Glasgow took two of over 4lbs. each; one measured 23½in. in length, twenty-four hours after he was taken. The exact measurement of the largest trout (5lb. 2oz.) taken by Mr. McKenzie of Picton, I have not been able to get, which I much regret.

None of the lakes in the Province of Quebec north of Gaspé can in my opinion compare with the Nova Scotia lakes, as regards the size and game qualities of the trout, not excepting Lake Edward, about which Mr. Clarke writes. I have had better trout fishing in the St. Maurice River country and Rawdon Lakes, Quebec, than I ever had along the line of the Lake St. John Railroad.

The weights of the trout above given are exact and are nothing exceptional. I have visited this same pond for a number of years every season, and have always had good sport. In the larger lakes trout of much greater size can be taken. The best time for fly-fishing is from June 1 until the end of August. June is the best month, and as a rule the fish take the fly better than the bait. At the lake above mentioned they will not take bait at all. I only know of one large trout taken with bait for the last five years in this pond.

I have often wondered how it is that some of the New York and Boston sportsmen do not acquire one of these lakes either as a club or individually. The cost would be slight compared with what they have to pay for fishing privileges elsewhere; and there would be no danger of their being crowded out of the best spots; there is room for all so far as trout fishing is concerned. Flies are not troublesome as a rule; the nights are delightfully cool; there are no hotels on the lakes with brass bands and Delmonico bills of fare; but there is a power of good solid enjoyment and comfort for all true sportsmen who enjoy camping out in its full sense. The amount of duffle and the size and expense of the outfit can depend upon the individual taste of the sportsman and the length of his stay in the woods; the difficulty of transportation of baggage is not great, hardly ever over three miles into the woods, and generally over a fair logging road."

I pen these hurried lines, thinking it may interest some fellow sportsman who has been crowded out of his once favorite river, pond or lake. I have no axe to grind. I don't run a hotel, keep a store, nor am I proprietor of a stage line, but I shall be glad to give any information on the subject of Nova Scotia fishing to any brother of the rod who may feel inclined to ask.

GLOBE SIGHT.

THE RANGELEY LAKES.

Editor Forest and Stream:

Captain Farrar's elaborate and sorrowful defense of Chas. A. J. Farrar in this week's issue of FOREST AND STREAM is hardly an adequate reply to my open assertion that "good fishing at the Rangeley Lakes is a thing of the past." The original remark was but a passing item, hidden away in a quiet corner of a long article upon Lake Edward, and I did not dream that any person would have temerity to question such an evident fact. Neither do I propose to give publicity to the name of the angler who cast flies below the Upper Dam for thirteen days without a rise; but I will add that within a week I have received many letters—some thirty—all coinciding with my views, and among them one from a sportsman whose name is most familiar and who almost surpassed the above dismal record. He cast flies steadily for two weeks and caught—two little fish, one per week. I have neither authority nor inclination to drag his name into this controversy, but the editor, for his private information, will find it upon the slip inclosed.

However, as no angler of repute has denied my statement, and as the only contradiction of any kind comes from parties who openly confess themselves financially interested in the prosperity of the Rangeley Lakes as a resort for tourists in search of "pure air and fine scenery," I shall not further encumber your columns upon the subject. I note with great glee that W. A. Robinson, referring to my statement, asserts that "myself and another man in seven hours' fishing caught 500 trout weighing from ¼ to 4lbs."

In seven hours there are four hundred and twenty minutes, and therefore the above gentlemen took one and a fifth trout every minute steadily during the memorable seven hours. Had they only stopped to light a pipe, eat a sandwich or drink a cup of water, the record would have been ruined. He does not state where or in what year this illustrious event occurred, but of course little things like these are immaterial. Besides, if—and then—or because—as stated—nevertheless—and if not—or in consequense—but, and whereby—notwithstanding—the old flag—and yet people continue to go there, in spite of these lamentable facts. I do not wish Mr. Robinson to insinuate that I have denied or questioned his legend. Not for a hecatomb of orbicular worlds would I permit myself to harbor such an uncivilized fancy. My sincere and lasting regret will be that I was not there to give him a hand in landing the quarry. Most assuredly the glorious moments were crowded to the brim with a steady undulation of unalloyed and exquisite excitement. A few more shining deeds like this, or even better, will speedily restore the former pristine celebrity of the Rangeley Lakes.

And now, ever amiable FOREST AND STREAM, turn and see what my "new discovery," lovely Lake Edward, has already produced. The Providence *Journal*, the Rochester *Democrat*, the Manchester *Union* and your own columns, have within a week printed letters from anglers who have recently visited my "new discovery," and behold the result! All have taken *fontinalis* in large numbers and larger in size—even to 5lbs. in weight. It gratifies me to read these records, and cheers me to think of the many more who will go down to this beautiful water to find themselves guided aright, and to feel "the thrill of the rod and the pulse of the reel."

An angler, in the last issue of FOREST AND STREAM, speaking of Lake Edward, says: "If there is hidden away in this wild tract a more beautifully diversified sheet of water that this 'Lake of the Great Islands,' I have not seen it yet." Let me whisper a gentle word in your ear, adventurous friend: There *is* such a lake, concealed deep in those majestic forests, whose rippling waters bathe the base line of imperial mountains, and where every vision is a spectacle of surpassing beauty. In the shortening days of the coming September my little birch canoe will again glide o'er its placid waters, and if the harvest verifies anticipation, the readers of FOREST AND STREAM will learn fully of this ideal Utopia.

KIT CLARKE.

NEW YORK, July 28, 1888.

TROUT KILLED BY LEECHES.—The Truckee, Cal., *Republican* says: "For a number of years past in has been observed that the trout in Lake Tahoe whenever they would ascend some of the streams to spawn, would perish in large numbers, and at times the bodies of the dead fish would accumulate in such numbers along the banks of the streams that the stench arising therefrom would be unbearable. The cause of this strange mortality has been discovered. Messrs. Stevens & McKenney, who have been taking spawn for the State, on the north side of the lake, near Hot Springs, have discovered that the great enemy of the trout are nothing more or less than water leeches, which are to be found in immense numbers in some of the streams which flow into the lake. These blood-suckers are found attached to the rocks and pebbles of the stream and are so numerous that thousands can be seen in a square yard of space. They are different from the ordinary leech, being round, about an inch to an inch and a half long, and about a sixteenth of an inch in diameter, when not full of blood. Each end is provided with a 'sucker,' that is a flat elastic surface, the center of which draws in and causes a vacuum by which the worm can adhere to any object. In the water the tail is attached to the body upright, to sway to and fro, ready to catch hold of any passing object. The fishermen above named state that it is not an uncommon sight to see fifty to a hundred leeches on one fish. They form on the gills in bunches twice as large as a man's thumb. The fish cannot then breathe and die; when only a few leeches are on the gills the blood is soon drawn from the body and death results in a short time. It is only a matter of time until the red trout of Tahoe will disappear. (The silver trout do not go up the streams, hence are not affected.) Some means should be taken to clear the streams of these leeches. It has been suggested that the only remedy would be to poison the waters of the streams with some substance which would kill the blood-suckers. What would kill them is not known. Perhaps lime would or petroleum. It would be well to make some experiments in this direction at once. The preservation of this fish interest at Tahoe demands it."

THE QUEBEC FISH AND GAME PROTECTION CLUB are determined, if possible, to protect the unrivaled finny wealth of the Lake St. John waters north of this city from the practices which would quickly lead to its extermination. After the seizure some time ago of nets and fish belonging to one Tremblay, who was trading in the produce of the lake, it was contended that the law favored the practices in which he indulged, and no further action was then taken. Emboldened by this circumstance, Tremblay appears to have not only resumed the business of netting the landlocked salmon and other fish of the lake for shipment to the United States, but to have gone even still more extensively into it. During the session just closed, however, the Legislature passed an act which, it is thought, will cover just such cases as his; that is to say, declaring the taking of fish except by rod and line in the inland waters of the Province illegal and punishable. Armed with this new authority, which received the Royal assent on the 12th instant, and acting also in obedience to the instructions of the Fish and Game Protection Club and of the Government, Mr. O'Sullivan pounced down upon Mr. Tremblay a second time last week and captured all the nets and night lines he had set in the lake, together with twenty-four barrels of landlocked salmon and other fish which he had salted down and ready for shipment, and about a hundred weight of fresh fish recently caught. Placing a guardian over the property seized and to watch further proceedings, Mr. O'Sullivan then returned to Quebec and the next step in the business will, no doubt, be a prosecution before the Police Court here by the Fish and Game Club, when the whole question of the legality or illegality of Mr. Tremblay's proceedings will be thoroughly ventilated. It is not our desire by any means to prejudge the case, but we may express the hope that some means will be found to effectually check at Lake St. John the short-sighted and destructive practices which have already ruined so many of the fine water stretches of this country.—*Quebec Chronicle.*

LARGE ADIRONDACK TROUT.—Cazenovia, N. Y., July 26.—If length has anything to do with the weight of a trout, I shall have to differ from Mr. Howlett, for I once caught in the inlet to Cranberry Lake a trout that measured 22½in. in length. Had no scales so could not weigh him, but his length was as stated.—WILL H. CRUTTENDEN.

[A fish of the length given must be 1½in. larger than the one recorded by Mr. Howlett, but its weight might or might not be so great. Larger fish than Mr. Howlett's may have been taken in the Adirondacks, but the record of any one of them to have any value must be complete in details, with nothing left to conjecture.]

FISHWAY IN THE HUDSON.—Albert Blaisdell, of Washington, D. C., is at the American House. He will superintend the building of a fishway in the State Dam. The fishway will be put in the center of the dam, and the McDonald system will be used. The fishway will cost about $1,800. Six or eight men will be employed three weeks in the construction.—*Troy Times, July 24.*

THE NET DECISION.—Experience has shown that a law which simply punishes netters who are apprehended in the actual use of nets in places forbidden by statute can not be efficiently enforced. The netters enjoy practical immunity, and practice their unlawful calling almost at will. The fisheries of the State cannot stand the drain they suffer under the unrestrained use of nets. Persons who enjoy line fishing are not the only ones concerned. The people generally have a direct economic interest in maintaining the fisheries. Net fishing should be limited as under the existing statutes. We are of the opinion that Justice Williams went out of his way to declare the act in question unconstitutional, and we trust that the higher courts will take a different view of the situation. But if it is decided that the Legislature exceeded its authority, no time should be lost in framing a statute which will accomplish the object desired. The fisheries must be protected from the ravages of the netters.—*Syracuse Herald.*

WEAKFISH IN PRINCE'S BAY.—During the past week the catches of weakfish in Prince's Bay, and in fact all around Staten Island, have been light. The small "school fish" have been taken in some numbers, but the larger ones were scarce. We tried the "tide runners" in the bay last week with a friend who knows he best spots, and while we saw many small fish taken in the channel outside our game did not come on the flats in either the number or in size which was expected from the reports. The frequent toadfish seemed to appreciate the expensive shedder crabs, and early in the day it was thought that a change in the tide would bring in the yellow fins that we sought, but the tide went out and came in again without materially affecting our basket, and at sundown a small boy could carry it. Others fishing near by met with the same success, and all were of the opinion that the day would have been better spent in the channel where the school fish were.

THE LARGEST BLACK BASS.—St. Catherines, Ont., July 24.—*Editor Forest and Stream:* We are desirous of knowing the weight of the largest black bass on record, as we think we are catching some record-breakers here. Two were caught this week weighing 6lbs. and 6lbs. 7oz., respectively. If the latter fish breaks the record I can send you affidavits of its weight, or, if I hear from you in time, will send the fish.—H. D. K. [In our issue of August 25, 1887, will be found a record of a bass taken by Mr. A. N. Cheney, of Glens Falls, N.Y., which weighed 8½lbs. In the issue of August 31, 1882, Mr. F. Joyner, also of Glens Falls, records the capture of one of 8¾lbs. These were the small-mouth species. In Florida the large-mouth grows to 12lbs. and over.]

FLY-FISHING AT LAKE EDWARD.—*Editor Forest and Stream:* It gives me great pleasure to inform you that I just received information from a most reliable source that the large trout in Lake Edward are now rising freely to the fly. Several gentlemen from the States who are now there, report that they have never enjoyed such fine sport before. This being true of Lake Edward, the same is doubtless true of all the lakes of that region. No black flies nor mosquitoes now. Millions of large trout I know are there. What a paradise for a fly-fisherman during the month of August!—GEO. F. GALE, (Brattleboro, July 28).

ALEXANDRIA BAY.—St. John's Island, July 26.—As your paper has always suggested that successful fishermen should make known their successes to their brothers in the pursuit, I send you the following: Mr. Charles Donohue, Jr., while out fishing yesterday hooked a maskalonge, and landed him after nearly fifteen minutes of very skillful playing. Two hours after capture the fish weighed 37½lbs. He is the largest fish taken in some time on this section of the river, and the splendid fight he made adds greatly to the credit of the fisherman who caught him.—F. L D.

TO GET AHEAD OF MOSQUITOES.—A wide awake contributor cites several instances where the use of Dalmatain insect powder, burned in a metal vessel, not only banished mosquitoes from a room, camp, schooner, woodshed, but prevented their return. It was successful in every instance from 1881, when it was first tried, up to the present time. A teaspoonful is the quantity mentioned to be burned in a room. The writer suggests burning it in vases on a verandah where people sit out of an evening.

BLUEFISHING continues good in the Great South Bay of Long Island. Among the recorded catches was one of sixteen fish in one tide by a nine-year-old youngster, and another of four bluefish and a 4lbs. flatfish by a seven-year-old girl. It is believed by the baymen that this increase in bluefish is decidedly due to the fact that the menhaden netters and oil factory people have shut up shop. Weakfishing is good, too, one catch scoring thirty fish caught by moonlight; one of the fish weighed 4lbs.

WINNIPESAUKEE.—The Lake Village, N. H., *Republican* says: Among the big strings of fish taken on Winnipesaukee recently were seven bass that weighed 25lbs.; a string of pickerel weighing 65lbs., and averaging two pounds each; a string of 16 lake trout, taken by Thomas French, of Tuftonboro,' in one day.

A telegram from Crescoville, Pa., says: "During the thunder storm that visited this region July 9, a maple tree in front of Minor Cresco's residence was struck by lightning. The only damage done to the tree was the splintering of a piece out of the trunk, midway between the ground and the lower branches. After the storm was over, Mr. Cresco went out to look at the tree. On the ground at the foot of it lay an immense black snake dead, and holding in its mouth a young robin. There was a robin's nest in the tree, and it was known to have had three young ones in it. As the tree had been struck by lightning, it was supposed that they had been killed. A boy went up the tree and found two young robins in the nest, alive and lively. It is supposed that the black snake had climbed the tree and robbed the nest of one of the newly hatched birds, and was descending the trunk as it was struck by lightning and killed with its prey in its mouth. The lightning thus avenged the robin."

Fishculture.

NATURAL FOOD FOR YOUNG FISH.

BY M. E. O'BRIEN.

[Read before the American Fisheries Society.]

THE subject "natural food of fish" is one that has received but meagre attention from the older naturalists, and our knowledge regarding this most important factor in fish-culture is but in its infancy, merely a passing glance having bestowed on it by both naturalists and fishculturists of the present day. Undoubtedly much good work has been done within the last five years toward investigating the food of the various species of marine food fish, the result of examinations made on fish caught by steam trawlers and line boats; but in reference to fresh-water species, migratory and non-migratory, as far as I am aware, little effort has been made in this direction.

The present system of aiding the growth and development of fish by supplying them with various kinds of artificial foods, such as liver, coagulated blood, vegetables, etc., may produce results of a kind, but it is a system open to many objections.

First, it is unnatural. Second, it has a tendency to render the water putrid, and consequently injurious to fish. Third, it favors the introduction of disease. Fourth and last, but not least, it entails a great deal of expense.

The results of such artificial feeding are found not to correspond to its cost, and this fact deters many people from engaging in the rearing of fish who would otherwise do so. All the results of artificial feeding are based more or less on hypothesis, because in making experiments the natural food, both animal and vegetable, has in most cases nowhere been investigated or taken into account. Now, I am sure no one will deny that it is better, if possible, to stick to the natural food, and give the powerful productions of nature a chance of exercising their beneficial influence. What I wish to bring before your immediate notice is this: "That at a comparatively small cost, conditions closely approximating those of nature can be established, under which conditions various forms of natural food will live, thrive and multiply, so as to afford a continual increasing supply of nutriment to the fish."

For the past two years I have been making investigations to find if possible some means by which fish, confined in small ponds could be supplied with natural food. My first step was to find out what the fish fed upon, and this led me to examine the stomach contents of numerous fish during the different seasons of the year. I confined my investigations to that most interesting class—the salmonidæ (*Salmo fontinalis* and *Salmo irideus*). What may be termed a post-mortem examination was performed—slitting the fish along its ventral or belly aspect, thus exposing the alimentary tract, I tied two ligatures, one around the gullet, the other round the intestine near the pyloric, or lesser end of the stomach. Removing the portion between the two ligatures, I opened the stomach and extracted the contents, placing them on a white plate. These I examined both by aid of the naked eye and microscope, then deposited them in a glass vial containing rectified spirits, and affixed a seal and label indicating the kind of food and date of examination. Thus at the end of the season I had quite an array of bottles containing different species of natural fish food.

The majority of the food belonged to the invertebrate type, including various species of crustacea, insecta, worms, leeches and mollusca. Some of these the fish seemed to prefer at a certain season of the year to the exclusion of the others; thus I found the ordinary univalve shellfish (*Limnæa stagnalis*), a very frequent customer during the summer months, a decided favorite with both the *Salmo fontinalis* and *Salmo irideus*. This shellfish exists in enormous quantities in the lakes and quiet pools of rivers and is greedily devoured by the trout. They feed on aquatic plants on whose stems they creep, and come occasionally to the surface to respire. In their reproduction the same limnæa is capable of serving at the same time as a male for a second, and as a female for a third and by this connection of one individual with two others a continuous chain of some length is not unfrequently produced. The number of eggs is prodigious, and they are deposited on stones, stems of plants, etc., in elongated masses enveloped in a glary substance, very much similar in appearance to that which surrounds the ova of the frog. In their adult condition they love to crawl about on a gravelly bottom. Other genera, such as planorbis, cytilus and ancyllus, used to turn up on various occasions. Those mollusca are a valuable source of nutriment to fish, having a double function, being composed of two parts, viz.: the fleshy portion or animal, which is a delicacy in itself, and its outer covering or shell, which, from its containing a large portion of carbonate of lime, promotes the strength and growth of the fish.

Of crustacea, the common fresh-water sand-hopper (*Gammarus pulex*) was invariably to be found. It abounds in almost all springs, ponds and rivulets, swimming near the bottom on its side. It feeds principally on dead material, and, like the limnæa, reproduces itself in enormous quantities. As a diet, it seems to cause a deeper color in the flesh of the fish. Most of the larger trout like to feed on material more in proportion to their size; thus, in the summer months, the frog and tadpole are particularly sought after as a bill of fare. Various species of insecta both in their larval and adult conditions, worms and a small brownish black leech, are also in my list of stomach contents.

Now, as an adjunct to a fish pond, it seems to me that some of the above types could be reared in such quantities as to form a good and economical source of nutriment for fish. These lower types undoubtedly require certain conditions for their healthy existence, and what I propose is this: Trenches, or basins, should be dug in close apposition with the ponds, and, if necessary, communicating with them. These basins to be supplied with spring water by means of a pipe connected with the main spring. One should be devoted to shell culture, another to insect culture, and a third to crustacea, and so on.

These various foods could be transferred by means of a fine net, or better still, by a running stream of water communicating with the fish pond, or means could be established whereby these forms could creep from the basin into the pond. By this method the fishculturist would know exactly how much food the fish were getting, and he would also be able to arrive at some estimate as to the comparative nutritiousness of the various forms of natural food. Suitable conditions could be produced whereby insects about to deposit their eggs might be attracted, and soon the basins would swarm with larvæ, which form an excellent food, especially for young fish. As in human economy the food of the child requires to be different from that of the adult, so in like manner does the food of the young fish require to be different from that of the adult fish.

One word more, and that is regarding the frog. Should it be admitted into the arena of fishculture? I think so. The damage it does to small fry can be kept within limits. A small pond could be constructed with an arrangement to prevent its escape, and in this pond the cultivation of the tadpole could be prosecuted, and for a time an abundant supply of stronger food would be afforded for the larger fish. Should the above experiments be tried and meet with success, they will establish the economic value of natural food as opposed to the artificial system of feeding; increase the number of fishculturists, and, in addition, afford a means of studying the life history of these lower forms, in connection with which are many points of great scientific interest requiring elucidation.

SOUTH BEND, Neb.

Mr. Mather remarked that he agreed with Mr. O'Brien that natural food was the best; but the trouble was to produce it in quantity sufficient for the daily food of a hundred thousand fry. He had a reservoir, about 300 by 30ft., which supplied the hatchery, and here he usually planted about 6,000 trout fry, which found sufficient food during the summer, and outgrew those which were fed on clams and mussels, which, by the way, is the best food he ever used, and in October he drew this reservoir down and took out from 1,500 to 2,000 fine young trout; but it was doubtful if the water would grow many more.

THE NEW YORK COMMISSION.

COMMISSIONER SHERMAN went to inspect the work done on the new hatchery at Mill Creek, Hamilton county, and found the work progressing well. The hatchery is on the old State road leading to Jessup's River. The part from Newton's Corners to the hatchery was so dilapidated last year as to be actually dangerous to traverse with a wagon. By concert between the highway commissioner and the hatchery force it has been put in good order and is now safe for all kinds of wheeled vehicles.

The building stands on solid granite rock on the small island just below where an old mill once stood. The foundation walls are laid in water lime cement out of this rock, blasted from adjacent boulders. The dam which is to furnish the water supply is but a hundred feet distant, up the creek, and the water has a fall of fifteen feet to the hatchery. It is built of timber, across a narrow gap in the rock and but ten yards of masonry are needed to make the whole dam a solid work of rock. Water is conveyed from the dam through a six-inch wrought iron pipe which delivers it directly into the distributing troughs. The building is of wood 45 by 35 in ground dimensions, with a hip roof, and is three stories high, with a two story addition 26 by 16. The first floor of the main building is for the hatchery troughs, of which there are to be forty, each twelve feet long by 14 inches wide and six high; the whole to have a capacity for two millions of trout spawn. There are also to be glass hatching jars capable of containing five millions of spawn of white or trout fish. The equipment of the hatchery is to be in all respects equal to that of the other State hatcheries.

The second story is to be fitted up for the superintendent and accommodation for boarding the employes. It is also to contain a workshop, where the mechanical operations of the hatchery are to be done. An elvator is to be placed in the addition, by means of which fuel, provisions, etc., are to be hoisted to the second floor. The third floor is to be devoted to storage purposes, but can be fitted up into lodgings if needed. The building is first rough boarded and covered, roof and all, with waterproof felt paper. On this the shingles and clap-board siding are placed. Inside the whole is to be ceiled or plastered in the best manner. The hatching room is to be heated by a portable furnace set up on the same floor.

All the work is to be complete by Oct. 1, and as soon as the trout begin to spawn in the neighboring lakes and streams a sufficient force is to be set at work spawn gathering. It is estimated that 1,000,000 of brook trout spawn may be gathered in this vicinity. An equal amount of salmon trout spawn is to be procured from the great upper lakes. Frost fish spawn in almost unlimited numbers may be obtained in November from the large lakes in this and the adjacent townships.

The Kennel.

Dogs: Their Management and Treatment in Disease. By Ashmont. Price $2. Kennel Record and Account Book. Price $3. Training vs. Breaking. By S. T. Hammond. Price $1. First Lessons in Dog Training, with Points of all Breeds. Price 25 cents.

FIXTURES.

DOG SHOWS.

Aug. 22 to 24.—Third Annual Show of the American Fox-Terrier Club, at Saratoga Springs, N. Y. (Including all terriers.) Entries close Aug. 22. H. P. Frothingham, Secretary, 2 Wall street, New York.

Aug. 27 to 31.—Toledo Dog Show, Toledo, O. H. E. Cook, Superintendent.

Sept. 4 to 7.—Second Annual Dog Show of the Michigan Kennel Club, Detroit, Mich. H. E. Cook, Superintendent.

Sept. 11 to 14.—First Dog Show of the Buffalo International Fair Association, at Buffalo, N. Y. C. W. Robinson, Secretary.

Sept. 18 to 21.—First Annual Dog Show of the Syracuse Kennel Club, at Syracuse, N. Y. Howard B. Rathbone, Secretary.

Sept. 24 to 27.—Fifth Dog Show at London, Ont. C. A. Stone Superintendent.

Sept. 25 to 28.—Second Annual Dog Show of the Bristol Park Agricultural Society, Bristol, Conn. Entries close Sept. 22. C. F. Barnes, Secretary.

Oct. 9 to 12.—First Dog Show of the Virginia Field Sports Association, at Richmond, Va. B. H. Grundy, Secretary, Room 26, Shafer Building. Entries close Oct. 1.

Oct. 23 to 26.—Second Annual Show of the St. Paul and Minnesota Kennel Club, at St. Paul, Minn. J. E. Stryker, Secretary, Room 98 Globe Building.

Nov. 6 to 10.—Dog Show of the Richmond County Poultry and Pet Stock Association, in connection with Augusta National Exposition at Augusta, Ga. H. Madden, Superintendent.

Feb. 12 to 15, 1889.—Fifth Dog Show of the New Jersey Kennel Club, at Jersey City, N. J. Geo. L. Wilms, Secretary, 142 Monticello avenue, Jersey City, N. J.

Feb. 19 to 22, 1889.—Thirteenth Annual Show of the Westminster Kennel Club, New York. James Mortimer, Superintendent.

Feb. 26 to March 1, 1889.—Second Annual Show of the Rensselaer Kennel Club, Troy, N. Y. Alba M. Ide, Secretary.

March 5 to 8, 1889.—Second Annual Dog Show of the Albany Kennel Club, at Albany, N. Y. Geo. B. Gallup, Secretary.

March 12 to 15, 1889.—Second Annual Show of the Fort Schuyler Kennel Club, Utica, N. Y. James W. Dunlop, President.

March 19 to 22, 1889.—First Annual Dog Show of the Maryland Kennel Club, at Baltimore, Md. W. S. Diffenderffer, Secretary.

March 26 to 29, 1889.—First Annual Dog Show of the Massachusetts Kennel Club, at Lynn, Mass. D. A. Williams, Secretary.

April 2 to 5, 1889.—First Annual Show of the Rochester Kennel Club, at Rochester, N. Y. Harry Yates, Secretary.

April 9 to 12, 1889.—First Annual Dog Show of the Mascoutah Kennel Club, at Chicago, Ill. John L. Lincoln, Jr., Secretary.

FIELD TRIALS.

Sept. 11.—Third Annual Field Trials of the Manitoba Field Trials Club. Derby entries close July 1. All-Aged entries Aug. 1. Thos. Johnson, Secretary, Winnipeg, Manitoba.

Nov. 1.—Second Annual Field Trials of the Indiana Kennel Club, at Bicknell, Ind. P. T. Madison, Secretary, Indianapolis, Ind.

Nov. 19.—Tenth Annual Field Trials of the Easteru Field Trials Club, at High Point, N. C. (Members' Stake, Nov. 15.) W. A. Coster, Secretary, Saratoga Springs, N. Y.

Dec. 3.—First Annual Field Trials of the Southern Field Trial Club, at Amory, Miss. T. M. Brumby, Secretary, Chattanooga, Tenn.

Dec. 10.—Second Annual Field Trials of the American Field Trials Club, at West Point, Miss. C. W. Paris, Secretary, Cincinnati, O.

Jan. 14, 1889.—Sixth Annual Field Trials of the Pacific Coast Field Trial Club, at Bakersfield, Cal. N. P. Sheldon, Secretary, 320 Sansome street, San Francisco, Cal.

COURSING.

Oct. 15.—Third Annual Meeting of the American Coursing Club at Great Bend, Kan. F. K. Doan, Secretary, 1210 Olive street, St Louis, Mo.

A. K. R.—SPECIAL NOTICE.

THE AMERICAN KENNEL REGISTER, for the registration of pedigrees etc. (with prize lists of all shows and trials), is published every month. Entries close on the 1st. Should be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (50 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription $1.50. Address "American Kennel Register," P. O. Box 2832, New York. Number of entries already printed **6435**.

CHESAPEAKE BAY DOGS.

Editor Forest and Stream:

To the true sportsmen there is nothing more sad or discouraging than to kill game and be unable to retrieve it, whether it is deer, grouse, quail or ducks. There is the sad thought that he has taken life and done no one any good. But it is in water fowl shooting that the largest per cent. of dead or crippled game is lost, the nature of the grounds or waters they frequent are such that a large per cent. of ducks knocked down are never retrieved. It is a common question and reply, "Well, how many did you get?" "Oh, I got about a dozen and downed twice as many more that I could not get, we had no dog that was good for anything and had to leave them." Who has not heard a conversation similar to the above and taken part in it as well? I know I have many times and never when I have so lost a duck or goose have I not wished I had missed it clean, no matter how nice a shot it was.

I tried setters for retrieving, but never saw but two that were reliable at all times and alas! I owned neither of them. Spaniels are too small and short legged for work in deep mud and water among wild rice and sedge. About eighteen months ago a friend and myself concluded we would try the Chesapeake Bay dog, so I bought a female puppy of that breed and my friend a dog of the famous Maxwell's Point strain. Both have now grown to be splendid animals, the female weighs about fifty-five pounds and the dog about seventy-five; they are strong, well built and able to go anywhere. One day this spring my bitch retrieved a wing-tipped goose that weighed twelve pounds from at least two hundred yards from shore, going and returning through slush and floating ice; and that too in deep water; and she brought him in alive and without mutilating.

Now, I am not much of a dog trainer, and did not know as I should succeed any better than I had done with setters, but I found that about all the training required was to make them obey, for they take to retrieving and carrying as naturally as a setter does to pointing or as a duck does to water. They are very easy controlled. I have never struck mine a blow, more than a slight slap with the hand. They are emphatically a one man's dog, knowing and caring nothing for any one but their master, very intelligent and affectionate, but have lots of sand and are excellent watch dogs. They are as crazy at the sight of a gun or an old canvas hunting coat as the highest strung setter, and are tireless. I feel like shouting Eureka! I hunted but little in the spring of 1888, but got quite a lot of ducks, and not one duck that myself or son "downed" was lost, and not more than half a dozen the fall before. Now there is some sport for me in duck shooting, for I know if a duck comes in range and I hold the old Fox right I shall have that duck. No more dead ducks to feed crows and other vermin, no more cripples to crawl off and die a lingering death. I feel more like a sportsman and less like a savage. But why is it that we see so few of and hear so little about this grandest of all retrievers? It is but seldom we see them mentioned in the reports of dog shows or in your advertising columns. Wherever ducks are shot there should the Chesapeake Bay dogs be found. Those who have never seen them work do not know what a good duck dog is. E. A. PALMER.

BLAIR, Neb.

BEAGLES AS PETS.

Editor Forest and Stream:

In the constitution, by-laws, etc., of the American Pet Dog Club, just published, I find a list of dogs "recognized by the American Pet Dog Club as house or pet dogs." In the said list appear beagles and spaniels.

If it suits the A. P. D. C. to merely regard, as far as they are concerned, the said two breeds of sporting dogs as pet dogs it can not be prevented, but the injury that will arise will come from inducing some to pollute the dignity of the breeds by using them merely as pets, instead of putting them to their legitimate work in the field, and thereby decreasing the hunting instinct in themselves and their progeny. While the A. P. D. C., I think, no doubt mean well in what they have done, I must, in my official capacity, condemn and protest against the said club usurping the functions of the American English Beagle Club as stated under their heading "objects of the club," wherein they say, "In any and all bench shows given by and under the auspices of this club, *the standard of merit as laid down by Stonehenge shall be inflexibly enforced* by the club, and observed by the judges in making awards [italics mine]. No person shall be a judge who shall not subscribe to, and agree to be governed by such standard."

As the American English Beagle Club is the recognized authority here on the breed, its standard and judges being used by the various shows, it will be seen at once that the part taken by the A. P. D. C. can only work harm instead of good, as its action certainly must be antagonized by the A. E. B. C. Having read the "objects of the club," I am led to believe the club had nothing in view but the welfare of the breeds taken up and that their action regarding the beagle was one of innocent over-zealousness. Were they to include beagles in the list and in so doing indorse the rulings of the A. E. B. C. the case would appear differently. The directly opposing the workings of the A. E. B. C., as they have, as shown in the quotations above is, I believe, the result of ignorance of the breed in question they are pretending to assume authority over.

Therefore, with all due respect I ask the A. P. D. C., would it not be better to include in your list of breeds merely such as legitimately come within your province; certainly not to include any breed of sporting dogs, and particularly so those already protected by a proper specialty club?

The A. E. B. C. would appreciate the mere recognition of their breed and indorsement of their club and its rulings by the A. P. D. C. were it not for the fact that even such recognition by a pet dog club would even prove an injury to the breed as shown above by encouraging the keeping of beagles for pet dogs, and consequently dulling the hunting instincts in themselves and their progeny and in other ways.

I would respectfully request the secretary of the A. P. D. C. to call the attention of the matter to his club and advise me as to what action, if any, is taken.

HERMAN F. SCHELLHASS, President A. E. B. C.

MANITOBA FIELD TRIALS.—At a meeting of the Manitoba Field Trials Club, July 20, it was decided to run the trials at Morris on the same grounds that were used last year. Mr. M. B. Walls, of Chatham, Ont., has been selected as judge. The Canadian Pacific Railway Company, upon presentation of club certificate, will transport dogs free.

DEATH OF BOB.—Granby, Conn.—*Editor Forest and Stream:* A short time ago my other dogs killed my stud beagle Bob (imported Ringwood—imported Music). Bob was the finest hunter I ever saw, and although weighing under 11lbs. has several times run a fox about 36 hours, and he was the best rabbit dog I ever owned.—N. ELMORE.

THE SOUTHERN FIELD TRIAL CLUB.

Editor Forest and Stream:

As much as I am averse to newspaper controversies I am compelled once more (and for the last time I hope on this subject) to ask space in your columns.

When, in consequence of my official connection with the Southern Field Trial Club, it became necessary in vindication of the club and its members to publish the truth and thus expose the fallacy of the Chicago paper in refusing to publish our paid advertisement, I trusted and believed it would be my last, for I had no doubt but Dr. Rowe would hasten to make honorable amends through the columns of his paper. But I was mistaken in the man, for to the contrary, notwithstanding he had a true statement of the facts before him, he industriously and, as he thought, quietly, circulated the manifold Brumby letter among sportsmen all over the country two weeks before my communication forced him to publish it. After learning of its secret circulation it became necessary that I should write a second letter, wherein I specifically charged the Doctor with opposing the Southern Field Trial Club by letters, and otherwise exposing the flimsy pretexts upon which he declined the paid advertisement of our club, and showing his inconsistency. In response to my second letter the Doctor published a card, in which he says: "I have not written a letter to any one regarding the entries for the Southern Field Trial Club in any way, shape or form." Again recognizing the resemblance of the Doctor to the "quietest dog in the show," I accept his silence as assenting to the correctness of every charge I made against him, but that of having written letters, etc., to the prejudice of our club, and of that one I submit indisputable proof—his statements to the contrary notwithstanding.

This manifold Brumby letter, which was so industriously circulated, charged that "the chief object of the Southern Field Trial Club was to break up the American Field Trial Club," and also that if ours succeeded the other must fail. In fact, the whole tenor of this letter from beginning to end is opposition to the S. F. T. Club, and the organization of it, that it ought not to exist, that it was conceived in sin and born in iniquity, and must not be patronized. No one can pretend that the circulation of this manifold Brumby letter was for any other purpose than to prejudice the S. F. T. Club by preventing parties from entering their dogs and otherwise patronizing it. Can a club exist without entries? Is the circulation of this letter among sportsmen saying nothing "regarding entries in the S. F. T. Club" in any way, shape or form?

This is not all. I am convinced of the fact that other letters and means were used to prevent entries in the Southern Field Trial Club; which conviction is supported by indisputable evidence. Now for the proof. I have in my possession a letter from Mr. L. C. Bruce, of New York, in which he says that a prominent member of the A. K. Club had shown him a letter from Dr. Rowe two weeks before my communication appeared, and which was accompanied by the manifold Brumby letter. I also have in my possession a letter from as honorable a gentleman as this country affords, in which he says that in a conversation he had with Dr. Rowe, he (Rowe) admitted having sent the manifold Brumby letter to a number of persons, giving the names of several of them. This I defy the Doctor to deny. If he should I will give the name of my informant.

I am also in possession of a letter from Mr. B. M. Stephenson, in which he says, "Mr. Bevan told me he would enter three dogs in the S. F. T. Club, but subsequently declined, and gave as a reason that he would do nothing that Rowe objected to." In further support of this, I am informed by Mr. Jas. L. Anthony, of New York, that Mr. Bevan would not run his (Anthony's) dogs in the Southern Field Trial Club, and that he (Bevan) gave as a reason, "That he loved Rowe, and would be a snake if he handled dogs in the Southern Field Trial Club;" and thus he (Anthony) was forced to take his dogs from Bevan and place them in the hands of another handler.

I have still more evidence to support my statement, but this will suffice. The individual's methods are too well known by sportsmen in general to need more; all his virtuous pretensions are a sham.

The fact that the Southern Field Trial Club has more Derby entries for this year than any other club, demonstrates the fact that a club can succeed without the support of the Chicago paper; yes, and even do so with its active opposition.

We tender our grateful thanks to the sportsmen from all sections of the country for their generous support. With an apology for having trespassed upon your columns, we dismiss the subject and the Western paper from further consideration. J. W. RENFROE.

ATLANTA, Ga., July 28.

THE TWO DOG CLUBS.

NEW YORK, July 31.—*Editor Forest and Stream:* I observe Dr. Perry has again delivered himself of a very exhaustive defense of the N. D. C. In trying to prove, however, the absence of the only really bad and fatally weak feature of his club, viz., antagonism to A. K. C., he lamentably shows the cloven foot. He says: "A snail may compass the earth, but there are none who desire to follow in its course." In this metaphor the snail is the A. K. C. Evidently without intention Dr. Perry took his mask off. He could have said nothing to better illustrate the contempt of the N. D. C. for the A. K. C., as a leader or competitor. How then can anybody believe that the close companionship and accord can possibly exist which Dr. Perry endeavors to show his club was organized with the avowed intention of cultivating with the A. K. C.

And that all these "catch support" expressions and fair words mean nothing at all but clever dust throwing in the eyes of sport-loving breeders and exhibitors of the country, is proved by the indisputable fact that at no time since its inception has the N. D. C. had any communication, official or unofficial, with the A. K. C. with a view to co-operation. On the contrary, it has ignored the A. K. C., and its promotors have claimed that the N. D. C. was called into being as a crying necessity to do everything well which is now done so badly. "Everything that is done so badly" is shown by the regulations, dog show rules, constitution and its interpretations of the N. D. C. to comprise the entire field of operations of the A. K. C. Consequently the A. K. C. is by the most unmistakable implication unfit and incapable for the proper discharge of its duties and should in that case be superseded by a worthier institution.

But Dr. Perry admitted that the majority of his members expressed themselves to him as in sympathy with the A. K. C. when they were importuned to join, and many of the N. D. C. committee distinctly stipulated that they would only act provided absolute assurance was given that the A. K. C. would not be antagonized. That assurance was given and is to-day most inconsistently repeated. Then why does not the N. D. C. confine itself to its proper field?

Dr. Perry has seen fit to insinuate that some of the present officers of the A. K. C. were bought off by the tender of office in the A. K. C. from support of the N. D. C. How absurd! As I was invited by Dr. Perry to become a member of the executive committee of the N. D. C., he must refer to me as one of these. His communications to me on this subject were all marked "personal." This was odd; still I treated them so and declined for the best of reasons, viz., that I did not approve of the foundation of a club on the lines indicated by Dr. Perry, fearing, notwithstanding his assurances, that it would bring discord and confusion into the doggy world, and feeling that if any reforms were necessary they could be made through the A. K. C., and where its duties were too restricted they could be so enlarged as to satisfy the requirements of breeders; and that an association of breeders could be formed in connection and in thorough sympathy with the A. K. C.

I sincerely believe that the breeders do require an association of their own, and I, as a breeder and exhibitor, desire one greatly and would have supported the N. D. C. heartily, but the N. D. C. was not what was represented or required, and if I interpret the wishes of the breeders and exhibitors at large correctly, not what they really desired either. The A. K. C. was organized as a court of appeal and last resort, and the local clubs belonging to it are intrusted with their own disciplining. The system was intended to extend throughout the country.

Rivalry, which Dr. Perry considers so healthy, should grow as between kennel clubs organized for holding shows, field trials and improving dog breeding, but to have two dog courts of last resort and rivalry between these two, seems to me as likely to defeat justice, as if our National Constitution provided for two Supreme Courts of the United States, one Democratic and the other Republican.

Dr. Perry speaks of prejudice, abuse, etc., of the N. D. C. since its inception. Where, pray, did he see this or hear it? On the contrary, I think the N. D. C. was received by all with great fairness and most sportsmanlike good-will, but it has recently belied the avowed objects of its original promoters. Words cannot explain this away.

If so friendly to the A. K. C., where is the proof of it? Is it by asking a lot of prominent A. K. C. gentlemen to lend their names as figureheads to act as an unconscious mask to the N. D. C. batteries? Who does not understand that worn-out political device. Dr. Perry has not well coated his pill. AUGUST BELMONT, JR.

Editor Forest and Stream:

Your correspondent in last week's issue is right in assuming that the letter of Mr. Hamilton Busbey to Mr. C. J. Hamlin was written in haste.

The facts, as I learn from Mr. Busbey himself, are, that the letter was addressed with one eye on the clock to avoid missing the afternoon train, to an old personal friend, not with a view of publicity, but simply by way of suggestion, which had been solicited.

The chirography was not good, as is proved by Mr. Robinson reading "Coptic" for Graphic; the object was not to stir up controversy, but to quietly check a growing spirit of antagonism, and that, while the editorial "we" was absent from the scrawl, the sentiment expressed in it was formed after a pretty thorough discussion of the question with prominent dog breeders and members of the A. K. C. It was the use which was made of the letter which gave to it a warlike tone.

Mr. Busbey, I am told, is not unfriendly to the N. D. C. so long as it stands on the platform announced by its president in his inaugural address; but he objects to all attemps on the part of a few fractious spirits to use the machinery of the club to weaken the ranks of the A. K. C.

Your correspondent concedes Mr. Busbey's "eminence in turf affairs," but sneers at his judgment on the management of bench shows. How much the real question at issue will be helped by this sneer, will be demonstrated by coming events. It is true that Mr. Busbey has given in latter years the larger parts of his thoughts to breeding theories and the turf, but I recall the time when he assisted at the establishment of field trials, gun trials and bench shows in this country, and that was prior to the spring of 1881, when Mr. Chas. H. Mason landed in New York, and it was before Mr. James Watson began to fix his eye on kennel organization and dream of getting his fine Italian hand into Yankee flesh pots. Mr. Busbey has owned and shot over some of the best dogs in the country, and I would be willing to risk a trifle that he can kill more birds in the field or at the trap than the critic who signs himself "One who will show at Buffalo."

It is well known that Mr. Busbey has not been a trader in dogs or made a profession of judging at bench shows for hire. Neither is he a member of the tickle-me, tickle-you clique, but he is none the less qualified to detect a battery masked by so flimsy a thing as an open rail fence.

As an owner, breeder and lover of dogs, I am anxious for peace between the two kennel clubs, and it seems to me that Mr. Robinson and his kindred spirits have done all to stir up strife. It certainly was not a non-partisan act to circulate in the manner that he did, and without the knowledge of the gentleman to whom it was addressed, a strictly private letter. A LOVER OF FAIR PLAY.

[All of which is published as a matter of news, "important if true."]

Editor Forest and Stream:

I notice in the list of "approved shows" of the National Dog Club that no year is given for the following shows: New York Fanciers, Toronto, Ont., London, Ont., St. John, N. B., Ottawa, Ont., Pacific Kennel Club, New Bedford, Stafford Springs, Montreal. Do all wins count at the above shows? Why is the Cincinnati '88 show ignored with 362 entries, and other shows with 100 entries approved?

A. C. COLLINS.

HARTFORD, Conn.

"DISGRUNTLED ASSOCIATES."

HORNELLSVILLE, N. Y., July 27.—*Editor Forest and Stream:*—In your issue of July 26, Mr. August Belmont, Jr., goes out of his way to give the Hornell Kennel Club a whack as "disgruntled associates." Well, we will admit that we are "disgruntled," but Mr. Belmont should remember that some of our club were breeders and known to the world as such, before he ever thought of the fancy, and they did not make their name either by buying the best in England.

He should go further into the subject and let all know why we are "disgruntled." As I do not suppose he will do it, I will give a few facts, so that other clubs may know what to expect unless they vote as they are told to by the grand moguls at 44 Broadway.

First fact—A member of our club exposed the "Chicago special steal."

Second fact—A member of our club exposed the Pittsburgh "pewter medal steal."

What, I wish to ask Mr. Belmont, did the A. K. C. do about it? Did they suspend or expel the Pittsburgh or Chicago Club or disqualify any one connected with the stealing? But there is no need of any answer. All know what the A. K. C. has done for the breeders of America.

Third fact—Our superintendent caught one Farley stealing here and at Buffalo. He reported him to the A. K. C., but they said they would not disqualify because the Buffalo Kennel Club was not a member; and that, I must say, was a fine decision for a body that wishes to govern the canine interest of our big country. Our club, then a member of the A. K. C., disqualified Farley, but we had a delegate who was so unfortunate that he had a brain, and the A. K. C. would do nothing about it, but waited until the Westminster Kennel Club caught Farley at more crooked work and then disqualified him.

Fourth fact—All the above were but a fitting introduction to the crowning offense of depriving our club of the right to be represented by the only delegate who had ever been able to show himself capable of understanding what his duties were. We instructed our secretary to tell the A. K. C. the above facts and also about their violating the rules in recognizing Atlanta just to please Mr. Belmont. So they arose in their might and expelled the Hornell Club, and now Mr. Belmont says we are "disgruntled."

We are willing to leave it to the breeders of America to say if we did not have sufficient provocation.

"Disgruntled associates" is not, after all, a bad term for us. I may say to Mr. Belmont, as Gratiano said to Shylock, "I thank thee, Jew, for teaching me that word."

WILLIAM REWALT, JR.,
Pres. Hornell Kennel Club.

"A BIT OF KENNEL HISTORY."

NEW YORK, July 30.—*Editor Forest and Stream:* In an editorial of your last issue you speak of negotiations having been conducted by Mr. Peshall with Mr. Mason for the publication of an A. K. C. periodical by him. As you desire to add this matter to "Kennel History," perhaps it would be more accurate to couple with the story that I as President of the American Kennel Club said that no negotiation of the kind was ever conducted on the part of the A. K. C. I distinctly desire to make no reflection upon Mr. Mason and his abilities, or say what the A. K. C. would or would not do in such a connection. Your informant was mistaken.—AUGUST BELMONT, JR., Pres. A. K. C.

Editor Forest and Stream:

In your last issue I notice an editorial headed "A Bit of Kennel History." Permit me to say that I never asked Mr. Mason upon what terms he could be induced to take the position then held by Mr. Vredenburgh as editor of the American Kennel Club Stud Book. The only conversation I have any recollection of having with Mr. Mason upon the subject was about the time the late *Kennel and Gun* went off; and Mr. Mason and myself were discussing the subject, when I said something about some of us starting a dog paper, and Mr. Mason asked, "Who is going to edit it?" and I, in a jocular mood, replied, "I guess we will have to get you." I think my course in the American Kennel Club in regard to Mr. Vredenburgh is sufficient to brand your statement absurd. In regard to the derisive letter you mention which I wrote about the English Gentleman, it was simply an answer to a very vindictive letter which appeared in your paper in regard to the American Kennel Club; and if you will take the trouble to examine the files of your own paper, you will see that such is the case.

So far as your not publishing my letter is concerned, I will say that I met your Mr. Hammond at the New York show, and while the letter had appeared in the *Turf, Field and Farm* it had not appeared in your paper. Mr. Hammond spoke to me on the subject and said that it had come too late, but that it was all in type and would appear in the next issue. He seemed to construe the letter in quite a different light from the way I intended it, and he advised me not to have it published. Your Mr. Hammond will, I think, bear me out in this statement. In regard to Mr. Mason, I have often said that he possessed the ability to ably edit a kennel paper; I have always been on friendly terms with him and I have never had any controversy with him of any name or nature, except to answer his attacks on the A. K. C., or to make a few pleasant remarks in a jocular way over his dog Beaufort, or in reply to some of his highly-tinted statements about old Jimmie. C. J. PESHALL.

OUR BOSTON SHOW REPORT.

AT the meeting of the American Kennel Club Mr. August Belmont, Jr., took occasion to question the accuracy of the FOREST AND STREAM'S report of the Boston show. The following correspondence explains itself:

OFFICE OF FOREST AND STREAM, 318 BROADWAY, NEW YORK, JULY 25.—*Mr. August Belmont, Jr., 36 Wall Street, New York:* DEAR SIR—At the recent meeting of the A. K. C. I was greatly surprised at your statement that the report of the Boston dog show in FOREST AND STREAM was untruthful and misleading. As the writer of that report I request that you will please to state wherein, in your opinion, that report contains any justification for your criticism. An early answer will greatly oblige, Yours truly,

S. T. HAMMOND, Kennel Editor FOREST AND STREAM.

NEW YORK, July 30.—*S. T. Hammond, Esq.:* DEAR SIR—I have but just returned from a trip West, finding yours of the 25th on my desk. You can call upon me if you desire to learn why I stated at the meeting of the American Kennel Club that the FOREST AND STREAM misrepresented the actual quality of the Boston dog show. If you are responsible for the statement in the report that "the quality in some of the classes was superior to that of any previous show which we have attended, while two or three classes were not quite up to the mark," I will rest my assertion as justified by that alone, if nothing else; as the pointer, collie and fox-terrier classes, the largest, as a rule, of all, were thin in quality and numbers. The entries were padded a great deal, even in these.

The whole intention of your report was to give the impression to readers that the Boston show was exceptionally good, both by comparison with its own previous shows and those of other prominent clubs; and as this was not the case, I repeat what I said at the A. K. C. meeting, regretting that I have not the time to afford you a very minute elaboration of my reasons. AUGUST BELMONT, JR.

If Mr. Belmont will read the special reports written by the judges, Miss Anna H. Whitney, Dr. Wm. Jarvis and Messrs. Chas. H. Mason, Wm. Dunphy, N. Elmore, Thos. Dawson and Ed. Lever, he will see that they fully corroborate the estimate contained in the sentence to which he makes specific allusion. That estimate was the honest opinion of the kennel editor of this journal, who was present at the show, and is recognized as competent to form an opinion. Mr. Belmont, we are advised, was not at the show; nor if he had been there would his opinion on any one class be accepted by anybody as worth a rap. This critic's original statement as to the accuracy of our report and his second statement as to its purpose are alike impertinent and void of truth. —EDITOR FOREST AND STREAM.

MR. BELMONT'S CHARGES.

Editor Forest and Stream:

In your issue of July 26 appears a letter signed "August Belmont, Jr., President A. K. C.," in which the following statement is made: "The incessant plottings which are being conducted against the A. K. C. through the N. D. C. by such parties as Mr. Jas. Watson," etc. For the present I will content myself by requesting the writer of that letter to substantiate his statement by evidence, for no person, whether he be a "party" or a gentleman, should make such a charge unless he knows whereof he is speaking.

JAS. WATSON.

NEW ENGLAND FIELD TRIALS.—*Editor Forest and Stream:* Why cannot we New Englanders have a field trial here in New England? There are, no doubt, many persons here that cannot afford the time and expense in visiting the Southern trials. I am of the opinion that we might organize a New England Field Trial Club that would benefit those breeders and owners who wish to demonstrate that they have got good field dogs. The writer thinks that the pointer, setter, spaniel and beagle breeders and owners might join hands and do themselves proud. Gentlemen, speak up, and name the objections to this move.—A. C. COLLINS.

DOG TALK.

THE *Spectator* gives us the following: "Bob is a fine two-year-old mastiff, with head and face of massive strength, heightened by great mildness of expression. One day he was seen carrying a hen very gently in his mouth to the kennel. Placing her in one corner he stood sentry while she laid an egg, which he at once devoured. From that day the two have been fast friends, the hen refusing to lay anywhere but in Bob's kennel, and getting her reward in the dainty morsels from his platter. There must have been a bit of canine reasoning here. Bob must have found eggs to his liking, that they were laid by hens, and that he could best secure a supply by having a hen to himself. Socialists will note with a chuckle of satisfaction that even in the animal creation Proudhon's maxim hold's good. 'Property is theft' indeed when dogs take to appropriating their masters' hens."

Mr. James Watson writes as follows: "I have not been having so much of my usual bad luck of late with my collies. I have two litters by Strephon, one out of Juno and the other out of Mavis, and as both are dams of winners, I am again speculating in futures. By the way did you ever hear of rats attacking puppies? The Juno litter were bitten dreadfully when three days old. One has a bite out of its ear, another lost a toe, a third a piece of its tail, and one dog was so badly chewed about one of its hindlegs that it died two days later, more from weakness from loss of blood than anything else, I fancy. I was away the day after they had been bitten, so no one found it out till I returned and looked at them the following day morning. After that you may want to ask what my usual bad luck is. I did not give the rats a chance at the Mavis' litter you may be sure."

Our combative friend, Mr. Wade, does not confine himself to fights on dog matters. By the Pittsburgh *Commercial Gazette* we see that he has plunged into the United States Court against the whole Allegheny Valley Railroad, which is a sort of branch of the Pennsylvania, on account of the road maintaining a picnic ground near his residence at Hulton, which Mr. Wade asserts is a common nuisance from the numbers of vile characters from Pittsburgh who frequent it. It must be exceedingly tough if all Mr. Wade's mastiffs are not sufficient protection, and fighting a powerful railroad company is a pretty large job. However, the size of a fight, or the power of his antagonists never did scare Mr. Wade.

A very desirable piece of knowledge is, how to stop a dog fight; choking off, douching with water, etc., will sometimes answer, but very game dogs will hang on, even under a pump, and choking off is sometimes somewhat dangerous. A certain means is showering something over the dogs that will produce sneezing. Be his will ever so good, the motion of sneezing involuntarily opens his jaws. Pepper answers very well, but snuff is probably the best, as it can be used *ad libitum*, and will certainly produce the effect if enough is used. In a large kennel, a supply of snuff should always be kept on hand.

Mr. C. C. Cook of Canton, O., owner of Moses, purposes adding to his kennel of mastiffs and on his behalf Mr. E. Probert, formerly of Salem, O., has purchased in England of Mr. Richard Cook, a bitch by Ilford Chancellor, dam Ilford Constance, and in whelp to Beaufort. Ilford Constance, the dam of the bitch, is now owned by Mr. A. Gerald Hull. Mr. Probert is the person who had charge of Mr. Aston's mastiffs in New York when Dr. Perry put Baby first and started the series of indignation meetings on the top benches at Madison Square Garden.

Mr. Aston of Orlando, Fla., has returned to England, owing to the ill health of Mrs. Aston. He disposed of all of his mastiffs with the exception of Baby, which he took home with him.

We hear rumors of a new kennel club that is to be formed at Pittsburgh to take the place of the Western Pennsylvania Poultry Society.

At the recent English Kennel Club show at Barn Elms, the prize medal offered for appliances was won by Spratts Patent.

We are pleased to learn that Mr. Howard Hartley is recovering from the shock of paralysis he received two weeks ago.

Trenton is to have a dog show in connection with the fair there next October.

There will be a dog show in Chicago next April, held by the Mascoutah Kennel Club.

A dog show will in all likelihood be held in connection with the Fairfield, Conn., county fair.

The American Pet Dog Club is now an incorporated body, having recently received its charter.

ENGLISH KENNEL CLUB RULES.

THE following alterations in the show and field trial rules of the English Kennel Club were made at a meeting of the club July 4:

"Rule 15. The committee of the Kennel Club shall publish as early as possible in each year in the *Kennel Gazette* a list of shows selected by them as being worthy to rank as first-class exhibitions. A first prize at any one of such shows shall for purposes of a challenge class qualification count two points. A first prize at any other show under Kennel Club rules shall count one point. No dog shall be qualified to compete in a challenge class that has won less than ten points at shows registered in or for the Kennel Club Calendar and Stud-books; and no dog shall compete in an open class that is qualified to compete in a challenge class at any show where challenge classes are provided for that breed. The prizes must be won in open classes which are open to all dogs of any breed without restriction, or in varieties of the same breed divided by weight, color, sex or age in adult classes.

"Rule 16: No dog shall in future be entitled to be called a champion that has not scored six points in challenge classes, two of which must be either at the Kennel Club shows or at the shows of the National Dog Show Society, Birmingham. Each win in a challenge class at a first class show (as explained in rule 15) shall count two points, and each win in a challenge class at other shows under Kennel Club rules one point. If a prize winner be disqualified, the next dog in order of merit, as placed by the judge, shall take its place, and the win shall count in every respect the same as if it had been the original award. An equal first prize in challenge or open classes shall be counted as a win to both dogs."

N.B. to Rules 15 to 16.—These rules shall come into operation upon January 1, 1889, and any dog which shall have qualified previously to that date for competition in a champion class or challenge class must compete in a challenge class where such class is provided. Any dog entitled to be called a champion before that date shall not be deprived of his title.

FIELD TRIAL RULES.

Rule XI., line eight, after the words, "or on account of byes," insert the following: Or "if any dog, beaten in the first round of a stake, has shown, in the opinion of the judge or judges, exceptional merit, he may be allowed to remain in competition. This must be declared to the secretary or stewards by the judges at once, or on the conclusion of the round. A fresh draw shall then take place at the direction of the stewards, and this order of running shall be no more disturbed in finishing the stake. The usual guarding to be practiced, and, in addition, those dogs drawn against one another in the first round to be 'guarded' in the second. The judges shall also have the power to throw out in the first round of a stake both dogs in competition, if, after a sufficient trial, they consider them exceptionally deficient in merit. In this case the order of the original draw shall not be disturbed."—*Kennel Gazette.*

SYRACUSE DOG SHOW.—Syracuse, N. Y., July 30.—*Editor Forest and Stream:* Everything looks most favorable for a great success of the bench show of the Syracuse Kennel Club to be held on Sept. 18, 19, 20 and 21. The cash prizes will amount to about $1500, and the specials will be an attractive feature; for many valuable and handsome prizes have been promised, especially for kennels consisting of four or more dogs. Maj. J. M. Taylor will judge pointers and setters, A. C. Wilmerding spaniels, Herm. F. Schellhass beagles, etc., James Mortimer all other classes, and William Tallman will be the superintendent. The hall is one of the best, being 192x60ft., good light and excellent ventilation. Spratts Patent will do the benching. Judging by the way inquiries are pouring in for premium lists we expect a most attractive show. The club's dogs will not be entered for competition.—HOWARD B. RATHBORN, Sec'y.

LONDON DOG SHOW.—London, Ont., July 28.—*Editor Forest and Stream:* The contract was let last evening for the London Kennel Club's bench show buildings and benches, to be erected in the grounds of the Western Fair, London, Ont. The main building will be 40x130ft., with wings, which will contain two judging rings, 12x30 each, secretary's and manager's office, feed rooms, etc. The benches will be wire and will be made in this city. The buildings are the property of the club and are to be used for bench shows only, and when finished will be the most complete in the country.—C. A. STONE Manager.

DEATH OF NEWTON ABBOT JUBILEE.—Mr. E. M. Oldham has met with a great misfortune in the death of his field spaniel bitch Newton Abbot Jubilee. She was undoubtedly the best bitch of the breed in this country, and the loss is one that cannot be easily replaced. At the time of her death she was heavy in whelp to Newton Abbot Darkie.

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope of large letter size. Sets of 200 of any one form, bound for retaining duplicates, are sent for 30 cents.

NAMES CLAIMED.

☞ **Notes must be sent on the Prepared Blanks.**

Mikado. By F. F. Harris, Portland, Me., for liver and white pointer dog, whelped June 10, 1886, by Graphic (A.K.R. 2411) out of Zitta (A.K.R. 1358).

Nixie. By F. F. Harris, Portland, Me., for lemon and white pointer dog, whelped Aug. 28, 1887, by Nick of Naso (A.K.R. 4391) out of Portland Lily (A.K.R. 4058).

Ethel. By F. F. Harris, Portland, Me., for lemon and white pointer bitch, whelped May 13, 1885, by champion Beaufort (A.K.R. 694) out of Zuba (A.K.R. 1359).

Dawn. By Dr. Louis O. Lusson, Philadelphia, Pa., for liver and white pointer bitch, whelped March 11, 1888, by Bang (Price's champion Bang—Salter's Luna) out of Vandalia (Bang Bang—Zanetta).

Vandal and Joyce. By Rosecroft Kennels, for blue belton and tan English setter dog and bitch, whelped April 7, 1888, by Prince Foreman (A.K.R. 5800) out of Passion (A.K.R. 3424).

BRED.

☞ **Notes must be sent on the Prepared Blanks.**

Trinket—Trailer. H. F. Schellhass's (Brooklyn, N. Y.) beagle bitch Trinket (Flute—Queen) to his Trailer (Racket—Fly), July 23.

Princess II.—Bang. G. G. Barker's (leased by E. J. Martin) (Wilmington, Del.) pointer bitch Princess II. (Nat—champion Princess) to J. H. Winslow's Bang (Price's champion Bang—Salter's Luna), July 13.

Floss—Mack. E. Indicott's (East Longmeadow, Mass.) pointer bitch Floss (Van—Blitzen) to Dr. L. Corcoran's Mack (Ned—Gipsey), July 29.

New York Beauty—Rockingham. J. E. Meyer's (New York) English setter bitch New York Beauty (Monk of Furness—Nellie of Braunfels) to F. Windholz's Rockingham (A.K.R. 3867), June 21.

Princess Phœbus—Rockingham. F. Windholz's (New York) English setter bitch Princess Phœbus (A.K.R. 1287) to his Rockingham (A.K.R. 3867), June 13.

Blitz—Rockingham. John Yewdall's (Philadelphia, Pa.) English setter bitch Blitz (Thunder—Peg) to F. Windholz's Rockingham (A.K.R. 3867), June —.

Belle—Bradford Harry. E. G. Carleton's (Boston, Mass.) Yorkshire terrier bitch Belle to P. H. Coombs's Bradford Harry (Crawshaw's Bruce—Beale's Lady), July 29.

WHELPS.

☞ **Notes must be sent on the Prepared Blanks.**

Duster. A. McDonald's (Rockland, Me.) foxhound bitch Duster (Rake—Belle), July 23, eleven (four dogs), by L. Butler's Klipper (Plunder—Kate).

Fleet. A. McDonald's (Rockland, Me.) foxhound bitch Fleet (Flip—Festive), July 20, nine (four dogs), by P. F. Armstrong's Hunter (Breckenridge—Queen).

Portia. John Coles's (Linden, Mass.) mastiff bitch Portia (A.K.R. 3563), July 25, ten (five dogs), by his Dulph (champion Hero II.—champion Dolly Varden).

Linden Duchess. John Coles's (Linden, Mass.) mastiff bitch Linden Duchess (Bosco—Juno, A.K.R. 1144), July 23, seven (four dogs), by his Dulph (champion Hero II.—champion Dolly Varden).

Sallie Walker. A. McDonald's (Rockland, Me.) pointer bitch Sallie Walker (Gem Beaufort—Minnie T.), July 23, seven (three dogs), by his Leslie's Spot Dash (Sir Phillip Sidney—Topsy).

Kent Queen. Charlottesville Field Trial Kennels' (Charlottesville, Va.) imported pointer bitch Kent Queen (Kent Bitters—Kent Florist), July 19, six (five dogs), by their Pontiac (Milton Bang II.—Climax).

Bonanza. F. F. Harris's (Portland, Me.) pointer bitch Bonanza (Beaufort, A.K.R. 694—Zuba, A.K.R. 1359), July 8, eight (three dogs), by Westminster Kennel Club's Naso of Kippen (Naso II.—Maggie).

Katisha. F. F. Harris's (Portland, Me.) pointer bitch Katisha (Graphic, A.K.R. 2411—Zitta, A.K.R. 1358), July 24, nine (four dogs), by Chestnut Hill Kennels' champion Beaufort (A.K.R. 694).

Zitta. F. F. Harris's (Portland, Me.) pointer bitch Zitta (A.K.R. 1358), July 11, six (two dogs), by Chestnut Hill Kennels' Beaufort (A.K.R. 694).

Roseline. A. Quick's (New York) pointer bitch Roseline (Ben—Daisy), July 24, ten (seven dogs), by his Clifford (Donald—Devonshire Lass).

Jessica. Geo. Browne's (Dedham, Mass.) Gordon setter bitch Jessica (Tom—Cremorne), July 22, five (three dogs), by his Argus II. (champion Argus—Beauty).

Peggy Bowley. J. H. Winslow's (Philadelphia, Pa.) cocker spaniel bitch Peggy Bowley (Koba—Hilla), July 20, six (two dogs), by American Cocker Kennels' Doc (A.K.R. 3795).

SALES.

☞ **Notes must be sent on the Prepared Blanks.**

Clyde (A.K.R. 5598)—Gypsie May (A.K.R. 5602) whelp. Black, tan and white collie dog, whelped June 13, 1888, by W. A. Wickham, Cedar Bluff, Ia., to Geneser & Sons, Granger, Ia.

Clyde (A.K.R. 5598)—Iowa Queen (A.K.R. 5784) whelp. Sable and white collie bitch, whelped May, 1887, by W. A. Wickham, Cedar Bluff, Ia., to Bussey & Handcombe, Rock Springs, Wyoming.

Clio. Silver fawn Italian greyhound dog, whelped Dec. 23 1887, by Spider out of Daisy, by A. B. Norcross, Milford, Conn., to W. H. Caldwell, Newburg, N. Y.

Mainspring—Perry whelp. Lemon and white pointer dog whelped Sept. 12, 1887, by T. F. Rivers, Bridgeport, Conn., to R. W. Shaw, Galveston, Tex.

Zip. Black and white English setter dog, whelped July, 1885, pedigree not given, by Geo. W. Lovell, Middleboro, Mass., to R. M. Greig, Butte City, Mont.

Sport. Orange and white English setter dog, whelped June, 1886, pedigree not given, by Geo. W. Lovell, Middleboro, Mass.. to H. A. Harrington, Boston, Mass.

White Ben. White English setter dog, whelped July, 1881, pedigree not given, by Geo. W. Lovell, Middleboro, Mass., to L. C. Chase, Swansea, Mass.

Lillias. Black, white and tan fox-terrier bitch, whelped July 6, 1887, by Splauger out of Blenton Lilly, by W. S. Applegate, New Albany, Ind., to Jas. E. Unks, Brownsville, Pa.

Snap. Scotch terrier dog, age and pedigree not given, by J. J. Nussbaumer, St. Louis, Mo., to N. Guerdan, same place.

DEATHS.

Judy Obo. Black cocker spaniel bitch, whelped Oct. 17, 1884, by Obo II. out of Daisy Zulu, owned by Geo. E. Brown, Dedham, Mass., July 20, in parturition.

Rifle and Trap Shooting.

RANGE AND GALLERY.

FITCHBURG, Mass., July 26.—Match A of the series now in progress under the auspices of the Fitchburg Rifle and Gun Club closed last week with the following totals: A. B. Small, 847; F. Harvey, 829; W. W. V. Lowe, 811; L. R. Starkey, 823; C. H. Brown, 707. At the last meet the work of each man in detail off-hand was as follows:

A B Small	7	10	8	7	7	8	8	10	8	8—81
C H Brown	8	5	6	7	10	8	6	7	7	3—70
F Harvey	9	8	7	7	5	5	9	6	4	7—67
E Newton	8	7	10	7	8	7	5	4	6	4—66
F M Patch	8	4	6	6	4	6	3	7	10	7—61
L Starkey	9	3	7	3	5	5	8	7	7	5—59

Rest Match, New Center.

A B Small	11	10	11	12	12	12	10	9	8	12—107
C H Brown	9	9	12	11	9	11	9	10	10	11—101

G W Bishop	21	19—40	B J Brown		—16
H J Black	20	19—39			

BISMARCK AS A DEAD SHOT.—Berlin, July 26.—Prince Bismarck has given evidence that he is still a skillful marksman. While practicing with a rifle at 120 yards recently, he hit the bullseye every time.

BOSTON, July 28.—The conditions were very unfavorable at the range to-day, a strong fishtail wind blowing from 12 o'clock. A large number of militiamen were present to qualify at the different ranges. Following are the best scores made to-day:

Rest Match, 200Yds.

S Wilder	12	10	9	9	10	12	10	12	10	12—106
B G Barker	12	11	12	8	12	9	11	7	9	12—103

	220	232	195	657		221	216	213	650

TORONTO, July 28.—The regular practice of the Toronto Rifle Association was held this afternoon. The scoring was very high, as will be seen from the list below. The weather was the finest this season. The final telegraphic match between Bomanville and Toronto was shot at the same time and resulted in a victory for the home men. The Torontos have won two out of three contests:

	200 yds.	500 yds.	600 yds.	Total.
Robt McVittie	32	30	31	93
Wm Harp	29	33	29	91
Tom Mitchell	31	24	35	90

LINDSAY, July 24.—The fifth annual meeting of the County of Victoria Rifle Association was held in the Council Chamber here to-night, when the following officers were elected for the coming year: Col. Deacon, Hon. President; Major S. Hughes, President; Capt. Evans, First Vice-President: Robert Sylvester, Second Vice-President; Lieut. Bucknell, Secretary and Treasurer; Sergt. Williamson and Robert Sylvester, Auditors; Lieut. Hopkins, Sergt. Robinson and Sergt. Williamson, D. Sinclair and J. H. Oliver, Council of Management. The association intend to hold their annual fall match in September. A prize list is now in course of preparation.

NEWARK RIFLE NOTES.—August Begerow, of the Newark (N. J.) Shooting Society, made 2,007 points in 100 consecutive shots on the ¾in. ring target at the Shooting Park on Thursday, July 26. Mrs. Geo Downs, of Brooklyn, the lady who made the last red flag at the recent festival, was at the park a few days ago and did some very fine shooting. Mrs. Downs is an enthusiast in shooting. John Coppersmith, who ran a loading rod into his hand on the last day of the festival, is coming around all right and will be able to shoot again in a week or two. The annual king shoot of the Newark Shooting Society will be held in the Shooting Park the last week in August. For this affair each member of the society who competes is required to contribute a prize worth at least $3. The title of king, along with a medal, goes to the member who makes the highest score in the three shots on the ring target. The Jersey Schützen Corps will hold a two days' shoot at Union Hill the latter part of August. Nearly all the Newark marksmen will compete.

LYNN, Mass., July 28.—Several of the best shots in the State were present at Indian Hill to day, but the strong breeze that kept blowing all day prevented high scores. Lieut. Merritt of the 2d corps of Cadets shot remarkably well, however, as his score shows. Two of the 200-yards targets were demolished by the wind. The scores:

Two hundred yards military match, Creedmoor, off-hand:

Lieut Merritt	5	4	5	4	4	4	4	4	4	5—43
G A Church	4	4	4	3	5	4	5	5	4	3—41
F H Downey	4	3	4	4	4	4	4	4	4	3—38
C J Walker	5	4	4	4	4	4	4	3	4	4—40
J O Knowles	3	3	3	4	4	3	3	3	5	4—33

OTTOWA, July 23.—The Ottawa Rifle Club held the 12th spoon competition on Saturday. The weather was fine, with light but variable winds. The spoons were won by Mr. Morrison and Major Perley, the ranges being 500 and 600 yards, Martini-Henry rifles, 10 shots at each range.

	500	600		500	600
N Morrison	43	43—86	J Nutting	40	29—69
Major Perley	43	42—85	Lt -Col. McPherson	40	24—64

W A Jamison	34	35—69	C S Scott	23	18—41
J D Taylor	38	31—69			

BRIDGEPORT, Conn., July 26.—This afternoon as the steamboat Waterbury arrived from New York John McDonald, a teamster from the Union Metallic Cartridge Company, was unloading cartridges from his two-horse dray on the pier. He dropped a box containing 1,000 rifle cartridges, which exploded. McDonald was blown against the freight house, the harness was stripped from his horses and they were badly injured with rifle balls. Boxes and barrels were hurled in every direction. No one was seriously hurt, although the side of the Waterbury and the shed are spattered full of bullets.

QUEBEC.—Rideau range is being put in order for the Quebec provincial rifle matches, to be fired on the 7th, 8th and 9th August. Twenty targets are being supplied for the regular matches and five for the extra series, so that there will be no lack of accommodation.

FITCHBURG, MASS., RIFLE CLUB.—The following are the best scores shot at the rifle range of the Fitchburg Rifle and Gun Club, July 25. The conditions were very favorable for good scores, there being hardly any air stirring toward the latter part of the shoot.

Off-hand.

A B Small	10	10	7	9	10	7	8	10	9	6—86
C H Brown	8	7	7	5	4	7	10	10	8	6—72
E Newton	7	4	5	9	7	5	7	7	7	5—63

Rest Match.

C H Brown	9	11	12	9	10	11	10	10	10	9—101
W V Lowe	11	8	11	9	8	11	9	9	12	11—99
A B Small	8	9	9	9	10	9	12	8	11	12—97

July 28 the wind was very strong and inshtail, rapidly shifting from 11 to 1 o'clock. The wind would completely change in force and direction while one was taking aim. The following are the best scores shot, off-hand:

A B Small	7	7	6	7	9	5	10	9	7	9—76
W V Lowe	6	7	9	8	10	8	5	6	5	8—72
David Salmond	10	9	3	8	5	4	5	5	10	9—68

Rest Match.

C H Brown	9	12	12	12	11	9	11	12	9	9—106
A B Small	12	10	9	10	11	9	9	11	10	10—101
W V Lowe	7	8	8	8	9	8	8	12	7	7—82

WILLIAM V. LOWE.

ST. LOUIS, July 28.—Neuhaus made the top score at the regular weekly shoot of the St. Louis Pistol Club. Out of a possible 120 the following scores were made:

O Neuhans	117	G W Alexander	111
L V D Perret	114	W H Bonnell	111
W Bauer	113	M C Billmeyer	108
W A Hettel	112	M Summerfield	104
A E Bengel	112		

W. H. Bonnell and W. H. Hettel, both members of the St. Louis Pistol Club, had a friendly match. While the scores are good either of the contestants can do much better, they being not up to their usual good form, and this, with the hot weather, made good scores very difficult. Conditions—100 shots each, and .22-caliber pistol, distance 12 yards, 1¾-inch bullseye.

W H Bonnell	108	112	105	109	114	109	111	115	108	110—1101
W H Hettel	110	110	111	108	107	108	109	105	111	111—1090

CREEDMOOR, July 28.—The 6th Marksman's Badge Match.—A strong fish-tail wind bothered the shooters in the forenoon; the scores, however, were good. The day was fair and cool. Following are the winners of cash prizes:

	200 yds.	500 yds.	Total.
Richard Oliver, Staff, 23d Regt	20	25	45
A C Saunders, Co H, 23d Regt	22	22	44
A G Scranton, Co F, 7th Regt	21	2	43
C C Wallace, Co I, 14th Regt	22	21	43
J B Frothingham, Staff, 2d Brigade	19	23	42
W L Candee, Co B, 23d Regt	20	22	42
Daniel Bacon, Co K, 7th Regt	21	21	42
Winners of medals were:			
J N Munson, Co G, 7th Regt	19	24	43
Geo Ball, Co F, 23d Regt	20	23	43
R M Kalloch, Co H, 7th Regt	20	23	43
H B Thomson, Co C, 7th Regt	21	22	43
W J Underwood, Co H, 7th Regt	21	22	43

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

WORCESTER, Mass., July 27.—At the regular meet at Coal Mine Brook range this week of the Worcester Sportsmen's Club, was the classification score, 6 strings of 5 each, followed by the dividing of the prizes in Class A without shooting the prize score. The work in detail follows:

Classification Score—Class A.

G W Russell	454455—27	E T Smith	445532—23
G J Rugg	443455—25	A L Gilman	433523—20
M D Gilman	443545—25

COMING WESTERN SHOOTS.—Waverly Gun Club's annual tournament, Waverly, Iowa, August 1 and 2. Live birds and inanimate targets. Helena Rod and Gun Club's third annual territorial tournament, Helena, Montana, August 6, 7 and 8. Greenfield Gun Club's first annual tournament Greenfield Iowa, August 7 and 8. Live bird, blue rock and blackbird tournament, Hastings, Neb., Aug 7, 8 and 9. Nippert and Tucker's second semi-annual tournament, Paris, Ky., August 29 and 30. Live pigeons and Cleveland blue rocks. Chamberlin Cartridge Company's tournament; contest for place closes August 31. Ties shot off at Cleveland O., September 12. Al Bandle's fourth annual (Centennial) tournament, Cincinnati, Ohio, September 4, 5, 6 and 7. $1000 guaranteed. Al. Bandle, Manager.

WINCHENDON, Mass., July 24.—At the regular meet this week of the Winchendon Gun Club at their range the work of each man out of a possible 10 clay pigeons was as follows:

H J Lawrence	1111111111—10	F E Mann	1100110101—6
F E Hapgood	1111011011— 8	P S Davis	1000100111—5
A D Lwarence	1011110110— 7	E M Whitney	1110000011—5
J Sutherland, Jr	0111111001— 7	Wm Stuart	0010100111—5
Chas Bailey	1010101011— 7		

MARION, N. J., July 26.—The following is the score of a match between Mr. Charles Smith, of Plainfield, N. J., and Mr. A. Manitz, of Orange Valley, N. J., on the grounds of the Jersey City Heights Gun Club, at Marion, N. J. The shooting was at 50 live pigeons each, 30 yards rise, use of both barrels, five traps, for $50 a side. Both contestants shot in good form, and the match was very close:

Manitz	1111111101111111011111111101101111101111110111—42
Smith	0111111110110111111111101110111111111111100100—41

CHAMPION BREWER.—The championship of England challenge cup for pigeon shooting, value $500, has become the property of Captain Brewer, of Philadelphia, by reason of his magnificent shooting in the recent competition at Hendon, London. The conditions were to shoot at 25 pigeons each, 30 yards rise, entrance £5, 50 per cent. of which was taken by the winner, 20 the second, and 10 the third. The first contest was won by Mr. Farrell, with a score of 22 kills, and Captain Brewer and Mr. Hamilton shared second and third money. Captain Brewer then followed with three consecutive wins. In the first instance he killed 21 out of 25, on the second occasion he succeeded in grassing all his 25 birds, and in his third victory he missed one only out of 25. Brewer used a 10-gauge gun.

WELLINGTON, Mass., July 28.—The October weather to-day made overcoats a necessary part of the shooter's equipment. In the consolation match at 15 blue rocks and 12 clay pigeons, the following scores were made: Bond, 16; Conant, 14; Melcher, 20; Stone, 22; Bates, 18; Stanton, 20; Baxter, 18; Wardwell, 21; Knowles, 18; Savage, 14; Moore, 21; Adams, 12; Brown, 14; Perry, 24; Richards, 14; Miller, 15; Hutchinson, 21; Grimes, 16; Snow, 19; Nichols, 20; Burton, 13; Little, 12; Hosmer, 15; White, 12. Following were the winners in the sweepstake matches: Six clay pigeons—Snow. Six bluerocks—Knowles and Baxter. Six clay pigeons—Knowles and Moore. Six bluerocks—Wardwell. Six clay pigeons—Wardwell. Six bluerocks—Miller. Six clay pigeons—Brown and Perry. Six bluerocks—Snow and Moore. Thirteen bluerocks, consolation match—Stone and Perry first, Wardwell and Moore second, Conant, Hutchinson and Nichols third, Melcher fourth. Twelve clay pigeons, consolation match—Perry and Snow first, Melcher, Stanton and Hutchinson second, Stone, Knowles and Moore third, Bates and Miller fourth.

UTICA, July 25.—The Little Falls Gun Club and Oneida County Sportsmen's Association had a contest at Riverside Park to-day. Thirteen marksmen from each organization composed the teams. Each man tried his skill at 25 single clay pigeons. The names of the shooters and the scores made were as follows:

Little Falls.

After the match between the clubs had been shot, several sweepstakes were made, in which some fine shooting was done. A return match is to be shot in Little Falls soon.

NEW BEDFORD, Mass., July 21.—To-day the Acushnet Gun Club visited Westport Factory to engage in a friendly contest with the Star Gun Club at that place. The match was shot on the grounds of Frank Whalon near the factory. The result of the match is given below; 20 American clays were allowed per man:

Acushnet Gun Club.		Star Gun Club.	
C A Gray	17	Frank Whalon	11
Job Spooner	13	A W Lewis	11
Wm Durfee	11	E Sabins	14
C A Gray, Jr	16	Geo Lewis, Jr	16
J G Whalon	16	P Simmons	17
	—		—
	73		71

A return match will be shot Aug. 4 at the grounds of the Acushnet Gun Club at Acushnet.

PHILADELPHIA, July 28.—The Parker Gun Club's team of 10 men met with a defeat at the hands of the Darby Club's team at Collingdale to-day. The match was at 25 clay-pigeons each, National Gun Association rules to govern:

Darby Club.		Parker Club.

Mr. Chas. A. Meyers officiated for the Darby Club as judge, and Mr. Rowcroft for the Parker Club.

LOWELL, Mass., July 26.—The Lowell Rod and Gun Club held a picnic at Nabrasset Grove, West Chelmsford, to-day. The principal feature of the occasion was the team shoot at clay-pigeons between Messrs. Faulkner and Lovejoy on one side and Bates and Knowles on the other, and which was won by the latter. The conditions were 50 clay-pigeons, 18yds. rise, 3 angles. Scores: First team—Faulkner, singles, 35; doubles, 43; total, 78. Lovejoy, singles, 34; doubles, 29; total, 63. Team total, 141. Second team—Bates, singles, 43; doubles, 35; total, 78. Knowles, singles, 39; doubles, 30; total, 69. Team total, 147.

AUBURN GUN CLUB.—A certificate of incorporation of the Auburn Gun Club was filed in the Cayuga County Clerk's office July 25. The headquarters will be in Auburn and there will be five directors. The directors named are Harvey M. Howland, C. W. Tuttle, Leroy W. Stevens, S. F. Rathbum and Harvey R. Kidney.

SYRACUSE, N. Y., July 25.—There were thirty-two entries for the grand king bird sweepstakes shoot at the Valley to-day. Besides local marksmen, there were shots present from Watertown, Auburn, Albany, Poughkeepsie, New York and other places. Among the chief winners were Whitney of Phelps, Hudson, Spangler and McMurchy of Syracuse, Yankton of New York, Paddock of Watertown, Howland of Auburn, Thiern of Poughkeepsie and Peacock of Buffalo.

July 26.—In the shoot at Onondaga Valley continued this afternoon prizes were won by G. C. Luther, M. C. Smith, E. Hudson, H. McMurchy, A. Spangler, Thorne of Poughkeepsie, Henry Whitney of Phelps, W. G. Paddock of Albany, Capt. Peacock of Buffalo, Holly Garduer and Beckwith, both of Albany. The shoot was one of the most interesting and successful held by the club. The rivalry between Thorne of Poughkeepsie and Whitney of Phelps has led them to make a match for $200 a side at 100 birds. The match will come off at the Valley grounds soon. Each man has deposited $50 forfeit money.

KANSAS CITY, July 24.—The Independent Gun Club held its regular monthly medal shoot at Exposition Park this morning. The attendance was up to the average and the birds were a fine lot. Some excellent scores were made, Mr. J. M. Anderson winning the medal with a clean score. Appended is the full score:

W V Rieger	1111101110— 8	Ed Bingham	1111101111— 9
J K Guinotte	1111011001— 7	G B Orr	1011011011— 7
G Wasson	1111111010— 8	Hall	0111111101— 8
A E Thomas	1011111111— 9	W Anderson	1011111111— 8
H Wiltsee	0111101111— 8	J M Anderson	1111111111—10
W W Sterne	1111110111— 9	W T Henry	1011011110— 7

FRANKFORD, Pa., July 28.—The regular monthly prize shoot of the North End Gun Club took place on their grounds this afternoon. On account of this being the vacation season, a great many of the active members were conspicuous by their absence. Mr. Wm. Wolstencroft received his new Winchester repeater from the factory to-day, and, while exercising it, gave us a fine exhibition of shooting at triple birds. Mr. W. has been using a Winchester for some time, and liked it so well that he had one made to order, a very handsome, high grade gun. Six of our members are using this make of gun and are much pleased with them, as they are very hard and close shooters. Mr. W. Wolstencroft and Wm. M. Pask can make very creditable scores at tripie birds with the repeaters—a difficult feat, we think. In the shoot to-day, the first prize, a bag of shot, was won by Wm. Wolstencroft, with 18 out of 20 to his credit; Jas. Wolstencroft took second prize, 200 shells, and S. Richards, third prize, 1,000 wads. The following is the score, 20 singles—10 blue rocks, 10 standards:

Jas Wolstencroft	1111101111010111111—17
J Crowther	1110111011111111110—17
G L Garsed	0010110100001001111—10
G E Pack	0111011111111100010—15
A L Lumb	1101111001101111011—15
S Richards	1111011110111011011—16
J H Davis	1101101110000100110—12
Jas Entwistle	1010111111101111111—17
J Blair	0111111100001001110—12
Wm Wolstencroft	1101111111101111111—18
Dr Allen	1101110011111000010—11
Chas Munch	1111011110110101111—17

The ties for second place were Jas. Wolstencroft, J. Crowther, Jas. Entwistle and Chas. Munch; in the shoot-off Jas. Wolstencroft broke 11 straight and took second prize.—J. C. D.

BROOKLYN, July 23.—The members of the Glenmore Rod and Gun Club turned out very strong in point of numbers at Dexter's Park to-day. It was the regular monthly shoot for the Midas diamond badge and an extra prize given by Mr. J. D. Bennett, consisting of a handsome punch bowl and stand. Eighteen went to the traps, and W. Selover was the only one to kill all his seven birds, he winning the badge and Bennett prize.

After the shoot T. Edgarton, George U. Forbell and W. Selover shot off a match of six birds each, Forbell won, killing five; W. Selover second, with four. Another match is being arranged between the Glenmores and the Coney Island Gun Club, to be shot off at Dexter's Park some time during the next month.

M J Burke (25)	1111101—6	W Bennett (22)	0111001—4
T T Edgerton (25)	1101111—6	G Jardine (22)	0100001—2

C Magee (25)	1101100—4	W Littlejohn (28)	1111000—4

Referee—Mr. A. Lunenschloss.

The executive committee handed in a report showing that in classifying the members as regards their shooting abilities they had placed fourteen in Class A, thirty-two in Class B and fifty-seven in Class C. The report was adopted. On motion of Peter Sutter it was resolved to hold the annual outing of the club on Wednesday, August 22, at Ruffle Bar. It was also resolved that in future nine prizes be contested for at each monthly shoot, to be presented to the best three marksmen in each class, and that the prizes be purchased by the club.

STATEN ISLAND, July 30.—On July 28 five members of the Grymes Hill Gun Club held a practice shoot, 25 blue rocks each, 16yds., one barrel. The score:

P V Caesar	1111111110111010001111100—18
Elihu Crowell	1100101010110101010111111—16
V C Tompkins	0011100101010116011101101—15

F. Fesser shot 4 out of 15 and stopped. Anderson hit his fourteenth bird and missed all the rest.—V. C. TOMPKINS, Secretary.

THE BATAVIA GUN CLUB, of Batavia, N. Y., which organized early in July, with a membership of fifty, held their first club shoot July 25. The club have secured the same grounds on which the State shoot was held in 1878.—H. T. BOOTH, Sec'y.

RAVENNA, O., July 26.—The first of a series of matches between the Kent and the Ravenna Gun Clubs were shot off at the Gun Club Park here. Each team was represented by ten men, who shot at 25 birds, and the Kent team were successful by 17. The following is the score:

Kent Club.

T C Hall	111000001100011	10 10 10 10 11—13

The Locksley Club has challenged the Rockport Gun Club to a badge shoot, to take place on the grounds of the latter next Saturday afternoon. The match is expected to be an interesting one if the day is fine.

NEW YORK SUBURBAN.—The New York Suburban Shooting Ground Association will hold a meeting this afternoon at Taylor's Hotel, Jersey City, at 4 P. M.

MONTREAL, July 28.—The Dominion Gun Club are again stirring up the shooting interest, and this afternoon the first competition for a fine Horsley gun was commenced. The gun will become the property of whoever succeeds in making the best score three times. To-day there were 22 entries, the weather was glorious and the birds flew strong. The following are the best scores:

D Robertson	1111111111010111101—17
T Murray	1111111111010111100101—15

TORONTO, July 28.—The opening match for the McDowall & Co.'s medals was concluded this afternoon at their grounds, Queen street east. This contest is at Peoria blackbirds for three gold medals, one each for first, second and third class men, the highest total scores in four shots to win. The shoot is open and free to all; but those who wish to take part must enter and shoot next Saturday, when the second competition takes place, after which no entries will be received. Conditions, 20 Peorias, 18yds. rise, from 3 screened traps:

First Class.

McDowall	11111001110001111110—14

LAFAYETTE, Ind., July 24, 1888.—*United States Cartridge Co., Lowell, Mass.:* DEAR SIRS—I find your Climax Paper Shot Shells excellent and quite equal to Eley's. There is no hang fire or tendency to do so. I intend using your shells in a match next week. I will give them a good boom, as they deserve it.

Yours truly,

—*Adv.* (Signed) W. GRAHAM, Champion English Shot.

IRIS—CANOE YAWL.

THE accompanying design shows a very good type of large canoe, of sufficiently light draft for most waters where such craft are used in preference to the Class B canoe. She has ample room for two, or even three persons with their stores and duffle for a long cruise. The Iris was built in 1887 by J. A. Akester, of Hornsea, near Hull, Eng., and is now owned by Mr. Holmes, owner of Cassy. The hull is carvel built. The mast is fitted with a tabernacle for lowering, the sail plan being shown in plate. The inside ballast is in four blocks, two being generally carried, while the lead keel weighs 450lbs. A centerboard could readily be fitted to work entirely beneath the floor, and would be a great aid to the boat in windward work. The tiller is of iron, and curved as shown so as to work about the mizen mast. The dimensions are as follows:

Length over all	18ft.
l.w.l.	17ft. 4 in.
Beam, extreme	5ft. 1 in.
l.w.l.	4ft. 7 in.
Draft, extreme	1ft. 4¼in.
Least freeboard	1ft. 1 in.
Sheer, bow	10¼in.
stern	7 in.
Ballast, keel, lead	450lbs.
inside, lead	225lbs.
Mainmast, from stem	2ft. 3¼in.
deck to truck	15ft. 3 in.
Mizenmast, from stem	17ft. 3¼in.
deck to truck	7ft.
Mizen boomkin	2ft. 3 in.
Main boom	15ft.
yard	15ft.
Mizen boom	6ft.
batten	6ft. 6 in.
Mainsail, area	168 sq. ft.
Mizen, area	25 sq. ft.
Total	193 sq. ft.

"IRIS"—CANOE YAWL.

THE W. C. A. MEET, BALLAST ISLAND.

THE GARDNER CUP WON BY GEO. A. WARDER, CANOE IF.—W. C. A. TROPHY WON BY READE W. BAILEY, CANOE NOTUS.

BALLAST ISLAND, July 22.—The fourth and most successful meet of the Western Canoe Association is nearly completed, and we pause in the week of gaiety to fulfil our promise to send you a report. Camp was opened Saturday, July 7, with some twenty canoes, which number rapidly increased till the score on Tuesday showed fifty-nine craft, including Commodore Bartlett's yacht, Mr. Ware's sloop, and seven Class C, or larger than the limit, canoes. Cincinnati was first upon the field, then the Ruckawas, of Dayton, and Jabberwocks, of Springfield, drove their tent stakes, and soon the little emerald isle of Ballast was once more dotted with white, and alive as only true canoeists can awaken it, at their annual outing.

The races were called on July 10, and the "free for all" sailing, twice around Ballast Island, showed that some of the new boats had not been built in vain as prospective "mug winners." The wind was brisk and a good sea running, much to the dismay of the "fair weather canoeists," who had relied upon a large spread of canvas to carry them to the front; 30 entries, 13 starters. The Jabberwock canoe If led and held it to the last leg, when Wood, of Chicago, in a new boat designed by Capt. Crane, passed him, winning by a few seconds. Nat. H. Cook, of Chicago, (Class C) third, J. B. Keogh fourth, Geo. B. Ellard fifth, Commodore Bartlett (Class C) sixth. O. A. Woodruff fouled Dr. Henshall, capsizing the latter.

Race 2. Class B, sailing on the mile and a half triangular course, twice around, no limit to ballast or rig.—A good stiff breeze in the N. E. and some sea that wrecked the gear of several who had not

thoroughly tested their crafts in lumpy waters. B. W. Wood, of Chicago, first; Geo. A. Warder, Springfield, O., second; J. B. Keogh, Chicago, third.

Race 3. Class A, sailing three miles.—A. W. Kitchin, Chicago, first; T. P. Gaddis did not finish. Only two canoes of this, the smaller class, were at the meet, and unfortunately under the W. C. A. rules they cannot enter in the Class B races. The disposition therefore is to cease perfecting Class A models, where but little competition exists. The Nethla, a small canoe, was next to the fastest at the '87 meet, but her owner sold her and built a Class B, solely to be allowed to compete against a larger number of boats. The two classes are so closely matched in sailing that they should be thrown together, as has been done by the A. C. A.

Race 4. Class II., paddling.—Four starters, Kitchin first, Sullivant second.

Race 5. Class III., paddling.—Five starters, McCune first, Wood second.

Race 6. Paddling and sailing combined.—Two starters, Wood first, Keogh second.

Race 7. Paddling, any canoe.—Five starters, McCune first, Thos. S. Gates second.

Race 8. Paddling capsize.—Four starters, G. H. Gardner first, N. H. Cook second.

Race 9. Novice sailing.—Four starters, Chas. Eldeder first, Geo. Frey second.

Race 10. The Gardner Challenge Cup, six miles, four times around the triangle.—Nineteen starters. Wind fresh, increasing to half a gale. Reade W. Bailey, canoe Notus, led to first buoy, but was overtaken by Wood on the third, (windward) side. The If had a poor start, being ninth to round the first buoy, but on the windward work jumped to third place, which was kept till the fourth round, in which Wood capsized while running free, and the Notus swamped on the windward thrash, causing Bailey to lower sail and bail out. Geo. A. Warder, canoe If, won, being half a mile ahead of the only canoe afloat, J. B. Keogh in the Spray.*

Race 11. Sailing capsize.—Five starters, G. H. Gardner first, Warder second.

Race 12.—Hurry-skurry.—Four starters, N. H. Cook first, McCune second.

* The Spray is an old "Sandy Hook" model, 14×31, built in 1881 by W. P. Stephens.

Race 13. Consolation, for those who had not won first or second prize.—Four starters, Gardner first, Johnson second, Woodruff third, Shiras fourth. Gardner ruled out for not sailing his own canoe and Johnson for fouling buoy.

Race 14. Hand paddling.—Four starters, Anderson first, McCune second.

Race 15. Tournament.—Gardner and McCune first, having capsized all other competitors.

Race 16. The W. C. A. Trophy Cup.—Twenty starters, 7½ miles (five times round the triangle). Wind light and no sea. It was the Notus' day, and taking the lead from the start, she kept it throughout. Mr. Bailey sailed the race without an error. Reade W. Bailey, Pittsburgh, Pa., first; B. W. Wood, Chicago, Ill., second; J. B. Keogh, Chicago, Ill., third; Geo. A. Warder, Springfield, O., fourth; O. A. Woodruff, Dayton, O., fifth; O. H. Root, Cleveland, O., sixth; J. O. Shiras, Cincinnati, O., seventh.

Race 17. Tandem paddling for ladies.—Misses Gardner and Alice Huntington first, Mrs. Crawford and Miss Carrie Huntington second, Misses Ellard and Holland third.

Race 18. Class C sailing.—Six starters, N. H. Cook first, J. R. Bartlett second.

Race 19. Special sailing passenger, for a canoe donated by Messrs. J. R. Douglas & Co., to be presented to a lady member of the W. C. A. within twenty-four hours after winning.—Seven starters, wind light. N. B. Cook and N. H. Cook in canoe Carrier Pigeon first, Capt. Crane and J. B. Keogh second. This was the closest race of the regatta, the four leading canoes finishing within a few seconds of each other. The Messrs. Cook presented the canoe to Miss Grace Trafford of Chicago.

Race 20. Special paddling race for ladies.—Prizes, a canoe donated by Messrs. Ransom & Co. of Cleveland, to the winner and one to the last to finish. The second prize was kept a secret until the finish. Five starters, Miss Alice Huntington first, Miss Gardner second, Mrs. Crawford third, Miss Dot Huntington fourth, and fifth and last Miss Mame Ellard.

It was decided this year to select five races to count as "record races." Each of the leading five canoeists to be credited in the order of finishing. The first to receive 50 points, the second 40, and so to the fifth, who received 10. The races were, one sailing for each class, one paddling for each class, the combined paddling and sailing, and the two cup races. The three highest scores each received a large substantial flag, to be owned and hung in front of the winners' tents as scalps. The flags were embroidered, "W. C. A. Record. Winner 1888."

Before the last of the record races (the sailing and paddling combined) the three highest men had tied on the score of 130 points, and great interest was taken in the coming event. Unfortunately one of them was called home and could not return till the race was finished. The record is a capital plan to induce the perfecting of an all-round canoe, for as occurred this year, a man might gain the second record and not win a single race.

The winners of the Gardner cup and W. C. A. trophy will each receive a large flag, upon which is embroidered "W. C. A. Cup Winner," and the year it was won. He will also have his name engraved upon the prize.

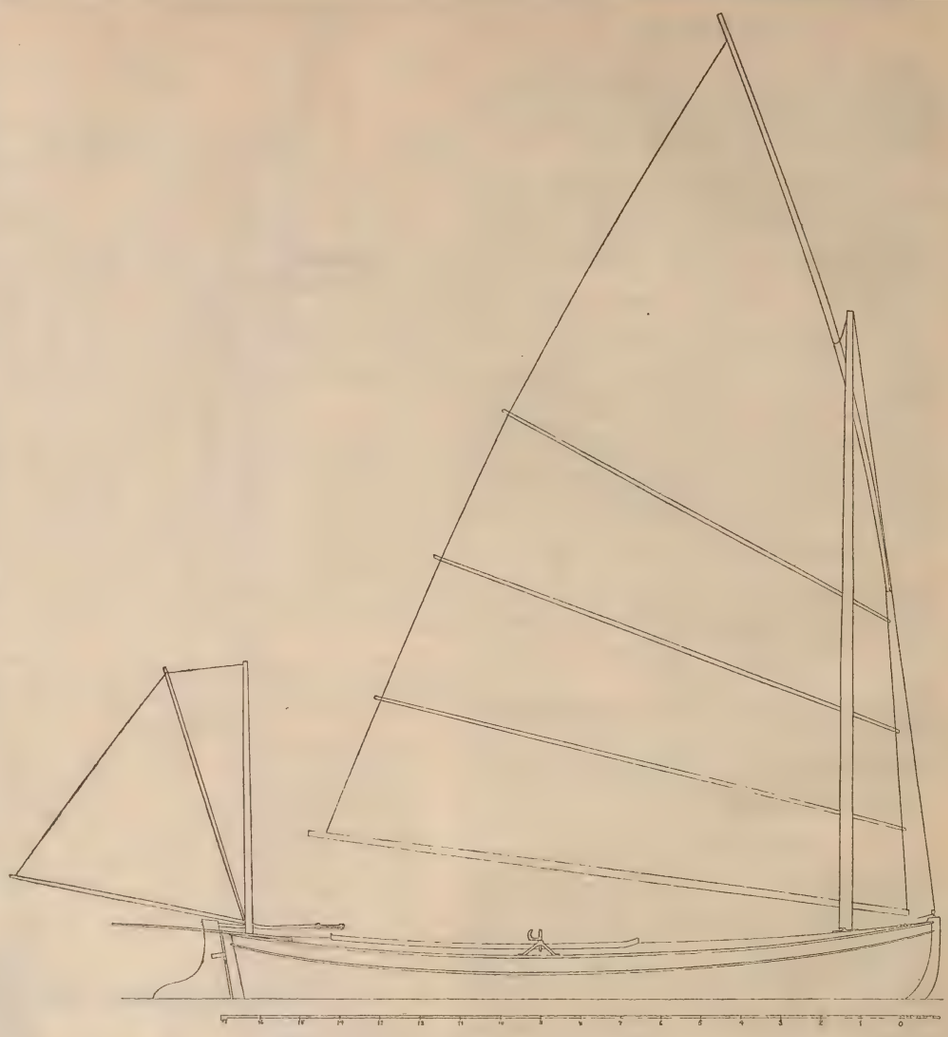
The business meeting collected the entire camp before the handsome tents of the Cincinnati Club on Saturday afternoon. Commodore Latham presided, and after the roll call forty applications for admission to the Association were accepted. The secretary read his report, showing the finances to be in an excellent condition: $266 of the $325 had been subscribed toward the trophy, and the balance, $59, was raised in just five minutes.

After the customary vote of thanks to the Secretary-Treasurer for performing his duty and compiling and printing the handsome annual book, the balloting for officers for the ensuing year began. The following excellent ticket was unanimously elected: Commodore, J. R. Bartlett, Fremont, O.; Vice-Commodore, D. H. Crane, Chicago, Ill.; Rear-Commodore, Chas. J. Stedman, Cincinnati, O.; Secretary-Treasurer, O. H. Root, Cleveland, O.; additional Executive Committee—C. J. Bousfield, Bay City, Mich.; T. P. Gaddis, Dayton, O.; T. J. Kirkpatrick, Springfield, O.

The canoe hop at Wehrle's, Thursday night, was a great success, and no handsomer gathering could be imagined than the numberless white flannel suits of the canoeists in contrast with the vivid colors of the young ladies' costumes; while here and there the floor was dotted with the "conventional," just arrived on the especially chartered steamer City of Sandusky.



In the wee sma' hours the members once more surrounded the blazing camp fire. Lemons, sugar and water were produced, with just a drop of something warmer to counteract the effects of the night air; banjos, guitars and mandolins accompanied the well-known W. C. A. melodies, and each and every canoeist resolved to return in '89 to the most delightful of all islands for a meet—Ballast. No. 76.

A. C. A. MEMBERSHIP.—Central Division: Edward N. McKinney, Edward O. Roessle, Robert Lenox Banks, Jr., of Albany. Atlantic Division: North McLean, Rolla Thomas, Geo. S. Holt, Richard F. Stone, Eustis L. Hopkins, Frank C. Moore, L. Schepp, O. T. Conner, all of New York; Charles Fox, Gardiner, Colorado; Gen. F. A. Starring, Washington, D. C.; and Albert Phillips, Newark, N. J. Eastern Division: Wm. Clark, Northampton, Mass.; Fred. F. Walsh, Geo. C. Dempsey, Wm. P. Atwood, Lowell, Mass.; Edward H. Marsh, Chas. G. Spaulding, Springfield, Mass; Fred. L. Hopkins, Leland S. Ellis, Lawrence, Mass; Edwin B. Walker, Belchertown, Mass. Persons wishing to join the Eastern Division will be furnished with blank forms of application by addressing the purser. Henry D. Marsh, Springfield, Mass.

A PRIZE FOR A CRUISING RACE.—The following offer has been received by Mr. Vaux of the regatta committee: "I see by the *Canoeist* that the question of an A. C. A. cruising contest is being agitated. Could not a racing cruise be organized, say from New York to Albany? If Messrs. Foster, Vaux, Totten or Wilkin will join, I will offer a handsome cup for a prize between those two points.—Neversink."

BRITISH C. A.—A small camp with races was held during Henley week on the Thames. The general meet will be on Loch Lomond, in Scotland, this month.

NORTHERN DIVISION MEET.—The Northern Division of the A. C. A. is now in camp at Lake Couchiching. Com. Gibson is in camp.

SAIL PLAN "IRIS"—CANOE YAWL.

A. C. A. PRIZES.

THE Regatta Committee would acknowledge in addition to contributions previously noticed, a flag from Mrs. H. Lloyd Thomas (Hon. A. C. A. lady member) for the gymnastic event on the programme, and also a prize flag from Geo. A. Warder, the work of his sister, Miss Warder, and $5 from the Hartford C. C. The following letter explains itself:

LAWRENCE, Mass., July 24.

MR. PAUL BUTLER: Dear Sir—I see by the FOREST AND STREAM that the A. C. A. needs more money for the prizes. I do not think our canoe club received any circular; perhaps it would not have done any good if they had. A good many clubs have yet to wake up and see what good the American Canoe Association is doing for them. There are three in the L. C. C. who are members of the A. C. A. The other sixty-two are not, and so they think the A. C. A. has no right to ask them for anything. The three A. C. A.s have chipped in and send you $5. It is very small and very late, but it is the best we can do, and it may help some. Hope to see you at the meet and good-luck to you in the races.

BERT LAWRENCE.
CHAS. F. SMITH.
WM. R. PEDRICK, JR.

NEW YORK C. C. CHALLENGE CUP.—The following letters have just been received by the N. Y. C. C. Though the notice is very short and no race for the cup was expected this year the challenge has been accepted and trial races will be held in September to chose one or two men to defend the cup: 11 Buckingham, street, W. C., May 16: Dear Sir—On behalf of the Royal C. C. I am instructed to send you a challenge to sail for your International Cup this autumn. I will send you the names of our representatives later on, in the event of our challenge being accepted. Awaiting the favor of your reply, I am, etc., T. G. F. WINSER. Sec. 11 Buckingham street, Strand, W. C., July 18.: Dear Sir—The inclosed has just been returned to me, not having been delivered, I presume on account of insufficient address. Our Mr. Stewart is visiting America and will be our representative. W. Baden-Powell is also nominated, but he is not certain whether he will be able to spare time for the voyage. Hoping that this will reach you in time, I am, dear sir, yours faithfully, T. G. F. WINSER, Sec.

A CHIP FROM THE VELNETTE'S LOG.

THE annual cruise of the Rochester Y. C. was advertised to start at 3 P. M. on June 30, but as is usual in such cases, one or two yachts were not ready, and several other causes conspired to delay the start until after 7 P. M.

Part of the crew of the Velnette had been hard at work from early in the afternoon getting a new spinaker pole ready, and stowing the traps and grub, to say nothing of all light canvas for a few days' cruise of six able-bodied men—no slight job on a yacht of less than 24ft. waterline. The last shaving was off, and scarcely had the carpenter been put ashore when the mooring was slipped, and we started on a chase for the commodore and most of the fleet, for the gun had been fired twenty minutes or more before.

The crew for the trip was the regular racing crew that carried the yacht through an unbroken series of victories in last season's races. Our captain, Vice-Commodore Walbridge, "Ned," bronzed and weather beaten from his perilous voyage up the "raging Erie" on the Majel; W. A. Stace, "Billy," sailing master, the Oliver Twist of the party, who is always "calling for more" (sail); C. M. Everest and E. J. Woodbury, who spend most of their time on the fore deck handling the "white wings"; W. H. Briggs, "the Doctor," who won't kick as long as he don't have to wash the dishes; J. S. Briggs, "Jack," who don't mind washing them if "Ned" will do the masthead work.

The Velnette left the lighthouse about 8 P. M., astern of nearly every yacht in the fleet, for a dead beat to windward in the teeth of a howling gale from N.W. Having calculated on the wind lightening at sunset no reefs were put in, while both Madge and Majel had single reefs and all the rest double. The only unpleasant result was wet decks, and a very decidedly uncomfortable angle of inclination, even for a cutter. By tacit agreement the fleet was to get to Niagara as quickly as possible. The staunch little cutter immediately began to smell her way along to her natural position under the existing circumstances, and before it was too dark to make out the yachts distinctly, had passed most of the fleet, and had hauled up even with the commodore, on the Majel, and the new cutter Amelia and the big one Madge, which seemed to be the only one not helped by being reefed. During the night all but Madge were dropped behind.

Sunday morning found us off Oak Orchard, with the weather showing signs of an approaching calm. With light winds and under a broiling sun, we crawled along the coast, until at 4 P.M. we decided to stop at Olcott and get a good rest and a hotel dinner while waiting for the usual night off-shore breeze, (which did not materialize). We can and do hereby recommend any one to the lake trout served at the Cooper House. Later in the day, Jack being the only one of that name and consequently the one to "get the gun off" was threatened by the entire police force with the direst penalties of the law for disturbing the peaceful serenity of the little town by "shooting the sun down" with our new breechloader. A slight acquaintance with the contents of our ice-chest soon restored him to his former equanimity.

The general order dividing the watches was read at sundown, and at 8 o'clock the starboard watch took charge of the yacht. At 9 we again started on our course, more for the sake of avoiding the mosquitoes, for which 18-mile creek is famous, than with any idea of making any headway in the dead calm which was then blowing.

Very little was made on the course during the night, but on the morning of the second a freshening breeze from E. N. E. sprang up, and as it is only 18 miles between Olcott and Niagara we made Niagara at 11 o'clock, under light canvas, speaking schooner Oriole, R. C. Y. C., a short distance from port. We found Madge and Amelia already there, having kept on without stopping. The rest of the fleet, except the Majel, which had put into Oak Orchard,

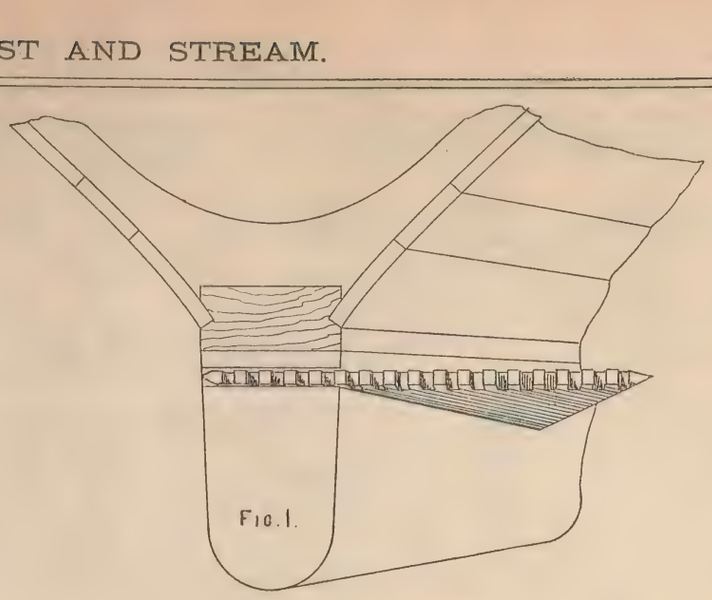
had gone back to Charlotte Saturday night. It was certainly a "cutter night."

A number of yachts of the Toronto, Royal Canadian and Hamilton yacht clubs were there before us to help Niagara celebrate Canada's Fourth of July, the second, Dominion Day. Among them was the Verve, a twin sister to our Madge, both being built by Watson, of Thistle fame.

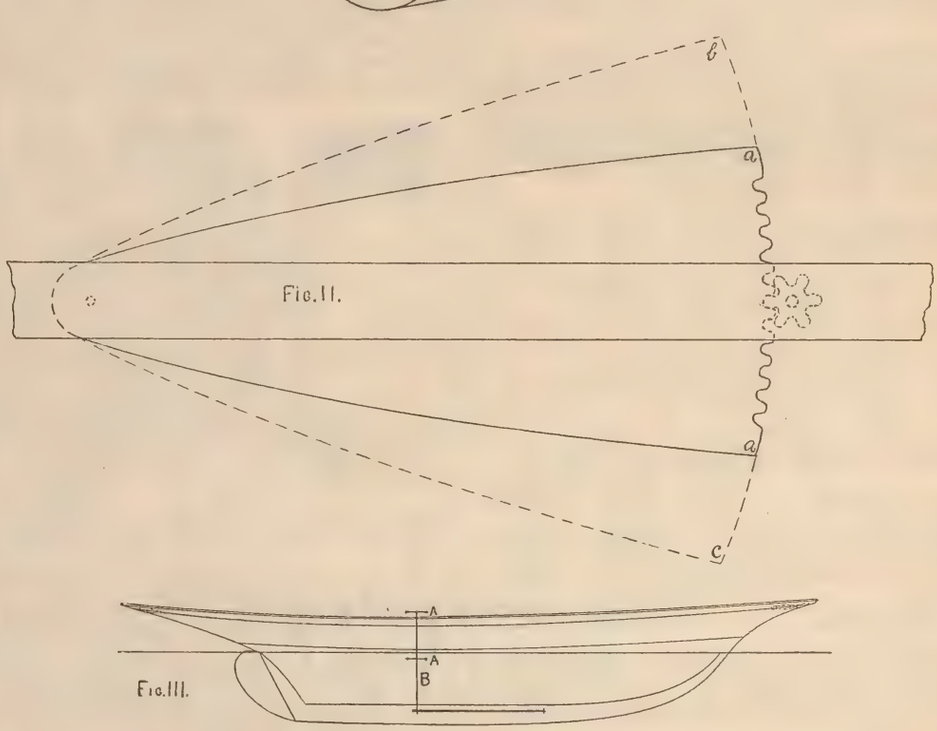
Having paid our respects to all the visiting yachts in the harbor, and tested their hospitality, seeing nothing more worth staying for, and having replenished our stores, the vice-commodore assumed command of a detachment of the club, and about 2:30 the Velnette, Armida and Amelia started for Toronto under working canvas, being led (about half the way) by the Mollie, R. C. Y. C. The wind dying gradually, the crew had some practice in setting light canvas, and trying the different sails in the different positions. The best result was obtained by an old device. The spinaker pole was swung around and lashed down as an addition to the bowsprit, and the enormous new spinaker set as a balloon jib, a device which saved a race last fall and which always worked well with a beam wind. We arrived off Toronto Light about 10 o'clock, after a long search for a lost oar, and anchored at 1:15 A. M.

The plan for the next day was to do the city of Toronto, which we proceeded to carry out in our best fashion. We took dinner at The Hub, enjoying the result of a bet that we could not pass the Mollie the day before. It was eminently proper that a man should pay the penalty for betting against his own yacht.

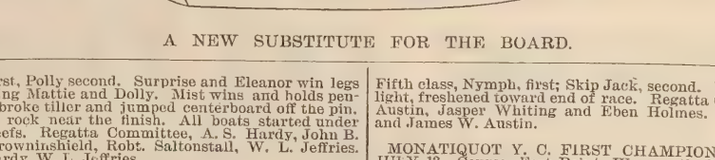
Right here we must put in our word of appreciation for the two clubs of Toronto, and especially for the Toronto Y. C. and the crew of the cutter Verve, who met us first and sent one of their men, Mr. Thompson, to pilot us into one of the club moorings, when we were rather doubtful concerning soundings and courses. Before we were up and sufficiently awake to recognize him, a member, whom we afterward found to be Mr. Davenport, of the Vivid, came on board and tendered us the hospitality of the club, of which we were glad to avail ourselves, together with the use of the mooring and their steward and telephone. In the afternoon Mr. Percival, of the R. C. Y. C., came with his little yacht and took a part of our crew across the beautiful bay to their club house on the island, probably the finest house on the lakes. Among others we met there Mr. Geo. E. Evans, the enthusiastic secretary of the club and association, who is mourning over the fact that family affairs will this year, for the first time, keep him from making the circuit with the Toronto yachts. They all did everything possible to make our visit at Toronto the one that will be longest remembered of any trip the yacht has yet made. We can promise them that if they are ever in Rochester only the secrecy of their arrival will prevent payment of instalments of our debt to both clubs.



On the return from the island we found the rest of the crew impatient to leave, so after finishing up some official business with Mr. Evans we slipped our mooring, and after a parting salute, leaving the Armida and Amelia to follow a few days later, the Velnette started on what proved to be a remarkably quick run home. A very light breeze was blowing from S.E., which lasted just long enough to drop us out of the harbor, where under shadow of the island, near the outer light, we waited until about 11:30 P. M., when a stiff whole-sail breeze from S.W. struck the yacht, sending her across the lake under started sheet, rail under part of the time. It was just the wind for the Velnette, and early in the morning we made Oicott, having struck a little further west than at first intended. Keeping well off shore to catch the force of the wind, we soon made 30-mile Point, from which we made an even 9 miles an hour until we rounded Charlotte Light at 1:30 in the afternoon of "The Glorious," having made the run from Toronto, nearly 110 miles, in about 13 hours, or an average of nearly 8 miles an hour. We have no knowledge of this time having been bettered by any yacht of less than 25ft., corrected length, and we therefore claim it as a record for the Velnette until we hear to the contrary.



Before closing we wish to call the attention of whoever may see this to something which furnished as much amusement as any one thing on the trip. It was a little detective camera, the "Kodak," sold by the Eastman Company of this city. All one has to do is to point the thing, press a button, and the picture is taken. Turn a thumb-screw and pull a string, and another negative is ready. In this way one can expose 100 negatives, which are on a roll, and then send them to the manufacturers and have them developed and a new roll put in. Through this handy contrivance, smaller than a cigar box, we have a panorama of all the interesting scenes of our trip, besides several pictures of the crew caught in some peculiar and embarrassing situations. The pictures are round, three inches in diameter, but may easily be enlarged. The camera is not yet in the market, but soon will be; we had the first one sold.



We found from this trip that some of the 1,500 pounds of extra lead put this spring on the keel of the Velnette would have to come off, and that in handling light canvas in the prevalent light winds the advantages of a topmast would more than counteract the disadvantages in a blow. So before the association regatta the Velnette will appear as a full-blooded cutter, ready to make the heart of Mr. Williams, her builder, glad, by another unbroken series of victories this year, and a clear title to another R. Y. C. prize cup, unless the competition aroused by her success last year prove too much for her this.

A NEW SUBSTITUTE FOR THE BOARD.

MR. WALTER E. ADAMS, of San Francisco, has lately applied for a patent on the device shown in the accompanying illustrations; a movable "horizontal keel" such as has lately been under discussion in our columns. A slot is cast in the iron or lead keel in which a triangular plate of metal is fitted so as to move freely from side to side, being pivoted on a vertical bolt at its fore end. The after side is circular and is cut into teeth, in which a small pinion gears, as in Fig. II. This pinion is fast on a vertical shaft, B, which runs through a stuffing box inside the keel, and up to the deck, having two handwheels, AA, one on deck and one in the cabin. When before the wind the plate is in the position, *aa*, Fig. II. When on the port tack it is thrown over to *b*, and when on the starboard tack to *c*, so that the area exposed is always at right angles to the lee side of the keel. The mechanical features of the design are very simple, it can be made at a small cost, there is no weakening of the structure, and it should add very materially to the lateral resistance.

A NEW SUBSTITUTE FOR THE BOARD.

THE NAVY DEPARTMENT AND THE NORTON SYSTEM.

A LETTER was sent by the FOREST AND STREAM to Secretary Whitney, calling his attention to the claims of the Norton Naval Construction and Ship Building Co., and suggesting that the merits of the system be fully investigated by competent men. The following reply disposes effectually of the statement of its promoters that the Norton System is in any way indorsed by the Navy Department of the United States:

NAVY DEPARTMENT, Washington, July 26.

Gentlemen:

I have your letter of the 25th instant, and also the copies of FOREST AND STREAM which contain articles concerning the Norton System of Ballasting. In reply I have to state that this Department has tried the Norton Life Boat for naval purposes and it has been reported against. I cannot order any general investigation, there is nothing before the Department to which it is material. With many thanks for your kindly suggestion, I am Very Respectfully.

WM. C. WHITNEY, Secretary of the Navy.

The Forest and Stream Publishing Company.

BEVERLY Y. C.—132d Regatta.—Second for Buzzards Bay championship, Monument Beach, July 28. Courses, first and second classes: Leaving Pine's Buoy on starboard, Bird Island Buoy and Scraggy Neck Buoy on port and return, 11 miles. Third class—Twice around Pines Buoy and return, 6½ miles. Fourth class—Twice around Buoy 12 and return, 4 3-5 miles. Weather cloudy any rainy. Wind a strong N.E. gale. Tide ebb.

FIRST CLASS.

	Length.	Elapsed.	Corrected.
Surprise, Jas. M. Codman	26.00	1 52 34	1 40 39
Mattie, Vice-Com. Stockton	26.10	1 52 36	1 41 36
Whisper, S. M. Weld	16.02	2 10 07	1 58 23

Guenn, Perry Lawton	17.00	1 35 55	1 05 35
SECOND CLASS—JIB AND MAINSAIL.			
Diadem, L. A. Hayward	18.02	1 23 51	0 54 26

Winners of first: First class, Moondyne; second class, Tartar third class, Diadem. Second: First class, Folly; second class, Rocket Third: First class, Posy; second class, Hester. All the yachts reefed; Posy's centerboard was broken; Secret, first class, capsized before the start. Regatta committee—T. D. Bagley, A. W. Blanchard, R. G. Hunt, A. E. Pratt. Judges—Henry Gardner, C. F. Colby, T. P. Willey.

Second Pennant Regatta, July 17.—Inside courses. First Class, distance 8 miles; second class, distance 6 miles. Weather fair. Wind light and steady E.S.E. Tide 4:50. Start 3:30.

FIRST CLASS.

	Length.	Elapsed.	Corrected
Folly, J. F. Sheppard	26.08	1 30 13	1 05 57
Secret, E. F. Linton	22.06	1 49 39	1 21 38
SECOND CLASS CATRIGS.			
Rocket, H. F. Faxon	16.02	1 25 08	0 58 11
Guenn, Perry Lawton	17.00	1 32 21	1 06 21
Hester, P. R. Blackmur	19.11	1 31 53	1 08 46
Maud, H. A. Nash, Jr.	19.02	Disabled.	
SECOND CLASS JIB AND MAINSAIL.			
Diadem, L. Hayward	18.02	1 20 45	0 55 58
Wasp, T. P. Willey	16.01	1 35 05	1 08 02
Snarleyow, G. E. Maybury	17.10	1 35 19	1 11 13
Spray, C. T. White	18.08	Disabled.	

Winners of first prizes—Class 1, Folly; Class 2, Rocket; Class 3, Diadem. Second prizes—Class 2, Guenn; Class 3, Wasp. Third prizes—Class 2, Hester, Snarleyow. Second class was started before the first. Diadem wins pennant in her class. Folly and Rocket each win a leg and sail off for pennant July 31 with Posy and Hester, which each won in first pennant race. Snarleyow was handicapped 8m., but sailed a splendid race. Spray parted bowsprit stay. Judges—H. Gardner, N. F. Hunt, Dana Smith.

WEST LYNN Y. C.—The second championship race was sailed on July 28 in a very strong N.E. breeze. The times were:

FIRST CLASS.

	Length.	Elapsed.	Corrected
Lark, Sprout & Olin	22.03	50 30	33 00
Blanche, James Bessom	23.03	51 00	35 59
Nordeck, Howe & Rich	22.07	55 00	37 35
THIRD CLASS.			
Isabel, Davis & Hodgkins	16.00	25 00	14 20
Wild Cat, Charles Alley	16.03	37 45	14 30
Florence, John Welch	16.05	28 45	15 27

OPEN BOATS.—A race was sailed on July 28 between the cats Mollie McCarthy and Jean, over the course of the Harlem Y. C., the wind being light S. E. Mollie McCarthy won in 2.19.30, Jean giving up.

AMERICAN Y. C. NAPHTHA LAUNCH RACES.—On July 28 the American Y. C. held its races for naphtha launches and rowing boats, off the club house, Milton Point. There were 13 starters for the cup given by Mr. Clement Gould for naphtha launches, the list being:

	L.W.L.	
Lookout	26ft. 6in.	Joseph Hegeman
Wanderer	31ft. 6in.	Martin Sanders
Spitfire	22ft. 6in.	C. Dewing
Plover	22ft. 6in.	Richard H. Derby
Gnat	22ft. 6in.	William E. Gelin
Lulu	16ft. 4in.	J. M. Ceballos
Crick et	18ft. 6in.	J. A. Bostwick
Alice	22ft. 6in.	P. S. Shutt
Sadie	27ft. 3in.	John S. Price
Adele	22ft. 6in.	John A. Hill
New Jersey	31ft.	Leon Abbett
Tillie	21ft. 6in.	Com. Starbuck
Folly	31ft.	E. H. Shethar

The course was 8.80 knots, the times being:

	Start.	Elapsed.
Lookout	4 20 50	1 09 50
Plover	4 20 50	1 09 19
Wanderer	4 17 12	1 04 30
Spitfire	4 26 17	1 14 25
Gnat	4 25 20	1 14 05
Lulu	4 30 35	1 19 55
Cricket	4 32 25	1 21 33
Alice	4 23 00	1 11 58
Sadie	4 21 32	1 08 37
Adele	4 23 45	1 11 25
New Jersey	4 16 38	1 04 53
Tillie	4 26 15	1 15 34
Folly	4 21 50	1 09 29

The winners under the Isherwood allowance were Lookout and Plover. In the rowing races the Siren's crew won the dingey race, beating crews from the Tillie and Viola, while Inanda's crew again won the Bateman cup, beating a crew from the Viola.

BAY VIEW Y. C., July 28.—The first race of the season was sailed by the Bay View Y. C. on July 28, in a very strong S.E. breeze; the courses being: First class—From judges' boat to Long Island, leaving it on starboard, to Rainsford Island on port, to red spar buoy No. 2, northeast of Thompson's Island, on port, to judges' boat; distance, eight miles. Second class—From judges' boat to Cow Pasture buoy No. 6, leaving it on port, to red spar buoy No. 2 on starboard, to Sculpin ledge buoy 6 and Spectacle Island on the port, to starting point; distance, six miles. Third class—Judges' boat to Cow Pasture buoy No. 6, to red spar buoy No. 2 to black buoy No. 7, leaving all on port, back to judges' boat; distance, four miles. The times were:

FIRST CLASS.

	Length.	Elapsed.	Corrected.
Prince Karl, E. L. Williams	29.01	1 27 00	1 04 36
Iquique, Garland & Co.	22.07	1 37 30	1 09 48
Emma S, —— Stafford	23.09	1 43 07	1 24 27

SECOND CLASS.

Ida, F. Pfund	17.08	1 42 50	1 15 48
Vim, Fleming and Lane	20.07	Withdrawn.	

THIRD CLASS.

Trouble, Morse and Knapp	16.01	1 37 00	1 19 90
Housca, H. Saladine	15.05	1 43 00	1 24 28

Half of the 15 entries did not start on account of the weather. Vim lost her bowsprit and Bertha capsized.

The winners were: First class, Prince Karl, first prize, $8; Iquique, second prize, $6. Second class, Ida, first prize, $6. Third class, Trouble, first prize, $5. The judges were Harry Lillywhite, William Chandler and George Hammer.

PROVINCETOWN.—The second race for the Barnstable Bay championship was sailed on July 26 over a course of 6 miles to leeward and return in a moderate S.W. wind. The times were:

FIRST CLASS.

	Elapsed.	Corrected.
Madcap, Provincetown	3 02 41	2 19 30
Marjollu, Provincetown	3 07 59	2 22 42
Madge, Orleans	3 06 01	2 25 21
Ariel, Dennis	3 14 58	2 31 23
Percy Allen, Brewster	3 16 02	2 31 56
Bertha	3 19 12	2 36 56
Sachem, Provincetown	3 22 57	2 38 34

SECOND CLASS.

Iris, Orleans	3 23 35	2 33 06
Ada, Provincetown	3 25 15	2 37 19
Minnie, Provincetown	3 33 06	2 39 12
Magic, Barnstable	3 31 21	2 41 07

A special race, 2½ miles, between whaleboats from the whaling schooners Antarctic and William Grozier resulted thus: Antarctic's, 40m. 13s.; Grozier's, 42m. 35s. Iris takes prize for second class boats, as she won the one sailed on July 4. In first class Madcap has taken one and Magic one. The judges were Robert Lavender, A. L. Putnam, A. I. Williams, George Holmes and Moses N. Gifford.

HULL Y. C.—69th Regatta, July 28. Courses, regular club courses. Weather, double reef breeze. Wind, N.E.

THIRD CLASS—CENTERBOARDS.

	Length.	Start.	Finish.	Elapsed.	Cor.
Nora, E P Boynton	22.02	Capsized.			
Posy, R G Hunt	22.02	3 15 00	4 30 41	1 15 41	0 54 25
Secret, E F Linton	22.06	3 15 00	4 40 39	1 25 39	1 04 38

THIRD CLASS—KEELS.

Thelga, H L Johnston	22.01	3 15 00	4 36 48	1 21 48	1 00 29
Echo, Burwell & Isham	24.09	3 15 00	4 34 40	1 19 40	1 00 16

FOURTH CLASS—CENTERBOARDS.

Mabel, C L Dunwe	19.11	3 20 00	4 41 44	1 21 44	0 58 37
Niobe, G N Keates	20.02	2 20 00	4 42 18	1 22 18	0 59 24
Myrtle, R C Poor	19.02	3 20 00	4 44 12	1 24 12	1 00 24
Tartar, J B Forsythe	19.07	3 20 00	4 44 14	1 24 14	1 00 49

FOURTH CLASS—KEEL.

Vaga, H W Friend	18.02	3 20 00	4 47 40	1 27 40	1 02 53

FIFTH CLASS—JIB AND MAINSAIL.

Coyote, W Abbott	20.03	3 25 00	5 17 46	1 52 46	1 32 43
Tom Cat, C H Eockhart	19.00	Withdrew.			

Winner of third class centerboards, Posy, $15. Third class keels Echo, $15. Fourth class centerboards, Mabel first, $12; Niobe second, $6. Fifth class, Coyote $12. Shadow, Nimbus and Albatross started in first class centerboards did not finish as they went to assist the Aglaia, first class keels, who carried away her mast. Regatta Committe, Com. and Vice-Com. and Ex-Off., John Stetson; Chairman, R. C. Poor; Secretary, C. S. Waldo. Judges, B. W. Rowell, E. Lombard, Jr. and J. R. Chadwick.

CAPE COD Y. C.—The first race of the second series was sailed off Orleans on July 28 in a strong N. E. breeze, the courses being 6½ and 5½ miles, the latter for Third Class. The times were:

FIRST CLASS.

	Elapsed.	Corrected.
Madge, Cummings and Howes	1 17 17	0 55 15
Percy Allen, F. S. Allan	1 30 25	1 06 31
No Name, A. Lake	1 34 28	1 08 41

SECOND CLASS.

Seola, E. E. Nickerson	1 37 50	1 09 33
Carrie L., George Clark	1 44 27	1 12 58

THIRD CLASS.

Sachem, A. O. Hurd	1 17 04	0 52 30
Mischief, E. Snow	1 09 40	0 51 14
Una, G. Paxton	1 28 40	1 04 48
Rob Roy, H. Hewins	1 24 57	0 53 32
Tempest, E. Smith	1 37 21	1 10 38
Prices, C. Doane	1 33 41	1 09 18

The judges were Seth K. Kingman and Albert Smith.

LAKE Y. R. A.—The official times of the Oswego regatta were:

	Start.	Finish.	Elapsed.	Cor.
Atalanta, Eyre, Brighton, Ont.	9 04 55	3 07 30	6 02 35	6 02 35
White Wings, Jarvis, Hamilton.	9 00 40	3 10 15	6 09 35	6 07 48
Cygnet, McGaw, Toronto	0 01 50	3 50 35	6 49 05	6 49 05
Madge, Cartwright, Rochester	9 01 45	Lost topmast; did not finish.		
Iolanthe, Bigger, Bellville	9 13 45	1 19 25	4 05 40	4 04 51
Merle, Ames, Oswego	9 12 30	1 10 00	3 57 30	3 57 39

A remeasurement was demanded by Mr. Ames, owner of Merle, after the Rochester regatta, but it resulted in favor of Iolanthe, and she takes the prize. The regatta at Hamilton on Saturday failed for lack of wind, and will be sailed on Aug 3.

The Toronto Y. C. regatta was sailed on July 30 in a light wind, White Wings winning in second class, Cyprus beating Merle in third class, and Vclnette winning easily in fourth. The particulars were received too late for publication this week.

BANSHEE.—Under Mr. Smith's superintendence Banshee has been out at Piepgrass' for 3,000lbs. of extra lead on her keel, 1,500lbs. being taken from inside and 1,500lbs. being added anew. Her topmast, gaff and bowsprit have been lengthened 2ft. each and boom 3ft. in readiness for the promised races of the 40-footers this fall.

SOUTHWARK Y. C. SWEEPSTAKE REGATTA, July 29.—Course, Mifflin street wharf to Black Buoy off of Billingsport and return. Distance, 20 miles. Weather, cloudy with rain. Wind, southeast and light. Tide, ebb to buoy, flood half-way:

FOURTH CLASS.

	Start.	Turn.	Finish.
Victor P. Dorp, L. Dorp	11 35 00	1 42 12	3 20 40
Okey No. 1, A. Troutt	11 35 00	1 43 16	3 16 18
A. J. Rivel, A. Fox	11 35 00	1 46 20	3 16 15
Chas. Deputy, Tom Murry	11 35 00	1 48 18	3 22 39
Jos. Nobre, Ben Wilson	11 35 00	1 43 18	3 18 22

SECOND CLASS.

Hattie, Geo. Peck	11 45 00	2 10 20	3 30 43
H. Boardman, James Dailey	11 45 00	2 06 33	3 28 04
Harry E., W. Eisinbrown	11 45 00	2 14 36	Withdrew.
J. Brady, G. Mitchell	11 45 00	2 08 17	3 29 48

Winners first prize—Class Two, H. Bordman. Class Four, A. Rivel. Prizes—$25 for Fourth Class, $20 for Second Class. The Rivel was sailed by Chas. Dunley, who won the swimming contest at Gloucester City, July 28. Regatta committee, Jilet Wilson, James Cavenaugh, F. Malen. Judge, Uncle Hugh Boyle.

MONTGOMERY SAILING C.—11th weekly cruise, July 29.—Course, Norristown to Indian Creek and return. Distance, five miles. Weather, cool. Wind, light southeasterly:

	Length.	Start.	Finish.	Corrected.
Sadie, canoe	18.00	1 34 40	3 27 50	1 57 50
F. & W. Playford, tuckup	15.00	1 40 00	3 49 00	2 09 00
Gracie, skiff	12.00	1 30 40	3 49 50	2 09 50
G. W. Bowers, tuckup	15.00	1 40 00	3 50 55	2 10 55
S. H. Querner, tuckup	15.00	1 40 00	3 54 35	2 14 35
J. S. Frith, tuckup	15.00	1 40 00	3 56 20	2 16 20
Iola, ducker	15.00	1 30 00	4 00 00	2 20 00

It was a run to the outer mark, the Sadie rounding at 2:26, followed by the Gracie at 2:34. In the beat home the canoe increased her lead four minutes on the Gracie. The tuckup Playford passed the Gracie half a mile from the finish, after which the skiff again took the lead, but was finally beaten by the Playford 100yds. from the line. Judge, William Alcord.

AMERICAN Y. C.—The first race of the second series of the American Y. C. was sailed off Newburyport on July 28 in half a gale from E. N. E., the inside course being chosen. The times were:

	Length.	Elapsed.	Corrected.
Hazard, Pierce & Moody	23.00	1 33 50	1 35 50
Puzzler, Shackford & Lunt	19.06	1 51 31	1 47 44
Budge, Paul J. Lowell	19.03	1 50 49	1 46 41
Gem, Besse & Woodwell	15.08	2 07 23	2 07 23

The Kid started, but withdrew, and White Cloud capsized before the start. The judges were J. W. Sargent, Amos H. Geary and Wm. V. Hewlett.

RACING AT LAKE MAHOPAC.—First race, Dean House Cup, series 1888. Course 10 miles. Weather pleasant; wind squally and variable, N. E. to S. E.

	Length.	Elapsed.	Corrected.
Trifler, C. & E. Dusenbury	19.8	1 35 40	1 32 55
Flora, A. H. Dean	21.7	1 34 05	1 33 15
Mischief, W. Nash	16.6	1 40 40	1 35 45
Vixen, F. Patterson	22 5	1 37 35	1 37 35
Mist, A. H. Dean	20.2	1 42 27	1 40 12

The above was the first of a series of races for the Dean House Cup for 1888, which goes to the winner of two out of three races. Judges, Col. S. J. Murphy, A. Ammerman, W. A. Nash.

CENTERBOARD, KEEL SLOOP AND CUTTER.—In the 69th regatta of the Hull Y. C., on July 28, in a strong N.E. gale, the centerboard sloop Posy (22ft. 6in.) handsomely beat the keel sloop Echo (24ft. 6in.) and the cutter Thelga (23ft.), besides the Canarsie, L. I., centerboard Secret. All yachts with housed topmasts and close-reefed sails. Course, 6 miles; one-half course close hauled, one-half running and free. Corrected time:

Posy	0 54 25	Echo	1 00 16
Secret	1 04 38	Thelga	1 00 29

Posy's friends consider this a very creditable performance, as she is generally called a light-weather boat. In same race Shadow had topmast housed and double-reefed sails, ann Aglaia carried away mast.

QUITE ANOTHER TUNE.—When Titania first came out, a year ago, the Boston *Herald* expressed its regret that with Sachem, Volunteer and Titania, Mr. Burgess had not built a yacht in Clara's class, so as to make a "clean sweep" of all the classes. Now on the eve of the Goelet Cup race, the same paper is ready to hedge on its crack boats, as follows:

"The schooner yacht Marguerite arrived at City Point on Friday last, and was soon after hauled out on Lawley's ways. The Marguerite floats below her designed line by several inches, and has too much lead on her keel, so that not less than six tons must be cut off to let her up, so that she can float as designed. The time is too short in which to get the Marguerite tuned up for the Goelet cup race, and her owner has decided not to cut the lead off now, but to wait until the end of the season, when there will be plenty of time to do a good job on her. The Marguerite is now off from her best trim, and justice to the yacht and her expert skipper would be not to start her in the race for the Goelet cup. Certainly in her present form she is in no condition to race some of the flyers in her class. Even in her best chances, a stray breeze of wind, with the great amount of lead and her enormous sail spread, she would be liable to severe strains, which would not benefit her in the end. Her owner will do the wise thing if he withholds her entry from the Goelet cup race. The schooner yacht Sachem, since the additional lead was put on her a month ago, has settled by the head, and now she has got to be doctored for the race, and some of the lead forward is to be cut off. The Volunteer will be hauled out next week at Lawley's, and will be put in order for the Goelet cup race. The schooner Sea Fox will be fitted out especially for this race. Slight alterations will be made to her sails, and, outside of the Grayling and Sachem, her chances are very good. The Sea Fox certainly has good form, and is a beautiful yacht both above and below. She is without doubt the handsomest yacht in this country, though she was designed by an amateur. In breezes over eight knots she is to be feared, hence it will not be surprising if she wins the Goelet cup."

If Marguerite cannot stand a good blow in perfect safety through a 40-mile race, even with a few extra tons of lead on her keel, the type cannot be worth much for sea-going work.

MR. WATSON ON CENTERBOARDS.—After the nonsense that has been written on both sides of the centerboard question abroad; by those, on the one hand, who are opposed to the centerboard in any shape, and those, on the other, who would build a centerboard yacht to compete for the Cup, it is refreshing to read a little hard common sense from one who is well qualified to speak. Mr. Watson, in writing lately to the secretary of the Y. R. A., says: "I do not think a clause fixing a minimum depth at all necessary. I have been thinking over what I said about weighted boards at the Royal Clyde yacht meeting, and I fear this proposal savors of grandmotherly legislation; and, although it is undoubtedly a necessary restriction, it may handicap us severely in racing with the yachts of other countries, who are left with open hands as to centerboards. However, were any one building a centerboarder for America, he would no doubt take advantage of all latitude given by the rules. The rule need be on a sliding scale, fixing the weight of the board in a ratio with the rating. I do not see that there is any objection to admitting centerboards into our races, and I do not believe they are any faster than properly designed keels, and, if they are, the sooner we find it out the better." Unlike most who have taken part in the discussion without any thorough knowledge of the centerboard and the new American boats, Mr. Watson has sailed against them and been beaten by them; finding them neither the terrible bogies that are pictured by some, nor being scared into giving up the attempt to beat them with a keel, like too many others.

HAMILTON, ONT., REGATTA.—Through a correspondent we learn the following particulars concerning the unfinished race of July 28: "The new cutter Psyche lead her class of 12 yachts, including the Burgess boat Merle, the Boston built Majel, the Scotch cutter Cypress, and others. The course was 10 miles, sail twice over. Wind light, falling away entirely after first round had been made. Psyche outsailed the Merle by 20m. in five miles of windward work, after which the yachts scattered in search of luck which did not come and the race was abandoned." Although this test can hardly be said to have been crucical or final, the Psyche appears to be a smart boat in light winds, a matter of interest to our readers, as she was designed by Mr. Kunhardt as a roomy cruising cutter, rather than a racer. Her performance to windward indicates that her keel is at least as serviceable as the Merle's board for high fetching. Psyche has only part of her ballast on the keel and rig to suit. She is flush decked on a waterline length of 32ft., besides having 10ft. beam. Our correspondent adds that she is also "the handsomest yacht on the Lake by long odds."

MINERVA.—Mr. Chas. H. Tweed's new cutter was launched on July 14 from Fife's yard at Fairlie, being christened Minerva. On July 23 she sailed for America, with Capt. Charles Barr in command. The statements in the daily papers that Minerva was a 70ft. yacht owned by Mr Sweet of the Clara, and commanded by Capt. John Barr, of Clara and Thistle, and that she was built to challenge for the America's Cup, are entirely false. She is but 40ft. l.w.l., with clipper stem, and will race in the class with Baboon, Banshee, Nymph, Xara, Crocodile and Chiquitos. Capt. Chas. Barr is a younger brother of the skipper of the Thistle. Capt. John Barr is this year doing very good work in the racing cutter Thora, a boat with little reputation for speed, but which, in his hands, has raced very successfully. Clara is now laid up, Mr. Sweet being abroad, but it is not unlikely that he may be here again next year with Capt. Barr in a 70ft. cutter.

SHINNECOCK BAY Y. C.—A yacht club under this name has been organized this season at Shinnecock Bay, with its station at Atlantieville, Long Island. The officers are: Com., Wm. M. Lawrence; Vice-Com., Wendell Baker; Sec'y-Treas., Geo. Milvern Eddy; Meas., Wm. Stone. The yachts are all cat rigged, in 3 classes, over 20ft., 17 to 20ft., and under 17ft., being rated by length and ½ overhang. Races are sailed every Saturday with amateur crews, the prizes being flags. On July 28 an open race was sailed in a strong N. E. breeze, over a course 5 miles to windward and return, with 17 starters. The winner in First Class was Marion; in Second Class, Nakahira, Inez Burr and Annie L.; Third Class, Maud, Aura and Elsa.

THE Y. R. A. AND THE CENTERBOARD.—A meeting of the Council of the Y. R. A. was held on July 11, at which the replies of the different clubs on the centerboard question were submitted. The circular was sent to 55 yacht clubs, of which 27 were in favor of admitting centerboards without any restrictions, 6 were in favor of admitting them under some restrictions, 2 voted against any immediate change, 6 were opposed to any change, 1 was undecided, and 11 did not reply to the circular. After some discussion and the reading of letters from Messrs. Clayton and Watson, the motion to expunge Rule 8, prohibiting centerboards, was unanimously adopted by the Council, and it was decided to lay the matter before a general meeting of the Association August 1.

THE HUDSON RIVER AND THE ERIE CANAL.—This spring Capt. Howard Patterson, of the New York Navigation School, made a cruise in the steam yacht Skylark through the Erie Canal for the purpose of collecting information for yachtsmen. The results of his cruise are embodied in a work now nearly ready, which will contain a large amount of information concerning the navigation of the Hudson River and Erie Canal.

CAPSIZE OF A NEWPORT CATBOAT.—On July 24 one of the famous Newport catboats, used about Newport Harbor for taking out pleasure parties, capsized in a squall, the only passenger, Miss Sophie Clemenz, of New York, being drowned in the cabin, where she had taken refuge from the rain. The boatman was taken off by a passing steamer after he had tried in vain to dive and open the cabin door.

BUILDING NOTES.—Lawley & Son have given up their old yard at City Point, and concentrated their business at the main yard on the other side. They have just fitted a new mast 1½in. larger in Mr. Rogers's cutter Bedouin, and have also laid the keel for a 25ft. cutter for W. S. Eaton, from a Burgess design. The new cutter for Mr. Rogers will be 29ft. 6in. l.w.l., 36ft. over all and 10ft. beam.

GREAT HEAD Y. C.—A gale was blowing on July 28 when the steamer arrived at Port Shirley with several hundred spectators on board for the Great Head regatta. Though a number of the yachts were ready to start, it was decided to postpone the race to Aug. 11.

THE LADY GLENMORE'S CHALLENGE.—Dr. Chas. G. Weld, of Boston, has borrowed the fast cat Mabel of F. L. Dunne, and proposes to accept the Lady Glenmore's challenge, making the amount $1,000 per side, provided that shifting ballast be prohibited.

CITY POINT Y. C. OF SOUTH BOSTON.—Officers 1888: Com., Richard Coleman; Vice-Com., P. W. McDonough; Fleet Captain, John Boyce; Recording Sec., W. F. Perry; Financial Sec., J. M. McKay; Treas., P. F. Welch; Meas., George Oegler.

IMITATION THE SINCEREST FLATTERY.—The New York Y. C. has this year taken a hint from the American Canoe Association and will offer prizes in each class for the average records on all the runs of the cruise. The average record has been tried with success for four seasons in canoeing.

QUINCY Y. C. PROTEST.—In the Quincy Y. C. pennant race of June 16 Folly finished first, but Posy protested her for not sailing the proper course. After a hearing before the regatta committee the protest was allowed, and Posy was awarded the pennant.

NEW ROCHELLE Y. C.—A cup valued at $150 has been offered by the New Rochelle Y. C. for a race on Aug. 10 of yachts in the 35ft. class, open to the Atlantic, Larchmont, Oyster Bay, New Haven and Greenwich clubs.

THE EASTERN REGATTA.—The Eastern Y. C. has appropriated $1,500 for prizes for the proposed race at Marblehead on Aug. 16, provided the fleet of the New York Y. C. goes around the Cape.

A RACE TO THE ISLE OF SHOALS.—A race has been arranged from Cape Ann to Isle of Shoals, 30 miles, on Aug. 4, to be open to yachts of 16 to 30ft., under N. E. Y. R. A. rules.

MAYFLOWER, Rear-Com. Morgan, has been overhauled at Piepgrass's, having a longer bowsprit. She has discarded her jibstay and will carry a new Lapthorne jib, set flying.

MERRIMAC Y. C.—The annual regatta of the Merrimac Y. C. was sailed on July 28 in a fresh breeze, with seven entries. Thetis won, with Cygnet second.

CORINTHIAN Y. C., MARBLEHEAD.—The race of July 28 was postponed on account of the weather. The 40-footers were all absent.

SENECA.—This name has been given to Mr. Fabyan's new Burgess steam yacht.

SOUTHERN Y. C.—A regatta will be sailed on Aug. 4, at Pass Christian, Miss.

New Publications.

IN NESTING TIME. By Olive Thorne Miller. Boston: Houghton, Mifflin & Co. Cloth, 275 pp. Price $1.25.

This is a type of a new class of work on the study of birds, which might, with some propriety, be classed as "ornithographical," since it holds precisely the same relation to ornithology as biography does to biology; a distinction thoroughly appreciated and, indeed, insisted on by the author, who says: "Our predecessors have devoted their energies to classifying and arranging. They have dissected and weighed and measured every part of the little bodies; they know to a fraction the length of wings and tails; they have pulled to pieces the nests; clutched the eggs, and blown and mounted and labeled, and set up in cases the whole external of the little creatures. All that can be learned by violence, all the characteristics evolved by fear are duly set down in the books. You shall find a catalogue of the robin's possessions in the shape of feathers and bones, pictures of his internal anatomy, illustrations of his nest building, but in the whole world of these books you shall not find the robin. The soul of the robin has escaped them."

Ornithology, like biology, can never be a popular study with the young; it conveys no idea of personality with its hopes and fears and anxieties, and modes of thought, and feeling, and action, and it is these which interest us. "In Nesting Time" treats of precisely these subjects, and bears about the same relation to works of ornithology, properly so called, as magazine stories of boys and girls bear to Quain's anatomy. The author introduces us to acting living birds whose acquaintance she has made, and whom she has specially studied at that particular period, when they first leave the nest to make their own way in the world.

To do this successfully she has necessarily had to force herself upon the acquaintance of the parent bird, who generally resent all intrusion upon their domestic circle at nesting time, and the individual characteristics called into play or observed by her, are all jotted down with a fidelity that makes the young reader appreciate and enter into the feelings of these "brothers of ours in feathers," as she calls them, with a sense of being able to interpret them by his own feelings, while the tact displayed by the author in reconciling the parent birds to her presence constitutes a complete course of instruction in the methods necessary to constitute a good observer.

Mrs. Miller's observations of facts are conscientiously and carefully exact, and consequently of the highest scientific value, but the reader loses all idea of science in the pleasure of making new and interesting acquaintance, whose personal characteristics are described in a simple and charming style. We could not recommend the work too highly as a guide to the subject it treats of.

Answers to Correspondents.

☞ No Notice Taken of Anonymous Correspondents.

PETE T.—Read "Training vs. Breaking." For sale at this office. Price $1.

W. H., M.D., Ontario.—An advertisement in our columns might find for you a purchaser of the foxes.

F. W. L., Flushing, N. Y.—No changes were made at the last session in the laws relating to feathered game in Queens county.

E. L. B., Fitchburg, Mass.—Vermont ruffed grouse open season will begin Sept. 1. Black bass season in Vermont from June 1 to Feb. 1.

R. A. L., Philadelphia.—In treating a dog for tape worm every care should be taken to examine all segments of the parasite which may be passed, as there can be no cure unless the head has been expelled.

W. S. M., Yates, Mich.—Cannot discriminate as to different makes of rifles; there are many good ones for target practice at short distances.

C. T., Pawtucket, R. I.—Please inform the close time on quail, woodcock and partridges in Massachusetts? Ans. Woodcock and partridge between Dec. and Sept. 1; quail between Jan. 1 and Oct. 15.

DOBSON, Albany, N. Y.—When was the illustrated article which Mr. Mather wrote, giving the life history of the dobson, or helgramite, published in FOREST AND STREAM? Ans. In our issue of Sept. 25, 1884.

A. C. C., Hartford.—Kindly give me the name of the inclosed bug. I found the same a very taking bait for black bass in Vermont. The bug is found in trout streams under stones and leaves on the bottom of the brook. Ans. It is a larva of a dragon fly (*Libellula*), one of the large species, but impossible to identify specifically.

R. A. E., Baltimore.—What is the weight of the largest catfish taken in the Mississippi River. Ans. The type specimen of *Ictalurus ponderosus* in the National Museum is 5ft. long and weighed 150lbs. We do not find a record of a larger one.

SUBSCRIBER, New York.—What fish can be caught in Greenwood Lake and what bait is used? Ans. Black bass, pickerel and sunfish. For the first the favorite bait is the dobson or helgramite, which can be bought at the lake, but minnows are also used. For pickerel use live minnows or trolling spoons, and for sunfish the angleworm.

HEGEMAN BOATS.—Can any of your readers, or dealers in sportsmen's good, inform me through these columns whether one of the old-style, scow-shaped Hegeman canvas folding boats is to be had? They used to be made at Ballston Spa, N. Y. For a clumsy landlubber, in shallow water, they are very good for duck hunting.—W. (Sacramento).

NORTHERN MICHIGAN.—A party of three, of which the writer is a member, are contemplating a trip to northern Michigan this fall to camp and "rough it" for about a month, and as we are not acquainted with the country, will some one who has been there tell us which would be the better place to go to for both hunting and fishing, the Upper or Lower Peninsula, and where would be a good place to pitch our tent? Tell us something of Long Lake, 9 miles from Alpena; Long Lake, 6 miles from Cheboygan, and Round Lake and Big Manistique Lake, 5 and 6½ miles respectively from McMillan. Any information on this subject will be greatly appreciated by GEO. L. RALSTON, Howard, Knox county, O.

S. M. V., Toronto, Ontario.—I want to stock a small lake fed by a spring brook with brook trout, and will esteem it a favor if you will tell me: 1. What is the time to move the fish? 2. Will the last of August or the first week of September be a favorable time? 3. Can they be successfully carried for 16 miles by wagon over a rough road, or will the jolting affect them? 4. How often ought the water to be changed, and at what temperature kept? Ans.—1. As early as possible before they begin to spawn. 2. Yes, but not later. 3. Yes, the jolting will do no harm if they are not near spawning. 4. No need of change, keep them cool and in motion, but do not overstock the cans. The lower the temperature the better, but do not make sudden changes.

A. MACHEST, Jersey City.—1. Holden, in his "Book of Birds," gives the following instructions for breeding meal worms: "Take an old box or jar, place a quantity of bran, meal, biscuit or bread, a few pieces of leather from an old shoe, and some woollen rags; put in about fifty meals, cover mouth of jar with thick cloth moistened occasionally, and you will soon have thousands." The initial supply of worms may be got from the millers, from dealers in ship biscuits, or of bird dealers. 2. Feed yellow birds on maw seed, canary seed, hemp seed, lettuce seed, thistle seed, etc. If birds are under two years old, the harder seeds should be crushed or moistened. 3. The Newhouse traps are made by the Oneida Community, at Utica, N. Y. 4. Send to us for "Taxidermists' Manual," 50 cents paper, $1 cloth.

C. J. C., Staten Island.—Has an adult salmon ever been caught south of the equator? A friend says that they are found in the market at Geelong, Australia, but are brought in ice from Europe. Ans. We find in a paper read before the Otago Institute by its secretary, C. E. Arthur, in 1881, the statement that Dr. Campbell and others netted the Cam, a branch of the Waimakariri, in July 1880, and took three quinnat salmon weighing from five to eight pounds. We have no later reports from New Zealand, and none from Australia. Reports of the Otago Acclimatization Society say: (1881) of English and California salmon, introduced from 1876 to 1878, there are reports that they have been seen in the Aparima River; (1884) the California salmon has been a partial success in Canterbury, but has failed in Otago. Twenty thousand fry were put in some Canterbury rivers in December, 1876, and in July, 1880, were netted in the Cam by Dr. Campbell. Thus we have it from two authorities that salmon planted south of the equator have lived.

The Champion Mastiff

WACOUTA NAP.

Winner of the following prizes: 1st, Buffalo; 2d, Newark; 2d, Providence; 1st and special, Pittsburgh; 1st and special, Detroit; 1st, special and head of winning kennel, St. Paul; champion and head of winning kennel, Milwaukee—all in 1887.

To those who wish to breed mastiffs of size, weight, power and activity, free from the faults due to so much intense inbreeding—dogs that exactly meet the requirements of the mastiff standard, Wacouta Nap is especially commended; for no dog in America promises as well to eliminate the faults in the blood of bitches of deeply inbred strains as this one.

ST. JOE KENNELS,
Niles, Mich.

IN THE STUD

To a limited number of approved bitches,

THAT GRAND MASTIFF DOG

Sears' Monarch

THE PARK BILL IN THE HOUSE.

IT is impossible to say when the Yellowstone Park bill, recently reported by the Public Lands Committee of the House, will come up for action. When it is called up a sharp fight will no doubt take place over it, and especially over the amendment authorizing the building of a railroad through the Park. This amendment, which is the most outrageous of the many bad changes made in the bill by the House Committee, will be the first one to be attacked, and there is every reason to believe that it can never receive favorable consideration by either branch of Congress.

It seems strange that a measure which is certain to inflict irretrievable damage on the Park, and so to meet with the uncompromising opposition of every friend of the reservation, should have been brought forward again. It shows the desperation of the railroad schemers. Does not the lobby remember its defeat two years ago on this question of railroads in the Park? Does it imagine that the temper of the House on this subject has so greatly changed since then? Has Judge Payson forgotten that the sentiment of the members was clearly expressed at that time by a vote in which the majority against his bill was 102 in a vote of 238? It is in the highest degree improbable that there has arisen in the House of Representatives since that vote was taken any feeling in favor of railroads in the Park which would overcome this majority. In fact, there is every reason to believe that the feeling in favor of protecting the Park by keeping railroads out of it is stronger now than it has ever been before.

It is said that General Wheeler, who made the report in which were recommended the iniquitous amendments which all those interested in the Park so unhesitatingly condemn, does not agree with the report which the majority of the committee decided should be made. We hope that is the case, and that when the time comes his voice may be heard on the right side of this question.

The suggestion has been advanced by a very eminent gentleman, one who is deeply interested in the Park, who is familiar with legislative methods, and has occupied a seat in the Cabinet at Washington, that it might be better to permit this bill to pass the House, and to trust to its being amended or killed as may seem best in conference committee. This suggestion, from such a source, is worthy of careful consideration, but to our mind it has one fatal objection.

The House of Representatives has put itself strongly on record as opposed to any project to permit railroad encroachment in the National Park. If it should pass this bill it would stand committed in favor of such encroachment. A vote to authorize the granting of the right of way to a railroad up the Yellowstone River would be construed by the various corporations which are anxious to build into the Park as a notification that the House has changed its views on this subject and is now willing to tear down the barriers of protection which have up to this time surrounded the reservation. If Congress shall grant permission to one railroad to enter the Park it can scarcely deny such permission to another. A flood of bills asking similar rights would be introduced by various corporations, and these rights the House could not logically refuse. The passage of the first bill would be the entering wedge. The first stroke of the hammer which drives a spike in the Yellowstone Park will be the death blow to that reservation.

It seems, therefore, far better that the bill should be defeated in the House than that it should pass with this disastrous railroad amendment as a part of its text, even though this provision should be struck out in conference committee. If this particular amendment can be thrown out, and the remaining portion of the bill passed, no great harm will be done perhaps, and we may hope to see the many crudities of the amended bill somewhat modified in conference committee; but the first thing to be done, and the one on which everything else hinges, is to kill the railroad amendment. This can and will be done, and for this all who are interested in the protection of the National Park should work.

MR BELMONT'S DESPERATE DODGE.

WHEN the New England Kennel Club refused to hold its Boston show under American Kennel Club rules last April, Mr. August Belmont, Jr., and his associates in enforcing the autocracy of the American Kennel Club boycotted the show by withholding their dogs.

In its report of the show the FOREST AND STREAM said:

> The dog show of the New England Kennel Club held in Boston last week, taken as a whole, was fully up to that of last year, except perhaps in its financial results. * * * There were 1054 entries, fifteen more than last year. In some of the classes the quality was superior to that of any previous show which we have attended, while two or three classes were not quite up to the mark.

We are not aware that the correctness and fairness of this estimate were ever questioned, until at a recent meeting of the A. K. C. Mr. Belmont asserted that our Boston report was untruthful and misleading, because it represented the show to have been more successful than it actually was. When asked for some substantiation of his assertion, Mr. Belmont in his letter printed last week added a second charge, namely, that the author of the Boston report had purposely made the report misleading and untruthful. Both of these charges we took pains to point out to Mr. Belmont last week were impertinent and void of truth. Now he sends us a reiteration of them; and instead of submitting anything even to show that he may have been deceived by others into making them, he suggests (and what a deliciously cool suggestion it is—for August) that our kennel editor "call upon him" to look at some "written proofs" he professes to have in his possession. Mr. Belmont does not need to be told that, if he has any such "satisfactory written proofs given to him by the best authorities of each special breed," the very best possible use he can make of them is to put them into print. If he can show that he has such "proofs," and was misled by them into making his charge at the A. K. C. meeting, the fact of his having been misled would be accepted in mitigation of the impertinence of the charge, though it would not affect its untruthfulness.

It is not to be thought that Mr. Belmont was moved to say what he did by any feeling against the FOREST AND STREAM; we are unaware that he has any feeling against the paper powerful enough to induce him to wrongly charge it with untruthfulness; and we are quite sure that if he had had any such feeling he would have been astute enough to see that the false charge could not injure the paper, but must injure him. There must have been some other motive for the part he played.

What is the explanation of Mr. Belmont's extraordinary conduct? Why did he make the assertion that the success of Boston's show had been untruthfully reported by us, when he ought to know, as every one else does, that his assertion lacked the first iota of truth? Why did he make the charge at an American Kennel Club meeting? Why, when publicly taxed by us with having made a statement not in accordance with the facts, does he rest content under the charge, and evade the issue by silly and mysterious references to "written proofs"? In other words, having made a charge notoriously false and indefensible, why does Mr. Belmont stick to it through thick and thin? These are questions easily answered. Mr. Belmont is playing a desperate dodge, but not a deep one.

It has been announced that the Buffalo show will not be given under American Kennel Club rules, but under National Dog Club rules. Mr. Belmont proposes to put his foot down, hard, on the National Dog Club. He has set out to intimidate the Buffalo managers into changing their rules. It is threatened by Mr. Belmont, or agents working for him, that unless Buffalo throws overboard the National Dog Club, he and his associates will boycott the show. Obviously such a threat will be ineffectual to bulldoze Buffalo unless the managers can be bamboozled into believing that to be boycotted by Mr. Belmont means disaster. To frighten them, therefore, Mr. Belmont boldly asserts that the Boston show, boycotted by him, did not have the success it is credited with in our columns. The argument as presented to the Buffalo managers, and based on a misstatement, is this: Because Boston did not show under American Kennel Club rules, Mr. Belmont boycotted Boston, and Boston (according to Belmont) was injured thereby; and because Buffalo will not show under American Kennel Club rules Mr. Belmont will boycott Buffalo, and Buffalo (according to Mr. Belmont) will be injured thereby.

The straits to which the President of the American Kennel Club is driven, in the endeavor to intimidate Buffalo, thus afford a perfectly satisfactory explanation of his untruthful statement that the FOREST AND STREAM misrepresented the success of the Boston show. It is held by some politicians that a lie well stuck to will do effective campaign work. The event will prove whether or not Mr. Belmont's desperate dodge will accomplish its intended purpose.

SNAP SHOTS.

AMONG the candidates for the office of Chief Game Protector of New York are ex-Deputy Controller C. R. Hall, of Albany; J. W. Johnson, of Palatine Bridge, and Hon. Floyd J. Hadley, of Westville Centre. Of the qualifications of the first two candidates we are not advised, but Mr. Hadley's conspicuous unfitness for the place is demonstrated beyond cavil by his record at Albany with respect to game legislation. To make Mr. Hadley Chief Game Protector would be on a par with the proposition once seriously entertained in some quarters of giving Mr. "Paul" Smith a place on the Fish Commission. It is doubtless practicable to discover a competent and trustworthy person to whom may be intrusted the game and fish protection interests of this State, and the Commissioners of Fisheries are not in any such desperate strait that they must follow the example of the ancient goodwife who made the fox her goose-herd.

The regular U. S. troops attached to the various departments are busy just now in the annual contest before the butts for the making up of the various teams and for the determination of the standing of the companies and individuals. There is fine marksmanship displayed at every one of the ranges. From the Presidio, Fort Snelling, Fort Leavenworth, Van Couvers Barracks and the lower ranges the reports are most encouraging and go to show that the love of the rifle has taken a firm hold on the bluecoats and that rivalry is running very high.

The FOREST AND STREAM'S report of the lawlessness rampant in the Adirondacks has been widely copied and commented upon. It is recognized as a faithful description of the abominable condition of things there.

The Sportsman Tourist.

CANOEING AND FISHING ON THE ST. JOHN.

FREDERICTON, N. B.—The St. John has its sources in the State of Maine as well as in the British Provinces of New Brunswick and Quebec. It can be navigated by canoe and bateau from the city of St. John, in the Province of New Brunswick, for its whole length, more than 400 miles, with one exception, where at the Grand Falls, 220 miles from its mouth, it makes a perpendicular descent of about 70ft. into a rugged and precipitous chasm, between whose steep sides it boils and surges a confused mass of white waters for nearly three-quarters of a mile. Here a carry of one-half or three-quarters of a mile is necessary. At this point there is a village with good hotels, and the portage is easily and quickly made by means of a good road. This is the only rapid around which a canoe or boat must be carried in the whole distance from the foot to the head of this beautiful river. For thirty-six miles above the Grand Falls to Edmundton the waters of the St. John run deep and smooth, hardly the ripple of a current disturbs their tranquil surface.

After Edmundton, where railway communication ends, is passed, the river becomes more rapid; thirty-five mile above Edmundton at the mouth of the St. Francis, to which there is a good road, highways cease and only a few scattered huts of the lonely hunter or woodsman are found above this; and even these shortly disappear, and the *voyageur* sees nothing but the ancient forests on either side of his watery way, which here passes along with rapid current in its descent to the sea, winding among ledges and working its route through boulders and over sandbars.

From Edmundton to the mouth of the St. John, with the exception of the carry at the Grand Falls, a child can paddle a canoe in perfect safety. Probably there is no river in America better adapted to canoeing than the St. John. The canoeist can either carry his own canoe by rail to Edmundton and paddle it down river, passing the night either at one of the farmhouses, which are found all the way down, or tent out in some of the numerous groves which are everywhere to be found. The Bluenose farmer will take no offense at any one camping on his ground, but will be very glad to sell him all the butter and eggs that he may require.

The waters of the St. John are clear as crystal, their descent to Fredericton, the capital of the Province, is uniformly rapid: there are no muddy reaches from its very sources to that city. Should the sportsman or traveler not have a canoe, he can hire a good boatman with his canoe to bring him down as far as he wishes. There are little villages in numerous places in sight of the river where provisions can be had, so that he can take his baggage in the canoe with him and get his meals either at some of these villages or beneath the shelter of the trees which overhang the river. Canoemen or sportsmen visiting the St. John had better come directly to Fredericton, where there are two large and first-class hotels. Fredericton is built on the western bank of the St. John, and steamers ply daily between that city and St. John, the large seaport at the mouth of the river.

On the east bank of the St. John, directly opposite Fredericton, there is a little village of Melicite or Akanaki Indians where men and canoes can be had, there is also another Indian village, eleven miles above Fredricton, on the banks of the river. These Indians are also expert men, and are always ready to carry visitors around in their light and graceful birch bark canoes. There is also a large Indian settlement where more than 20 canoes and Indians can be had, at the mouth of the Tobique, a river which empties into the St. John, about 115 miles above Fredericton, and which can itself be ascended in canoes without making any portage for 80 miles, and if the sportsman wishes to meet the Intercolonial Railway at Bathurst, on the Gulf of St. Lawrence, he can do so by carrying his canoe from Nictaux Lake to Nepisiguit Lake, a distance of three miles over a bushed portage; from the lake he passes down into Nepisiguit River, which is crossed by the Intercolonial Railway.

There is also a portage from Grand River to the Restigouche; a canoe can be poled up the former river to the Nagan, and by a three-mile portage taken into a stream which empties into the Restigouche; or what is better, the canoe can be hauled twenty miles on a wagon by lumbermen's portage from the St. John to the Restigouche, which is a splendid river, rapid, but without falls. The canoeman descending this, can take the Intercolonial Railway at Campbelltown. Green River, which passes the St. John eight miles below Edmundton, abounds with trout. This can be ascended by canoe to its source and the Quatawamkedgwick, one of the largest branches of the Restigouche, reached by a carry of six miles over a brushed road. Thus the Restigouche can be reached by either Grand or Green River, or by the Tobique, this last named portage being the most difficult. The Indians living at the mouth of the Tobique know all of these portages. There is a hotel at Andover, two miles below the mouth of the Tobique. Andover is reached by rail. About five miles above Andover the Aroostook River, which is nearly as large as the Tobique, joins the St. John.

There is good fishing on many of its branches. The best place to reach there is from Caribou, in the State of Maine, where there is a good hotel. There is railway communication with Caribou up the St. John.

There are but few fish to be caught in the vicinity of the Grand Falls. Edmundton, where there are several country hotels, and where canoes and men can usually be had, is an excellent center for fishermen. From it the upper waters of Green River are reached by a ten mile drive; from Edmundton to Temiscouata Lake, twenty-five miles distant, a boat can be rowed up the Madawaska into Temiscouata Lake, which itself is twenty-five miles long and very pretty, and where there is also at the little village of Notre Dame du Lac a very comfortable hotel. An hour's row from this up and across Lake Temiscouata will bring one to the mouth of the Tuladi, which can be ascended by canoe for more than fifty miles. This river, on which there is not a solitary house (with the exception of one at its mouth), abounds with trout. One of the lakes on one of its branches is nine miles long. On this Tuladi stream there are dozens of lakes and streams, in very many of which no fly was ever cast, the whole country being a vast forest.

A railway has just been constructed from Edmundton to the St. Lawrence at River du Loup, where the Intercolonial Railway is intersected. This railway runs along the shore of Temiscouata Lake.

From Edmundton, following the highway up the St. John (which is here the dividing line between the State of Maine and the Province of New Brunswick) for a distance of seven miles, one comes to Frenchville, where there is a comfortable little hotel, and where one can get guides and canoes. Five miles west of Frenchville by a good highway, Long Lake, the head of Fish River, is struck; down this for fifty miles or more one can descend with a canoe, and here at the proper season of the year he can get all the trout he wants; in numerous places they are of large size.

The St. Francis (thirty-five miles above Edmundton) is also a good river for lake or stream trout; it has a number of fine lakes on it, and is easily ascended by canoe.

Above the St. Francis to the head of the St. John trout can be caught at various places, and often in great quantities, by going at the proper season of the year. This part of the St. John being through a forest covered country necessitates the carrying of provisions, tent and bedclothes with one. All supplies can be had at Edmundton, which, as above remarked, is an excellent center for him who would spend a few weeks at the home of the trout—the upper waters of the River St John.

EDWARD JACK.

EARLY DAYS ON THE MISSOURI.

III.—THE INDIAN.

OF all misunderstood and misrepresented people I consider the North American Indian the most so. By some he has been painted as an incarnate fiend; by others he has been represented as a sage and stoic, his mind stored with philosophy, in demeanor grave, taciturn, and delighting in solitude; his body capable of great endurance, and his spirit sustained by unflinching courage. By such wresting, twisting and misrepresentation as would make a poem out of the multiplication table, or an allegory out of a problem of Euclid, his childish fetishism has blossomed into a sublime theology. His myths, which are like the dreamings of insanity, are remodeled to resemble legends of the lives of the saints, with a dash of the Arabian Nights. With a language of but little more than a hundred words he has become the author of sublime poems, dealing with the abstract and complex. Even gentlemen of the Masonic fraternity have discovered that he has anticipated the signs and secrets of their order.

He is described as stoical, yet it is an every-day affair to see a full grown Indian buck sit down, lift up his voice and weep over the most trifling disappointment.

He is called taciturn and loving solitude, and yet he will chatter like a magpie; gossip is his principal business in life, and he will ride for miles to be the first to tell any news; while there are not sufficient inducements on this whirling globe to influence him to live solitary for a single month.

He is supposed to be naturally brave and physically strong, but he is not; nor does he pretend even to himself to be either.

The only Indians I know anything about, are those of the upper Missouri. They are generally allowed to be the finest physically and otherwise of the North American Indians; and have been less contaminated by contact with the whites. It is of these I write.

It is useless to look for original Indian traits or myths among partially civilized Indians. The Jesuits and other Christian missionaries were early among the different tribes, and explained to them Christian stories and legends which they thought suitable to their comprehension. Many Catholic Frenchmen whose own lives were dominated by the folk lore and legends of mediæval Europe, lived among them and became their interpreters in their intercourse with the whites. Their language is so barren, so many things are called by the same name, that it is no wonder the imaginative and ingenious Frenchman, one of whose compatriots, it is claimed, could make soup out of a bucket of water and an onion, could also clothe the bald statements of the Indian in the flowers of rhetoric. A slight examination of any of the published Indian myths will easily disclose their originals. The Christian missionary anxious to find evidence of the universal knowledge of a Supreme Ruler, has elevated the poor savage's medicine bag into a Great Spirit. On the scent for evidences of a general belief in immortality, he has outlined from the ghastly spirit world of the red barbarian a something between the elysium of the Greeks and an orthodox Heaven and Hell. Other parties have delighted in dwelling on his scalping knife and tomahawk, yet the Indian antiquary will be puzzled to show a scalping knife different from the one in every day use for household purposes. As for the tomahawk I do not believe it could ever have been used as a weapon of war, as it could never meet any ordinary club on equal terms. I have heard of lodges being hung with scalps, yet I have never seen one there, and I have been prohibited by Crows from bringing one of their enemies' scalps into a lodge, for fear of bringing in the wraith of the vengeful dead.

When an Indian kills an enemy, he, and every one directly concerned in it, black their faces. The scalp is carried on a pole as they go circling round the lodge. At night the scalp is danced, after which they burn it. An Indian village after night is a picturesque sight. It is situated, when possible, amid the timber of a creek bottom, with the horses all tied round the lodges by the foot, and the ubiquitous wolf-like dog always ready for a snap and snarl. The older Indians sit round the lodge fire, over which perpetually boiled some meat while they had any. The lodge chief sits with his medicine bag hanging directly behind him, and no one must pass in front or behind him; fills his pipe with kinnekanik (dried willow bark mixed with one-third tobacco), smokes one whiff to the sun, one to the earth, one to his medicines, then circles it among his companions. The social smoke is enlivened by constant talk, their meagre language helped out by expressive Indian signs. In fact, so necessary do I consider these gestures to their conversation, that I almost think it would render them dumb if their hands were tied. These gesture signs are extremely expressive. There are natural gestures indicating ideas as there are natural tones indicating feeling. If we hear a shriek of pain, or a cry of joy, a groan or a laugh, we need no words to tell us what it means. I have attended a council of four different tribes, in which no word was spoken except natural tones. Here the silent handiness of the orator gracefully displaced his more bombastic speech.

Outside there is a more lively scene. Here and there are numerous fires, around which congregate the young men and women, whose laughing chatter does not suggest taciturnity. Around others gather the old crones discussing the tanning of the robes, the conduct of the dogs, the difficulty of getting dry wood for the fires, or the malevolence of some fetish which has that day caused lodge poles to become untied, the packs to become unfastened, or forbidden the skin to tan properly. If it is a scalp dance, the hairy trophy is tied on a pole and held aloft over the circling dancers. Outside the circle old men sat on the ground and beat time to the monotonous tom-tom. The singing commenced with a low gutteral bass "Hai-ha, hai-ha, hai-ha," gradually deepening and rising into a tenor, then with the shrillest women's voices rising into a weird soprano shriek, gradually lessening back to tenor and bass, until it died away in a sobbing guttural, then a full assembled war-whoop with a refrain of "Neotona batz-zatz." This song was accompanied by a rising and falling on the toes, with the knees slightly bent, the whole party making a circular movement. As their blood warmed and their enthusiasm deepened, the tom-tom beat louder and louder, the bass was deeper and hoarser, and the wailing crescendo rose to an unearthly shriek. The bucks commenced to mimic the motions of war, robes are thrown off, the rocking motion becomes a leap, the circle swaying faster and faster. One old woman, whose only attire consisted of a robe, who held in her clenched hand a gleaming knife aloft and sung "Neotonah batz-zatz," in the frenzy threw off the robe and continued the dance, which was now a leaping pandemonium, as naked as when she was born.

When I first saw these Indians the sense of shame and what civilization calls modesty had as little significance to them as to Adam and Eve before they had eaten of the tree of knowledge.

While one part of the camp was a scene of merry jesting, dancing and gossip, in the gloom of another section would rise the wail of some one weeping for the dead.

No gifted funeral orator can equal or convey the impression of the mournful tenderness, the exulting pride or gloomy despair expressed by the untaught savage in this mere act of formality. An Indian, man or woman, will be laughing and dancing; in a moment the merry circle will be left, and the next moment the same person will lift up his voice in heart-breaking accents, the plaintive notes will weep tears of mournful tenderness, again startling defiance and war will breathe with fierce energy the deeds of the silent dead; then as the sorrowful recollections, inspired by the fate of the fallen relative, the high pean sinks to such supplicating despair as suggests a lost spirit lamenting its dismal fate. And all this is a mere formality, for the next moment the weeper may be the merriest of the laughing throng.

The religious belief of the Indians is a difficult question to handle, as they really have no formulated beliefs. You question one Indian in the same camp in regard to these ideas and the next one will give you views that are the exact reverse. I am satisfied that where they have not been impressed by the beliefs of the whites their god, in so far as they can be said to have one, is the sun. He dispenses to them light and heat, and in return their greatest festival is the sun dance. They multilate themselves in his honor; it is very common to find arms and valuables tied on top of a tree, or a dog or a horse tied to the body of a tree, given in honor of the shining orb. But this is no monotheistic belief, but rather a pantheism that venerates any conspicuous force.

The ruling guiding power of an Indian is his medicine. This is contained in a sack made from the skin of some animal, which he considers of good omen to himself. In this he places his fetish. It may be a weed, or a rock, or a trinket, and I once knew a very prominent Indian to have buffalo dried dung for his medicine.

Their ideas of life after death are very vague, but the general belief is that it is gloomy and unsatisfactory. Their conception of the joys of futurity are fairly presented in the answer of the shade of Achilles to the consolation of Ulysses:

> "Talk not of ruling in this dolorous gloom,
> Nor think vain words (he cried) can ease my doom.
> Rather I'd choose laboriously to bear
> A weight of woes, and breathe the vital air,
> A share to some poor hind that toils for bread,
> Than reign the sceptred monarch of the dead."

The dead body is painted and furnished with arms and food left on his grave. He is rolled and swathed in wrappings to exclude the air, and each body is placed on a separate scaffold, high enough to be out of the reach of wild animals. His feet are placed to the rising sun and his medicine buried with him. In mourning for the dead the relatives usually cut off the hair, and if the dead has been of any importance, they usually cut off one or more fingers in his honor.

If an Indian is killed in a quarrel his relatives are usually appeased by payment. I remember once a fancy, overbearing young Assinaboine buck came into the Milk River Agency and bent his bow and arrow on the agent's pet dog. The agent warned him if he shot the dog he would kill the Indian. The young buck shot his arrow, the agent killed him. We expected to have some trouble, but the grief-stricken father came forward on behalf of the relatives and claimed that, in consideration of the young man being such a good buffalo runner, the agent must pay for the loss of such a person a red blanket, a piece of calico and four pounds of sugar. He complied with their demands, but the vengeful relatives thereafter adopted him as their banker. The mother and other relatives of the slain young man scarcely ever met the agent without embracing him and with endearing epithets begging for something more in remembrance of the good buffalo runner.

The chief has but little authority and the office is not hereditary. He is like a prime minister, in that he must command a vote of confidence to retain his position.

The working women are usually stronger physically than the men, but the duties of the camp, all things, considered, are as evenly divided between the sexes as among the whites. The male Indian has to hunt, guard the horses, which are watched day and night, defend the camp and go to war, which means stealing horses. When horses and food are plenty, polygamy is freely and with approbation practiced. As an act of hospital-

ity, wives and daughters are freely loaned to guests and friends, but for granting favors without the permission of her liege lord, the amorous fair one is often deprived of her nose.

The strong point of the Indian is his vanity. He will spend hours with the looking glass, surrounded by admiring friends, endeavoring to trace a peculiarly becoming stripe on his painted face.

Wealth and poverty have the same distinction in the savage village as in the metropolitan city. The owner of many lodges and horses lives a life of ease. He has several wives and his children are the belles and beaus of the camp. When the camp moves many of his horses may be driven without even carrying a saddle, but that does not prevent his poverty-stricken tribesman from trudging along on foot, carrying his miserable possessions on his back. HENRY MACDONALD.

Natural History.

TO A BROWN LINNET.

A WILD, sweet note
From a little, brown throat,
As if the murmur of brooks were in it;
The song he sings
Of the wildwood rings,
And this the song of my little linnet!

Such ripples and trills!
Ah! my own heart thrills
As the quick notes hurry and hasten along;
That I too may share,
Sweet bird of the air,
Thy pure, wild melody, rich and strong!

No touch as of pain
In thy glad refrain,
Thou singest as if thy heart o'erflewed!
Nothing but gladness,
No hint of sadness,
Only joyously praising thy God!

Merrily ringing,
Cheerily singing,
Saying to the sad of heart "Be of good cheer!
God taught me to sing
The message I bring,
The bright star of hope draweth anear!"

A pure, clear note
From a tiny throat,
With the rippling murmur of streams within it;
The song he sings
Of the woodland rings,
And this the song of my little linnet!

L. A. F.

THE UNITED STATES RODENTIA.

[WITH AN INTRODUCTION TO THE STUDY OF THE ORDER.]

BY R. W. SHUFELDT, M.D., C.M.Z.S.

HAVING completed my sketches of the ungulate animals which occur in our United States fauna, we come next to the consideration of our Rodents, and the enumeration of them presents a very formidable array. We would naturally look for this, as the group is, generally speaking, an extensive one in most countries, and Professor Flower says of it, that "the Rodents form a very compact order, readily distinguished by their large chisel-shaped incisors, and by the absence of canines. They include by far the greatest number of species (over 900), and have the widest distribution of any of the orders of terrestrial mammals, being in fact cosmopolitan, although more abundant in some parts, as in South America, which may be considered their headquarters, than in others, as in Australia and Madagascar, where representatives of a few genera of one family (*Muridæ*) only are found, thus contrasting remarkably with the *Insectivora*, which constitute at least half of the mammalian fauna of Madagascar, but are without living representatives in South America."

In the present contribution it will be my aim to give the reader a general sketch of the leading structural characteristics of the Rodentia, with other matters pertaining to the group as a whole. I will also present the entire Order, as it is given in the Provisional "List" of the U. S. National Museum, so that after this has been done we may consider ourselves at liberty in future contributions to illustrate the Order by life histories of the most prominent species of the various genera and families, and this, too, without constantly referring back to the "List."

To continue, then, this latter we find the Order Ungulate followed by the

ORDER RODENTIA. RODENTS.

SUBORDER SIMPLICIDENTATA.

Family SCIURIDÆ. *The Squirrels.*

Arctomys printosus, Gmelin. Hoary Marmot. Columbia River northward to Alaska and (?) eastward to Hudson's Bay.
Arctomys monax (Linné), Schreber. Woodchuck. Eastern region of the United States and northward.
Arctomys flaviventer, Aud. and Bach. Rocky Mountain Marmot. Texas, Sonoran region and northward in the Rocky Mountains.
Cynomys columbianus, (Ord.) Allen. Western Barking Squirrel; Western "Prairie Dog." Rocky Mountain region.
Cynomys ludovicianus, (Ord.) Baird. Missouri Barking Squirrel; Missouri "Prairie Dog." Central region from 49° N. lat. southward into Mexico.
Tamias striatus (Linné), Baird. Striped Squirrel; Common Chipmunk. Eastern region of the United States to Canada.
Tamias lateralis, (Say) Allen. Say's Chipmunk. Central region west of Kansas and Nebraska and northward.
Tamias asiaticus borealis, Allen. Northern Chipmunk. Northwestern North America southward to the United States. Europe. Asia.
Tamias asiaticus townsendi, (Bachman) Allen. Townsend's Chipmunk. Northern California to British Columbia.
Tamias asiaticus pallidus, Allen. Pale Chipmunk. Plains of Upper Missouri and Yellowstone Rivers and Great Basin.
Tamias asiaticus quadrivittatus, (Say) Allen. Rocky Mountain Chipmunk. Central region west of the Rocky Mountains. Southern California region and Northern Mexico.
Tamias asiaticus dorsalis, (Baird) Allen. Gila Chipmunk. New Mexico, Nevada and Arizona.
Tamias harrisi, (Aud. and Bach.) Allen. Harris's Chipmunk. Sonoran and Lower Californian regions.
Spermophilus grammurus grammurus, (Say) Allen. Rocky Mountain Lined-tailed Spermophile. Colorado and Western Texas, southward into Mexico and westward to the Sierra Nevadas.
Spermophilus grammurus douglassi, (Richardson) Allen. Douglas' Lined-tailed Spermophile; Oregon "Ground Squirrel." Washington Territory to northern California.
Spermophilus grammurus beecheyi, (Richardson) Allen. California Lined-tailed Spermophile; California "Ground Squirrel." California and southward into Mexico.
Spermophilus empetra empetra, (Pallas) Allen. Parry's Spermophile. Northern North America.
Spermophilus empetra erythroglutæus, (Richardson) Allen. Red-throated Spermophile. Northern North America.
Spermophilus empetra kodiacensis, (Allen). Kodiak Spermophile. Kodiak, Alaska.
Spermophilus richardsoni richardsoni, (Sabine) Allen. Richardson's Spermophile. Northwestern United States northward.
Spermophilus richardsoni townsendi, (Bachman) Allen. Townsend's Spermophile. Northwestern United States.
Spermophilus obsoletus, Kennicott. Kennicott's Spermophile. Northern Central Region.
Spermophilus mollis, Kennicott. Short-tailed Spermophile. Central region from Rocky Mountains westward.
Spermophilus spilosoma, Bennett. Sonoran Spermophile. New Mexico and Texas to Mexico.
Spermophilus tereticaudus, Baird. Fort Yuma Spermophile. Fort Yuma, California.
Spermophilus mexicanus, (Licht.) Wagner. Mexican Spermophile. Southern Texas into northeastern Mexico.
Spermophilus tridecimlineatus tridecimlineatus, (Mitchell) Allen. Eastern Striped Spermophile. Central and eastern regions to Ohio.
Spermophilus tridecimlineatus pallidus, (Mitchell) Allen. Pale Striped Spermophile. Northwestern portion of the central region.
Spermophilus franklini, (Sabine) Lesson. Franklin's Spermophile; Gray-headed Spermophile. Upper Mississippi Valley; New Jersey (introduced).
Spermophilus annulatus, Aud. and Bach. Annulated-tailed Spermophile. Western Mexico.
Sciurus hudsonius hudsonius, (Pallas) Allen. Eastern Chickaree. Red Squirrel. Eastern and central regions east of the Rocky Mountains, northward to Alaska.
Sciurus hudsonius fremonti, (Aud. and Bach.) Allen. Fremont's Chickaree. Central region, from Rocky Mountains westward and north to southern Wyoming and Idaho.
Sciurus hudsonius richardsoni, (Bachman) Allen. Richardson's Chickaree. Western Montana and northern Idaho northward.
Sciurus hudsonius douglassi, (Gray) Allen. Douglass's Chickaree. Pacific region from central California northward.
Sciurus carolinensis leucotis (Gapper) Allen. Northern Gray Squirrel. Eastern region.
Sciurus carolinensis carolinensis, (Gmelin) Allen. Southern Gray Squirrel. Austroriparian region, Mexico and southward.
Sciurus carolinensis yucatanensis, Allen. Yucatan Gray Squirrel. Yucatan.
Sciurus niger cinereus, (Linné) Allen. Northern Fox Squirrel. Atlantic coast from southern New England to Georgia.
Sciurus niger niger, (Linné) Allen. Southern Fox Squirrel. Maryland to Louisiana.
Sciurus niger ludovicianus, (Custis) Allen. Western Fox Squirrel. Basin of the Mississippi and tributaries.
Sciurus fossor, Peale. California Gray Squirrel. Pacific region, from Oregon southward.
Sciurus aberti, Woodhouse. Albert's Squirrel. Colorado and Arizona to northern Mexico.
Sciurus arizonensis, Coues. Arizona Squirrel. Arizona to Mexico.
Sciurus aureogaster, F. Cuvier. Red-bellied Squirrel. California to Guatemala.
Sciurus griseoflavus, (Gray) Alston. Mexico to Guatemala.
Sciurus hypopyrrhus, Wagler. Fire-bellied Squirrel. Mexico to Panama.
Sciurus deppei, Peters, Deppe's Squirrel. Mexico, Guatemala and Columbia.
Sciurus æstuans rufo-niger, Linné) Allen. Nicaragua to Brazil.
Sciurus chrysurus, Pucheran. Panama to Columbia.
Sciurus variabilis, Geoffrey. Peruvian Squirrel. Panama to Bolivia.
Sciuropterus volucella hudsonius (Gmelin), Allen. Northern Flying Squirrel. Northern part of California and Pacific regions to the Rocky Mountains and northward.
Sciuropterus volucella volucella (Pallas), Allen. Southern Flying Squirrel. United States except the northwestern portion, Mexico and Guatemala.

Family HAPLODONTIDÆ. *The Sewellels.*

Haplodon rufus (Raf.), Coues. Sewellel. Pacific Coast from northern California northward.

Family CASTORIDÆ. *The Beavers.*

Castor fiber, Linné. Beaver. North American generally; Hudson's Bay to Mexico.

Family MURIDÆ. *The Mice.*

Fiber zibethicus (Linné), Cuvier. Muskrat. North America.
Neofiber alleni, True. Round-tailed Muskrat. Southern Florida (Georgiana).
Cuniculus torquatus (Pallas). Coues. White Lemming. Arctic America, Greenland, and corresponding latitudes of the Old World.
Myodes obensis, Brants. Lemming. Northwestern North America, Asia.
Synaptomys cooperi, Baird. Cooper's Mouse. Indiana, Illinois, Kansas, Minnesota, Oregon and Alaska.
Evotomys rutilus (Pallas), Coues. Red-backed Mouse. Circumpolar regions.
Evotomys rutilus gapperi (Vigors), Coues. Gapper's Mouse. Northern frontier of United States from ocean to ocean, Nova Scotia, south to Massachusetts.
Arvicola pinetorum (Le Conte), Baird. Pine Mouse. United States east of the Mississippi from Massachusetts southward, Kansas, Oregon and Mexico.
Arvicola quasiater, Coues. Mexico.
Arvicola austerus, Le C. Prairie Meadow Mouse. Western States and adjoining Territories, Louisiana.
Arvicola austerus curtatus, (Cope). Western Prairie Mouse. United States west of the Mississippi.
Arvicola oregonus, Bachman. Oregon Meadow Mouse. Pacific coast.
Arvicola riparius borealis, (Rich.) Coues. Little Northern Meadow Mouse. British America.
Arvicola riparius riparius, (Ord). Common American Meadow Mouse. All North America.
Arvicola xanthognathus, Leach. Chestnut-cheeked Meadow Mouse. North America north of the United States.
Arvicola townsendi, Bachman. Townsend's Meadow Mouse. Oregon and Washington Territory.
Arvicola mexicanus, De Saussure. Mexico.
Hesperomys palustris, (Harlan) Baird. Ricefield Mouse. South Atlantic and Gulf States; Kansas, Mexico and Guatemala; West Indies.
Hesperomys couesi, Alston. Mexico and Guatemala.
Hesperomys leucogaster, (Max zu Wied). Missouri Mole Mouse. Region of the Upper Missouri, Red River of the North.
Hesperomys torridus, Coues. Arizona Mole Mouse. Arizona.
Hesperomys leucopus leucopus, (Le Conte) Coues. White-footed Mouse. United States generally.
Hesperomys leucopus gossypinus, (Le Conte) Coues. South Atlantic States; Kansas.
Hesperomys leucopus sonoriensis, (Le Conte) Coues. Western Central North America from Alaska to Mexico.
Hesperomys leucopus cremicus, (Baird) Coues. Desert Mouse. Valley of the Gila and Colorado Rivers.
Hesperomys michiganensis, (A & B) Wagner. Michigan Mouse. Upper Mississippi Valley.
Hesperomys californicus, (Gambel) Baird. Parasite Mouse. Southern California and Mexico.
Hesperomys aztecus, De Saussure. Aztec Mouse. California to Mexico.
Hesperomys mexicanus, De Saussure. Mexico.
Hesperomys aureolus, (Aud. & Bach.) Wagner. Red Mouse; Golden Mouse. Central and Southern States to Mexico.
Hesperomys melanophrys, Coues. Black-eyed Mouse. Southern Mexico.
Hesperomys tequina, Alston. Guatemala.
Hesperomys nudicaudus, Peters. Guatemala.
Hesperomys panamensis, Gray. Panama and Colombia.
Hesperomys sumichrasti, De Saussure. Mexico and Guatemala.
Hesperomys pilorides (Desmarest). Antilles.
Ochetodon humilis (Bach.), Coues. Little Harvest Mouse. Mississippi Valley and Gulf States to Mexico.
Ochetodon longicauda (Baird), Coues. California? Guatemala.
Ochetodon mexicanus (De S.), Coues. Louisiana to Mexico and Guatemala.
?Ochetodon montanus, Baird. (Doubtful species.) Rocky Mountains, lat. 39°.
Sigmodon hispidus, Say and Ord. Cotton Rat. Southern United States to Panama.
Neotoma cinerea (Ord), Baird. Bushy-tailed Wood Rat. Western and Northwestern North America; eastward to Hudson's Bay, Nebraska and Colorado; southward to New Mexico and California.
Neotoma floridana (Ord), Coues. Wood Rat. Southern United States and northern Mexico. Rarely northward to Massachusetts and northern Missouri.
Neotoma fuscipes, Cooper. Dusky-footed Wood Rat. California and northern Mexico.
Neotoma ferruginea, Tomes. Mexico and Guatemala.

Family GEOMYIDÆ. *The Gophers.*

Thomomys clusius, Coues. Rocky Mountain Pocket-Gopher. Rocky Mountains.
Thomomys talpoides talpoides (Richardson), Coues. Northern Pocket-Gopher. Central region and northward.
Thomomys talpoides bulbivorus (Richardson), Coues. Pacific Pocket-Gopher. Pacific region.
Thomomys talpoides umbrinus (Richardson), Coues. Southern Pocket-Gopher. Lower California and Sonoran regions. Southern central region. Texan district.
Geomys tuza (Ord), Coues. Salamander. Florida Pocket-Gopher. Georgia, Florida and Alabama.
Geomys bursarius (Shaw), Richardson). Common Pocket-Gopher. Eastern Missippi Valley and northward.
Geomys castanops (Baird), Le Conte. Pecos. Chestnut Pocket-Gopher. Texas and New Mexico.
Geomys mexicanus (Licht.), Baird. Tucan. Mexican Pocket-Gopher. Mexico.
Geomys hispidus, Le Conte. Quackil. Central American Pocket-Gopher, Mexico and Central America.

Family SACCOMYIDÆ. *The Pouched Rats.*

Perognathus monticola, Baird. Mountain Pocket Mouse. Utah to northern California.
Perognathus penicillatus, Woodhouse. Tuft-tailed Pocket Mouse. Basin of the Colorado River.
Perognathus fasciatus, Max zu Wied. United States, between the Mississippi River and Rocky Mountains, northern Mexico.
Perognathus hispidus, Baird. Hispid Pocket Mouse. Tamaulipas, Mexico.
Cricetodipus parvus, Baird. Least Pocket Mouse. United States, west of the Rocky Mountains.
Cricetodipus flavus, Baird. Yellow Pocket Mouse. Rocky Mountain region southward into Mexico.
Dipodomys phillipsi ordii (Woodhouse), Coues. Ord's Pocket Rat. "Kangaroo Rat." Rocky Mountain region.
Dipodomys phillipsi phillipsi (Gray). Phillip's Pocket Rat. "Kangaroo Rat." Washington Territory to Mexico.
Heteromys anomalus (Thompson). Antilles and Trinidad.
Heteromys longicaudatus, Gray. Mexico to Venezuela.
Heteromys desmarestianus, Gray. Guatemala.

Family ZAPODIDÆ. *The Jumping Mice.*

Zapus hudsonius, Coues. North America generally.

Family OCTODONTIDÆ.

Capromys brachyurus. Jamaica.
Capromys prehensilis, Poeppig. Cuba.
Capromys melanurus, Poey. Cuba.
Capromys piloroides, Say. Cuba.
Plagiodontia ædium, F. Cuvier. Hayti and Jamaica.

Family HYSTRICIDÆ. *The Porcupines*

Erethrizon dorsatus dorsatus, (Linné) Allen. Canada Porcupine. New England and Ohio northwestward.
Erethrizon dorsatus epixanthus, (Brandt) Allen. Western Porcupine. Central California and Sonoran region, northward into Alaska, southward into Mexico.
Synetheres mexicanus, (Kerr) Alston. Mexico to Costa Rica.

Family CAVIIDÆ. *Cavies.*

Dasyprocta mexicana, De Saussure. Mexico.
Dasyprocta cristata, (Geoffrey) Desmarest. West Indies.
Dasyprocta punctata, Gray. Mexico to Costa Rica.
Dasyprocta isthmica, Alston. Costa Rica and Panama.

SUBORDER DUPLICIDENTATA.

Family LAGOMYIDÆ. *The Pikas.*

Lagomys princeps, Richardson. North American Pika. Central and Carolinian regions, from the Rocky Mountains westward, in the highest regions.

Family LEPORIDÆ. *The Hares.*

Lepus timidus, Linné. Polar Hare. Europe, North America, from Labrador northwestward to the Arctic coast.
Lepus americanus americanus, (Erxleben) Allen, Northern Varying Hare. New England and Middle States northward.
Lepus americanus virginianus, (Harlan) Allen. Southern Varying Hare. (?) Pennsylvania northward.
Lepus americanus bairdii, (Hayden) Allen. Rocky Mountains Varying Hare. Summits of the Rocky Mountains.
Lepus washingtoni, (Baird) Allen. Western Varying Hare. Northwestern North America.
Lepus sylvaticus sylvaticus, (Bachman) Allen. Wood Hare; "Gray Rabbit," "Wood Rabbit." United States generally, Mexico.
Lepus sylvaticus auduboni, (Baird) Allen. Audubon's Hare. California.
Lepus sylvaticus arizonæ, Allen. Desert Hare. Southern Arizona, Kernville, Cal.
Lepus sylvaticus nuttalli, (Bachman) Allen. Sage Hare. Central and Donovan regions, Mexico,
Lepus campestris, Bachman. Prairie Hare. Northwestern United States from Kansas westward to northern California, northward to British Columbia.
Lepus trowbridgei, Baird. Trowbridge's Hare. Pacific and lower California regions south of Oregon.
Lepus californicus, Gray. California Hare. California to Cape St. Lucas.
Lepus aquaticus, Bachman. Water Hare. Austroriparian region from Alabama southwestward into Mexico.
Lepus palustris, Bachman. Marsh Hare. Austroriparian region to Guatemala.
Lepus callotis texianus, (Waterhouse) Allen. Central and Sonoran regions, south of Oregon. Texan district. Mexico.
Lepus callotis callotis, (Wagler) Allen. Mexican Hare; Southern Jackass Hare. Southern boundary of the United States southward.
Lepus graysoni, Allen. Grayson's Hare. Mexico and Costa Rica.
Lepus brasiliensis gabbi, Allen. Central American Hare. Costa Rica to Columbia.
Lepus brasiliensis brasiliensis, (Linné) Allen. Brazilian Hare, Tapeti. Central America southward.

Since the above "List" was published I have written Dr. True to ascertain how many rodents have been added to our fauna since he published it, and in response to my request he has very kindly furnished me the desired information, and says they are as follows:

Sciurus carolinensis hippophœus, Merriam.
Tamias striatus lysteri, Merriam.
Tamias macrorhabdotes, Merriam.
Haplodon major, Merriam.
Arvicola pallidus, Merriam.
Hesperomys anthonyi, Merriam.
Hesperomys truei, Shufeldt.
Hesperomys taylori, Thomas.
Neotoma bryanti, Merriam.
Thomomys talpoides perpallidus, Merriam.
Dipodomys deserti, Stephens.

Which, as will be seen, forms quite an extensive addition, and which brings the "List" given fully up to the present writing.

From this formidable array of North American rodents it will be seen that we have actually in our United States fauna no less than three species of marmots, including the well-known woodchuck of the Eastern States; two species of "prairie dog" or barking squirrel; eight species of those gophers known as spermophiles; thirteen true tree squirrels, and finally, to complete this handsome family, two lovely species of flying-squirrels. We have a sewellel and the beaver; with the *Muridæ* represented by two muskrats, two lemmings, no less than twenty-

three different kind of mice, to which several new species have been added since this "List" was published, and three wood rats. Seven true gophers are to be found in our fauna (*Geomyidæ*), seven pouched rats and mice (*Saccomyidæ*), and a jumping mouse (*Zapus*).

Then we have two porcupines, a pika, and finally to complete the list no less than sixteen species of rabbits and hares, and even now, a new species of rodent is being added from time to time to this interesting group.

Among the United States representatives of this extensive order we have animals of the most widely diverse habits, as for example the rabbits, woodchucks and gophers; arboreal rodents, as the tree squirrels, represented by the gray squirrels; natatorial rodents, as the beaver and muskrat: and we may add aerio-arboreal rodents, as for example the flying squirrels. Our largest rodents are the porcupines and the beaver, and the smallest some of the diminutive and interesting pouched mice.

Passing to the characteristic structural points as exhibited by the *Rodentia*, we observe among the most striking of these to be certain peculiarities in their teeth. They all lack the canines, while, on either side, the uninterrupted row of molars and premolars may be with or without roots, and their crowns showing either a tuberculated or laminated superior surface. But still more notable are the incisors, for they never exceed two in the lower jaw, and generally a similar number above. These incisor teeth enjoy a continuous growth from persistent pulps, the upper and lower pair worn upon each other, and their cutting edges are kept permanently sharp and ever ready for use; but should the lower pair, for instance, by any means become lost or misdirected, the unopposed upper pair continue to grow on uninterruptedly, curve backward into the mouth, the roof which they may even pierce and enter the skull. Many of us have observed such deformed teeth in rabbits, or as I have also seen them in a beaver and a woodchuck.

As a general thing the collar bones (clavicles) are well developed in these animals, while the plan of their feet may be plantigrade, or somewhat removed from it, with five toes, as a rule, on each foot, and these armed with strong claws, although the latter may be, in some species, but feebly developed.

In the skull the orbits are not completely surrounded by bone, while in it a number of other characteristic features are to be noticed. Such forms as squirrels and chipmunks possess testes of great size, and through the order these organs may be situated either in the abdomen or they may be inguinal. According to Flower, "the uterus is two-horned, the cornua opening separately into the vagina or uniting to form a *corpus uteri;* the placenta is discoidal and deciduate; and the smooth cerebral hemispheres do not extend backward so as to cover any part of the cerebellum."

In speaking of the teeth I omitted to point out that these animals grow both a "milk" and permanent set, a plan of dentition known as the *diphyodont* type; and in most rodents the enamel of the incisors is confined to their anterior surfaces, a provision to insure their more certain attrition and sharpening from behind.

A glance at Fig. 1 will show the semicircular form of one of these incisors, and how, should it continue to grow unopposed by the corresponding tooth of the opposite jaw, it would tend to complete the circle, perhaps coming to the roof of the mouth opposite the free end of its own root. All rodents, as we know, are gnawers, and

fig. 1.

Vertical and longitudinal section through the skull of a Beaver (*Castor fiber*), showing the cerebral cavity, the greatly developed turbinal laminæ, the mode of implantation of the large, ever-growing, chisel-edged incisor, and the curved rootless molars. Drawn by the author after Flower.

fig. 2.

Side view of the skull of a Beaver (*Castor fiber*), lower jaw removed, showing teeth in the natural skull. Drawn by the author after Huxley.

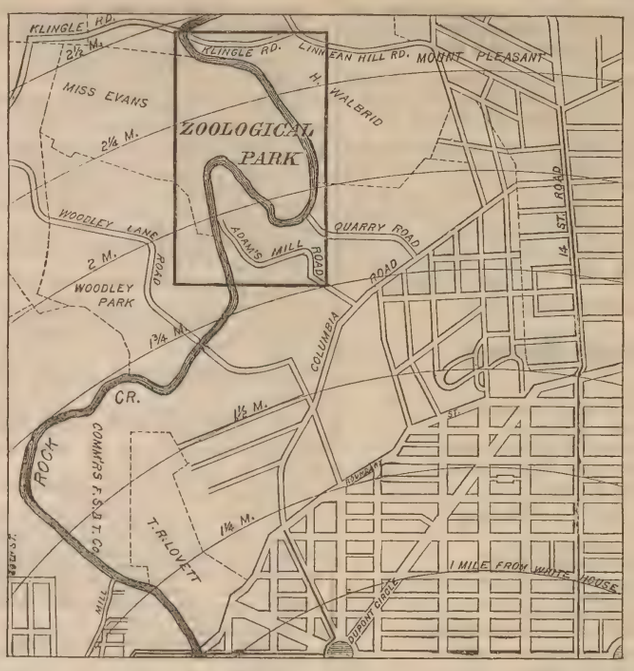

fig. 3.

Skull of Muskrat (*Fiber zibethicus*), natural size, showing very large incisor teeth, and the form of lower jaw in a typical Rodent. Drawn by the author after Flower.

they live for the most part on food that requires the exercise of this mode of obtaining it. Nuts, hard fruits, grain and similar substances hold a high place upon their diet list, while such animals as the prairie marmots eat much grass and some herbs. Mice are almost general feeders, and a year or so ago I pointed out in *Science* the enormous appetite the "prairie marmots" have for raw meat, a trait common to other rodents, and we are well aware of the muskrat's liking for mussels (*Unios*), and perhaps other shell-fish.

PLAN OF THE NATIONAL ZOOLOGICAL GARDENS, WASHINGTON.

Professor Flower well describes another interesting structure of the Rodentia when he writes that "the mouth is divided into two cavities communicating by a constricted orifice, an interior containing the large incisors, and a posterior, in which the molars are placed, the hairy integument of the face being continued inward behind the incisors. This evidently prevents substances not intended for food getting into the mouth, as when the animal is engaged in gnawing through an obstacle. In the hares and pacas the inside of the cheeks is hairy, and in some species, as in the pouched rats and hamsters, there are large internal cheek pouches lined with the hairy integument, which open near the angles of the mouth and extend backward behind the ears; in the New World pouched rats (*Geomyidæ*) the pouches open externally on the cheeks."

Last year I owned a wonderfully tame prairie marmot which had been reared by hand from a little thing no longer than my forefinger. It allowed all sorts of liberties and pranks to be played upon it without its ever thinking of biting one in return, and when picked up by the abdominal integuments, one always noticed three small papillæ protrude themselves from just within the margin of the rectum. These were the opening of a special set of glands which secrete that material which gives rise to the peculiar odor almost constantly noticeable in these animals. Other members of the group have a still more pungent scent about them, emitted from glands of a corresponding nature, but which have in the various species very diverse openings, as into the prepuce in certain mice; or within the exrectal folds as in the jerboas and rabbits; while other species show different apertures for them in the neighboring parts.

Rodentia exhibit several distinct modes of progression or locomotion, for our Hares and Rabbits, as we know, are great leapers, and progress either by short, or may be, very long leaps; *Zapus* rapidly gets over the ground by a series of graceful jumps, while the mole-mice tunnel beneath it quite as expeditiously as the veriest *Talpa*. Beavers are capital swimmers, while the flying squirrels are possessed of no mean volant powers, rendered possible by the cutaneous expansions which stretch between limb and limb on either side of their bodies. Finally, among the arboreal Squirrels we find tree-climbers of very pronounced agility and expertness.

Our rodents, as a rule, are thin-skinned animals, in which the pelage may vary all the way from the soft furry coat of a hare to the spiny and rough covering of the Canada porcupine; while their tails may exhibit very marked differences, as seen in the beautiful, wavy brush of Abert's squirrel, and the tough, naked paddle of the beaver.

Both in their skeletons and the rest of their anatomy the several families and even genera present us with much that is interesting, and from a comparative point of view, important; and, although much has been investigated in that direction, there yet remains a vast deal to be examined and carefully described and recorded. Some of our rarer forms have barely had more done for them than the preservation of their hides, by no means the most instructive part of the animal's economy.

Flower gives the typical dental formula of the order as $i \frac{1}{1}, c \frac{0}{0}, pm \frac{1}{1}$ or $\frac{0}{0}, m \frac{3}{3}$, but I prefer to allude to such points as these when we come to take up the separate representatives of the genera.

This completes what I have to say in reference to the salient characteristics of the order Rodentia as a whole, and in my next contribution I will take up the animals in the order in which they occur in the U. S. National Museum "List" as given above, commencing with an article on the squirrels or the Family *Sciuridæ*.

In closing I would add that fossil forms of rodents of great interest have been discovered both in this country and in certain parts of Europe. The most recent of these are closely allied to existing forms, as squirrels, beavers and mice. An extinct beaver has been yielded by the post-pliocene of this country, which in size far exceeds any existing species of the Rodentia, and consequently was a great deal larger than the animal of that genus we have with us now (*Castorides ohioensis*). Many other types have come to light which point to more generalized forms, but it yet remains to discover extinct species which will reveal the line of descent of this order, and define its true ancestry beyond all cavil.

Zoölogists have paid no little attention to the order Rodentia, as a comparatively rich bibliography will attest, and indeed so extensive is the list of works dealing with all that has reference to this, the largest of all our orders of mammals, that it would quite transcend the limitations of space for the present article, even to enumerate a partial list of them here, so that assistance will of necessity have to be omitted.

Possibly the opportunity may offer me to give a few of these works in the separate articles on the rodents which I trust to contribute to the columns of Forest and Stream on future occasions.

NOTES FROM A CANOE.

Editor Forest and Stream:

On May 28, while descending a small Delaware creek in my canoe, an incident happened which struck me at the time as being somewhat out of the ordinary. Being very hot, I had stopped my canoe and was feeling about in the water, when my hand came in contact with some inert substance that I took to be a large water plant bulb. I slowly drew it to the surface, meanwhile pressing and fingering it. As I was about to lift it from the water I was greatly surprised by its suddenly splashing and struggling. With a quick movement I threw it into the boat, and then saw that it was an 8in. mullet. On speaking of the matter to a friend he suggested that the fish was asleep.

On the same trip I was very much impressed by the hiding powers of the chipmunk. A female, chased by a male, stopped on the bank within ten feet of me. The ground was sloping toward me, entirely free from underbrush, and there were but few leaves. I had been looking directly at the chipmunk, yet when she stopped she disappeared as completely as if possessed of the legendary magic. The male, who was within four feet of her, began searching everywhere. He was evidently as much at a loss as to her whereabouts as I was. For about a minute he hunted diligently, often running almost over the spot where I had seen the female last, then he suddenly detected her and the chase began again.

The only explanation that I could find was that the chipmunk hid under a leaf, for there was no hole or cavity there to conceal her. J. B. B.

Hartford, Conn.

An Aged Turtle.—The papers of July 30 contained this note, dated Lancaster, Pa., July 29: "In 1810 Henry Mogel, a farmer of Centre Township, Berks county, found a land turtle in one of his fields, and cut his name and the year on the under part of its shell. His son, the present treasurer of Berks county, lives on the same farm. A few days ago he was passing through the field and he found the turtle, with the name and date plain on the shell, within a few feet of the spot where the turtle was first found, 78 years ago." We wrote to Mr. Mogel for confirmation of the story, and his reply was as follows: Reading, Pa., Aug. 2, 1888.—*Editor Forest and Stream:* Yours at hand; in reply I will state that the story about that land turtle is correct, and so is the date. —A. F. Mogel, Dep. Co. Treas.

Recent Arrivals at Philadelphia Zoological Garden.—Purchased—Two Geoffroy's marmosets (Midas geoffroyi), three gray wolves (Canis occidentalis griseo-alba), one black bear (Ursus americanus), two yellow-throated parakeets (Brotogerys tovi), one blue linnet (Linaria cannabina), one blue-bonnet parrakeet (Psephotus hæmatogaster), one blue grosbeak (Goniaphea cærulea), two large alligators (Alligator mississippiensis), six horned lizards (Phrynosoma cornuta), one royal python (Python regius), five naked-necked iguanas (Iguana delicatissima), two tree boas (Epicrates angulifer) and one pine snake (Pityophis menanoleucus). Presented—Two great horned owls (Bubo virginianus), two wood ducks (Aix sponsa), two common bitterns (Botaurus minor), two American magpies (Pica melanoleuca), one pea hen (Pavo cristata), two horned lizards (Phrynosoma cornuta), two mud turtles (Cinosternum pennsylvanicum), one musk turtle (Aromochelys odoratus), one Muhlenberg's terrapin (Emys muhlenbergii), one copperhead snake (Ancistrodon contortrix), seven painted terrapins (Chrysemys picta), one pine snake (Pityophis menanoleucus), two horned rattlesnakes (Crotalus cerastes), and one land tortoise (Cistudo clausa). Born—three beaver (Castor fiber canadensis), one elk (Cervus canadensis), and one hybrid deer, Carlacus mexicanus mother, and C. virginianus father.

Game Bag and Gun.

Antelope and Deer of America. By J. D. Caton. Price $2.50. Wing and Glass Ball Shooting with the Rifle. By W. C. Bliss. Price 50 cents. Rifle, Rod and Gun in California. By T. S. Van Dyke. Price $1.50. Shore Birds. Price 50 cents. Woodcraft. By "Nessmuk." Price $1. Trajectories of Hunting Rifles. Price 50 cents. The Still-Hunter. By T. S. Van Dyke. Price $2.

THE GROUSE AND SQUIRRELS.—III.*

Editor Forest and Stream:

Uncle John's predictions regarding the weather had proved to be correct, for when we awoke in the morning the first thing we heard was the rain pouring down in torrents; and it seemed anything but encouraging to a pair of eager hunters like Jack and yours truly. The smell of Uncle John's pipe and the noise made by him as he rattled around with the old kitchen stove, soon brought us to our feet; and in a few moments we had greeted the old man with a hearty good morning. "Well, boys," said he, "this may be a good day for fishing, but I guess you will not burn much powder, unless we go up to Long Pond and see if there are any ducks around."

We tried to make the best of it, hoping that it might light up a little after breakfast; but no, the darkness grew to blackness, everything was soaked, the atmosphere was so full of moisture as to be oppressive and to make breathing a difficult task. As Jack had been finding fault with his Winchester, I thought it a good time to try a little experiment to see if I could do anything to improve its shooting; and so, as he was going to reload some shells, I asked him for a few to work with. I had an "Ideal" reloading tool, with mould, stamped "for Colts lightning rifle, .32-cal." Rummaging around in the shop we found some old type and mixed it with lead in proportion of one part of type to five parts lead, by weight, and ran some bullets of 100gs. each, then with some tallow filled the grooves and loaded the shells with the usual 20grs. of FFG. deadshot powder; and here is a point that is worth remembering. The improved accuracy of the rifle was apparent from the second shot which Jack fired at a target from the shop window; and after a half dozen shots we both voted the Winchester rifle to be a good one if the bullets were only hard enough and the rifle held where it should be.

After we had done with the target shooting, we heard the *caw! caw!* of some crows up on the mountain, and as Uncle J. had predicted, they soon made for the bait that he had left for them 150yds. from the barn, down in the meadow. They were soon at work, and we adjourned to the barn to give them a shot from the window. "How far is it?" I asked Uncle J. "Just thirty rods, measured with a rod pole," he answered; and as Jack insisted on my trying the first shot, I brought the little .22 c.f. rifle to bear on them, with the sight set for thirty rods. It was pretty dark, but the ivory bead of the Lyman front sight only showed up the better; and with the greatest care and most deliberate aim from a good rest I fired and—missed him clean. In fact, I shot over him so much, that together with the fact that the report was very slight, he did not move, but kept on pecking away at his feast. That I felt a little—just a little bit cheap, I will not deny; but I invited Jack to go ahead and sat down to think the matter over. What shall I do? was my mental inquiry. Jack declined the shot and urged me to try again, so something must be done, and that quickly, too, before the crows were scared away. This is what ran through my head then, "The light is bad, and the atmosphere is very light; with my sights where these are I shoot too high." So I run the wiping rod through the barrel, put in a cartridge, and with a twist on the Lyman rear sight I lower it half a point; then with a careful aim the trigger is pressed, and as the smoke clears from before my eyes I have the satisfaction of seeing the old crow give a jump and with one convulsive flap of his wings tumbled over dead as a herring. The others started and flew a short distance, then circled around and came back to their dead comrade: and before I had once thought of such a thing Jack commenced to get in his work. He killed the first one dead in his tracks, and then, as the others started toward the mountain straight away from us, he began to work that lever for all it was worth—crack, crack, crack, crack—and when at the fourth shot another one tumble, Jack said that was "good enough" for him, and stopped shooting. Uncle J. was as wild as a boy sixteen, and trembled like a leaf, he was so much excited; and, when we had a hurrah all around, and had retrieved the birds, we found that the first one was shot in the breast, the second had lost most of his head, while the third was completely split from stern to stem (to reverse the words a little); and if ever a rifleman felt proud of a good shot Jack did, and well he might, for bringing down a flying crow that is "just hurrying" away, at forty rods distance, is no mean shot.

Now for the first time we noticed that the clouds are breaking away; and after a "bite" of something for a lunch, we shouldered our rifles and started for the woods above the pond with Jim the little dog at our heels. As it was pretty wet we kept in the cart road, and as we neared the upper end of the pond, Jack said he would just look into the cove for ducks, and in less than five minutes after he left me his old Winchester commenced to work and crack, crack, crack, went the rifle, which together with Jim's barking was enough to start the hair upon any man's head. Pretty soon I heard Jim splash into the water; and when I got to the edge of the pond Jim was just bringing in a large black drake that Jack had killed with the first shot. As the sun had come out in all its glory, we thought we would take to the woods once more and look for grouse and squirrels. We had hardly done so before Jim began to jump around and whine; and in a moment more he had three ruffed grouse up in a spruce tree about forty or fifty feet from the ground. "Now," exclaimed Jack, "R. you just go for them, shoot the lower ones first and you can get them all." I believe I had just a little tinge of the fever—for I heard a very distinct pounding beneath my vest—but the little rifle came up and the first one lay fluttering on the ground, another cartridge was quickly put in and down comes the next one; and while the smoke, noise and all the rest of it were exciting enough, little Jim was yelling like a demon and trying to climb the tree. Jack said that things looked a "little suspicious" after I had shot the second one and so dropped the third one. When the third one fell he landed right on Jim's back, and such a change as came over the little fellow I never saw. He did not know what to make of it and with his tail down he shot out from there into the open as if he was on business and it was quite a while before we could get him cooled down again.

We had done well for a rainy day and had birds enough, so we went down to the "oak pasture" to look for gray squirrels. Jim soon had one started, and after chasing him on the wall for about 100yds. he had him treed in an oak. We looked the tree over a while but could not see anything of him, and Jack wanted to give it up, but I told him that Uncle J. said that "Jim never told a lie;" and persevering in the search I soon caught a glimpse of something that looked like fur up on the top of a limb. Yes, it is he, but oh! how flat he lies and how he hugs the limb. Well, old fellow, let us see how much longer you will stay there. Through the large hole in the Lyman sight the little ivory ball is brought in line with his head, there is a whip-like report, and the squirrel comes tumbling to earth with the top of his head shattered. A thrill of savage exultation, a pang of remorse for the death of the bright little fellow and in he goes into the bag. Yes, we are sorry for the death of the little innocent creatures, and why do we kill them? Why do we spend many dollars in time and equipments? Why do we travel miles and miles through bush and bramble to find these beautiful birds and animals, and then, when we have feasted our eyes on them for perhaps not more than a second, send them to the earth mangled, without beauty, without motion and without life? I do not know, I have not killed a game bird nor gray squirrel for twenty years that I was not sorry for it and wished I had not.

As we moved on we found the red squirrels in abundance, and here it was that Jack found that the bullets we had moulded were excellent for squirrel shooting. He killed about a dozen of them without a miss, while the writer—well, he killed some, and some—that is, most of them that were hit he killed, but Jack hit all of his and killed them, too, and one thing we noted unanimously, that is that the .22-10-45 and the .32-20-100 are the two best cartridges in use for small game at short range.

Then as the sun was getting low in the west and we turned our steps toward the house, we began to realize that our vacation was over, and while we were to go back to the city and to business once more, we had something to lay away in our memories as well as renewed vigor for the present, and with a new lease of life we bid good-bye for a while to the old farm and the people that have made our trip so pleasant. IRON RAMROD.

*See FOREST AND STREAM, April 26, 1888.

TURKEYS IN THE NATION.

Editor Forest and Stream:

The story of an old hunting trip is sometimes of as much interest to the reader as that of one of recent date; so I thought perhaps the readers of FOREST AND STREAM would be interested in a deer and turkey hunt that the writer, in company with three others, once had in the Nation, or Indian Territory. It was in the fall of 1879. I was second miller in the City Mill, at Wellington, Kans. I procured a leave of absence for two weeks. My family was in a claim near Caldwell, about five miles from the State line. My wife's brother was farming the claim, and on my arrival home I found him (whom I will call Jake) and two of our friends, lately from Pennsylvania, with plans cut and dried for a turkey hunt down on the Big Turkey and Cimarron, or Red Fork, as we all called it then. Loading our outfit in my wagon, with a good team of horses hitched on, we were soon off, via Caldwell and the Pan-Handle Stage route. Jake and Cal were armed with shotguns for turkeys, while Bill and myself had repeating rifles, and expected to pay our respects to the deer.

It was in the month of November and the weather and roads were fine, so we made good time, and had some sport shooting quail and chickens on the way down, and on the afternoon of the third day we crossed the Big Turkey, a few miles above its mouth, and turned down stream. The stream here runs through a small valley or second bottom, as we call it, in which was a heavy growth of brush and timber. Some of the timber was very large and heavy, consisting of oak, ash, pecan, cottonwood, etc. After leaving this second bottom there was a narrow strip of prairie, crossing which one enters the black jacks—a small oak thicket among which the turkeys roamed in great flocks, living on the nuts from the black jacks. At night they would come to the bottom by the thousands to roost in the big cottonwoods, along the banks of the creek, and also to get water.

After crossing the creek I took my gun and told the boys to drive on down the creek until they found a good camp ground with plenty of feed for the horses, and I would take a little scout and see what the prospect was. I had not yet got out of hearing of the wagon when I saw a big flock of turkeys stretching their necks to see what was up. One fine fellow hopped up on a dead treetop, which gave me a fine mark. I dropped my Winchester on him and pulled, when up went the whole flock, including the one I had shot at. I thought it strange that my turkey did not stay with me, but as the flock came down again a few hundred yards away I followed on, and I soon came to my turkey with wings all spread out but stone dead, showing that he had flown until life was extinct. As it was now near sundown and no meat in camp for supper, I shouldered my turkey and started for camp. On my way in I saw a fine deer, but I did not get a shot. Arriving at the creek I found the wagon trail and followed it to camp.

The boys were camped in one of the nicest spots for a hunter's camp it has ever been my good fortune to strike, with everything a hunter could wish, including good grass for the horses. After camp was prepared I told Jake and Cal to take their shotguns and go up the creek, while Bill and I got the supper, for I thought they might possibly get a turkey or two as they came in to roost. After a short time we heard their guns, and long before we had the turkey cooked they arrived in camp, each toting four big fat turkeys. Cal said he thought they could have killed a wagon-load had they desired to do so, and if I was to judge from the gobbling and noise made the next morning, and from the number of turkeys I saw going from the bottom to the jacks, I would say that more than a thousand turkeys roosted that night within a half mile of our camp.

We shot a number of big fat fellows in the morning near camp. It then become so warm we decided not to shoot any more turkeys for fear they would spoil, so Jake and Cal said they would remain in camp and dress the turkeys, while Bill and I took a hunt for deer. We learned to-day that a band of some 300 Indians from Ft. Reno had been camped here for some time, and had only left the day before we arrived. From some cause unknown to me they will not kill the turkeys, but give all their time to hunting deer, while the squaws jerk and dry the venison on racks placed some two feet above the ground, under which they place a slow fire—more smoke than fire. Here we found large numbers of these along the banks of the creek, and in dressing our turkeys the boys cut all the flesh off the turkeys they could and spread it on the Indian racks, sprinkled it lightly with salt, and we soon had a fine lot of jerked turkeys. The "drum-sticks" we cooked for camp meat.

During the first day's hunt, Bill and I saw some deer, but did not get any. Bill killed a large bobcat down on the bottom below camp, and we took off his pelt and brought it along with us, as well as one very large gobbler which Bill shot because he had such a big long beard. I think he must have been an old timer. Our camp was a merry hunter's camp that night, and we rolled up in our blankets feeling full and happy.

At the first break of day Cal awoke us all by a loud "Gobel-lobel-lobel-lobel;" the camp was soon astir, and breakfast over, horses watered and picketed, and everything in order, we all struck out for the black jacks. I soon found a fine flock of turkeys, and sat down to watch them and see the old Toms chase the smaller ones about and get as many hens under their care as possible. While sitting here engaged in this very pleasant pastime, I saw a young deer (yearling buck) coming directly through the flock and toward me. This was good enough for me, so I sat still and let him come. When within about a hundred yards of me, he stopped to look at some turkeys that came flying in, and then, as if he thought all was not just right, he turned and walked away on his trail. Seeing my chance for a good shot about to fade away, I pulled on him, but overshot, and he, not knowing whence the shot came, stopped and turned broadside to me. I gave him another shot, this time with better success, as he came down with a broken back. After dressing him, I thought I would tote him to camp, as he was not very large, which I succeeded in doing, although he was an awful big deer by the time I got him hung up in a tree at camp.

The other boys had poor success after deer, but all came in loaded down with turkeys, for if any of us came in empty he was laughed at as a poor shot and no good at hunting if he could not get so much as a turkey.

The following day, the programme for the day's hunt was the same as the day just passed, and each fellow took his own course. As I was walking along through a grassy opening I saw two small deer heads sticking up out of the grass under a small oak; it was a pair of spring fawns, lying with their heads and shoulders together and their rumps in opposite direction. Thinking I could get them both at one shot I pulled on the shoulder of the nearest to me and killed it dead, but the other one bounded in the air—I should think as high as my head—and was off like the wind. I was so amused at his performance that I forgot that I had a repeating rifle until he was disappearing in the timber. This deer was further from camp than the one I got on the day before, but I started with him. When within about a mile from camp I met one of the boys and he gave me a lift, so we got to camp in good time. Bill wounded a deer to-day, but did not get it.

The usual quota of turkeys came in again that night, and our camp was a veritable hunters' camp, with two fine deer hanging in the trees, and the small saplings bending down with good fat turkeys, while the savory smell of roast turkey came from the Dutch oven at the camp-fire. Ye poor dyspeptics, think of this. Could you be here a few days you could eat like a wood chopper. The next day we got no deer and the turkeys were somewhat wilder, for a party of hunters from Arkansas City pulled in here yesterday and went at them as if they expected to exterminate every turkey in the Nation in a few days, which I guess they came very near doing. I got nothing for my day's tramp, and was trudging along up the creek bottom just at dusk when I saw an object up in an elm tree some seventy-five yards away, which I took to be a big gobler roosting alone. It was too dark to see my sights, but I thought I would make him get out of that any way, so I gave him a random shot, at which he stood up on the limb and said "*quit-quit.*" I walked up a few rods and gave him another shot, when he walked out further on the limb and again told me to "*quit,*" but I had no notion of quitting unless he got off that. It was now so dark he could not see me very well, so I walked up near the tree and gave him another ball. This time he flew and went across the creek, where there was no timber, but high grass. I heard him go down there with a loud flop, and I knew he was hit, so I went hunting for a log to cross the creek on, as it was quite deep here. I soon found one and crossed over. After hunting for him a long time I gave it up and started for camp, and had gone but a short distance when I again heard him flop, and looking around I saw him making his last struggles. I think he was the largest turkey I ever killed; he made a good load for me to camp.

Some time after dark we concluded Jake must be lost as he had not got in, so we fired off our guns, but got no reply, for Jake was not lost, but was waiting for a flock of turkeys to get to roost, as we learned later when he brought in two fine ones.

The next morning we were up before day and Cal and I started off to the roost for a few more turkeys, as we wanted to start for home that day. We each got one fine one and were back to camp for breakfast. After breakfast the horses were brought in, fed and harnessed, and the outfit loaded in the wagon and a start made for home. A short distance up the creek, a white-tail fawn was jumped up, and he received a warm salute from shot and ball, but waved his white flag at us, as he passed over the ridge unhurt. On our way home we passed by the graves of three freighters killed by the Indians a few years before.

That night we camped on Salt Fork, and such a yelping and howling as was kept up there all night by the coyotes I never heard before nor since, but they were smart enough to be all out of range of our guns at

daylight. The following night we camped near the stage ranch on Pole Cat, and, as we had been living on salt slap jacks for a few days we thought a few hot biscuits would go fine; so I took some flour and a nice turkey, and went over to the ranch and made a trade with Mrs. Todd, giving her the turkey in return for the baking. Now if you don't think we had a good supper that night you surely are a little off. The next day we rolled into Caldwell. We arrived home that night, and all felt the pleasant consciousness that we had done our duty, and had been well repaid. A. A. KNOTT.

BERTHOUD, Colo.

ADIRONDACK ABOMINATIONS.

Editor Forest and Stream:

A word as to the destruction of the forest, the game and the fish. I found on going in this spring that the lumbermen had penetrated as far as Third Pond, which is within six miles of Mud Lake, about the very center of the wilderness. They had cut the best of the pine and spruce, taking only the butts, and leaving the woods a tangled mass of limbs and tops. They had three camps in the vicinity, and three dirtier, filthier places never existed in the woods. I understand there were between 200 and 300 of them. They went in in the fall, and cutting down the woods was not all the work they did. We found secreted one of their trawling lines with over 100 hooks on it, with which they had been fishing in Spring Pond before it froze up. I judge it was used there, because Mr. Buriel caught a trout there with one of these trawling hooks firmly imbedded in his jaw. Again we found a large amount of deer hair around these camps. I have every reason to think these camps furnished themselves with deer meat the entire winter.

I supposed the State of New York owned something of the wilderness, and that they would sell no more of it. But from the fact that the lumbermen are cutting twenty and thirty miles beyond Big Tupper Lake, I should say the State had but little to say in the matter. I have been in the woods for many years and have never caught fish nor killed any game that I did not need for my table.

This year in leaving Spring Pond I said to Nichols, "This is probably the last time you and I will ever go over this trail together, for the vandals have ruined the woods."

"No, don't say that," he replied, "for we have been in these woods together too many years to think of giving it up now."

When I broke camp and we paddled out of the pond into Bog River I turned and with a very sad heart, took a last look at my camp, where I had spent so many pleasant seasons. Why should I return? The vandals are destroying the forest, the game and the fish. Excuse my wandering from the subject of your letter, but I could not very well help it. WALTER AIKEN.

FRANKLIN FALLS, N. H.

DR. BAILEY AND HIS DEER.

IN connection with the recent articles on Adirondack lawlessness the case of Dr. Bailey is of interest. It is thus reported in the Utica, N. Y., *Herald:*

"Through its secret service agents, the Utica Fish and Game Protective Association obtained information of deer slaughter up at Long Pond, east of Lowville. State Game Protector Drew was accordingly sent thither, and succeeded in bringing into Lowville Dr. Bailey, of Cleveland, Ohio, upon charge of killing six deer within a few days past. Prosecution was commenced by District Attorney Ryal at Lowville, and the Doctor was taken into custody on an order of arrest by the sheriff of Lewis county. While pretending to be telegraphing for bail he obtained a livery and made his escape, going back into the woods. At last accounts the sheriff was in hot pursuit, and it is thought he cannot escape. Dr. Bailey is a son of James Bailey, of this city. His wife is there with him, and is said to have participated in the violations of law by being out with her husband floating when some of the deer were killed. Other parties are said to be implicated, and the sequel will in due time appear. Strange to say, they were on the alert for game protectors."

A Utica correspondent writes: "The story at length would be a long one, and full as a nut of detective romance. It would be very interesting reading of how the protector had to 'play possum,' and how the wife and Mrs. Grant sounded him to discover whether he was a detective, and how he took them in, obtained their confidence and got the whole evidence, even when word had been sent in advance that detectives were coming and to 'get out quickly.' The doctor was kept away for twenty-four hours. The wife was to signal the detective by shooting at a mark. Not getting the signal they put out the hound upon a wounded deer, drove him into the lake and killed him at short range by the tail within hearing of the protector.

"The affair goes to show, as they declared, that if it had been a protector that they knew, he could not have obtained any evidence, and Mr. Drew succeeded only because he was not personally known there. Secret detective work only will accomplish the desired end. Mr. Drew has several times had equal success under the aid and efforts of this association."

LITTLE ROCK, Ark., July 31.—Wild pigeons have disappeared from this country. Up to six years ago they were very plentiful and then failed suddenly. It was customary for them to appear in October in immense flocks and stay as long as the mast lasted. Another bird that has disappeared is the paroquet. Formerly the creek bottoms were full of them. About twelve years ago they disappeared. I can give no reason for this, as no one killed them. They roosted on sycamore trees by hanging to knots by their bills apparently. They used to come into apple orchards in the summer in large flocks, and as they were just the color of the leaves it was surprising how many could get into a tree and be completely invisible. The prospects for a large crop of quail, deer and turkeys are good. The majority of people around here observe the game law, but I am sorry to say that it is not so in all parts of the State. I have been told that a circuit judge went deer driving last week, but cannot vouch for the truth of it.—CASUAL.

A PARTY is making up to visit the Ridean region on a steam yacht; and there is room for two more persons, as noted in an advertisement printed to-day.

BOYS AND BIRDS' EGGS.—A Virginia correspondent writes: "In the little town of Berryville, Va., I know of 1,500 bird eggs of all kinds of birds collected by the town boys. Is this not worse than the little sparrow would or could do? I know of a party who has eighteen partridge eggs of this season, and over two hundred of other bird eggs. It is a very common thing to hear the poor darky accused of pot-hunting and of robbing hen roosts, but for my part I can't see who is the biggest robber, the sparrow, the American boy or the negro. I can see that the negro robs the hen roost for the want of something to eat, but I can't see where the eat comes in by robbing the birds of their eggs."

DEER IN THE NORTHERN ADIRONDACKS.—A reliable correspondent reports that deer and ruffed grouse are more plentiful than usual in the region about Meacham Lake. The severe weather of last winter did not give promise of a good deer season, but in that vicinity the law was generally observed, and only one violation, near Duane, was heard of, and that lacked sufficient proof to prosecute. He thinks that the recent articles in FOREST AND STREAM concerning unlawful venison in some parts of the woods are just, but lays the blame on those who are intrusted with the enforcement of the laws. From all indications there are many deer in Franklin county.

WILD PIGEONS, Elmira, N. Y., Aug. 3.—Going down Canandaigua Lake last week, on Wednesday, I saw a flock of genuine wild pigeons flying north. Look out for them next April.—NILMAH.

JAMES PONCE, a hunter well known to all sportsmen who visit St. Augustine, Fla., has just signalized himself by killing four bears in one day.

THE ONTARIO GAME LAW.

THE only season during which the following game may be hunted, taken or killed is as follows:

Deer—Oct. 15 to Dec. 15.
Partridges—Sept. 1 to Jan. 1.
Woodcock—Aug. 15 to Jan. 1.
Snipe, rail and golden plover—Sept. 1 to Jan. 1.
Ducks of all kinds—Sept. 1 to Jan. 1.
Geese—Sept. 1 to May 1.
Hare—Sept. 1 to March 15.
The above dates are inclusive.

These may be exposed for sale for twenty days after expiration of time for killing. No eggs to be taken or destroyed at any time. No traps, nets or snares, baited lines or similar contrivances to be used. These may be destroyed by any person without liability. No contrivances described or known as batteries, swivel guns, sunken punts or night lights to be used for killing wildfowl.

Fur-bearing animals may be only taken, hunted or killed as follows:

Beaver, mink, muskrat, sable, martin, otter or fisher—Nov. 1 to May 1. Nor shall any trap or snare or other contrivance be set for them outside this season. Nor shall any muskrat house be cut, speared, broken or destroyed at any time. Any person may destroy such traps, snares, etc., so set, without any liability.

N. B.—No poison to be used in killing the animals named, and no poisoned bait to be exposed in any locality where dogs or cattle may have access to the same.

No deer dog to run at large from Nov. 15 until Oct. 15.

WISCONSIN DEER LAW.

Editor Forest and Stream:

Allow me to call attention to a misstatement of the game laws of Wisconsin published in FOREST AND STREAM, June 28, or that portion of them relating to the open season for deer in that State, which reads as follows: "Forbidden to kill * * * * * * deer, elk, moose, save only during November." When correctly written, "It shall be unlawful to kill * * * * * * any deer, buck, doe or fawn between the tenth day of November and the succeeding first day of October." Approved April 8, 1887.

There has been no session of the Wisconsin Legislature since 1887. Consequently there has been no change in the law.

For this information and a copy of the fish and game laws of Wisconsin, I am indebted to the kindness of Hon. Ernst G. Timme, Secretary of State. A. L. ROSE.

CHICAGO, July 31.

Camp-Fire Flickerings.

"That reminds me."

239.

LAST fall I went over to St. Francis county on a fishing and hunting trip. Finding game rather scarce, I was fishing on Burnt Cane Lake. While so engaged a bear came down, caught a half-grown hog, a "razor-back," that was rolling in the mud, and rushed back into the cane. I immediately followed after, thinking I had found the bear I had lost on various occasions over there. I followed him a long distance, but failed to get a shot. Tired and disgusted I started back to the lake. The cane was thick and hard to walk through, and I was walking on a fallen log. As I neared the upper end something black rushed out of the treetop and disappeared in the cane. I felt sure I had found my bear again, and firing two loads of buckshot at the moving cane I killed—a big razor-back. CASUAL.

LITTLE ROCK, Ark.

BIG SALMON.—Mr. Henry Ffennell, an authority, states that the salmon of 88lbs. that have been talked of during the last two or three years were "bogus fish." The number of salmon of 70lbs. and upward that have been taken in English, Irish, or Scottish waters, of which there is satisfactory evidence, can be counted on one's fingers. There is a record of one of 83lbs. that came into the possession of Mr. Groves, of Bond street; Pennant speaks of one of 74lbs.; in 1873 one of 70lbs. was taken at Littleton; and to these must be added the famous fish, a model of which was made by Frank Buckland, and is now in the Museum of Economic Fish Culture at South Kensington. It weighed 70lbs. exactly—Mr. Ffennell saw it on the scale—and it created a great sensation while it was on view just 18 years ago. It was taken in the nets—as all the other fish of that weight or over have been—by Mr. Speedie about two miles below Newburgh, on the River Tay. Mr. Ffennell gives a list of the big salmon taken by the rod. Only three in which he can believe have been taken by the rod that have weighed over 60lbs.—one of 60¾lbs. chronicled by Yarrell as having been taken from the Tweed by a former Earl of Home, one of 61lbs. taken from the same river in 1870 and one of 67lbs. mentioned by Young as being taken from the Nith in 1812. Of the weights of the big salmon taken by anglers in recent years, Mr. Ffennell has been careful to get accurate information and to have the weights verified, and the following is the list of salmon over 50lbs taken by anglers: "One of 57½lbs. taken in the Tweed in 1886 (by Mr. Pryor), one of 57lbs. taken by a poor fisherman on the Suir, Ireland, in 1872. In 1872 a salmon of 58lbs. was landed in the Shannon, and in the same year one of 53lbs. in the Cumberland Derwent (by Dr. A. Peek). The big salmon taken in Scotland by anglers last year weighed respectively 48¾lbs. (captured on the Burnmouth Water, on the Tay, by Mr. J. Hunter); one of 45½lbs. (taken on the Coulter section of the Aberdeenshire Dee by General Briggs); and one of 43lbs. (killed in the Long Craig cast in the Lower Birgham Water, on the Tweed, by the Earl of Home)."

Sea and River Fishing.

Angling Talks. By George Dawson. Price 50 cents. Fly-Rods and Fly-Tackle. By H. P. Wells. Price $2.50. Fly-Fishing and Fly-Making for Trout. By J. H. Keene. Price $1.50. American Angler's Book. By Thad. Norris. Price $5.50.

THE HERMITAGE.

PROVIDENCE, R. I.—Among the numerous items of interest published in FOREST AND STREAM, I would like to secure a corner for an interesting piscatory visit made some years ago to the trout farm of Capt. P., in Brunswick, Maine. Hospitality is proverbial among the brotherhood of true anglers; there seems to be some kind influence that has come down from old Father Walton to his sons of this generation, one of whom was the Captain, who had "beat his sword into a ploughshare," and his spurs into trout hooks. I had previously fished with him at the Schoodic lakes, Moosehead, Rangeley and many other noted resorts; but for genuine sport, comfort and success, this trip exceeded all my former experiences in that line. There could scarcely be found a more picturesque spot than the one selected by my friend for his outings. The old farmhouse which he had repaired, retaining its quaint old style, is a curiosity, more than two hundred years old! He has preserved many of the old original surroundings, the well sweep with the old oaken bucket, etc. The place, which he sometimes calls the "Hermitage," is in a retired glen, with green fields gracefully sloping southeasterly from a rocky ridge, down to the clear sweet waters of the trout stream which flows through his farm, and close by his door. This stream in early times was navigable for Indian canoes from its outlet into the salt waters of New Meadows River to the site of the old farmhouse, a distance of some three miles. The waters are now conveyed by aqueduct to the city of Bath, five or more miles to the eastward. At the time of my visit the woods abounded in partridges, foxes and other game; the stream and dark shady ponds and deep pools, with nimble trout and wild duck; truly, as Senator Grimes of Iowa described it, "a sportsman's paradise." The Captain, who is somewhat noted for his antiquarian and historical researches into Maine's early history, had hunted up the colonial history of this region, which is briefly as follows:

In the year 1651 the ship John and Sara, from London, arrived at Boston with 273 Scotch prisoners of war, to be sold as servants. There being no market for them, the consignee—Mr. Kimball, of Charlestown—set them all free. Among them was one Alester Coombs, who went to Maine, perhaps with Thomas Stevens and others, and made his settlement at what was afterward called Stevens River, now New Medows, in the present town of Brunswick. Their first purchase of land from the Indians is not recorded, but later purchases show that the natives acknowledged their previous titles, shown in the "Pejepscot Papers," where is a copy of an additional deed to Stevens from Ramegin, Sagamore of Nequsett, otherwise called by the English "Robinhood," dated July 3, 1675. It is briefly as follows, viz.: "A certain piece of land adjoining Pejepscot River, butted and bounded as follows: To the land of Thomas Stevens now in possession east, and to Alester Coombs his land south, and from the head of Alester Coombs his marsh, westerly to a certain path called the carrying path, and by said path in a straight line to Stone Island, Pejepscot Narrows, and north to land of said Stevens," etc.

The original line between Stevens and Coombs was very nearly as the railroad now runs from New Medows River westerly to Cook's Corner, where it intersected the old Indian carrying path, which it thence followed to Androscoggin River.

These two young pioneers built their cabins about a quarter of a mile apart, about the year 1655. Stevens's house is still standing, owned by Chapin Weston. The Coombs house, occupied by the Captain, stood at the "head of Alester Coombs his marsh," and was burned down about 1883, and—

> Now naught is left the old-time tale to tell,
> Save two old wrecks—the cellar and the well.

Alester Coombs's lot probably contained some 3,000 acres. It was divided about A.D. 1710 between Lieut. Peter Coombs, Anthony, John and their sister, Abigail, who married Thomas Berry, Seignor; the latter afterward resided at Berry's mills, West Bath, and John moved to Harpwell. If Alester Coombs was twenty-one when he came to America in 1651, he was sixty years old when Lieut. Peter Coombs was born in 1690, making it probable that another generation intervened between Alester and Lieut. Peter, the latter, therefore, may have been a grandson to Alester. The territory was again subdivided about 1741 between the then heirs and assigns, who were obliged to purchase rights from the Pejepscot Company. A portion of this old Alester Coombs estate has remained in the Coombs family until the present time, passing down through six, or possibly seven, generations; Alester, ——, Peter, George, Asa, John and John, Jr., one direct line. So much for history, which is an interesting study nowadays. I will tell you now about my visit.

I left Boston on the Kennebec boat about 6 P. M., arrived at the Hermitage about 7 next morning in season for breakfast. I will describe the first day's sport, and every day of my visit was a repetition. After breakfast we donned our long-legged rubber boots, shouldered our rods and implements of war and proceeded to business. Although the stream was well stocked originally, the Captain had added species that he had obtained from other sources, with the object of improving the breed. All up and down the stream that runs through what was "Alester Coombs his marsh" he had dredged out deep holes and pools, under logs, and among bushes and alders, affording cool retreats for his game, and a hiding place from the many village poachers. These trout pools were ingeniously contrived, and were an interesting study of a new art which old father Izaak might have applauded.

We waded through the marsh to a clump of alders where a temporary opening had been made by separating the fringing alders that surrounded a deep, dark pool. On a signal from the Captain I crept up to the opening and dropped my fly. It was taken in an instant, and "round and round the pool the captive spun." With my heart in my mouth I managed to keep my fish as near the center of the pool as possible; for two minutes he kept

me active and anxious; a fisherman for trout among the alders needs a large supply of care and patience; the reel at last draws him reluctantly in; he makes a few more spasmodic rushes, although evidenly very much tired, and yet hangs heavy on the line; the Captain stands ready with the landing net, and as I slowly and steadily raise him to the surface, he dexterously passes the net under him, and our first trophy is secure and safely lifted from the water. Three pounds—I verily thought he weighed ten, while he was tugging at my line! I wiped the perspiration from my face, seated myself on a hummock and partook of some refreshment.

Onward again we wallowed through the swamp, wading through wet places or jumping from tuft to tussock.

"Do you see that log?" asked the Captain.

"Yes, I see the log, but the water looks shallow."

"There's quite a cave under that log. Wait a moment." He then produced two long spruce boards, and extemporized a bridge over the honey-pots. Advancing to the end of this pontoon path brought me near enough to cast. "Now drop your hook on the further side of the log," said the Captain, "and when the fish takes it, play him up yonder into shallow water. Don't let him get under the log."

I did as directed, and a fish as large apparently as—well, a very large trout broke water close to my fly, but declined the tempting bait.

Severe critics are ever prone to surmise that these large trout that often escape capture are, like our most valued virtues, mythical conceptions. I will therefore build no theories about that trout. I reeled in my line quickly, in the meantime keeping very quiet until I thought the rest of the company under the log had forgotten the circumstance just related, when I made another cast, now a little nearer the log. This time there was no fooling, either by myself or the expectant trout; he made a furious dash, and, presto! I had him fast, but he made the reed buckle and bend and the line sing merrily in his frantic efforts to reach again his den under the log. I managed to baffle all his endeavors, and finally guided him into shoal water where he made the mud and water mingle promiscuously. The Captain soon got his net under him, and he surrendered a prisoner of war. After this second successful encounter we again adjourned from labor to refreshment, which was followed by another floundering tramp over the treacherous marsh, but like Van Buren I followed safely in the "steps of my predecessor." We now approached a field of flags and cat-tails. The Captain removed the slender lancewood tip and bent the line on to the stiff, unyielding end of the pole, substituting an angleworm for the artificial fly, saying: "Here we must go back to old time customs and yank your fish out by 'main strength and stupidness.' It is not considered orthodox now, but in this case I agree with the quaint old poet Chaucer:

"'It is wisdom, as it thynketh me,
To maken vertue of necessitee.'"

I could scarcely see any water, the flags were so thickly matted together. A place was pointed out to me, into which I dropped my worm. Quicker than a thought I yanked out a speckled beauty that in size was nearly as large as my previous captures. I freshened my bait and tried the trick again and again, and three noble trophies rewarded my victorious arm. One more deep pool in the stream we visited, and our creel was full. It was then high noon; regaining *terra firma* we made our way back to the farmhouse, cleaned and fried our trout, for we were keeping "bachelors' hall." After dinner we took our siesta in the hay mow. We drove in the afternoon to Brunswick village, made some calls on college friends, and at ten were back and in our beds renewing in our dreams the sports of the day.

After twenty such holidays interspersed with partridge shooting, fox hunting, ducking, visiting, boat sailing and one most delightful Down East clam bake, I returned to Boston with some 20lbs. of trout sandwitched in ice for my better half; and she still insists, 20lbs. added to my corporeal avoirdupois. This twenty days' vacation at a cost of less than five dollars, and with more piscatorial sport and enjoyment than could be had in sixty days in the Adirondacks at a cost of five hundred dollars, and all within twelve easy hours of my home, is, I think, something to make a note of. W. H. C.

MORE ABOUT LAKE EDWARD.

NEWPORT, R. I., July 30.—In glancing over a copy of FOREST AND STREAM of 19th, the first I have seen for a month, I notice two articles on Lake Edward. The writer signing Kit Clarke is, I presume, the same gentleman who wrote the article in the New York *Sun*, under date of June 22, which I read with great interest, and with a mental resolve to visit that locality at the first possible moment; and I went to bed to dream of catching innumerable trout of the size that fishermen invariably lose. A few days later I set out well provided with tackle, rods of various sizes, and a fly-book filled with the most enticing flies. If the writer in the *Sun* had only bethought himself to have given the sailing directions from Quebec, I would not have lost a day there, in ascertaining something definite about the time-table of the Quebec & St. John's Railroad. It is all easy enough when you do learn how, to get to a place, but it is astonishing how little the spruce young gentlemen in hotel offices know of anything, except how to make out a bill for a day and a half for one day's board. But I did find out how to get to Lake Edward at last, and I got there, and I found out several other things that the *Sun* man did not mention, especially as to black flies.

It was my first experience with them, for I had never visited the Adirondacks. Most of my fishing of late years has been on the mountain streams of California, where such pests are unknown. My first intimation of the presence of Lake Edward flies was when I was about starting out after dinner at the so-called hotel, when I saw a little Frenchman daubing his face with some vile-smelling liquid, and on inquiring for what purpose, he replied, "Mouche. You not acquainted wid de mouche? No? Vell! you try dis." Accepting the proposition I followed his example, and when completed fancied I was fly-proof. It was a dose for me, and I said to myself, if any fly can monkey around me now, he must have a strong stomach, for it nearly turned mine.

From the accommodating agent of the railroad company I had procured a boat and a man to row it, a Frenchman from Cork, whose brogue in either language settled the question of his nativity. I must give the railroad company due credit for providing every facility for sportsmen—good boats of various sizes, some of them the finest modeled Canadian canoes, to carry one, two or three persons, also camp outfit. Of course fly-fishing was what I expected, and I was somewhat set back when my guide asked me if I had brought any worms. "Worms? Worms for trout fishing?" "Yis, sorr, them's the best bait." "Great Scott!" said I, "have I traveled 500 miles to fish for trout with worms?" "Well, sorr, you must have either worms or minnows." I learned that to get minnows involved several hours patient fishing along the shores with a small, light rig. The day was waning and I was too impatient to get out on the lake and begin work. The guide said we must row about four miles to get to the best fishing ground. I rigged my 8oz. fly-rod, putting on a couple of my most tempting flies, and paying out a matter of 50yds. of line, trolled the whole distance without getting a rise.

Reaching what seemed a favorable spot, a point of rocks, I landed on a large outlying one, and for an hour's casting was rewarded with a couple of little chubs. Leaving the last one on my hook we started out again trolling with the little fish still on my hook. We had gone but a few hundred yards when I felt a strike, and hooked a fish that felt like business. My tackle was of course very light, and I found that all my skill would be called into requisition to land him. For fifteen minutes I was oblivious to the swarm of black flies that took advantage of other uses for my two hands and sailed in. They crawled down my back, up my nostrils, into my eyes and ears. At times I had to release one hand to clear my eyes of them to be able to see what my fish was about. At last I had him alongside, and having no landing net had to be very wary, but the gentleman was about used up, and the guide reached over and landed in the boat the largest regular brook trout I had ever caught, and the most beautiful fish I had ever laid my eyes on. It was no sluggish lake trout, but a fish to delight your true trout fisherman, a deep, rich green on the back, beautiful crimson spots and belly of salmon color, pink at the fins—in fact, a most lovely specimen of the hackneyed term "speckled beauty."

Putting on the other minnow, I payed out line again, and it had hardly straightened out before I had a second strike, and evidently from its force and the swirl, a still larger fish; but alas! he took my only bait—I did not hook him.

By this time the breeze having died away the flies had gathered in full force, saying, "Here's a tenderfoot with no veil, no gloves, let's go for him," and they did. The row back was the liveliest exhibition of fly flapping. Their favorite point was the back of the head and neck, and the present style of short clip is particularly favorable for flies and other biting varmints. By the time I had reached the primitive hotel I was a beautiful object, as may be inferred, and it being nightfall the black flies retired to give place to myriads of midges. There was some relief to be had from these little torments by the smudges built out in front of the house; but it was after going to bed that the fun really began, and between the stings of the bites of the black flies and the midges, it was impossible to sleep. There were other rooms and other fishermen in them, and the atmosphere throughout that domicile that night must have had an azure tint from the profanity and cuss words emanating from every room. It is a wonder that the roof was not lifted off bodily.

To go back to that trout. How much did he weigh? Well, now, I can't tell you. I only know that he made a supper for seven fishermen who sat down to the table, and each and all had a "quantum suff." Still, he was not a whale. Honest Injun, I should say he weighed between three and four pounds, and a more toothsome fish I never tasted. The flesh was a deep red, about the color of a brick, several shades darker than salmon, and very solid. As I was so entirely unprepared for encountering the black flies, as enthusiastic a fisherman as I am, I had to throw up the sponge and quit. It was fishing under a species of torture that I had not contemplated. If the gentleman writing the article in the *Sun* had only said, "Prepare for black flies," I would have made due preparation, or what was better, deferred my trip until later, when, according to programme, they have left; but as I learned from a resident, when the flies go mosquitoes take their places, but they are not so bad, and moreover do not inhabit the middle, but mostly the shores of the lakes.

Summing up the pros and cons of this Lake Edward fishing, there is this to be said in its favor: There is undoubtedly most excellent fishing; the fish are large, gamy, and of rare quality and beauty; but they are not educated to the fly. One reason for their not rising to the fly I attribute to the great depth of the water. I was told that at the lower end of the lake, at its outlet, they took the fly with avidity, and it must be the case that wherever there is running or shoal water good fly-fishing should result, for these fish evidently are stream-bred trout. The outlet of Lake Edward must be a large stream, and there are innumerable smaller streams flowing in, teeming with trout, but the forest is so dense that they are inaccessible. The shores of this beautiful lake (for it is a most beautiful one, fully twenty-five miles in length and from a quarter to half a mile in width) are so steep, and, as I say, so densely timbered, that it is difficult to find a spot level enough to make a camp and pitch a tent. The trees and undergrowth must be cleared to do it, anyway. It goes against the grain for a fly-fisherman to come down to bait-fishing; and worms—bah! But if you want to be successful in Lake Edward you must either fish with worms or minnows, unless you go to the outlet, which is a long pull; and to camp out and be eaten up with insects is not a pleasant alternative, although it is done. The least of the evils is to troll with a minnow, and a good many large fish can undoubtedly be taken in that way. The feathered spoon is not a success. I tried that faithfully. An artificial minnow might be effective.

The railroad for miles runs along a large rapid river, the name of which no one seemed to know. It must abound in trout and would afford scope for fly-fishing, but for a good deal of the distance is inaccessible, and there are no stations and hardly a spot to camp. There are lakes all along the course of the railroad, half a hundred at least, from one to a dozen miles in extent, affording as good fishing as Lake Edward probably, but the whole country is a wilderness as yet, and doubtless these untried lakes will afford fishing for a hundred years. There is another grand prospect for the fisherman in Lake St. John, the terminus of the railroad, a lake thirty miles long and equally wide, where a fine hotel is now building, and also a steamboat. At the outlet the new species (to us) called the "winniche," or landlocked salmon, abound. The fishing is said to be something wonderful, and they say the black flies are scarcer. It is bound to be the paradise of the fisherman in that case. As the thing stands, there is bound to be great fishing in this new country. It will never be fished out; the black flies will see to that. There are two great wants as yet, naphtha or steam launches on Lake Edward, and an effective repellent for black flies. The whole world seems to be going daft on inventions. Where is the genius that will find a remedy for this fisherman's pest? There is a small fortune in it. Show me the man or woman that will do it, and every fisherman will take him or her to his arms. The present advertised remedies are not effective. The hands can be protected by gloves; veils and nets seem defective. Why cannot a fine wire helmet and mask be made, with glass eyes for sight and an opening for breathing and allowing the fisherman to smoke? Here is a field for genius.

Nothwithstanding the warm reception the flies and gnats gave me I am going to try this Canada paradise again in September, extending my researches as far as Lake St. John; meantime, shall devote time and attention to inventing some more potent defense from this insect business than at present can be found. There is a goodly lot of four and five pound speckled gentlemen awaiting me up in that wilderness and I am bound to make their closer acquaintance, black or any other kind of flies to the contrary notwithstanding.

I shall give time, too, to explorations and test the question of fly-fishing thoroughly, and am sure to find that these fish will rise to a fly whenever fished for in suitable waters. I have never yet been able to raise trout with the fly to the surface in water fifty feet deep.

It is evident that Lake Edward trout seek the deep cold water during this season, at the lower end of the lake, nearest to the outlet, and doubtless run down into the river to feed and back again into the lake. It is an experiment worth trying, to fish the river. It will be heavy missionary work to do it, but the good of the cause demands the effort on some one's part, and I suspect I shall be the missionary. It will be a splendid opportunity to get in some big stories without fear of contradiction. I shall want a good sturdy chum for the expedition. Who shall he be? PODGERS.

Editor Forest and Stream:

The writer does not intend to weary the readers of the FOREST AND STREAM, nor to disgust its editor by writing one superfluous word about Lake Edward; but there continues to be so much enthusiasm—not to say extravagance of statement—in its praise, that a sober, conservative reconsideration of some of the statements referred to may be of service to some anglers who may be contemplating a visit to its seductive waters. Mr. Kit Clarke's communications, and especially the one by Mr. Geo. F. Gale in your issue of July 26, would lead one to believe that it is the easiest thing in the world to take a large number of large trout any day and anywhere in the lake. The latter says "bushels, even boat loads might be taken with bait." Now the writer and his friend were told by Mr. Walter Hoolihan, the agent, that their catch (July 11) of twenty-one, reported in the FOREST AND STREAM July 19, was better than the average catch for the time thus occupied. He spoke of some unusual luck recently enjoyed by a party of three, who caught about a half a barrel of trout at the lower end of the lake, camping from Saturday to Wednesday inclusive.

Mr. Clarke asserts that there are no guides at Lake Edward and that none are necessary. "After half an hour's pull the angler drops anchor and goes to work. Favorite spots in Lake Edward have not yet been discovered, as one place is as good as another." I never saw the body of water yet in which one place was "as good as another" for fishing, and Lake Edward is certainly not an exception to the general rule. I saw three anglers who fished an entire day there with bait and caught just three trout. They did not go far enough down the lake, being only about six miles from the settlement. No trout at all can be taken in July nearer than this; and we found that it made all the difference between getting nothing and having good fishing, whether we anchored here or there, and our boatman (if Mr. Clarke chooses to call him some other name than guide) carefully selected his anchoring ground by taking certain bearings, stating as his reason that it was necessary for success. We tested his judgment by trying other promising places without getting a single nibble. Experienced "boatmen" of this kind, with use of a good boat, are furnished for $1,25 per day.

Let no one go to Lake Edward expecting to enjoy fly-fishing, for he will certainly be disappointed. We were told that in the Basecon River near the outlet of the lake trout about 1lb. weight and smaller can thus be taken in considerable numbers. There are other minor statements that challenge criticism, but I forbear. It is a long journey, and one likes to have cold facts upon which to make a decision whether he cares to go so far for that kind of fishing. We went under misapprehension, and while I am not at all sorry that I went—still I might not have gone had I known the whole truth. My only object in writing this and the former communication has been to place the matter more in accordance with facts as we found them, so that some brother of the gentle craft who may have read the glowing descriptions referred to may go to that beautiful lake and not be disappointed. Any true angler who enjoys bait trout fishing may feel certain of getting a reasonable catch of good-sized trout if he takes the advice—as to anchorage—of "half-breed Charlie" or any of the approved boatmen.

If any reader of the FOREST AND STREAM desires any further details, or to ask any questions concerning fishing in this lake, the undersigned will be very glad to answer any letters addressed to him on the subject.

P. C. BARKER, M.D.

MORRISTOWN, N. J., Aug. 6.

TOURISTS seeking rest and recreation during the hot summer months can obtain valuable information from the illustrated guide books entitled "A Summer Jaunt" and "Summer of 1888" issued by the Wisconsin Central Line. These books are descriptive of the summer resorts in Wisconsin and Minnesota, reached by the Wisconsin Central Line, and will be sent free to any address upon application to JAMES BARKER, General Passenger and Ticket Agent, Milwaukee, Wis.—*Adv.*

MAINE WATERS IN AUGUST.

THE summer days are upon us in good earnest, and naturally our thoughts wander to the streams and lakes where in the springtime we took the wily trout. Who is there to-day? Only the vacationist as a rule. With anglers it is in the midst of the dullest season of the year. The trout are in deep water and it is of little use to cast the fly, though the hotel advertisement still shines with tales of numbers caught. The season at the angling resorts is unusually dull this year, or rather it has been since the coming of hot weather. There are guests at some of the principal hotels at Rangeley and at Moosehead, but generally they are vacationists rather than anglers. Among all the anglers of my acquaintance in Boston not one is at present at the angling resorts, where they so delight to congregate in the angling season. I take up the papers and read the hotel arrivals, and not a single name do I see whom I know to be an angling expert. The anglers have not given up the sport; not much. They will be there again in September. Indeed the preparations for the fall angling are particularly noticeable, and no sooner than September is ushered in the fishers will be on the wing again.

Generally the water has been very low in the lakes and streams in Maine thus far this summer. A lack of rain has driven the trout into the pools, and brook fishing is poor. Perhaps I am writing that which is displeasing to the hotel keeper, when I dare to assert that the fishing is really poor. I am aware that the hotel puffer has been employed to write up this and that resort, but the stories of trout caught, to be found in the daily papers have come to be looked upon with suspicion by those who have been there. Take up a daily paper and read: "Here the trout lie thick around the spring holes, and rise with a rush to the fly—half-pounders generally, many of three-quarters, and often tipping the scales at a couple of pounds—handsome fish, and game to the very last moment." Where can this angler's paradise be found? Alas! It exists only in the imagination of the man who wrote it, as every real angler well knows.

Again read in a Sunday paper: "In a pond near ——— mountain, this week, two rods brought to net seventy-three fish weighing 75lbs., an unusual catch as to weight. In a little mountain pond back a few miles from ——— last Tuesday a Hartford gentleman and guide caught 107 trout in two hours, weighing 42lbs., and all with a fly—the scarlet-ibis, so killing a fly in the Rangeley Lake region." Brother anglers you are laughing now. "The scarlet-ibis, so killing a fly in the Rangeley Lake region!" There has been one in every angler's fly-book for years perhaps, but who ever found it to be a killing fly in the region mentioned? Such stuff published in the columns of respectable papers makes one think of the patent medicine specifics—they cure every disease. But that 107 trout in two hours. That was just about one trout a minute. How many scarlet-ibis did it take? A dozen trout on a very well tied fly will generally ruin it, especially trout weighing the one-hundred-and-seventh part of 42lbs. Now our Hartford trout butcher must have had in his fly-book about a square dozen flies of the scarlet-ibis breed. SPECIAL.

ADIRONDACK LARGE TROUT RECORD.

FRANKIN FALLS, N. H., Aug. 1.—*Editor Forest and Stream:* Your favor of July 30 is at hand. I have been in the habit for many years of spending the month of June in the Adirondacks fishing; I have always camped at the same place and had the same guide (Robt. W. Nichols). My camp is at First Pond on Bog River, being the first of what are known as Chain Ponds. About one-third of a mile back of the Second Pond is a small pond called Spring Pond. This pond is a deep, clear, cold pond, and as its name implies fed wholly by springs, there being no water running into nor out of it. I used frequently to cross it in going to Grave's Pond fishing. There were no fish of any kind in it.

In the year 1878 I caught from a brook running into Grave's Pond twenty brook trout from 4 to 8in. and carried them to Spring Pond and put them in. Nineteen of them swam off into the pond and one died. I thought no more of the matter till in 1883 Mr. Frank A. Buriel, of Laconia, N. H., who was camping with me, in crossing the pond saw a trout break water. He tried them and caught several large ones. During that season Mr. Buriel and myself caught quite a number of trout weighing from 3lbs. to 5lbs. each.

The next year, 1884, I caught one weighing 6lbs. 2oz. There were with me Mr. James O. Williams, of Schoharie, N. Y., who weighed the trout and made the inclosed drawing upon our return to camp, laying the trout on a piece of paper to do so and marking the date and weight upon it. There were of our party Mr. Williams, Mr. Buriel and myself and, for guides, Charles Greenough, Hosea Colbath and Robert W. Nichols.

This, I believe, answers your inquiry as to particulars about this particular trout. WALTER AIKEN.

TROUTING AT MEACHAM LAKE.—A correspondent writing from the northern Adirondacks says that the fishing in Meacham Lake has been excellent this season. The solitary pickerel caught there this spring scared all who are interested in the lake, but no other fish of this kind has been seen. Both brook and lake trout have been plenty, one lady took fifty-four good brook trout trolling with flies one forenoon, and they were not fingerlings either, several of them being half-pounders and over, while one weighed three-quarters of a pound. Another lady took an 8lbs. lake trout a few days ago, while trolling for the first time. The yearly stocking of the Meacham by Mr. Fuller, and his care in guarding the lake from netters and illegal fishermen, has kept the stock up so that good fishing is the rule there.

On Sunday morning a most extraordinary event was witnessed in the lake at the Welsh Harp, Hendon. About half-past ten a gentleman observed a commotion in the water, and on closer inspection he found that a fight was in progress between a carp, weighing about 18lbs., and a bream, which afterward turned down the scale at 3¼lbs. The fight lasted fully fifteen minutes, at the end of which time the bream was thoroughly vanquished. It was picked up, and on its right side were found several wounds, the largest being about three inches broad and two inches long. The bream was fearfully lacerated, several of the ribs being laid quite bare. It had also a deep wound on the head, above the right eye.—*Derby (England) Express, July 16.*

Fishculture.

THE NEW YORK COMMISSION.

AT a meeting held in New York, on Monday last, Commissioner Bowman announced that Supt. Seth Green has been very ill for months, and that it is improbable that he will ever resume his work, and in consequence of this Mr. Bowman had purchased hatching jars for whitefish, in order to begin the work of stocking the waters of Lake Ontario. Mr. Bowman also said that a strange fish, resembling a whitefish, was now sold in the markets. Thirty acres of oyster beds in Little Neck Bay were declared to be for rent, and are to be advertised. The propagation of mascalonge in Chautauqua Lake was decided upon, Mr. Blackford advising care lest the propagators, who are not ichthyologists, mistake and increase the pike or pickerel. Mr. Blackford also spoke of the successful stocking of the Hudson with salmon, and proposed that a fishway be built at Mechanicsville.

The appointment of game protectors was laid over. Game Protector Schwartz was commended for promptly putting a stop to the illegal net fishing at Skaneateles. Commissioner Bowman said he would back Game Protectors Schwartz and John Sheridan to go anywhere and put a stop to illegal fishing in spite of any threats by desperate fishermen. Schwartz could not be frightened even by bullets. As to destroying the nets, it was suggested that some care should be exercised, as one court has already decided that such destruction of property, although it is authorized by the fish laws, is unconstitutional. It is proposed to turn over the captured nets to the courts.

The meeting was marred by the entrance of a notorious politician from Staten Island who tried to force the appointment of one of his pets as a game protector, and blustered and threatened like the bully that he is, but no appointment was made.

SOME OBSERVATIONS ON THE BLACK BASS.

[Read before the American Fisheries Society.]

BY C. F. HOLT.

HAVING resided for the past thirty-five years on the bank of the Thornapple River, a favorite resort for that king of Michigan game fish, the small-mouthed black bass, I have had ample opportunities of studying their habits, and for the past few years have given the matter considerable attention.

They leave their winter quarters, usually under heaps of drift-wood or in hollow sunken logs, about the middle of April, and in a short time repair to their spawning grounds. I am quite sure that they pass the winter in hollow, sunken logs whenever they can, for, about the first of April, 1885, while removing some drift-wood from the river, we took out one hollow log that contained eighteen small-mouthed black bass, weighing from two to three pounds each: and again this year, at about the same time, I found six more under the same conditions. The spawning season here begins the last week in April. The first bed seen in 1885 was on April 28; in 1886, April 24; and in 1887 and 1888, April 26. The places selected are in nearly still water, near the shore, and in water from one to two feet in depth.

The beds are circular in form, from eighteen inches to three feet in diameter, and are formed by cleaning from the bottom all sediment, sand, etc., leaving a bed of clean pebbles. This is the joint work of both male and female fish. The bed having been prepared, the female then moves slowly over it, depositing her ova, and the male impregnates them as fast as laid. The eggs, which are very small, are glued fast to the pebbles. The impregnation is almost absolutely perfect. In the past three years I have examined a large number of beds, by carefully removing one or more of the pebbles covered with eggs, and examining them with a microscope, and have never yet found more than one per cent. of unimpregnated eggs.

After the eggs are impregnated the male leaves to the female the whole care of the eggs and the young brood. She now passes constantly backward and forward over the bed, the motions of her fins and tail keeping the eggs clean, which the fact of their being glued fast permits her to do without washing them away. The following incident will illustrate the necessity for this constant care and attention on the part of the female, as well as point a moral, and furnish an illustration of how the greatest possible increase of this fish may be brought about: One evening in the spring of 1885 I noticed a "jack light" coming down the river, and I felt certain that some of my pets would have to suffer. I had endeavored to protect them as much as possible by requesting such neighbors as I could reach to respect my wishes, and to avoid the beds that I had under observation. Nearly all were willing to do so, but this time one of them made a mistake, as I expected they might, and when I went out in the morning the mother fish was gone. I thought I would secure the young fish (they were just hatched) and take them to the house and "bring them up by hand." So, putting on my wading boots, I walked out to the bed, and there I found, not the young fry, but three or four crayfish and some minnows, which had evidently devoured every fish on the bed. At another time, under similar circumstances, except that the eggs were not hatched, the crayfish had destroyed all the eggs. I took up every pebble without finding a single one.

The eggs are hatched in from five to ten days, according to the temperature of the water. When first hatched, the young fish are transparent, and so small as to be invisible to the naked eye. They have a much larger umbilical sac than the young brook trout, in proportion to the size of the body. At first they are unable to swim, or even move themselves from the bottom, but in from two to six weeks they begin to rise and swim, although they are from one to two months old before the sac wholly disappears and they become perfectly developed fish.

After the fish are hatched the mother seldom passes over the bed, as in their then helpless state the motion of her fins would scatter them; but instead she now swims in circles around it driving away all intruders, such as minnows, crawfish, etc. After the young begin to swim she enlarges the circle until it becomes from ten to fifteen feet in diameter, she then gradually drives them toward the shore into shallow water where she keeps them inside of a half circle, the shore forming the other side. From this half circle all of their natural enemies are carefully excluded, and the fish are allowed to develop. After that is done she scatters them along the shore among the weeds and grass, where, if pursued, they can find hiding places. Then, and only then, does she leave them to care for themselves. They are now from one-half to three-fourths of an inch in length, black in color and very lively, darting out of their hiding places and seizing their prey as readily as the older fish, and by the first of October following, will be two inches in length.

I should estimate the average number of eggs in the beds at 4,000. Owing to the fact that some of the beds observed were near the mouths of cold spring brooks, where the temperature of the water in the river was much lower than where other beds were located, will account in a great measure, in my opinion, for the variation in the time taken for hatching the eggs and the development of the young fish; as in some seasons, and in some locations, I have found the young fish developed or weaned in one month from the time that the ova were deposited, and at other times two months were required for the same purpose.

I have been unable to procure both male and female fish at the proper time to try artificial impregnation, but have repeatedly taken part of the ova from the bed as soon as impregnated, and hatched them in dishes, and have kept them there until fully developed. I am of the opinion that very little can be done in the way of artificial impregnation or hatching, as nature has done for the black bass all that could be done.

All that the fishculturist need do is to stock all suitable waters with them, where they do not now exist, and then protect them during the spawning season.

CASCADE, Mich.

FOOD OF THE FISHES OF THE MISSISSIPPI VALLEY.

BY PROF. S. A FORBES.

[Read before the American Fisheries Society.]

THERE is a kind of insect in the South, called the agricultural ant, which is extremely fond of the seeds of certain grasses growing there spontaneously among the many species which make the prairie sod. Naturally, the agricultural methods of this ant are of a very primitive sort, and even fall below those of the native Indian. Besides collecting, wherever it can find them, the fullen seeds of many grasses and other plants, and storing these in its burrows, it also clears completely an area from 6 to 12ft. wide around its nest, and here either sows or permits to grow only one or two of the common grasses of whose seeds it is especially fond, harvesting the product and storing it for future use. It has not learned to cultivate the soil, or to introduce exotic plants of larger yield and better quality than those native to the sod, but it has advanced so far as to destroy on a little tract the competitors of the plants which bear its favorite food, and thus secures a larger and more convenient supply than would grow spontaneously. I mention this little ant because its agriculture seems to me to illustrate very well the aquaculture practiced by mankind at the present time. As this little insect collects the seeds of weeds wherever they happen to grow, so we fish the streams for whatever they happen to contain; and as it clears its little farm around its burrow, so we make our little fish ponds, seine out the worthless and destructive fishes, the snakes, frogs and turtles, and throw the better species back to increase for our benefit. In two things our aquaculture is in advance of the agriculture of the ants, we have successfully introduced two or three foreign species, and we have learned to take measures to maintain the fish supply wherever it has suffered from the effects of overpopulation. The first of these measures the ants have not thought of, and the second they probably do not need, because their numbers do not overrun their food supply. I believe it will pay us to inquire whether we can hope to get beyond this ant stage of aquaculture, and whether we may not learn to do at least as much to increase and improve the product of the waters of the country as the wild Indian did to cultivate the soil.

At present four things are done in general: First, we attempt to maintain or restore the relative numbers of our valuable aquatic animals—fish especially—defending the population of our waters against the evils growing out of civilized settlement. This is like trying to restore the native growth of trees and grasses to the surface deadened by travel and building, and by careless or unskillful usage. Second, we try to increase the relative numbers of the most valuable of our native aquatic animals above the limit originally fixed by nature. This is as if we should collect and plant the nuts and acorns in the woods, and gather and sow abroad the seeds of the most valuable native grasses, in the hope that this artificial aid might enable our favorites to surpass their rivals. Third, we have aimed to introduce foreign with our native species in our natural waters. This is too much like sowing quantities of apple seeds and wheat and corn broadcast in the woods and on the prairies in the hope that if we use seed enough the plants we seek to introduce will crowd out the native vegetation. And finally we do, on a small scale, partly imitate actual agriculture by clearing or forming little patches of water here and there, and planting in them an exotic fish, protecting it from the agricultural practice of the native Indian, who partly cleared his little patches in the river bottoms and planted and harvested the exotic corn and bean and pumpkin.

But it will not do to push this parallel too far. There are some things possible in agriculture which the aquaculturist cannot do. We cannot plow and till our lakes and rivers as the farmer does the prairie sod, ruthlessly exterminating all the native forms of life in order to substitute other sorts more useful to him. And even where we clear a little lake or start a pond, stocking it with carp or croppie, we cannot keep out the frogs and bullheads by any artificial tillage, as the farmer can the weeds. We are compelled, in other words, to work for improvement in the midst of things as they are. Not being able to destroy the native population of our waters, we have to take it into account and then make our adjustments to it. And right here, it has long seemed to me, is where the work is most needed. If we cannot get rid of the natural order, we certainly need to understand it. If we cannot destroy the native population, but must live and work with and through it, we certainly ought to know what it is like and what we can do with it; what we can do in spite of it, and what we cannot do because of it. It is because I have worked out some parts of an answer to these questions that I have ventured to appear here to-day, in a society of fishculturists. If fishculture is merely the culture of fishes, then I can have little or nothing to say, because I never raised a fish in my life; but if a scientific and rational fishculture must finally merge in the broader science and art of aquaculture; if we must study to understand and improve the system of aquatic life into the midst of which we thrust our little fishes—then I may perhaps claim some share in your deliberations.

What I have to report to-day is chiefly an answer to the question: What do our native fishes eat? This is only a single item of what we really need to know, and yet perhaps a larger one than might at first be supposed. Although fishes are the dominant class in every fairly permanent body of fresh water, they have no great variety of interests or occupations; but except for the relatively brief intervals devoted to their simple office of reproduction, they do little but to search for food and to eat, and avoid being eaten in turn; consequently, if we seek to measure or estimate their function in the general system of life in any region or locality, we are limited chiefly to their food relations, immediate and remote.

Among the purely practical results to be anticipated from such a study, are a more accurate knowledge of the conditions favorable to the growth and multiplication of the more important species; the ability to judge intelligently of the fitness of any body of water to sustain a greater number or a more profitable assemblage of fishes than those occuring there spontaneously; guidance as to the new elements of food and circumstance which it will be necessary to supply to insure the successful introduction into any lake or stream of a fish not native there; and a clear recognition of the fact that intelligent fishculture must take into account the necessities of the species whose increase is desired, through all ages and all stages of their growth, at every season of the year, and under all varieties of condition likely to arise.

We should derive, in short, from these and similar researches, a body of full, precise, and significant knowledge to take the place of the guess-work and empiricism upon which we must otherwise depend as the basis of our efforts to maintain and increase the supply of food and the incitement to healthful recreation afforded by the waters of the country.

As a contribution to the general subject, I present here-

with a summary account of the food of twelve hundred and fifteen fishes, obtained from the waters of the State of Illinois at intervals from 1876 to 1887, and in various months from April to November. These fishes belonged to eighty-seven species of sixty-three genera and twenty-five families. They were taken from waters of every description, ranging from Lake Michigan to weedy stagnant ponds and temporary pools, and from the Mississippi and Ohio rivers to the muddy prairie creeks, and the rocky rivulets of the hilly portions of the State. Nine hundred and fourteen of the examples studied were practically adult, so far as the purposes of this investigation are concerned, the remaining three hundred and one being young, in the first stage of their food and feeding habits. More than half these young belonged to a single species—the common lake whitefish—but the remainder were well distributed.

I have arranged the matter under the following general heads: (1) a general account of the food of the most important species and families of our native adult fishes; (2) a brief account of the food of the young; and (3) a summary statement of the food, so made as to exhibit (*a*) the kind and relative importance of the principal competitions among fishes, and (*b*) the relative value to the principal species of fishes of the major elements of their food.

First, then, I will attempt to give you very briefly, and in the most general way, the facts relating to the food of the most important fishes, those which I think most likely to interest you as fishculturists, taking the species in their zoölogical order rather than in the order of their economic importance.

FOOD OF ADULTS.

The abundant white perch or sheepshead of the larger rivers and lakes, now commonly marketed, I find feeding, when full grown, almost exclusively upon the bivalve mollusks known in the West as clams, whose heavy shells the fish is enabled to crush and grind by a special apparatus in the throat. The shells are swallowed with the bodies and pass, in part at least, through the intestine. Half-grown specimens feed in much larger ratio upon aquatic insects, especially the larvæ of May flies, but take likewise the smaller mollusks with spiral shells, commonly known as water snails, the food in my examples being about equally divided between these two elements. The youngest specimen feeds, like the young of fishes in general, upon the smallest of the Crustacea.

The common perch or ring perch, excessively abundant throughout the northern part of the country, varies in food according to the waters it inhabits, those in the great lakes feeding almost wholly upon small fishes—especially of the minnow family and upon crayfishes—five or six times as many of the former as of the latter. River specimens, however, eat few fishes, but find nearly all their food among the Crustacea, partly crayfishes, but chiefly the smaller kinds, known to zoölogists as amphipods and isopods, and in common speech as water wood-lice and brook shrimps. Aquatic insect larvæ, especially those of day-flies, and small spiral-shelled mollusks are eaten in about equal ratio.

The two pike-perch or wall-eyed pike are exclusively piscivorous, if we may judge of twenty-six specimens whose food I studied. More than a fourth of the fishes taken consisted of the spiny-finned species, including eight per cent. of catfishes, but nearly half were the common gizzard shad.

We shall find accumulating evidence that this shad, not used with us for food, is, notwithstanding, one of the most valuable fishes in our streams. Nevertheless, not the slightest attention is paid to its preservation, much less to its encouragement. The fishermen commonly regard these fishes as a mere nuisance, and leave them to die on the bank by hundreds, rather than take the trouble to return them to the water. They are a very delicate species, and are easily killed by rough handling in the seine, but the majority of those captured might be saved with a little care.

Their abundance as compared with some other species in our rivers might seem to indicate that they are common enough as it is. Few realize, however, the number of fishes needed to feed a pike-perch to maturity. Two or three items from my notes will furnish the basis for an intelligent estimate.

From the stomach of a pike-perch caught in Peoria Lake, October 27, 1878, I took ten well-preserved specimens of gizzard shad, each from three to four inches long; and from another I took seven of the same species, none under four inches in length. As the gizzard shad is a very thin, high fish, with a serrate belly, these were as large as a pike-perch can well swallow; and we may safely suppose that not less than five of this shad would make a full meal for that fish. The pike-perch is a very active hunter, and it is not at all probable that one can live and thrive on less than three such meals a week. The specimens above mentioned were taken in cold autumn weather, when most other fishes were eating but little; but since fishes generally take relatively little food in winter, we will suppose that the pike-perch eats, during the year, on an average, at this rate, per week for forty weeks, giving us a total per annum of six hundred gizzard shad destroyed by one pike-perch. We cannot reckon the average life of a pike-perch at less than three years, and it is probably nearer five. The smallest estimate we can reasonably make of the food of each pike-perch would therefore be somewhere between 1,800 and 3,000 fishes like the gizzard shad. A hundred pike-perch, such as should be taken each year along a few miles of river like the Illinois, would therefore require from 180,000 to 300,000 fishes for their food. Finally, when we take into account the fact that a number of other species also prey upon the gizzard shad, and that the whole number destroyed in all ways must not exceed the mere surplus reproduced—otherwise the species would soon be extinguished—we can form some approximate idea of the multitudes in which the food species must abound if we would support any great number of predaceous fishes. The gizzard shad being a mud eater and vegetarian, taking little animal food except when very young, can probably be more readily maintained in large numbers in our muddy streams than any other fish.

The Kennel.

Dogs: Their Management and Treatment in Disease. By Ashmont. Price $2. Kennel Record and Account Book. Price $3. Training vs. Breaking. By S. T. Hammond. Price $1. First Lessons in Dog Training, with Points of all Breeds. Price 25 cents.

FIXTURES.

DOG SHOWS.

Aug. 22 to 24.—Third Annual Show of the American Fox-Terrier Club, at Saratoga Springs, N. Y. (Including all terriers.) Entries close Aug. 15. H. P. Frothingham, Secretary, 2 Wall street, New York.

Aug. 27 to 31.—Toledo Dog Show, Toledo, O. H. E. Cook, Superintendent.

Sept. 11 to 14.—First Dog Show of the Buffalo International Fair Association, at Buffalo, N. Y. C. W. Robinson, Secretary.

Sept. 18 to 21.—First Annual Dog Show of the Syracuse Kennel Club, at Syracuse, N. Y. Howard B. Rathbone, Secretary.

Sept. 24 to 27.—Fifth Dog Show at London, Ont. C. A. Stone Superintendent.

Sept. 25 to 28.—Second Annual Dog Show of the Bristol Park Agricultural Society, Bristol, Conn. Entries close Sept. 22. C. F. Barnes, Secretary.

Sept. 9 to 12.—First Dog Show of the Virginia Field Sports Association, at Richmond, Va. B. H. Grundy, Secretary, Room 26, Shafer Building. Entries close Oct. 1.

Oct. 23 to 26.—Second Annual Show of the St. Paul and Minnesota Kennel Club, at St. Paul, Minn. J. E. Stryker, Secretary, Room 93 Globe Building.

Nov. 6 to 10.—Dog Show of the Richmond County Poultry and Pet Stock Association, in connection with Augusta National Exposition at Augusta, Ga. H. Madden, Superintendent.

Feb. 12 to 15, 1889.—Fifth Dog Show of the New Jersey Kennel Club, at Jersey City, N. J. Geo. L. Wilms, Secretary, 142 Monticello avenue, Jersey City, N. J.

Feb. 19 to 22, 1889.—Thirteenth Annual Show of the Westminster Kennel Club, New York. James Mortimer, Superintendent.

Feb. 26 to March 1, 1889.—Second Annual Show of the Rensselaer Kennel Club, Troy, N. Y. Alba M. Ide, Secretary.

March 5 to 8, 1889.—Second Annual Dog Show of the Albany Kennel Club, at Albany, N. Y. Geo. B. Gallup, Secretary.

March 12 to 15, 1889.—Second Annual Show of the Fort Schuyler Kennel Club, Utica, N. Y. James W. Dunlop, President.

March 19 to 22, 1889.—First Annual Dog Show of the Maryland Kennel Club, at Baltimore, Md. W. S. Diffenderffer, Secretary.

March 26 to 29, 1889.—First Annual Dog Show of the Massachusetts Kennel Club, at Lynn, Mass. D. A. Williams, Secretary.

April 2 to 5, 1889.—First Annual Show of the Rochester Kennel Club, at Rochester, N. Y. Harry Yates, Secretary.

April 9 to 12, 1889.—First Annual Dog Show of the Mascoutah Kennel Club, at Chicago, Ill. John L. Lincoln, Jr., Secretary.

FIELD TRIALS.

Sept. 11.—Third Annual Field Trials of the Manitoba Field Trials Club. Derby entries close July 1. All-Aged entries Aug. 1. Thos. Johnson, Secretary, Winnipeg, Manitoba.

Nov. 1.—Second Annual Field Trials of the Indiana Kennel Club, at Bicknell, Ind. P. T. Madison, Secretary, Indianapolis, Ind.

Nov. 19.—Tenth Annual Field Trials of the Eastern Field Trials Club, at High Point, N. C. (Members' Stake, Nov. 15.) W. A. Coster, Secretary, Saratoga Springs, N. Y.

Dec. 3.—First Annual Field Trials of the Southern Field Trial Club, at Amory, Miss. T. M. Brumby, Secretary, Chattanooga, Tenn.

Dec. 10.—Second Annual Field Trials of the American Field Trials Club, at West Point, Miss. C. W. Paris, Secretary, Cincinnati, O.

Jan. 14, 1889.—Sixth Annual Field Trials of the Pacific Coast Field Trial Club, at Bakersfield, Cal. N. P. Sheldon, Secretary, 320 Sansome street, San Francisco, Cal.

COURSING.

Oct. 15.—Third Annual Meeting of the American Coursing Club at Great Bend, Kan. F. K. Doan, Secretary, 1210 Olive street, St Louis, Mo.

A. K. R.—SPECIAL NOTICE.

THE AMERICAN KENNEL REGISTER, for the registration of pedigrees, etc. (with prize lists of all shows and trials), is published every month. Entries close on the 1st. Should be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (50 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription $1.50. Address "American Kennel Register," P. O. Box 2832, New York. Number of entries already printed **6435**.

THE TWO DOG CLUBS.

Editor Forest and Stream:

Mr. August Belmont, Jr., president American Kennel Club, has been making some remarkable deliverances of late, and honestly I stand aghast at the utter ignorance of the temper of the American doggy public that he displays. He says that the only really bad feature of the National Dog Club is "antagonism to the A. K. C." Good Lord deliver me! Antagonism to the A. K. C. a crime! What does Mr. Belmont know of doggy affairs? What experience has he had with dogs, doggy men and dog show clubs, to warrant his posturing as a judge on the rights of any man to be "antagonistic to the A. K. C."?

Dr. Perry put himself far in the van of mastiff breeders and exhibitors before Mr. Belmont was heard of in connection with dogs. Dr Cryer was the preëminent authority on pugs, and known as a very fair all-round judge before Mr. Belmont (as I verily believe) knew the difference between a fox-terrier and a short-tailed toy bull-terrier. Messrs. Osborne, Nickerson, Porter, Hemingway, Barnard, the two Moores, etc., are all in the same category, with infinitely more experience than Mr. Belmont has had. So I fail to see the justification for such an *ex cathedra* deliverence.

It is said that the A. K. C. is so highly respected, so exalted a body, that it is above criticism (the only remaining ground that I can see for Mr. Belmont's autocracy). Well, I should smile! Does he know of "construction," that drama by which the president and one other member, at a meeting called in Cincinnati at three days' notice, deliberately negatived the express enactment of the club? the subsequent "proxy" re-election of the "constructor" as president? the shameful refusal of the club to take any action, even ever so mild a censure on the "Chicago special" and "bogus medals," after thorough investigation and unanswerable proof of the truth of both offenses? and its shameful rascality in reversing itself as a "court of appeal and last resort" (Mr. Belmont is authority for this) in the Beaufort-Patti M. business, made still worse by a reconsideration of a previous vote being allowed on motion of the secretary, who absolutely represented nobody? After these disgraces the sublimity of the assurance that puts the A. K. C. up as something too holy for irreverent criticism is—well, it just simply *is*, that's all.

Of course the present managers of the A. K. C. will say "all this happened before my taking office," as though that rehabilitated the damaged character of the club. To do this it must first punish in some way at least one of these disgraces, yet the "constructor," the "proxy-bearer," etc., are, or have been, active members, and in the disgraces of the Chicago special and bogus medal condonations, their most highly and universally respected member, Mr. Peshall, was an actor. Nobody can ever attach the slime of discreditable conduct to Mr. Peshall, but when such a man allows his club to be disgraced, what will tag, rag and bobtail do?

Then that wonderful conception of an official gazette, maintained by Mr. Belmont's private purse. Has plutocracy entirely swallowed the dog men of America? Is it not perfectly evident that such a journal would be recognized as simply "Mr. Belmont's private organ?" Imagine such a journal permitting full and free expression of matter adverse to Mr. Belmont's wishes! I do not mean for one moment that Mr. Belmont makes the proposal with any such end in view, nor that he would expect any such favoritism, doubtless his intention is simply to benefit the A. K. C., but the practical point is, would it not be felt that Mr. Belmont had an unfair advantage by his private support of the journal? And how much respect would the journal gain?

Then that idea of "associate members of the A. K. C." Just imagine Messrs. Perry, Moore, Sears, Barnard, Thayer, Cryer, Willey, Mercer, Porter, Hemingway, Craig, etc., belonging to a "club" that was allowed one vote in the A. K. C. Their combined power negatived by the vote of Pittsburgh, an incorporated company wherein a controlling interest in the stock is held by two out of one hundred members; or Hartford, which is practically Messrs. Collins & Cugle (no disrespect to them), or Baltimore. Great snakes! wouldn't they write themselves down as asses?

The simple truth is, that those who own, breed and exhibit dogs are the ones to control doggy matters, and do it they finally will. No amount of cuttle-fish clouding of the real facts in Mr. Belmont's latest style will stave off the inevitable. That doggy interests are to be dominated by any such ragged body as the A. K. C. is impossible. The veriest "Mrs. Harrises" can and do gain admission to it. Two or three men conclude to get up a dog show club, they get the consent of a few more to allow their names to be used as members of the club, and the result is a full-fledged member of the A. K. C. The boss bugler makes himself the delegate to the A. K. C., it don't suit him to attend and he sends a proxy to Tom Collins, and the Beaufort-Patti M. disgrace is the result. Then what a regular business the A. K. C. makes of stealing others' brains? The stud book was not thought of until the success of the *American Kennel Register* suggested a tempting bait. The official gazette arises from the necessity of having something more than a mere dry register, and the associate member business is hit on after the National Dog Club shows as a cloud in the horizon, fraught with damaging consequences to the A. K. C.

In what instance did any present member of the A. K. C. ever do one good piece of work? Who did do the work that reflected some credit on it? Let Messrs. Porter, Osborne, Nickerson, Child, Morgan, Grosvenor and Watson answer. The inherent and ever-present bane of the A. K. C. has been the crudities of new hands at the bellows, a fresh hand comes in, and without informing himself of what the past has been, without studying the chart that indicates the rocks it has struck on before, he goes off at half-cock with his freshly conceived conceptions, and the flock follow, and great is the asininity thereof. Not one of the early laborers of the A. K. C., those who honestly and intelligently worked for it, now remains connected with it, while some of its worst disgracers have lately flourished as delegates at its meetings.

What the intentions of Dr. Perry and his associates were in founding the N. D. C. I don't know and don't care. They did not consult me, I am glad to say, but one thing I do know, the A. K. C. is, and always has been, a laughing stock in doggy circles, it has always been despised, and has never done anything to remove the bad opinion dog men have of it, and there certainly will be some other governing body here. Whether this is to be the National Dog Club, I don't pretend to say, and I am sure nobody will be quicker to whack the head of the National Dog Club than I as soon as it deserves it.

W. WADE.

HULTON, Pa., Aug. 4.

DOG TALK.

WE learn from the *Stock-Keeper* that Mr. E. H. Moore has purchased the rough-coated St. Bernard dog Ben Lomond and the mastiff bitch Lady Phyllis, the latter for 200 guineas. The price of Ben Lomond is stated to have been "a long way in excess of £200." *Fanciers' Gazette* compliments Mr. Moore as "being one of the very best judges of St. Bernards and mastiffs with whom we have ever inspected kennels of these breeds," and rejoices that he did not succeed in his negotiation for Plinlimmon.

Henry Goetz, of Phillipsburg, N. J., gave Jas. K. Mosser, of Hanover, a large farm dog, which was immediately shipped by rail to Williamsport, 140 miles away. A fortnight afterward the dog walked into his former master's house in a starved and worn out condition. It was learned that he had left Williamsport a week before and had walked the entire distance. This is only one of innumerable cases where dogs have found their way home in an equally wonderful way.

The superintendent of the Buffalo dog show writes that entries are coming in finely, and that from present appearances this show will receive the hearty support of a large number of the most prominent breeders. He also says that valuable specials, in addition to those already announced, have been promised, and that probably there will be one or more offered for each class.

It is one of the orthodox tenets of fox hunting that the fox enjoys being chased by the hounds. Philosophers who are not hunters are disposed to question the truth of this; and many newspaper columns have been filled with heated discussions on the subject. But both sides agree on Newport "fox hunting;" there is perfect unanimity of opinion that no cruelty is involved, because there is no fox.

Newark, N. J., exacts a dog tax of $1. The dogs on which taxes are paid number 1,931. The Newark *Call* thinks that the total figures do not represent one-third of the number of dogs in the city. It can safely be said that they represent rather the number of citizens who have conscientious scruples against perjuring themselves for the sake of $1.

Chestnut Hill Kennels have purchased from Mr. Horne, Pittsburgh, Pa., the well-known Irish terriers Dennis and Eileen. They have also purchased from Mr. S. T. Mercier, Gilford, Ireland, the collie bitch Cora II., a sister to their champion Dublin Scot. We understand it is their intention to breed her to their Scotilla.

An English clergyman perpetrates the following advertisement: "Two fine, strong, handsome Dandie Dimont pups, lady and gentleman, first-class pedigree, by Ettrick; nine weeks; 42s. each; also very handsome lady dog, same pedigree, nine months, etc."

Owing to the removal to Chicago of Mr. R. A. Craig, the Wacouta Kennels, of St. Paul, Minn., will soon be situated at or near Chicago, and all letters in future to reach the Wacouta Kennels should be addressed to P. O. Box 625, Chicago, Ill.

Mr. H. T. Drake, St. Paul, Minn., writes as follows: "I wish to find Dr. Chas. Neil, formerly of Detroit, Mich. Will you do me the favor to insert an inquiry for him in your next issue."

The well-known basset hound Nemours is dead.

INDIANA FIELD TRIALS.

INDIANAPOLIS, Ind., Aug. 4.—*Editor Forest and Stream*: Please mention the following additional entries to our Derby. These entries were delayed through no fault of the owners of the dogs, and our board decided that they were justly entitled to recognition:

J. H. Craft's liver and white pointer dog Robin Adair, Jr. (Robin Adair—Nellie K.), whelped July 1, 1887.

John E. Link's lemon and white pointer bitch Dixie Bang (Ware's Bang—Carr's Fredia), whelped Jan. 13, 1887.

This makes a total of seventy nominations.

P. T. MADISON, Secretary Indiana Kennel Club.

THE COLUMBUS FANCIERS' CLUB.—The Columbus Fanciers' Club of Columbus, Ohio, a stock company, with a capital stock of $2,000, has been organized for the purpose of encouraging the breeding and improvement of thoroughbred poultry, pigeons, dogs and pet stock generally. The officers for the ensuing year are as follows: A. E. Pitts, President; Frank Tallmadge, Vice-President; Thos. R. Sparrow, Secretary; Samuel Stevens, Treasurer; Homer Henderson, R. J. Fanning, G. F. Gast, H. A. Bridge and P. B. Hayes, Executive Committee.

DETROIT DOG SHOW.—*Editor Forest and Stream:* Owing to the multiplicy of entertainments advertised for Detroit during the first week of September, our committee has concluded that it would be injudicious to give a bench show at a time when the patronage of the public will be so badly divided, and therefore withdraw our dates of Sept. 4, 5, 6 and 7. We hope soon to be able to reannounce dates and to offer exhibitors the largest and most complete list of prizes ever given at a Western show.—H. E. COOK.

"DISGRUNTLED ASSOCIATES."

NEWPORT, R. I., Aug. 4.—*Editor Forest and Stream:* Mr. William Rewalt, Jr., President of the Hornellsville Kennel Club, publishes an open letter in the FOREST AND STREAM, pluming himself on the part of his club with my stigma, "disgruntled associates," for their hostile attitude toward the A. K. C., and professes to state facts, adding the sins of omission respecting them on the part of the A. K. C.

The true facts, let me say, are quite different, and are from record. Let us take them in their order.

First fact—A member of our club exposes the Chicago "special steal."

Under date of March 8, 1886, Mr. Wm. Wade asked the A. K. C. to investigate the case known as the Chicago special, wherein he charged that the Illinois Kennel Club did not pay a special prize of $15, donated by Mr. F. S. Waters and won by Mr. J. Otis Fellows. This matter was referred to a special committee (Mr. W. H. Child) at the meeting of May 6 following, and at the meeting held Sept. 15, 1886, Mr. Child reported that the special had been paid, the evidence was ordered on file and the committee discharged. I quote from Mr. L. F. Whitman's letter of Sept. 11, 1886, to the committee, a part of the testimony in the case:

The special of $15 was donated through me by Mr. F. S. Waters, and of this I notified the club at its next meeting. * * * In reference to the use of the funds I will say that the club passed a resolution to send me to the Cincinnati show to solicit entries for the Chicago show, furnishing me with some funds to pay my expenses; this amount, however, was insufficient, and I was compelled to use the funds in my possession to liquidate the same, intending to place the excess in my report to the club, after the show, when I made my last and only settlement. The club being financially embarrassed, I did not include the amount in my settlement, but wrote Mr. J. Otis Fellows in reference to the matter, saying that as soon as I could I personally would pay the special. This I did pay before any charges were filed with the American Kennel Club, and I now hold receipts for $15 from the United States Express Co. and from Mr. Fellows. The amount was paid before, and not during the Pittsburgh show as charged. In acknowledging the receipt of the money Mr. Fellows wrote me that Mr W. Wade of Pittsburgh had advised him not to accept the special money from me.

Second fact—A member of our club exposed the Pittsburgh "pewter medal steal."

At the meeting of Dec. 6, 1886, Mr. Jas. Watson charged the Pittsburgh Club with awarding medals of alloy, instead of silver as advertised. The Committee on Discipline, to whom it was referred, reported that from evidence collected it had been the custom of this club to award just such medals as are now questioned, that in its opinion exhibitors knew about what they would receive, but in order to prevent a like occurrence, Mr. Drake, of St. Paul, offered a new rule, which was adopted and is now in force, that on and after that date medals advertised as gold or silver must be of the purity of U. S. coin; medals of alloy can be designated as club medals.

Third fact—Our superintendent caught one Farley stealing here and at Buffalo. He reported him to the A. K. C., but they said they would not disqualify because the Buffalo Kennel Club was not a member; and that, I must say, was a fine decision for a body that wishes to govern the canine interest of our big country. Our club, then a member of the A. K. C., disqualified Farley, but we had a delegate who was so unfortunate that he had a brain, and the A. K. C. could do nothing about it, but waited until the Westminster Kennel Club caught Farley at more crooked work, and then disqualified him.

Mr. Fellows notified the secretary of the A. K. C. that this Farley had been detected in stealing from the Buffalo show; this was submitted at the meeting held May 5, 1887, and was referred back to the Buffalo Club, with the information that said Buffalo Club was not under our jurisdiction. Even had the Buffalo Club been a member of this association it would have been necessary for said club to have first investigated and passed upon the Farley matter before it could be properly brought up before the A. K. C. This association has always adhered to the principle that the club under whose jurisdiction the offense was committed must first act, the A. K. C. only taking up the case on appeal, and it only assumes original jurisdiction over the acts of its own members (which are clubs) as illustrated in the case of the so-called Chicago special referred to in the early part of this letter. Later this Farley committed the same offense at the Hornell Kennel Club's show, by whom he was disqualified, and said disqualification was recognized by the A. K. C. and notices to that effect were promptly mailed to every delegate in the association. At the New York show of last spring entries were made by one P. H. Foster; one of his entries was protested, and during the investigation made by the Westminster Kennel Club managers they discovered that Foster was a brother-in-law to Farley, who had already been disqualified by the Hornell Kennel Club; and the protest as above being sustained by proof, the W. K. C. disqualified the protested dog and suspended both Foster, the exhibitor, and Farley, the then discovered owner (under Rule 28) for fraud. Farley appealed to the A. K. C., who, after investigation by a committee, sustained the action of both the Hornell Kennel Club and the W. K. C. by making the disqualification for ever.

Fourth fact—All the above were but a fitting introduction to the crowning offense of depriving our club of the right to be represented by the only delegate who had ever been able to show himself capable of understanding what his duties were. We instructed our secretary to tell the A. K. C. the above facts, and also about their violating the rules in recognizing Atlanta just to please Mr. Belmont. So they arose in their might and expelled the Hornell Club, and now Mr. Belmont says we are "disgruntled."

The Hornell Kennel Club was requested to name some other delegate in place of Mr. James Watson, for the following reasons:

First—That he was the editor of the *American Kennel Register*, and was publishing the same, while a delegate, in opposition to the stud book of this club.

Second—That he was the editor of the Kennel department of the *Sporting Life*, of Philadelpia, Pa., and while a delegate to this association was using said position in opposition to the stud book of this club.

Under these circumstances such a delegate was certainly not in accord with the principles of the club to which he was a delegate, and the A. K. C. very properly refused at a subsequent meeting to recognize Mr. Watson under Article 9.

The Atlanta Club was elected a member of the A. K. C. Aug. 22, 1887; consequently the awards at its show the following January must be counted; and, therefore, that they were recognized "just to please Mr. Belmont" is pure invention.

The A. K. C. expelled the Hornell Club, by unanimous vote, under Article 9 of its constitution, for reasons supplied by the Hornell Club itself in the following letter:

HORNELLSVILLE, N. Y., April 30, 1888.—A. P. Vredenburgh, Sec'y A. K. C.—Dear Sir: I replied to your letter some time ago, but have received no answer to my question about Farley and the W. K. Club; perhaps you will at some future time be at liberty to explain it.

As to the Hornell Kennel Club sending a delegate to your meetings, I doubt if we will ever condescend to notice you further. The incompetency of your club in dealing with such glaring outrages as the "Chicago Special Prize," "The Pittsburgh Pewter Medals" and the "Farley Case," all of which were reported by or through the undersigned, is positively disgusting and nauseating to all fair-minded men.

All these were but a fitting introduction to the crowning offense of depriving us of the right to be represented by the only delegate who has been able to show himself capable of understanding what his duties were. (Please imagine the above paragraph printed in bold-faced type.)

The A. K. C. has never amounted to anything, and is likely to peter out now with a new candidate in the field. It is not a club which reflects any honor upon its members, its aims and objects being too well understood by those who have watched the course of events, winding up with the Atlanta recognition in direct violation of your own rules and simply to please Mr. Belmont. It is no wonder that Mr. Child declined in disgust to be any longer connected with an association that would not be elevated. He has the respect of all honest dog owners, and it is further enhanced by his late action in resigning.

The Hornell Kennel Club decline to send any delegate but Mr. James Watson, and as you have bounced him by compelling him to withdraw from your deliberations, the clique now running the A. K. C. can run it until they run in into the ground or else see their errors and recognize our inalienable right as a club.

The above was read before a special meeting of our club and approved with applause.

(Signed) J. OTIS FELLOWS, Sec'y Hornell Kennel Club.

AUGUST BELMONT, JR., Pres. American Kennel Club.

"A BIT OF KENNEL HISTORY."

Editor Forest and Stream:

Your editorial under the above heading surprised me. Mr. Peshall's reply shocked me. I was shocked because Mr. Peshall, whom I had always believed to be a truthful man, had tarnished the fair pages of FOREST AND STREAM with a half denial of what he knows to be a perfectly true statement of facts. Mr. Peshall remembers every word that passed between us, "about the time the late *Kennel and Gun* went off," which was more than twelve months ago, and I judge from his weekly contributions to a horse paper that he is conversant with the doings and sayings of every prominent person from the time of Adam down to Hannibal, and from Hannibal down to Chas. J. Peshall. But when the half dozen individuals who control and get fat on the A. K. C. (Mr. Belmont is not one of these; the wolves are "feeding" him for a *fête* royal) think it advisable that Mr. Peshall should not have a memory, he loses it to oblige them and forthwith becomes wholly incapable of recalling what transpired a few short weeks ago. It has been said that these fellows expelled a delegate for having a brain, and I do not think that it would be unreasonable to assume that Mr. Peshall, who is said to be a retired lawyer, has taken warning therefrom and decided not to be expelled for having a memory.

The facts concerning "a bit of kennel history" are as follows: On the afternoon of the same Thursday that your editorial condemning Rule 2, and exposing the trickery of the 44 Broadway clique was published, I met Mr. Peshall, accidentally. He told me that he wished to see me, and we at once proceeded to a place where they sell water. Mr. Peshall was, I admit, considerably excited. He said that the A.K.C. would have a paper of their own. To which I replied there was no one to edit it unless they felt disposed to get men like Rendle, Mortimer and Goodman; men who have none but a superficial knowledge of dogs, and no record as breeders or owners. I also told him that to do this would be suicidal, as nobody would care to read a dog paper that was not managed by a man who had a first-class record as owner, breeder or exhibitor. Mr. Peshall then said, "What is there to prevent our getting you? If we cannot, we will get a good man from the other side." To this I replied that it was clear to me that the American Kennel Club did not intend to do the right thing by exhibitors; that I could not afford to become associated with it in any way until it had shown itself capable and willing to deal justly by all, and that I had enough work on hand with my book, judging, and writing reports to occupy my spare time. After having assured me that if I took a hand in the controversy against the wolves I would surely injure the sale of my book, all of which I was green enough to see, Mr. Peshall and I parted, the best of friends.

Ten days or so after this Mr. Peshall called late in the evening to see me, and I was surprised, for his visits had for months been few and far between. Possibly the hungry wolves at 44 Broadway had gone for "that fellow Mason" to such an extent that Mr. Peshall began to doubt his judgment or the right to choose his own friends. I don't know about that, but his visits were fewer than they had ever been before. It occurred to me at once that Mr. Peshall had come to endeavor to persuade me to reconsider my decision about the paper. He, however, quickly dispelled that notion by asking me if I would take hold of the A. K. C. Stud Book and on what terms. I gave him a prompt and negative reply, and turned the conversation to a discussion of the merits of the portraits for my forthcoming book. Mr. Peshall did not remain more than a few minutes after he got my final decision on the question, and has only been to see me once since. A very short time after this I learned that Mr. Vredenburgh contemplated resigning the management of the Stud Book, and that the only candidate for the position was the younger half of the Hempstead Farm Company, the individual who makes a separate heading for Prince Charles spaniels and classifies tri-color spaniels with the Blenheims. In order that the subscribers may not again have cause to regret the young man's making the "official" a laughing stock for dog owners, let me tell him that a tri-color spaniel is a Prince Charles and must go under that heading, and that a ruby spaniel is not a Blenheim.

Mr. Peshall says that he has never had any controversy with me of any name or nature. The files of FOREST AND STREAM contain a letter written by me several years ago, stating that while I am ever ready for a discussion with men who have had experience as dog owners, I cannot and will not waste time over those who have not. How is it that Mr. Peshall has never forgotten that letter and yet cannot remember what has transpired since Christmas? Mr. Peshall's statement that he has only replied to my attacks on the A. K. C. is misleading. I do not think that up to February I had ever written a line against the club. I always said that the A. K. C. should be given a chance to do good. It has had the chance and refused to take it. When a member of the A. K. C. returned an entry of mine to let his own dog win, I thought it time to "attack," notwithstanding Mr. Peshall's gratuitous advice in regard to the sale of my book; and I would like to know now why the protest that was lodged by Mr. Winslow was hushed up, and what became of the $5 bill that was deposited. Did it find its way into the coffers of the A. K. C., or was it invested in a feed for the wolves? Perhaps as the W. K. C. was the offender the protest was frivolous. We all know that when these people entered Sensation in a wrong class at Boston and refused to return the prize, the A. K. C. backed them up, because it was not strong enough to take action against itself. If the owner of Kenmore had done such a thing he would probably have been kicked out of the shows, and in quick time. But with F. R. Hitchcock and T. Terry in one corner of the A. K. C. office, and P. C. Ohl and that lovely creature Schellhass in another, how are you going to act against the W. K. C.? It seems to me that if Mr. C. J. Peshall would utilize a little of his time in trying to reform abuses instead of allowing his memory to leave his head to take shelter in his clothes, and filling the papers with quotations from the Scriptures, he might to some extent regain the respect of the dog loving community.

"Let him be kept from paper, pen and ink,
So he may cease to write, and learn to think."—*Prior.*

There will be plenty of work for Mr. Peshall and the wolves before long. In conclusion let me express my thorough contempt and disgust for the individuals who have been trying to ruin the Buffalo show because it refused to pay blood money or be dictated to in the matter of the appointment of judges. There has been no opposition to the London show, although it is not given under A. K. C. rules. That was overcome by engaging a member of the clique to judge.

Now, Mr. Peshall, let me ask you what is your opinion and what is the opinion of the honorable members of the A. K. C., and of the dog fancy throughout the civilized world of a kennel club that sanctions and encourages the appointment of judges who are in the pay of certain exhibitors? This thoroughly rotten state of affairs must some day be explained to the right-thinking men who are so peculiarly represented in the A. K. C.. When the time comes for a clear showing up of the whole business, Mr. C. J Peshall will perhaps do me the kindness to have his memory about him. He will need it. CHAS. H. MASON.

BENCH VERSUS FIELD.

THE Kennel Club managers are chiefly composed of gentlemen who breed, for sale to a large extent, some one or more sorts of dogs. These gentlemen influence the selection of judges. In our opinion their appointments are good ones. The breeding for sale we have no earthly objection to in the abstract, and as far as non-sporting dogs are concerned, we see no disadvantage in one man breeding and keeping just as many dogs as he chooses; whether it is fair that these breeders should also appoint the judges is the question which does not concern us or, in fact, anybody but the other exhibitors, among which we are not to be found. What does concern us is that the same principle of breeding in great numbers should be applied by the managers of dog shows to the breeding in their own kennels of dogs which deceive the public under the guise of champion sporting dogs. When we see a dog show manager with twenty to forty retrievers in his kennel, and upon inquiry find that his sporting is of a very limited character, while his dogs, broken or unbroken, figure as dog show champions, we are aware that he is keeping far more dogs than he can give work enough to do to render them really useful sporting dogs; and we are aware also that the public buy them and breed from them under the impression that they are procuring really sporting dogs; when as a matter of fact, they are offering nothing better than toys which have been bred for generations entirely for dog shows, some of which have incidentally been broken, and a much smaller proportion used in sport to any useful extent. This case bears a strong likeness to that of the successful breeders and exhibitors at Kennel Club shows. If the club were to inaugurate retriever trials in the field, and make entry at the shows depend upon success in the field, we should expect to find all these celebrities conspicuous by their absence. We know, as a fact, that field merit is not considered in the breeding of the majority of show pointers and setters, and we are morally certain that it is the same with retrievers and spaniels. In fact, it must be so when they are bred in large quantities in any single establishment. There cannot be enough work to bring out and exercise the intelligence of the stud dogs and bitches and the instinct in every succeeding generation becomes weaker as a consequence.

What one prominent member's kennel is among retrievers, we are inclined to think another's kennel of Irish setters is among setters. We have made particular inquiries as to what amount of shooting these dogs get, but we cannot hear of any one who can affirm that they do get work to any considerable extent. Doubtless both these gentlemen occasionally breed a good dog, but that does not show a good working blood. What does show it is when every puppy in a litter may be depended upon to be up to the average of good dogs, and many of them far above it. This we should not expect from either of the above kennels, where an occasional dog up to the average is all we should look for. The English setters and the black and tan setters at the show just past show us that there can be even lower grades of breeders of sporting dogs than those reached by the retriever breeders of both sorts. Here we find that breeding for show points for so long has defeated itself, and has physically incapacitated the outcome of the system for hard work, even if they possessed the will to do it, which we do not suspect they do: If the Kennel Club interfered with the present system, by making entry at their shows depend upon dogs having done something at field trials, Othello's occupation would be gone. All the champions and coming champions would be excluded from competition, and a dog show, instead of being a great assembly of dealers, would become a rendezvous of sportsmen who breed dogs because they want them. A few years ago we had hopes that dog shows might be drifted into something of this kind, and we used the little influence we possess to induce the establishment of field-trial classes at dog shows. A few gentlemen very honorably attempted to combine good looks and good work and public form. These were Mr. Lonsdale, Mr. Lloyd-Price, Mr. Barclay Field, Mr. Purcell Llewellin, Col. Cotes and Mr. Pilkington. Doubtless if the absence of these gentlemen had not been more or less preferable to their company at Kennel Club meetings, they would have been encouraged to continue to exhibit; but then, as before, Othello's occupation would be gone, so that, in one way or another, they have all been made to prefer to keep their dogs without the sphere of action of the Kennel Club. Only one of these gentlemen exhibits one entry, viz., Mr. Pilkington, and we are constrained to say that the exhibition of Woolton Game is the remnant of the better spirit and more sporting character of dog shows.

We have already said that we used our influence to induce classes for field trial dogs; and at one time, before the Birmingham dog show fell under the boycotting influence of the Kennel Club, it looked as if it might become the fashion to send field trial dogs to the shows. We remember a class containing about a dozen magnificent field trial winning setters: but, unfortunately, the Kennel Club followed Birmingham with a sort of feeble imitation such as to make the whole thing ridiculous; thus they give a first prize of £3 for pointers, and a second of one pound, and throw the prize open to any dogs which may have been entered twice, or called up twice at a field trial; for such is the meaning of the words of the regulation; whether it was intended or not we cannot say. But so little is the prize regarded by those who are ambitious to win field trials that, although thrown open practically to all entries at field trials, neither pointer nor setter field-trial class secured more than four entries, showing that those who have really valuable dogs do not regard the inducements of Kennel Club honors as equivalent to the risks run by the dogs in obtaining them. When, therefore, we see the name of a field trial owner in the catalogue, it is generally a sign that he has a draft to sell which he will not personally recommend to a purchaser.

For these reasons we strongly advise our readers who want dogs for the moors to leave dog show dogs entirely alone, and instead, to attend Aldridge's sales, where they may generally find dogs which some friend can tell them about, or if not, they may rely upon the affirmative descriptions in the catalogues when a well known name is attached thereto.

How much the classes of dogs supposed to be used with the gun depend upon a fancied connection with working dogs is this year very obvious in the paucity of the entries of black and tan setters. Four entries, and but three exhibits, is the result of the entire non-appearance of black and tan setters to field trials. The connection of the English and Irish setter classes, and the pointers with field trials, is nearly as remote. It is a necessity to keep up the connection in appearance, and every effort is made consequently to press into service the name of a field trial sister, cousin, or aunt; but when a show dog is successful as a field trialer it is usually because he has a pedigree on the other side as well. This was the case with Master Sam this year,

which on the dam's side is of the same blood as Mr. James Bishop's Beau of the Ball and Mr. Llewellin's Dan.

Between the two dogs in the challenge class of English setters there was not much to choose. Neither look like workers, and their brother, which won in an open class, carries his ears back showing the insides of them like a half-bred collie. The bitch in the challenge class is a more hardy looking animal but far too small. Two English field trial setters and one Irish one put in an appearance, but the former were a long way off first-rate when we saw them work, and in appearance they are decidedly common. Nevertheless, it is quite possible that Mr. Lowes's bitch may, some day, make a really good one, if she can be brought under proper control without breaking her dash.

The Rev. O'Callaghan and dogs bred by him were successful in Irish setter classes; he also trotted out once more his single field trialer. Mr. Shirley and dogs bred by him won in flat-coated retrievers, and Mr. Skipworth's dogs took the prizes for the curly-coated sort.

The show was held in a field belonging to the popular Ranelagh Club, an excellent advertisement for the Kennel Club, to which the idea of a connection with sport is all important; however, they did not make much use of their opportunities, as a visit to tents, through which the rain was streaming, was not very enjoyable either for the inspectors or the inspected.

For descriptions of the toys, sporting or otherwise, we must refer our readers to one or the other of the fanciers' papers.

Of pointers we cannot say much, but we give them more notice than the setters and retrievers, because there is slightly more ground for believing the classes contained some sporting merit; indeed, the Kennel Club is clearly less regarded now than ever as representing sportsmen's interests in doggy matters. Bar one or two small kennels, none of the prominent sportsmen of the day were represented. Not a single entry either from Mr. Heywood Lonsdale, Mr. Lloyd Price, Mr. Barcley Field, or Col. Cotes; and these gentlemen a few years ago were each and all almost invariably strongly represented at the K. C. shows; but they evidently declined any longer to receive the club's dictum. The challenge classes were weak, Naso of Upton alone in the dog class; and Mr. Lloyd-Lloyd's Lady Jane winning in bitches. She is a smart, pointer-like looking bitch, full of quality, too fine almost for hard work. Molton Broom is a good roomy one, lengthy and pretty level; Aldin Bell and these two were the only entries for challenge bitches, and the merits of each of the aforegoing have so frequently been discussed that it is unnecessary to devote further space to them on the present occasion. In the open dog class (55lbs. and up) Mr. E. Bishop's Lord Newton, a dog of great quality, is very smart and showy-looking, standing up bold and square; he has good lung-room, also has good feet and legs, is straight and strong in front, with a good head, a nice graceful neck, and well-placed shoulders, fairly good back, ribs and loins, and a thoroughly good pointer stern; but we should like him a little more bent in the stifle-joints, and cleaner about the hocks. He is decidedly a show dog; what he may be in the field we can't say; if good, Mr. E. Bishop is just the man to run him at the trials, but he has not put in an appearance at those contests at present. Mr. Bryan's Banker (second prize) we know something of, having seen him run, and an account of his performance appeared in these pages, recording the running of the Springfield trials; on a close inspection he is not quite so straight in front as we thought he was, and is, perhaps, rather effeminate in head qualities, but he has a good barrel, capital well-bent thighs, and is as hard and full of muscle as a prize fighter. We know that he can gallop, and that he has a keen love for hunting; had he been better broken at the trials he would have pushed very near to the front. Mr. Norrish's Teign (third prize) is a different stamp of dog, rather heavy in head, and very light in eye; he is also rather flat-sided, but his chest is very deep; he has plenty of good, straight bone, and strong compact feet, and ought to be able to go; his stern, however, is decidedly foxhound in length and carriage. Mr. Lloyd's Totnes Parody (reserve) we did not care for, he is wide in front and slopes off in hindquarters. Mr. W. Nicholson's Drayton (v.h.c.) is too leggy, and has not a nice expression. Friar of Upton is a useful-looking dog, with plenty of bone, but rather plain in head properties.

Large bitches were barely an average as a class; Mr. G. Pilkington's Woolton Game, winner at the National Trials, Shrewsbury, this year, had an easy win. She is a heavily marked liver and white bitch, has good feet and legs, is very level, with excellent back and loins, a nice pointer-like head, and low-set ears, but she is rather upright and thick in her shoulders; of quality she has plenty, and she is a good one in the field. Mr. Bryan's Bracken (second prize) is a very compact, square made animal, rather too short if anything for breeding purposes; she has good head and nice dark hazel pointer-like eyes, rather a rare feature in the modern representative of the breed. Mr. Statter's Lothé (third prize) is fairly good in body and head properties, but stands badly in front, is weak in her pasterns, and has not the best of feet. A good-bodied bitch, with nice straight legs, plenty of bone and well-sprung ribs, is the Rev. J. Pooley's Milton Stella (reserve), but her light eye and prick ears detract from her otherwise pointer-like characteristics. In the small-sized dog class (under 55lbs.) there were only a very few good ones. Mr. J. L. Bulled's Molton Baron was lucky to get first place, for, although he is a good-bodied dog, with nice head and ear and fair bone, he stands much too wide in front; he, however, has a nice pointer-like head and eye. Mr. F. Lowe's Kent Cob is a hard-looking useful sort, has a capital barrel, good feet and legs, and his credentials are a second prize at one of the Continental field trials; we should have placed both him and the Rev. W. J. Richardson's game-looking little Rex of Milton—jealous little beggar though we know him to be in his work when running against a competitor—in front of the winner. Mr. W. C. Tong's General Bounce (reserve) is a very peacocky-looking gentleman, good in outline, but not well filled in; a heavy fallow or wet, clingy turnips would, we should fancy, soon take the go out of him. Sir T. B. Lenard showed two, Chandos and Kite, fairly good useful-looking pointers. Mr. Beck's Perdix is a good-bodied dog, but is very short, chumpy, and unpointer-like in head; he has good sporting blood in his veins, however, on his dam's side, being out of Mr. Lloyd Price's La Vole, an old field trial winner. In the corresponding bitch class Mr. W. J. Tredinnick's Cornish Juno (first prize) is a great roomy bitch, with good feet and legs, but she looks and handles soft and flabby. Mr. Salter's Treacle (second prize) is a compact, smart-looking little bitch, with not the best of feet and forelegs. Mr. Holmes's Isabella (third prize) is evidently kept for the show business, and, although very sleek and pretty, looks far too soft for work; and there were two or three others we should have placed in front of her, including the Rev. W. J. Richardson's Milton Ringlet, a very smart, wiry-looking little bitch, with nice clean-cut head, well-set ears, plenty of bone for her size, full of muscle, as hard as a board. Mr. F. Lowe's Daphne of Avon (reserve) was not in her place when we visited the show, so we can say nothing about her. Bar the above-named animals, there was nothing worthy of special note among the pointers. In the field trial class there were three representatives only. These were Woolton Game, Kent Cob, and Rex of Milton, each one of them already referred to above, and they were placed in the order given, viz., Woolton Game, first (which prize is of the value of £3, being £1 less than the first prize given by the Kennel Club in the toy terrier class); Kent Cob, second prize, £1; Rex of Milton, reserve.

SPANIELS.—There was a fairly good muster of Clumbers, but nothing really first-class among the entire entry. The Duke of Portland showed a team of nine good, useful, workmanlike looking animals, but with one or two exceptions not such typical animals as we have seen exhibited from the same kennels before. Boss III., Mr. R. Pratt's first in the challenge class, is a giant; but he has not altogether the correct type of Clumber head, and we doubt his lasting more than two or three hours at work. The Duke of Portland took first and second, and reserve in the open dog class with Dot II., Rock IV. and Dart II. The bitches were most of them small and weedy, some of them distinctly not pure bred ones. Mr. L. Deane's Bromine was clearly the best in the class and is a very fair type of the breed.

Irish water spaniels were a fair lot only, but the best type animal of the lot, Pat Malone, was in such wretched coat that he only took he. The Shaugraun is a dog with a capital head, body and leg coat, but he is coarse in muzzle; he was alone in the challenge class for dogs, as was Colonel, the Hon. W. Le Poer-Trench's Harp in that for bitches; she is a very nice one and has the orthodox whippy stern, which by the bye, however, looked uncommonly as if her kennel man had sandpapered it. Spalpeen, from the same kennel, won in the open dog class; he has a fair amount of head and body coat, but not quite of the right sort. Mr. Glaisby's Pat Malone, has excellent head and muzzle and the right kind of coat both on the body and legs; that is when he has not shed it. On the present occasion there were only about half a dozen ringlets left on him to swear by; it was a pity to show him. Barry Sullivan is good in muzzle, but bad in head coat. The best colored animal of the breed was Mr. Nisbet's Kate Kearney, first for bitches, but her coat is not quite the thing at present, being rather open; she also seemed to be shedding it. The second prize bitch, Mr. Mouttray's Molly Doolin, has clearly got a touch of the French poodle in her composition, judging from the long tufts on her muzzle, but her owner deserves credit for showing her in her natural garb, without resorting to that cultivation at which some dog show men are such adepts.

Of field spaniels and so-called cockers we have little to say. There were a few nice liver-colored animals and a lot of soft-coated blacks, the regular show bench breed, which have contaminated the working breeds of spaniels almost everywhere throughout the country.

Of the old and practically obsolete breeds of sporting dogs (bloodhounds and deerhounds) there was an excellent show of bloodhounds, the bitches being a grand lot. Deerhounds were fairly numerous and good. Greyhounds were two moderate classes, but coursing men seldom patronize dog shows, so no particular interest can attach to the entries sent to compete on the bench.—*Land and Water.*

THE BUFFALO DOG SHOW.

THE premium list of the dog show to be given by the Buffalo International Fair Association at Buffalo, N. Y., Sept. 11 to 14, is a liberal one. In the champion classes for prominent breeds the prize is $20 for dogs and the same for bitches, with a second prize of bronze medal when there are three or more entries. In open classes for prominent breeds the prizes are: Dogs $20, $10 and bronze medal; bitches the same; puppies $10 and bronze medal for each sex. For spaniels the American Spaniel Club's classification No. 1 is adopted with $10 in champion classes, $10, $5 and bronze medal in open classes. Collies have $10 in each champion class, with $20, $10 and silver medal in each of the open classes and $10, $5 and silver medal for each puppy class. In a number of the other classes the champion prize is $10, open classes $10, $5 and bronze medal for each sex. In some of the less prominent classes the prizes are $10 and $5 and $10 and medal. Where one class only is provided it will be divided by sex when there are five entries of each sex.

The association offers a kennel prize of $10 for mastiffs, rough-coated St. Bernards, smooth-coated St. Bernards, greyhounds, pointers, English setters, Irish setters, field spaniels, cocker spaniels, beagles, collies and bull-terriers; $10 for best pair beagles, 13in. or under, and the same for best pair black greyhounds; $20 for best team of eight working spaniels; $20 to handler of largest number of dogs; $10 to handler of second largest number, and $20 to exhibitor making most entries. Other specials are offered for best brace of Irish setters and best brace of greyhounds. Messrs. F. Windholz, W. Wade, Chas. H. Mason, Dr. J. Frank Perry and several other gentlemen whose names we have not learned have also offered valuable specials.

The Pug Breeders' Challenge Cup, open to all American bred pugs, and the American Field Cup, open to pugs owned by members of the American Pet Dog Club and members of the National Dog Club of America, will be competed for. Entries close Sept. 1. The address of the secretary is C. W. Robinson, 47 Chapin Block, Buffalo, N. Y.

OUR BOSTON SHOW REPORT.

NEW YORK, Aug. 4.—*S. T. Hammond, Esq., Kennel Editor Forest and Stream:* DEAR SIR—I was surprised to see in your paper's last issue that you published your letter to me of the 25th July and my reply of the 31st, as I considered them private communications, at all events until my consent to their publication had been secured. In my letter to you I said that I was ready if you called upon me to give you my reasons for my criticism of your paper's Boston show report. They are based on very satisfactory written proofs given to me by the best authorities of each special breed.

I reiterate all I have said publicly and privately on this subject, and invite as much of your habitual misrepresentation and abuse as your well trained staff in this line consider they can spare for me. As you published the correspondence to which this relates please publish this.

AUGUST BELMONT, JR.

FOX-TERRIER CLUB'S SHOW.—New York, Aug. 6.—*Editor Forest and Stream:* I call your attention of the closing of the entries of the American Fox-Terrier Show printed in your last issue, Aug. 22. Please have the date rectified to Aug. 15. The entries are coming in rapidly, and the indications are that the show will far exceed the previous shows in quality and numbers.—H. P. FROTHINGHAM, Secretary and Treasurer.

THE SELECTION OF JUDGES.—*Editor Forest and Stream:* I am informed by independent exhibitors that certain persons in control of the A. K. C. have written to a dog show committee advising them to select as a judge a kennel man employed by individuals who have office room in the A. K. C. office. While I have the honor of not being associated or connected in any way with said persons, I believe that I, as well as every other individual interested in the dog, have a perfect right to ask the president of the A. K. C. if there is any truth in the report, and if there is to state when the honorable members of the A. K. C. were consulted on the question, and which of them authorized said persons in A. K. C. office to use their names in connection with such suspicious proceedings.—CHARLES H. MASON.

KENNEL MANAGEMENT.

☞ **No Notice Taken of Anonymous Correspondents.**

H. A. E., New Haven, Conn.—I have an Irish setter dog, 5 yrs. old, afflicted with very sore ears. On the edges of the hole into the head are some little red pimples, and his ears and head are not swelled in the least. They are very sore inside and very itchy. He will scratch them with his hind paw and then rub them and whine as if it hurt. His ears seem to be burning with fever. There are no discharges. He is strong and healthy with the exception of his ears. Ans. Canker of the ears. Wash carefully twice daily, and after drying let a few drops of the following medicine fall in each ear and then knead the ears gently:

℞	Bromo-chloral	j
	Tr. opii	ʒj
	Aq. ad	ʒij
Mix.		

E. T., Brunswick, Me.—My foxhound bitch has an enlargement upon her throat. I think it is a goitre. At the present time it is very hard. Ans. Iodide of potassium internally and mercurial ointment applied daily to the surface may cause its size to decrease. Consult a veterinary.

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope of large letter size. Sets of 200 of any one form, bound for retaining duplicates, are sent for 30 cents.

NAMES CLAIMED.

☞ **Notes must be sent on the Prepared Blanks.**

Wasp and Nettle. By John Graham, New Albany, Ind., for brindle and white bull-terrier bitch, whelped July 21, 1888, by Steve (Billy—Rose) out of Chunkey (imported Jim—Daisy).

Rifle and Trap Shooting.

RANGE AND GALLERY.

NATIONAL RIFLE ASSOCIATION PROGRAMME.

FOLLOWING is the official programme of the sixteenth annual meeting of the National Rifle Association, to be held at Creedmoor Sept. 10 to 15 inclusive:

No. 1. Directors' Match.—200yds.—open only to directors of the N. R. A. Rounds, five; position, standing; weapon, any military rifle. Prize.—The Directors' Championship Gold Badge, shot for annually.

No. 2. Judd Match. Open to all comers, any military rifle, including specials; Remington, State model, allowed one point on each score; 200yds.; standing; rounds, seven; entries and re-entries, $1 each; only three entries allowed to be shot on each day; match to occupy two days; the aggregate of two scores to count for the first five prizes, the winners to have the choice of prizes in the order of merit of their scores. First prize.—A handsome mantel clock, value $35. Twenty-five cash prizes, viz.; $25, $20, $15, $10; six of $8, seven of $5, and eight of $5 each.

No. 3. Wimbledon Cup Match.—Open to all citizens and residents of the United States; 1,000yds.; thirty shots; any rifle within the rules; cleaning allowed; position, any; entrance fee, $2. First prize.—The Wimbledon Cup. Presented by the National Rifle Association of Great Britain to the N. R. A. of America, to be held by the winner till the next fall meeting. Value, $500. Won in 1875 by Maj. Fulton; in 1876 by I. L. Allen; in 1887 by Dudley Selph; in 1878 by Frank Hyde; in 1879 by C. Laird; in 1880 by W. M. Farrow; in 1881 by F. J. Rabbeth; in 1882 by W. Budworth; in 1883 by H. T. Rockwell; in 1884, 1885 and 1886 by J. W. Todd; in 1887 by T. J. Dolan.

No. 4. President's Match.—First stage, 200 and 500yds., 7 shots each, open to army, navy and marine corps, or national guard of any State. Competitors to shoot with the rifle of the model issued by the State they represent or the U. S. Springfield rifle; .50-cal. Remington rifles will be allowed one point. Twenty-two prizes, viz.: $20, $15, ten of $10, and ten of $5 each; entrance fee $3 to both stages. Second stage, open to all prize winners in the first stage; 600yds.; number of shots 10; position any; rifles same as in first stage. Prize, the mid-range championship of America for one year, and cash $25, to be awarded to the competitor making the highest aggregate score in both stages.

No. 5. The Long Range Military Match.—Any military rifle, 800, 900 and 1,000yds; any position; all comers; 10 shots at each distance; entrance $3. Eight prizes, viz.: $20, $15, $10, $8, $7, and three of $5 each.

No. 6. The Tiffany Match. — All-comers' continuous match, 200yds., standing; number of shots 7 on the American standard target; any rifle. The allowance for special military rifles will be three points, for other military rifles four points, and for the Remington-State model .50-cal. five points on each string. Cleaning allowed between shots for rifles other than military or special military. The first prize will be a silver vase presented by Messrs. Tiffany & Co. Thirty-one cash prizes aggregating $264, viz.: $30, $25, $20, $15, five of $10, seven of $7, and fifteen of $5 each. The aggregate of three scores to count for all prizes. Extra prizes of $5, $3, and $2, will be awarded each day to the competitors making the highest three single scores. Entries unlimited; fee, $1 each ticket, or three for $2 if taken at one time.

No. 7. Governor's Match.—10 shots at 500yds.; position, any; rifle, any military; all comers. Entries, $1 each or three for $2 if taken at one time; $200 divided into 25 prizes, viz., $25, $20, $15, $10, six of $8, seven of $6 and eight of $5. All prizes to be won on the aggregate of three scores, and ties in each case to be decided by the next best score (or scores). Allowance for Remington .50-cal., 5 points; other military rifles 3 points on three scores, and in the same proportion for single scores.

No. 8. All-Comers' and Marksman's Badge Match.—Open to everybody; 200 and 500yds; standing at 200, prone at 500; 5 shots at each. Entrance fee, $1 or three tickets for $2 if taken at one time. Rifles, the Remington .50-cal. State model or such other rifles as may be issued or authorized by the State of New York. Thirty-one prizes, total $240, viz., $25, $20, $15, eight of $10 and twenty of $5 each. The firing at both ranges must be done on the same day or the score will be considered void.

No. 9. Hilton Trophy Match.—Open to military teams of 12; 200, 500 and 600yds.; 7 shots at each distance; standing at 200yds., any at 500 and 600yds.; any military rifle which has been adopted, authorized or issued as an official arm by any State or Government. Entrance fee, $2 each man. Prize, a Trophy, presented by Hon. Henry Hilton, of New York, to be shot for annually, to be held during the year by the head of the corps or organization whose team may win it, to be returned to the N. R. A. at the expiration thereof. Value, $3,000. Also a medal to each member of the winning team; won in 1878 and 1879 by State of New York; in 1880 by Division of the Missouri, U. S. A.; in 1881 by State of New York; in 1882 by State of Pennsylvania; in 1883 by State of Michigan; in 1884 and 1885 by Division of the Atlantic, U. S. A.; in 1886 and 1887 by State of Massachusetts.

No. 10. Short Range Team Match.—Open to teams of four, from any regularly organized rifle club or association or military organization. Ten shots at 200yds., standing. Rifles, any within the rules. Cleaning allowed between shots for rifles other than military or special military. Target, the American Standard. Teams using the Remington rifle, State model, .50-calibre, will be allowed 28 points, and 16 points will be allowed to teams using other military or special military rifles. Entrance fee, $6 per team, re-entries allowed, but only the highest score to count. Four prizes, viz.: $40, $30, $20 and $10.

No. 11. Inter-State Military Match.—Open to one team from each State or Territory in the United States, consisting of twelve members of the National Guard, 200 and 500yds. At 200yds. standing; at 500yds. prone. Any military rifle which has been adopted, authorized or issued as an official arm by the State or Government. Rounds, ten at each distance. Entrance fee, $2 each man. Prize.—To the team making the highest aggregate score, a large bronze "Soldier of Marathon." Value $350. Also a medal to each member of winning team.

No. 12. Inter-State Long Range Match.—Open to teams of four, all rifle associations or clubs in any State or Territory. 800, 900 and 1000yds.; fifteen shots at each. Any rifle within the rules. Entrance fee $10 each team. Prize.—A Trophy, to be held for the year by the successful team, which shall be deposited in some central place in the State whose team may win it. Also a medal to each member of the winning team.

No. 13. New York State National Guard Match.—Open to teams of twelve from each Infantry organization of the National Guard of the State of New York; 200 and 500yds., standing at 200; prone at 500yds. Five rounds at each distance. Entrance fee, $1 each man. Prize, a trophy presented by the State of New York. Value, $300.

No. 14. First Brigade National Guard Match.—Open to teams of twelve from each regiment in the First Brigade of the National Guard of the State of New York; 200 and 500yds. Five shots at each; standing at 200; at 500yds. prone. Entrance fee, $1 each man. First prize, a trophy, presented by the State of New York. Value, $100. Second prize, cash, $25.

No. 15. Second Brigade National Guard Match.—Open to teams of twelve from each regiment or separate company of Infantry in the Second Brigade of the National Guard of the State of New York; 200 and 500yds. Five shots at each; standing at 200; prone at 500yds. Entrance fee, $1 each man. First prize, a trophy, presented by the State of New York. Value, $100. Second prize, cash, $25, presented by the Second Brigade Staff N. G., S. N. Y.

No. 17. Revolver Match.—Thirty yards, 5 shots on the American standard target, reduced for 100yds., position standing, off-hand, use of one arm only allowed, revolver not to exceed 2¾lbs. in weight, maximum length of barrel (exclusive of chamber) 7½in., minimum trigger pull 8lbs., plain open sights sufficiently strong for service purposes, any ammunition, cleaning allowed between scores only. Aggregate of three scores to count for all prizes. Entries 50 cents or three for $1 when taken at one time, $60 divided into 10 prizes, viz.: $15, $10, $8, $7, and seven of $5 each.

No. 18. Steward Match.—Open to all comers, 200yds., Creedmoor target, 5 shots, position sitting, kneeling or standing, any military or special rifle, an allowance of two points will be given to competitors who use the Remington rifle, .50cal., the allowance to be added to the aggregate of the three scores. All prizes to be won on the aggregate of three scores. Entries 50 cents each or three for $1 if taken at one time. Entries unlimited. Match open every day.

No 16. General Sheridan's Skirmishers' Match.—Open to teams of six from the regular army, navy, marine corps, national guard, volunteers or militia of any country, State or Territory; 600 to 200yds. and return; second class targets; weapon, the military rifle with which the association has been regularly armed; entrance fee, $5 for each team. A commanding officer or coach may be allowed in rear of each team, or as a member on the firing line. The first prize in this match is a trophy presented by S. D. Schuyler. Value, $150. This prize is to be won three times before becoming the property of the winner. It will be held for a year by the officer commanding the winning corps. Also a bronze medal to each member of the winning team. Won in 1884 and 1885 by 4th Artillery, U.S.A., in 1886 and 1887 by Engineer Corps, U.S.A.

The matches will be shot as nearly as possible upon the following days, though the right is reserved after entries are made to change the order of shooting: Monday, Nos. 2, 3; Tuesday, Nos. 2, 5; Wednesday, Nos. 4, 10, 12; Thursday, No. 10; Friday, Nos. 13, 14, 15, Saturday, Nos. 9, 11. Nos. 1, 6, 7, 8, 17 and 18 will be open every day.

No shooter will be allowed to place the butt of the rifle, when aiming, under the coat, vest or suspender.

BOSTON, Aug. 1.—The number of shooters at Walnut Hill today was very small, but those that were present did good work, as the following score will show:

ST. PAUL, July 30.—The members of Company C., N. G. S. M., of St. Paul, held their first shoot for the Callender Diamond Badge Saturday. The weather was very warm and unfavorable to making good scores. Only eighteen members of the company participated in the contest. Captain Chantler made the highest score and won the badge, with Sergeant Stephenson second, Corporal Moreland third and Lieut. Van Duzee fourth. The following is the score:

	200yds.	500yds.	Handicap.	Total.
Capt A E Chantler	43	42	0	85
Sergt W B Stephenson	36	36	6	78
Corp D Moreland	41	35	2	78
Lieut C A Van Duzee	30	39	6	75
Private W B Neal	23	33	2	68
Lieut W S Shank	31	20	6	67
Sergt F C Bailly	28	27	2	67
Private M S Weide	29	22	10	61
Sergt L S Winne	20	33	6	59
Corp S G Iverson	33	9	10	52
Corp B W Rising	35	7	10	52
Private F A Jenkins	16	2	10	28

The following shot at 200yds. only: Privates W S Hart, 35; R J Wood, 34; C C Warren, 28; J H Reed, 24; D Rutherford, 21; C N Ludlow, 8. After the contest for the badge a team shoot was held with ten men on a side. Capt. Chantler and Corp. Moreland selected and captained the teams, the latter having first choice of men. The team contest was 10 shots for each man at 200yds., and resulted as follows:

Capt. Chantler's Team.		Corporal Moreland's Team.	
Sergt Bailly	38	Private Jenkins	16
Sergt Stephenson	36	Lieut Van Duzee	30
Lieut Shank	31	Private Neal	23
Private Weide	29	Corp Rising	35
Sergt Winne	20	Capt Iverson	33
Private Wood	34	Private Warren	28
Private Rutherford	21	Private Ludlow	8
Capt Chantler	43	Corp Moreland	41
Lieut Taylor	39	Corp Falk	41
Private Reed	24—315	Private Hart	35—219

The company will shoot again on the Minneapolis range next Saturday, and a week from next Saturday a match between a team of ten men from Company C and ten from Company A, of Minneapolis, will be shot. The shoot will be 10 shots each man at 200yds.

LYNN, Mass., Aug. 4.—The following scores were made at Indian Hill range to-day: 200yds., second match, standard, W. C. Johnston, Jr. 70, W. H. Merritt 65; 200yds., military match; Creedmoor, W. H. Merritt, 42, 40, J. W. Gerry, 39, 37; 500yds., military match, W. H. Merritt 45.

TORONTO, Aug. 25.—The final telegraphic match between Bowmanville and Toronto took place this afternoon, and resulted in a victory for the home team by the handsome majority of 56 points. The two teams have shot three matches, the first being a win for Toronto by 47 points, the second a win for Bowmanville by 7 points, and the third, as above stated, for Toronto by 56, or a grand aggregate win of 96. The shooting to-day was very fine for a team, as, comparing it with the score that carried off the Kolapore cup at Wimbledon this year, the Toronto men beat it by 16 points. Conditions: Martini rifles, eight men a side, Queen's ranges, 7 shots each, no sighters.

Toronto.	200	500	600	T'l

AMHERST, Mass., July 28.—The following scores were made at Mountain View Range, 200yds., off-hand, standard target;

Henry Adams	7	9	9	10	10	6	8	9	8	9—85
A F Bardwell	8	8	10	6	9	10	5	9	5	7—77
J S Thomas	9	10	7	5	5	5	4	3	7	7—62

THE ELCHO SHIELD.—The fight for this standard long range took place on Wimbledon range July 19. At the first range, 800yds., Ireland took the lead with 383 points, Scotland making 366, and England 554. At the 900yds. England made 557, Ireland 539, and Scotland 505. The total scores over the two ranges were then—Ireland 1,122, England 1,111, and Scotland 1,071. At the 1,000yds. range England put on 531, Ireland 530, and Scotland 497. The grand totals were therefore, Ireland 1,652, England 1,642, and Scotland 1,568. Ireland was thus the victor by 10 points over England, and 84 over Scotland. The Irish score was the best ever made under the conditions now existing, which were established in 1874. Hitherto the best has been that of England in 1881, the same (1,642 points) as that with which England only came in second on this occasion. Ireland's average was 206.5 points per man out of a possible 225; Capt. Barrett beating the famous Elcho Shield record (215 points) of Mr. John Rigby and Major Stamford Young, by making 216. At 800yds. Mr. John Rigby (Ireland) made the h. p. s., Capt. Barrett and Mr. Braithwaite (Ireland), and Lieut. Ferguson and Mr. Love (Scotland) 74 each. At 900yds. the best scores were those of Mr. Smith (Ireland) 73, Sir Henry Halford (England), and Mr. Ganly (Ireland) 72, and Capt. Mellish, Lieut. Dutton-Hunt and Mr. Whitehead (England) 71. At 1,000 yds. Capt. Barrett (Ireland) and Lieut. Gibson (Scotland) made 73 each, Mr. Whitehead (England) 70, and Mr. Ganly (Ireland), and Capt. Mellish, Capt. Gibbs, and Major Godsal (England) 69 each. The best aggregate score was Capt. Barrett's magnificent 216 for Ireland. Ganly (Ireland) and Mellish (England) followed with 213 each. Then came Mr. Whitehead (England) with 212, Lieut. Gibson (Scotland) with 211, Major Fenton (Ireland) with 209, Capt. Gibbs (England) and Mr. Smith (Ireland) with 208. This is the twenty-seventh consecutive year of the match. Ireland, however, took no part in the first three competitions. Since 1865, inclusive, when an Irish team first came forward, England has won ten matches, Ireland nine and Scotland four. Of the whole twenty-seven matches England has won thirteen, Ireland nine, and Scotland five. The existing conditions of the competition have obtained since 1874. Last year the English score was 1,570, that of Scotland 1,569, and of Ireland 1,556.

The detailed score of this magnificent competition runs as follows:

Ireland.	800yds.	900yds.	1000yds.	Total
J Rigby (Rigby)	75	61	66	202
Capt Barrett (Medford)	74	69	74	216
W T Braithwaite (Met. by Gibbs)	74	67	60	201
Major Fenton (Rigby)	73	68	68	209
A Ganly (Gibbs)	72	72	69	213
W R Joynt (Rigby)	72	66	66	204

	566	505	497	1568

FRONT IGNITION CARTRIDGE.—T. Bland & Son, of London, have reported to Major H. W. Merrill, of this city, the working of their new cartridge. They write: "You will remember some time since we sent you a description of our new front ignition cartridge. An opportunity has occurred for us to make a preliminary trial, which took place at Dartford, Kent, on the 27th of April last. This trial was to test velocity by chronograph on Mr. Nordenfelt's range, and the experiment was superintended by Capt. Garnett, chief manager of the range. The velocity obtained was 2,525ft. per second, this being the highest velocity on record, average of 5 shots. The target, ¾in. boiler plate, was pierced by each projectile clean, but the hole was twice the size of the projectile, caused by the projectile expanding by impact. It is the opinion of Capt. Garnett, whose certificate we hold, that a ½in. plate would have been pierced just as easy. One bullet we traced in a bank of timber forming an upright in the cave about 16in. thick. The bullet had not gone clean through, but was nearly through; the tool we had could not probe its full depth. We have reason to believe this trial will have special interest to you. The whole 270grs. of powder was burnt in the cartridge case, Curtis & Harvey's No. 6."

A GIFT TO MAJOR MERRILL.—The following correspondence explains itself:

LONDON, July 20.—Major H. W. Merrill, Sir: We ask to be allowed to make a present to you of the Bland Express Double Rifle, .45 caliber, No. 10,263, if you will honor us by accepting same. This we offer as a tribute for the able manner in which your services benefitted us (the absent competitors) in the trajectory trials instituted by the FOREST AND STREAM in the fall of 1885. Tendering our best thanks, we remain your faithful and obedient servants, THOS. BLAND & SONS.

NEW YORK CITY, July 31, 1888.—Thomas Bland & Sons, Dear Sirs: Your letter of 20th inst., donating to me the "Bland Express Double Rifle," which was tested with many American made rifles by FOREST AND STREAM for trajectory height in the fall of 1885, and asking if I will honor you by accepting the same, is received. In reply I beg to say that I most cheerfully accept your generous offer, not more for the intrinsic value of this beautiful gun than for its great achievements at both the FOREST AND STREAM and *London Field* trial in November, 1885. A gift so historic is yet the more dear to me, for it bears the full assurance that the confidence you have placed in me (an entire stranger) has met with your entire expectations. Were it otherwise I could not accept the gift. Rendering my grateful thanks, I am yours very truly, H. W. MERRILL.

P.S.—As requested I send you two copies of the FOREST AND STREAM test pamphlet, mailed from their office. It is very full, authoritative and instructive to all riflemen.—H. W. M.

NEW ENGLISH RIFLE.—*London Engineer* gives the following interesting particulars of the new magazine rifle urgently proposed for British army use: "The bore is .303in. diameter, giving about 33 per cent. more rounds than the Martini-Henry for the same weight of ammunition. It has a detachable magazine. Experiments with the troops at Shorncliffe with the Martini-Henry, with a rifle with a fixed magazine, and also one with a detachable magazine, has shown that the last has a great advantage, arising from the circumstances that when a magazine is empty another filled magazine can be put in its place in the same time that it takes to get a cartridge out of the pouch and load with it. Thus the soldier is able to keep his attention directed almost wholly at the object at which he is firing, so long as his supply of magazines lasts. In a fixed magazine the advantage of rapidity is confined to the number of rounds supplied by the single magazine. When they are discharged the rifle is simply a breechloader until a suitable opportunity arises for recharging the magazine, unless some special charging gear is applied which approaches in degree the conditions of a detachable magazine. One magazine is attached by a chain to the rifle, so as to secure its ammunition. Subsequent magazines may be discharged and thrown away, if necessary, in the full heat of action; for in the continued use of magazines we are contemplating a time of supreme stress and importance. The attached magazine contains eight rounds, those subsequently used six rounds each. At present the infantry soldier will carry one or two spare magazines; thus, with the first one, he is furnished with a reserve of fourteen or twenty rounds for rapid discharge, according to whether he has one or two spare magazine. Cavalry and mounted infantry could carry bandoliers with eight or ten detachable magazines. Sergeant Beckwith, of the Tenth Hussars, carried eight magazines in his bandolier during the experiments. Mounted infantry thus becomes specially formidable, for it may be noticed that, both as to carriage power and the object of dispatching them to produce a rapid, telling blow, magazines in bandoliers are admirably adapted to their case. Three hundred and fifty rifles are ready for the troops. The Rubin cartridge is to be used experimentally, but English ammunition is progressing, and will, it is hoped, be ready when the experiments are over."

NEWARK, N. J., Aug. 2.—August Begerow, of the Newark Shooting Society, made 1,082 in fifty shots at the park to-day. His strings were 196, 223, 205, 208, 220.

CREEDMOOR, July 4.—Th seventh match of 1888 for the sportsman's badges was shot at Creedmoor to-day. The weather was fine, though warm, and the scores were good, although a bad wind, which blew from 5 to 9 o'clock, proved rather troublesome during the day. Attendance was fair. Stuart's score of 48 is the best made so far this season. Following are the winners, 5 shots at each distance:

	200yds.	500yds.	Total.
Frank Stuart, Co C, 69th Regt.	23	25	48
J M Maconnell, Co H, 9th Regt.	22	23	45
G E Constable, Co F, 13th Regt.	20	24	44
J T Hull, Co F, 23d Regt.	20	24	44

Medal Winners.			
A Stein, Co C, 7th Regt.	23	24	47
C A Jones, Co G, 7th Regt.	23	22	45
J B Frothingham, 2d B'g S't.	21	22	43

FITCHBURG, Mass., Aug. 4.—The following is the result of the shooting Aug. 1 by the Fitchurg Rifle and Gun Club. The wind was quite difficult to manage in the first part of the afternoon, but later the conditions were more favorable. The rest shooting of F. Harvey is specially good, he making a run of six consecutive 12s, and one score of 98 and two of 99 each on the old target and no sighting shots taken.

F Harvey, o. h.	7	4	5	10	6	5	10	9	7	8	—73
W V Lowe, o. h.	9	4	4	9	8	4	10	7	6	7	—68

UNCLE ARCE HAGAR.—Perryville, Mo., Aug. 2.—One of Perry county's oldest and most respected citizens died near here yesterday, very suddenly. Every one nearly in the county knows or has known old "Uncle" Arce Hagar. He was born in North Carolina in 1813, and removed to this county in 1827, and died at the ripe age of 75 years, having never been married, living with his mother a little over seventy-three years, she having died about a year and a half ago at the age of 94. He was a great marksman, and attended hundreds of shooting matches, and even up to last year was accounted as one of the best shots. He kept each paper target used at each match when shot, and they may be seen now at his home.

TORONTO, Aug. 4.—The Toronto Rifle Association held their regular practice this afternoon, which turned out to be a remarkably hard day for good shooting, the light being very deceptive, accompanied with a shifty wind. The telegraphic match between Halifax and this association came off at the same time and resulted in a victory for Halifax by 33 points, which goes to show there must have been a vast difference in the state of the weather in both places, as if it were near equal the contest ought to have been close. The return match will be shot next Saturday. Following are the practice scores:

	200	500	600		200	500	600	
W Campbell	29	33	27	—89	G M Donnelly	30	23	29	—82
A Cartwright	30	29	29	—88	A D Crooks	28	29	25	—82
J H Knifton	27	29	30	—86	R Rennie	28	25	28	—81
Tom Mitchell	29	28	29	—86	W Macdonald	28	26	27	—81
F Coldwater	29	27	29	—85	A Dumfries	31	25	25	—81
R McVittie	28	31	25	—83	Wm Hays	29	28	24	—81
J F Crean	28	31	24	—83	F W Curzon	29	24	27	—80
Geo Lewis	30	29	24	—82					

KING, Ontario, July 30.—The third match between King and Orillia rifle clubs for the championship of 1888, of the different clubs belonging to the Ontario Small Bore Rifle Association was shot by telegraph to-day and resulted in a victory for Orillia by 100 points:

Orillia.		King City.	
C Fortier	86	J H Ross	86
T Millichamp	82	H Rogers	78
F J Delaney	82	R Cull	76
W W Wood	82	E J Davis, M P P	72
G E Whiten	81	J W Crossley	70
Thos Reid	79	W Ross	69
R Strathern	78	T Scott	67
C Woods	76	Dr Norman	61
H Bingham	72	S Weir	57
J D Fortier	70—788	W A Ross	52—688

TORONTO VS. HALIFAX.—Halifax, Aug. 4.—A telegraphic shooting competition between Toronto and Halifax began to-day, the teams shooting on their own ranges. Each team is composed of eight men, the Halifax eight being from the Garrison Artillery and the Toronto eight from the Toronto Rifle Association. There will probably be three days' shooting, the scores being telegraphed to each city at the close of each day. The Halifax team had a rainy, windy day, and made a rather low score, the total being 674 points. The scores by ranges were: 200yds., 235 points; 500yds., 220 points; 600yds., 219 points. Col. J. R. Murray looked after the interests of the Toronto Association. Capt. Harris and Sergt. Harris, two brothers, made the highest totals, viz., 92 each. By a singular coincidence, this is the third time this season these two brothers have scored the same totals. In one match their totals were the same at each range. Toronto's score was 643, Halifax thus winning by 53 points.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

PHILADELPHIA, August 1.—*Editor Forest and Stream:* I inclose score of Press Gun Club shot July 10, small sweepstakes being indulged in. National Rules, five Ligowskys, ties divided.

NEWARK, N. J.—The East Side Gun Club at its regular monthly meeting last week elected the following officers: President, Chas. Walter; Vice-President, Chas. Laubenstein; Secretary, H. Reinhardt; Treasurer Phillip Schork. The club will hold monthly shoots at 20 birds each on the first Saturday in every month for five months. A gold medal is provided for first prize and a silver one for second. The first match took place Aug. 4 and resulted as follows: Henry Koegel 18, Chas. Laubenstein 17, Ph. Schork 16, Fr. Perment 16, Henry Langstaff 15 15, F. Hillferts 15, Chas. Walter 15, Chas. Faher 15, Henry Reinhardt 14, Thos. Richard 14, W. Hassinger 14, John Schilling 10, Herm. Heinrichs 10, Peter Ulrich 13, Henry Griffin 8.

SYRACUSE, Aug. 2.—The match yesterday between Oakleigh Thorne of Thornedale, Dutchess county, and Henry B. Whitney of Phelps, N. Y., at 100 kingbirds for $200 a side, was won by Whitney by a score of 96 to 85. Gardner and Paddock of Albany were winners in subsequent sweepstakes.

WILLIMANTIC, Conn., July 31.—The sixth contest between the gun clubs of Norwich, New London, Middletown and Willimantic at the fine range of the latter opened with threatening weather, but the clouds cleared away without dispelling any moisture, and a day of fine sport was enjoyed by many of the best breakers of clay pigeons in the country, as a tournament was conducted in connection with the cup shoot. During the day a total of 5,200 birds was thrown. William Perry, of Boston, and a member of the Willimantic Gun Club, carried off the honors, he hitting 146 and missing only 7. A stiff breeze prevailed during the shooting, but notwithstanding this drawback good scores were made. There was a large attendance of marksmen and a goodly number of spectators were present. In the contest for the silver cup the Willimantic team won by a score of 115; Norwich was second, 110; New London third, 108; Middletown fourth, 98. The home club's individual scores were: Perry 22, J. MacFarlane 21, Wheeler 20, Webb 19, Robinson 17, Baldwin 16. In the previous contests the Willimantics won the trophy three times. It has been captured more times by the Willimantic Club than it can possibly be by any other club, and consequently is now theirs to have and to hold. There were 37 entries for the $50 guaranteed purse, and first money, $29.60, went to W. Perry, who hit 19 pigeons out of a possible 20. Second money, $22.60, was distributed between Col. Ames, of New London, James MacFarlane, of Willimantic, and Harvey, of Norwich; third, $14.80, between E. T. Smith, of Worcester, Schaefer, of Boston, Bill, of Middletown, and Tucker, of Meriden; fourth, $7.40, between Miller, of Cincinnati, Robinson, of Boston, and Yerrington, of Norwich.

The other events resulted as follows: Six standards, 29 entries—Perry and Snow first, Miller second, Howe and Houghton third, Bowdish fourth. Six clays, 34 entries—Barnes, Perry and Beers first, Snow, Miller, Yerrington, E. T. Smith and Bowdish second, Wheeler and Cady third, Alpaugh, Earl, N. H. Ames and J. Macfarlane fourth. Seven standards, 28 entries—Perry first, Howe and Ely second, Russell third, Yerrington fourth. Nine clays, 51 entries—Perry and Connor first, Russell, E. T. Smith and N. H. Ames second, Schaefer, Beers, Olcott and Dunham third, Howe, Patterson and Bill fourth. Ten standards, 35 entries—Beers, E. T. Smith, Bowdish, Houghton and Sterry first, Perry, Webb and Robinson second, Schaefer, Harvey, Miller and Woodford third, Bill fourth. Ten blue rocks, 35 entries—Miller, Bowdish, Perry and Upson first, Yerrington second, Woodford and Howe third, Palmer and Nichols fourth. Six standards, 38 entries—Barnes, Smith and Russell first, Nichols, Miller, Howe and Wilson second, Root and Bowdish third, Mudd fourth. Three pair birds, 38 entries—G. Macfarlane, Miller and Harvey first, Nichols, E. T. Smith and Mudd second, Roberts, Robinson and Palmer third, Baldwin and Houghton fourth. Nine standards, 45 entries—Perry, G. Macfarlane, Russell, Beers and Bowdish first, Bill and Strong second, Wilson, Smith and Upson third, Dunham fourth. Six blue rocks, 40 entries—Russell, Bowdish, Ensign, Perry and J. Macfarlane first, G. Macfarlane, Wheeler and Dunham second, Root third, Barnes, Schaefer, Strong and Cady fourth. Six clays, 28 entries—Perry, Rice and Bill first, Yerrington and Strong second, Russell and Mershan third, Bailey and Baldwin fourth. Seven straightaway, 22 entries—Bowdish, Bill, Robinson and Snow first, Baldwin, Houghton, Strong, Roberts and Dunham second, J. Macfarlane and Cady third, Hubbard fourth.

KANSAS CITY, Aug. 3.—The Independent Gun Club had a medal shoot at Kansas City Shooting Park on the Big Blue this morning. Bob McBride won the medal, the following being the score:

T W Herson	1101111101—8	Dr Langsdale	0111110301—6
Dr J Bryant, Jr	1111911000—6	Chas McBride	1100010110—5
Bob McBride	1111011111—9	Dr Bedford	0011000010—3
J N Lee	0011111011—7	T C Bullene	0110100011—5
D G Wilson	1111100001—6	C R Thomas	1110111111—9
R D Mize	1110111111—9	O W Cogswell	1111001011—7
George Parker	1001110100—5		

The tie for the prize and first money was won by Bob McBride. T. W. Hisson received second money, and in the shoot-off for third money J. N. Lee won. A sweepstake shoot was then made up and resulted as follows:

Dr Bryant	0101013	George Parker	1101115
J N Lee	1111116	Capt Ditsch	1111116
Bob Mize	0110013	A A Brumbeck	0100314
O W Cogswell	1011104	John Tibbs	1011115
Tom Hisson	1001103	Dr Langsdale	1111105

Lee and Ditsch divided first money, and in the shoot-off for second money between the five shots Parker won.

Third shoot, 5 singles, 31yds.:

J N Lee	10011—3	John Tibbs	11101—4
R O Mize	11100—3	Capt Ditsch	11100—3
Dr J Bryant	10110—3	O W Cogswell	11000—2
A A Brumbeck	10111—4	George H Parker	11111—5

Parker first money, second divided.

Fourth shoot, 5 singles, 31yds.:

J N Lee	10100—2	John Tibbs	10011—3
R O Mize	11111—5	Charles McBride	11001—3
A A Brumbeck	11100—3	Dr Langsdale	00111—3
Capt Ditsch	11101—4	O W Cogswell	00000—0
George Parker	10111—4	Dr Bryant	01111—4

Mize first money. Parker in shoot-off between himself, Ditsch and Bryan, four shots, got second money.

TORONTO, Aug. 4.—The second weekly shoot at Peoria blackbirds, for McDowall & Co.'s medals, took place at their grounds this afternoon in the presence of a large number of spectators. About 25 competed in the three classes, all the gun clubs being represented. Several of the best shots were absent. The weather was all that could be desired, although a little bright. There are two competitions yet to complete the series. Following are the scores, at 20 Peorias from 3 traps, 18yds. rise:

First Class.

Charles	01011110011111110101—14	M'Dowall	01111111101010011011—14
W Paul	11110101010111110011—14	G Pear	00111111010011101101—13

Second Class.

Thompson	00111110000111111010—12	Harrison	0C10011111111000100—11
I Fisher	11011011000110101101—12	Romain	00011010000110111111—11
McClure	01010111101001011000—11		

Third Class.

Sinclair	11101001001101111011—13	McCready	10111000011111000010—12
Pearsall	00011101111101111110—13	Bayles	11000011010010001111—10

Those who were not at the first match shot their second string, resulting as follows: First class—Charles 13, Paul 11, Pear 10. Second class—Fisher 10, Romain 9, Thompson 8, Milney 6. Third class—Bayles 8, McCready 5.

OTTAWA, Ont., Aug. 3.—The St. Huberts and Ottawa Gun Clubs shot to-day for the silver challenge cup, seven men a side, fifteen Ligowskys, each, 15yds. rise, from five traps.

St. Huberts.		Ottawa G. C.	
P Trudeau	13	J Stewart	11
A Troop	13	H Baldwin	10
R G Dalton	12	J Manuel	9
Dr Martin	12	B Rathwell	9
F White	11	W H Tracy	9
E White	11	L C Labelle	8
J Deslauriers	9—81	A Stewart	7—63

The St. Hubert's score is an exceptionally good one, being only three birds short of an average of twelve out of fifteen for each man.

CINCINNATI, Aug. 2—The Independent-National Club were supposed to shoot to-day, but only seven members putting in their appearance little sweepstake shooting was indulged in, the few matches shot being won by Goodman, Magle and Paul. One of the winners, Magle, who was up to-day, a scholar of Wick, studying the art of double bird-shooting, got the idea, and sensibly, too, in his head that he could beat Wick at double rises—the result being a match. The match was shot and won by Magle by one bird. In justice to the loser it must be said he was, if not altogether, a bit careless as to the result, he shooting a hot gun throughout; not cooling his gun out once. No money hinged on the result aside of the actual expense of the match, Mr. Magle, who has been taught by Wick the art of trap shooting, shot remarkably, and with his winning of the Muldoon Medal on a score of nineteen out of twenty single rises, feels proud of today's achievement. Scores:

Magle.	Wick.
11 10 11 01 11 01 10 11 11 10	11 10 11 11 11 11 11 10 11 11
11 00 11 11 11 11 11 11 11 10	11 00 11 11 11 10 10 10 01 11
10 10 11 11 11 10 11 10 11 11—48	10 11 11 11 11 11 11 01 10 00—47

Time of shooting, 30 minutes; best straight runs (pairs, Magle 14, Wick 12, blanks, Magle 5, Wick 3. Judges, for Wick, Paul; for Magle Goodman; referee, S. L Sullivan.

FRANKFORD, Pa., Aug. 4.—A few members of the North End Gun Club braved the heat to-day and went to Fernwood to witness a private match, the first of a series of three between Mr. J. H. Davis and A. L. Lumb. The weather was intensely hot, and both the shooters and the scores made looked considerably wilted. The conditions of the match were 50 clays, 30 singles, 20 doubles—12-bore guns, under 8lbs., 1⅛oz. shot. Mr. Lumb won with 40 breaks—Mr. Davis getting 29. The next match will be shot on the N. E. G. C. grounds. It was so warm that it was a punishment to shoot, only one sweep being shot, 10 clays, entrance $2, resulting as follows: Capt. W. H. Pack 9, Jas. Wolstencroft 8, A. L. Lumb 9, Wm. Wolstencroft 7, S. Richards 7, J. H. Davis 5.—J. C. S.

MISS OAKLEY'S SHOOTING.—PHILADELPHIA, July 30.—After the great score made by Miss Annie Oakley with a 20-bore gun at Gloucester Park to-day, I send you the score and some particulars of the match. Miss Oakley shot with her 20-bore Lancaster gun, using 2½drs. of Schultze powder and ⅞oz. of shot. The match was made as follows: Mr. Frank Butler, the business manager for Miss Oakley, was talking about her shooting with her 20-bore gun and killing 41 out of 50 pigeons, when a Philadelphia gentleman stepped up and said he did not think she could kill 40 out of 50 "Philadelphia pigeons" with a 20-bore gun at 25 yards rise and 5 traps, Hurlingham rules, for $200. The match was made on the spot, and Mr. J. Frank Kleintze, of the Wingohocking Gun Club, and the champion pigeon shot of Pennsylvania, was chosen referee, and Miles Johnson, the well-known shot of New Jersey, trapper. The match created quite a sensation among the shooters of this part of the country, who had been using 10 and 12-bore guns, "and some of them do not think a 10-bore gun large enough for live birds," and it drew a large delegation of shooters to the Wild West show to witness the shoot, and bets were freely made that Miss Oakley would not accomplish her feat. The birds were a good lot, some very fast flyers being among them. Although the betting was against her, I do not think there was anybody on the grounds that was sorry to see the extraordinary score made by the little lady. From the time the first bird left the trap until the last one was scored the interest was undiminished, and when an extra good one was brought to grass the applause was deafening. The only bird lost was the thirty-second and that dropped dead on the roof of the band pavilion. The second barrel was used ten times, and that was four times more than was necessary, the others being brought down in fine style with one barrel. The score was as follows:

1 1 1 1 2 1 1 1 1 2 1 1 2 1 1 1 1 1 2 1 1 1 2—25
1 2 1 1 2 0 1 1 1 1 1 2 2 1 1 1 1 1 1 1 1 1 1—24—49

MERIDEN, Conn., July 24.—The Parker Gun Club, of this city, under rather unfavorable conditions, held a tournament to-day, New Haven being well represented by the cracks, though Mr. C. H. Sterry, of Tolland, Conn., carried off the honors of the day, as well as most of the money. The catering, under the efficient management of the ever popular Mr. Harry Oilen, was the best the club ever had, and atoned in a measure for poor management in other respects. First event, six blue rocks, Hill and Sterry first, Smith and Bristol second, Potter third, Ensign fourth. Eighth event, two-men team, 20 blue rocks, Folsom and Sterry, and Savage and Potter divided first, Alcott and Woodford second, Potter and Fairchild third.—J. F. I.

SOLOMON CITY, Kan., July 30.—Regular shoot, Solomon Gun Club, 15 Peoria blackbirds, 18yds.:

Kraenchi	011111111101001—11	Spratt	1100010001100001— 6
Edworthy	1010111011111110—11	Crooks	0110111011011111—11
Humberger	0001101111101001— 9	Johnson	1111101111010010—11
McAdams	0001101011111111—10	Dewar	1111110100101000— 6
Cadden	0101111100111091— 9	Robacker	1100000000101000— 3
Williams	1100011000100000— 5	Collins	0100110111011000— 8
McMahon	11000w	Gould	1010101101101001— 8

Tie for gold medal, shoot-off, miss and out, T. J. Edworthy won.—T. J. Edworthy, Sec.

GALVA, Kans., July 28.—W. T. Irwin, the Abilene *Gazette* tramp, made a call on the Galva (Kan.) craftsmen to-day, and the members of the gun club knowing his weakness for a trial of skill at the game, arranged for a match of five pigeons. The boys had a fine lot of birds in coops, and during the afternoon a match was shot with the following events:

Abercombie	1111111111111111111111111111—29
Hanna	1111111111111111111111111111—29
Robb	1111111111111111111111111111—29
Hill	1111111101111111111111111111—28

Add to this the tramp's score:

Tramp	1111111111111111111111111111—29

The totals show that 145 birds were shot at with but one lost bird. This is claimed to be the best score ever made in the West.

WELLINGTON, Mass., Aug. 4.—To-day, though sultry, has not been a very trying one at the traps and some good scores were made. In the consolation matches, 13 blue rocks and 12 pigeons, the following scores were made: Melcher and Bates 21 each, De Rochmont 20, Bond 19, Stanton 18, Nichols, Moore, Chapin and Browne 17, Grimes and Perry 16, Short and G. H. Savage 14, C. E. Savage and Snow 13, White 11, Durand 8. The other events were as follows: 6 pigeons, Chapin and Snow; 6 blue rocks, Moore; 6 pigeons, Bond; 6 blue rocks, Bond and De Rochmont; 6 pigeons, Moore, Bond and C. E. Savage; 6 blue rocks, Bond, De Rochmont and Moore; 6 blue rocks, Moore, Bates and Stanton; 32 pigeons, De Rochmont and Melcher; 13 blue rocks, Bates; 6 pigeons, Stanton and De Rochmont; 6 blue rocks, Snow and Bates; 6 pigeons, Snow, Stanton and G. H. Savage; 6 blue rocks, Browne.

CINCINNATI, O.—The Wick-Bandle shoot during this week has been a great success. It was set down for Tuesday and Wednesday, Aug. 7 and 8, on the Old Avenue Ball Park. Live birds were substituted for the English sparrows, which are at this season of the year hard to procure. The McMurchy Ohio State League rules governing the division of entrance money were adopted, thus giving the amateur an equal show with the expert. The rule which governed all sweepstake matches during the tournament reads: "The net amount of purse shall be divided into two equal parts. For instance a purse of $10 would be divided into two $5 purses, known as Classes A and B. In a ten-bird race all those breaking or killing ten, nine and eight divide purse A, and those breaking seven, six and five divide purse B. These purses to be subdivided in 50, 30 and 20 per cent."

MILTON, Pa., Aug. 3.—There was an unusually large attendance at the pigeon shooting match on the grounds of the Milton Fair and Driving Park Association to-day. First prize was divided between Dr. J. P. McCleery and A. C. White, of Milton, and S. D. Burke, of Northumberland, they killing 7 out of 8. The second between W. S. Allen and N. A. Hughes, Williamsport; Levi Hill and S. D. Reel, Muncy, and Dr. H. C. Sticker, Milton, and A. F. Finn, Sunbury, each scoring 6 out of 8.

PEEKSKILL, N. Y., Aug. 2.—A number of our sportsmen participated in a shoot at the Keystone artificial birds at Jumbo Park, to-day. The day was all that could be desired and the flights of the birds were strong. The first event was at 25 single birds for the championship of Cortlandt. The awards were as follows: 1st—W. H. Pierce with a score of 24 out of 25; 2d—J. B. Halsted 17 out of 25; C. Free 13 out of 25. Event No. 2 was at 10 single birds and the awards were as follows: 1st—W. H. Pierce 7 out of 10; 2d—J. B. Halsted 6 out of 10; C. Free 5 out of 10. Pierce used a L. C. Smith hammerless.

Canoeing.

Canvas Canoes and how to Build Them. By Parker B. Field. Price 50 cents. Canoe and Boat Building. By W. P. Stephens. Price $1.50. The Canoe Aurora. By C. A. Neidé. Price $1. Canoe Handling. By C. B. Vawz. Price $1. Canoe and Camera. By T. S. Steele. Price 1.50. Four Months in a Sneakbox. By N. H. Bishop. Price $1.50. Canoe and Camp Cookery. By "Seneca." Price $1.

Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signal, etc., of their clubs, and also notices in advance of meetings and races, and report of the same. Canoeists and all interested in canoeing are requested to forward to FOREST AND STREAM their addresses, with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

AMERICAN CANOE ASSOCIATION.

OFFICERS, 1887-88.

Commodore: R. W. Gibson..... } Albany, N. Y.
Secretary-Treasurer: F. L. Mix. }
Rear-Com. *Purser.*
Central Div..R. W. Bailey.....W. R. Huntington.....J. K. Bakewell, 110 Diamond St., Pittsburgh.
Atlantic Div. W. P. Stephens...L. B. Palmer.....F. L. Dunnell, 186 Jerolemon st., Brooklyn.
Eastern Div..H. E. Rice, M. D..Maxton Holmes...H. D. Marsh, Springfield, Mass.
N'thern Div..Robert Tyson.....S. S. Robinson.....Colin Fraser, Toronto.

Applications for membership must be made to division pursers, accompanied by the recommendation of an active member and the sum of $2.00 for entrance fee and dues for current year ($1.00). Every member attending the general A. C. A. camp shall pay $1.00 for camp expenses. Application sent to the Sec'y-Treas. will be forwarded by him to the proper Division.

Persons residing in the Atlantic Division wishing to become members of the A. C. A., will be furnished with printed forms of application by addressing the Purser.

WESTERN CANOE ASSOCIATION.

Commodore—J. R. Bartlett, Fremont, Ohio.
Vice-Commodore—D. H. Crane, Chicago, Ill.
Rear-Commodore—C. J. Stedman, Cincinnati, Ohio.
Secretary-Treasurer—O. H. Root, Cleveland, Ohio.
Executive Committee—C. J. Bousfield, Bay City, Mich.; T. P. Gaddis, Dayton, O.; T. J. Kirkpatrick, Springfield, O.

NORTHERN DIVISION MEET.

LAKE COUCHICHING, JULY 23-AUG. 4.

THE second annual meet of the Northern Division of the American Canoe Association was held at Horseshoe Island in Lake Couchiching, July 23 to Aug. 4. The location was an admirable one. The island lies about four miles northeast of the town of Orillia. It is about forty acres in extent, not much rocky surface, and is beautifully wooded right down to the water's edge. Suitable clearings were made, rendering it an ideal camping ground. The sailing course was an excellent one, with steady winds, and a finely sheltered paddling course was laid out to the east of the island.

The meet was an exceedingly successful one. About a hundred men were in camp, and thirty or forty ladies. The clubs represented were Orillia, Lindsay, Peterboro, Lakefield, Bobcaygeon, Whitby, Ubique and Toronto. The last named club was most largely represented, having about twenty men on the ground. Ubique and Lindsay mustered about a dozen, and Peterboro eight or ten.

The Division officers were: A. F. D. MacGachen, of Lindsay, Vice-Com.; Wm. G. McKendrick, Toronto, Rear-Com.; Samuel Britton, Lindsay, Purser. Com. Gibson arrived on July 31 and was heartily welcomed. Here is a local opinion from the Orillia *Packet*, which has given first-class reports of the meet:

"Commodore Gibson was met at the wharf by a large crowd, and received with three hearty cheers and a tiger. The portrait of the Commodore given in the A. C. A. year book is a capital likeness, and one is led to believe, on seeing him and Vice-Commodore McGachen together, that good looks are as much a *sine qua non* in the qualifications of an officer of the Association as an enthusiastic and intelligent interest in canoeing. The Commodore is a man of most agreeable manners and a kindly disposition, and may take with him the assurance that his presence at the meet added much to the general enjoyment, and that pleasant memories of him will long remain with the Canadian acquaintances he has made at Orillia. Vice-Commodore McGachen has discharged the onerous duties of his office most capably and acceptably, and retires with the hearty good wishes of all."

The annual general meeting of the Division was held on Tuesday evening, July 31, at 8 P.M. The following officers were elected for the ensuing year: Vice-Commodore, Robt. Tyson, Toronto; Rear-Commodore, S. S. Robinson, Orillia; Purser, Colin Fraser, Toronto. Executive Members, F. S. Rathbun, of Deseronto, and Jas. G. Edwards, Lindsay.

In view of the fact that it is the turn of the Northern Division for the general A. C. A. meet next year, it was resolved that the Northern Division accept the general meet, and that they recommend it be held in the neighborhood of the St. Lawrence or the Bay of Quinte, in order to secure as large an attendance as possible from the United States. A cordial vote of thanks was given to Commodore MacGachen and the other retiring officers, who have worked well for the Division.

The Orillia Citizens' Band had come over to serenade the camp, and after the meeting they headed a procession to the camp-fire, followed by a number of Orillia visitors. The officers-elect were introduced to the assembled ladies and gentlemen. The irrepressible big boys of the camp thereupon rushed forward, seized the new vice-commodore, and tossed him up in the air three times, with a "tiger" added, catching him as he fell. This is a token of affectionate regard, and is known as "bouncing." Messrs. Robinson and Colin Fraser were similarly favored, also Commodore Gibson and Mr. Dalton. Mr. Robinson is ex-Mayor of Orillia, and is well known and popular in the town. His election has received hearty and general approval.

Here are some more comments by our genial friend of the Orillia *Packet*:

"After nightfall I stole out and wandered around. The Association was holding its annual meeting in the big marquee, selecting officers for next year, etc., etc. The boys were all there, ready for any amount of mischief, but intent on business. The speechifying was got over in the average—and as each new officer was appointed he received three rousing good cheers and a chorus, "for he's a jolly good fellow," by the whole strength of the company. Then the boys "fell in" outside on mock parade, the Orillia band struck up and everybody marched off to the camp-fire on Squaw Point. The mirth began again. Stirring strains by the town musicians, songs by the boys, jokes from the crowd. Oh, it was just lovely, to note by firelight the countenances of august judges, of austere fathers and sedate matrons expanded laterally into the broadest smiles—City Fathers grinning like schoolboys amid the silvery sounds of laughing girls.

"And the 'bouncing!'—which means a crowd of stalwart young fellows seizing a victim by the head, boots, shoulders, anywhere, and flinging him sky-feet on high in the air. Down he comes, to be caught in a perfect forest of arms—up again—perhaps half a dozen times! The sensation is doubtful while it lasts and exquisite when it's over. It is a distinction and an honor to be 'bounced,' none but good fellows and favorites being chosen for the operation. I won't mention any names this week, but—eh, Mon! it was 'fearfu' funny' to see the lengthy limbs of one Orillia's most prominent townsmen, which promenade Mississaga street with such dignity, sprawling skyward with still greater prominence in the glare of the campfire. Six exhibitions of them and a different attitude every time!!"

The races commenced on the afternoon of July 28, when the two sailing events came off. Following is a complete report of all the events:

Saturday, July 28.

Novices sailing, for those who never sailed an A. C. A. race before 1888. Three miles. Time limit, 1½ hours.

F. Goodwin, Lindsay, canoe Manita.....1
Hugh Maclean, Toronto, canoe Wa Wa.....2
E. Easton, Lindsay, canoe Comet.....3
A. M. Rice, Toronto, canoe Dixie.....4

Winner's time, 1h. 6m. Wind very light. Seven started. Manita led from the start. The contest between Wa Wa and Comet was close and exciting. Only four finished.

Special sailing race for all classes of canoes. Four and a half miles. Time limit, two hours.

W. G. McKendrick, Ubique and Toronto, canoe Mac.....1
D. B. Jacques, Toronto, Hyla.....2
Harry F. McKendrick, Ubique, canoe Chum.....3
Colin Fraser, Ubique and Toronto, canoe Una.....4
George Sparrow, Toronto, canoe Petrel.....5

The race was a sort of preliminary canter, apart from the class races. Twenty started but only five finished. The wind was very light during the first two-thirds of the race, but began to improve then and turned to the west, when the race between the five leading boats became quite interesting. Up to this time almost from the beginning they had been in the following order:

W G McKendrick, Ubique and Toronto, canoe Mac.....1
H F McKendrick, Ubique, canoe Chum.....2
G Sparrow, Toronto, canoe Petrel.....3
D B Jacques, Toronto canoe Hyla.....4

These were close together, and were followed at a considerable distance by C. Fraser, Ubique and Toronto, canoe Una. The puff in the last round had the effect of changing their position. The Hyla passed the Petrel and gradually closed up on the Chum. They reached the finishing line almost exactly at the same time; the Hyla having the inside went around first, and so secured the second place. The Una also crept up on the Petrel sufficiently to get inside of her at the finish, and so secured fourth place. All the other starters got so hopelessly in the rear that they dropped out.

Monday, July 30.

The regular class races were begun to-day:

Sailing race—Centerboard canoes, open or decked, 3 miles, twice around a triangular course:

D. B. Jacques, Toronto, Hyla.....1
W. E. McKendrick, Toronto and Ubique, Mac.....2
H. F. McKendrick, Ubique, Chum.....3
F. Goodwin, Lindsay, Manita.....4
W. S. Lister, Lakefield, Cacia.....5

There were 13 starters, and all finished. A good breeze was blowing and the race was excellent. Winner's time 52m. 40s; time of last canoe 1h. 8m. 10s. A very fine and close struggle took place between Hyla and Mac. Hyla is a lapstreak decked canoe, with a heavy centerboard and a balance lug. Mac is a light-decked smooth skin canoe, of a specially fast model, carrying a light board and sails of the sliding gunter style, all before the mast. Chum is an open canoe of the same model as Mac, and with similar sails. Manita is a fast boat, and her skipper is a promising novice.

Sailing race—Open to canoes with lee boards, 3 miles:

Colin Fraser, Toronto and Ubique, Una.....1
Hugh C. Maclean, Toronto, Wa Wa.....2
John Kelly, Toronto, Irene.....3

There were only three starters. The Una won easily. The race between the other two was close. The limited number of entries in this race was owing to a change in the division of canoes. Last year they were divided into the open and the decked class, irrespective of the board. Then there was a good race of the open canoes. This year the canoes are divided as above, all the centerboarders being put together, open or decked. This change does not work well.

Combined sailing and paddling race, twice around a triangular course of half a mile side:

W. G. McKendrick, Ubique and Toronto, canoe Mac.....1
H. F. McKendrick, Ubique, canoe Chum.....2
Colin Fraser, Ubique and Toronto, canoe Una.....3
T. Britton, Lindsay, canoe Aurora.....4
A. Shaw, Toronto, canoe Vic.....5

The sides of the triangle were paddled and sailed alternately, commencing with paddle. Six starters.

Lady and gentleman's tandem, ½ mile:

G. Strickland and Miss G. Hall.....1
Dr. Douglass and Miss E. Britton.....2
H. F. McKendrick and Miss J. Ovens.....3

There were 9 starters.

Classes 2 and 3, paddling, 1 mile, with a turn:

P. W. Strickland, Lakefield.....10 55
Dr. Douglass, Lakefield.....11 30
Colin Fraser, Ubique.....11 40

Four starters.

Classes 4 and 5, paddling:

W. G. McKendrick.....11 20
S. Britton.....11 40
M. J. Collins, Bobcaygeon.....11 55

An impromptu tournament took place in front of headquarters, the prize being a paddle offered by Colonel Harry Rogers of Peterborough. There were six entries: D. Strickland, Lakefield, paddled by E. Cox, was opposed to W. S. Lister, of Lakefield, paddled by P. Strickland; G. Sparrow, Toronto, paddled by F. Mason, was opposed to G. Wright, Lakefield, paddled by F. Godwin; E. B. Edwards, Peterborough, paddled by J. Spier, was opposed by J. Jephcott, Toronto, paddled by W. C. Jephcott. In the first round Sparrow knocked out Wright. After a few rounds Strickland knocked out Lister, and was then opposed to Sparrow, whom he succeeded in downing after a sharp struggle. About the same time Edwards placed his man in the water with his boat on the top of him. He was then opposed to Strickland, when, after an interesting contest, without either securing a victory, the event was declared a draw, and left over for future decision, as night was approaching.

Tuesday, July 31.

Special sailing race for the Orillia challenge cup, given by Mayor Thomson and citizens of Orilla. Three miles.

Arthur Mason, Toronto, canoe Cecebe.....1
Colin Fraser, Ubique and Toronto, canoe Una.....2

Seventeen started, but only two succeeded in getting twice around the course. A third man, Will Fraser, Ubique, went around once and came in right side up. All the others were upset by half a gale from the southwest, which was blowing in savage puffs. Harry McKendrick was the first to come to grief. He broke his mast off short in a desperate effort to keep from capsizing, just as the first gun fired. Shortly after this, W. A. Cooke and A. Shaw, both of Toronto, came in collision when tossing around in the heavy sea, and both canoes went over. The remainder started, and most of them rounded the first buoy; but their career ended before the second buoy was reached. The steamers Longford and Southwood were engaged in giving assistance to the wet canoeists. This is one of the roughest races the A. C. A. men have sailed. There was a somewhat similar one in 1883 at Stony Lake, when only two men got round the course, the second of whom was the same Colin Fraser who was second today. Mr. Mason received hearty congratulations on his skillful and successful sailing to-day.

The following is the afternoon's programme of races:

Passenger sailing race, each skipper being accompanied by a passenger; 3 miles.

Wm. G. McKendrick.....1
W. S. Lister, Lakefield.....2
J. G. Edwards, Lindsay.....3

Six started. The wind continued to blow hard. Of the remaining three starters, one broke his mast, one upset and the third came back with his canoe half full of water.

Combined paddling and sailing race, paddle a mile to windward and sail back again:

W. G. McKendrick.....1
Colin Fraser.....2
Harry F. McKendrick.....3
Dr. Douglas.....4

The Doctor beat the others in paddling and rounded the far buoy first, but he lost time in getting up his sail.

Paddling race for open canoes, classes four and five:

Harry F. McKendrick.....1
Darcy Strickland, Lakefield.....2
M. J. Collins Bobcaygeon.....3
Will A. Fraser, Ubique.....4

This was a good race. Time 11m. 41s.

Paddling race; club fours; one mile; four men from the same club in each canoe; one mile, with a turn:

D. B. Jacques, W. A. Cooke, H. Wright, Geo. Sparrow, Toronto..1
Dr. Douglas, A. R. Wright, W. S. Lister and Darcy Strickland..2
H. F. McKendrick, Smith, Richard Lees and J. N. McKendrick..3

This was the most interesting race. The three crews turned the far buoy within a few seconds of each other, Toronto leading. On the return Ubique steered wildly and finally dropped out of the race. The other two made a good finish, Toronto leading by a few lengths. The precision of their stroke was much admired, they paddling together like one man.

Hurry-scurry race, run 50yds., swim 50yds., and paddle about a quarter mile.

Harry F. McKendrick.....1
Samuel Britton, Lindsay.....2
Darcy Strickland.....3

This race was great fun. The men ran to the end of the wharf, plunged into the water, swam to their canoes, climbed in and paddled to the finish, which was a close one.

Wednesday, Aug. 1.

Tandem paddling race; distance, one mile with a turn.

Sam Britton and Harry F. McKendrick.....1
D. B. Jacques and Henry Wright, Toronto.....2
Percy Strickland and Darcy Strickland, Lakefield.....3
W. J. Read and M. J. Collins, Bobcaygeon.....4
Dr. Douglas and Mr. Wright, Peterboro.....5

Five entries. The race was a close and interesting one.

A portage race and a tournament were also on the programme, but neither came off, the reason being a lack of entries.

A record was made up on the usual principle; twenty-two competitors.

	Points.
1. Wm. G. McKendrick	39¼
2. Harry F. McKendrick	30 10
3. Colin Fraser	27 5
4. Sam Britton	17 5
5. D. B. Jacques	13¼

The regatta committee were Dr. Douglas, Chairman; Geo. Hatton, Peterboro, and Colin Fraser, Toronto, Judges and Starters; E. B. Edwards and Col. Harry Rogers, Clerk of the Course; Thos. Carscadden, Galt.

An exceedingly fine and artistic assortment of flags was at the disposal of the regatta committee, all given by lady friends of the division. There were no factory made ones. Your correspondent has been at many A. C. A. meets, but never saw so fine a display of flags as this.

On Wednesday afternoon the competition for the best cruising kit took place. There were three competitors, A. M. Rice, Toronto, H. F. McKendrick, Galt, and W. Jephcotte, Toronto. The prize was a cup presented by Rear Commodore W. G. McKendrick, of Toronto. It was awarded to A. M. Rice, the judges considering that his was the most complete, if not so simple as some of the others.

The singing at the camp-fires was chiefly done by two separate and compact choruses, who usually sang separately, but sometimes joined in song. One was a group of ladies from Lindsay, the other the Toronto C. C., who had been practicing in their club house during the preceding winter.

On Thursday the 26th an excursion to Lake Simcoe and the town of Barrie took place on the fine steamer Longford. Capt. Thomson, her owner, is also commodore of the Orillia C. C. A register was kept at the secretary's table in camp, where canoeists enter their names, clubs, and the names of their canoes. Capt. Thomson enters himself, "Orillia Club, canoe Longford." He has taken a warm interest in the welfare of the Northern Division, and the other day took a number of the canoeists for a trip round the lake at his own expense.

A very successful trip to Washago and joint cruise up the Severn River was one of the features of the meet. The steamer Southwood started about 10 o'clock in the morning, carrying about 40 men and ladies, and towing a scow with two dozen canoes on board. The party left the steamer at Washago and paddled their canoes up the Severn four miles, till they reached the place where the inky waters of the Black River mingle with the Severn's clear stream. Two portages were made en route. The party returned by the same route, full of admiration for the beautiful scenery of the Severn and Black River.

The usual illuminated procession was held at night during the week. It had to be confined to the sheltered neighborhood of the ladies' camp, as it was too windy elsewhere for the Chinese lanterns. About 25 canoes, carrying from one to six lanterns, executed various evolution, and singing was done on the water with fine effect. The arrangements for the comfort and convenience of the canoeists were excellent. They were in the hands of a local committee consisting of S. Skeffington Robinson and Messrs. Kinnon, Bruce, Murphy and F. J. Delaney.

Arrangements were made with Mr. H. Elliott, boatbuilder, Orillia, whereby he has placed his boat house at the disposal of the Division for the landing of canoes and storage of camp stuff. He has an excellent landing stage. He flies a large A. C. A. flag. The arrangement is a great convenience, as several canoeists paddled and sailed to the town daily.

The Grand Trunk Railway placed Couchiching Park at the disposal of the Division. This company deserves thanks for its liberal transport arrangements.

Sign boards were placed at many points on the island pointing to the various camps thereon. The enterprising canoeist is always breaking out afresh. The T. C. C. had "Yonge street" for the main avenue of their camp.

Headquarters was prettily situated on the east side of the island. Landing at the steamer wharf, you saw a long row of canoes drawn up on the shore to the right. Before you was a cleared space, dotted with tents and bounded by foliage. A magnificent marquee, floored with boards, was erected by Mr. Kinnon. Mr. F. Cox, of Peterboro and Toronto, had the next largest tent. A number of fine marquees, chiefly striped in colors, were around, one of them the Toronto Club tent. Secretary Britton sat at his table in the open air, under the shade of a tree. Commodore McGachen occupied a marquee the door of which stood hospitably open all day long. Two tall flag poles at the commencement of the avenue carried the British and American flags, respectively, indicating the international character of the A. C. A.

"Tom," the handy man of camp, engaged and paid by the Association, was kept busy. An excellent store and barber shop were on the island. There were two botanical experts in the Ubique Club and they are collecting great heaps of the island flora for examination.

Mr. and Mrs. Lundy, of Peterboro, gave a very pleasant and successful camp-fire at the prettily situated ladies' camp on Baptist Bay, following their much-appreciated precedent of last year at Stony Lake.

Ex-Mayor Robinson, of Orillia, kindly placed his steam launch Wanda at the service of the Association, and she did good work. The regatta committee took her out to rearrange the buoys on the sailing course.

Sunday was a quiet day. Divine service was held in the open air at the usual hour for morning church. The officiating clergyman was the Rev. N. H. McGachen, rector of Littlebourne, Kent, England, and father of Vice-Com. McGachen. The ladies' camp was the place of service. In the evening a number of canoes joined together near Ladies' Bay. Holding gunwale to gunwale, they formed a solid raft, the occupants of which sang a number of sacred songs.

The meet was most successful and gives good promise of a large gathering next year on the Bay of Quinte, when it is expected that members from the States will repeat the visit they made in 1883 to Stony Lake. ISABEL, T. C. C.

FAST TRAVELING IN A CANOE.

THE following account of a trip by canoe is from the *Dramatic News*, of Fredericton, N. B., the run being made on the St. John River in May last:

"Messrs. A. W. and R. B. Straton started from the Lower Basin, Grand Falls, at 4:30 A. M. and passed the City Hall, Fredericton, at 7:19 P. M., making the run of 130 miles in 14h. 59m., including all stops. This is a feat which has never before been accomplished by canoemen, to the best of our knowledge. Men accustomed to running rafts down the river say that it is not an uncommon thing to bring a raft from Grand Falls to Spring Hill Cove in one day during freshet time. Indeed there is a tradition among old rivermen that a raft was once run from the Lower Basin to Wilmots Bluff, 9 miles below Fredericton, between daylight and dark, but whether this is anything more than tradition we cannot definitely say. It is said that Squire Kilburn, of Muniac, has often, at a good pitch of water, made the run from that place to Fredericton, 100 miles, in a day in a log canoe. Our esteemed friend, Judge Ingraham, tells of a day's journey which he once made in a bark, in company with Charles Lee, from the falls to Eel River, 81 miles. On June 15, 1887, at comparatively low water Messrs. J. W. Bailey and R. B. Straton covered the distance between Peel and Fredericton, 76 miles, in one day. And on May 6, at the beginning of the present freshet and before it had reached its height, Messrs. J. K. Knight, Agent Merchant's Bank, and H. M. Harley, Teller Nova Scotia Bank, Woodstock, made the run from Andover to Woodstock, 51 miles, in 7h., against a stiff head wind.

"Before attempting the trip, Mr. Straton prepared a time table, based upon information obtained in a survey of the river made by Deputy Foulis. All distances were taken from the plan accompanying his report of survey, as were the elevations from which was calculated the relative speed of the current at different points. The following are the principal points in the time table:

Grand Falls	4:30 A. M.
Tobique, 21 miles	6:30 "
Woodstock, 69 miles	11:34 "
Eel River, 81 miles	1:04 P. M.
Poquiock, 93 miles	2:28 "
Long's Creek, 111 miles	4:55 "
Fredericton, 130 miles	7:22 "

"It was exactly half-past four, by Fredericton local time, when the good canoe Red Swan pushed out into the noisy, frothy waters of the lower basin. On the far side, at the foot of the gorge, no canoe could live; but there on the west side, and extending half way across the basin, is an immense eddy, comparatively smooth, describing incessantly an immense circle, and covered, in places to a depth of six inches, with a creamy foam. The night has been very cold, and the top of this foam is hard and brittle with the frost. A short distance below the eddy a rocky point projects from the next bank, from which the water recoils with tremendous force, forming a line of rollers, extending obliquely down and across the river. About 100yds. below is another similar, but smoother. As the Red Swan drew near of the eddy, and feels the full force of the current, an attempt is made to get her outside of the line of rollers, for they look ugly; but the current is too strong, and so she is headed straight for them, and goes climbing through in beautiful style, not, however, without shipping considerable water. But it will never do to take the second line of breakers in like manner, for the Red Swan would want wings indeed to get through that wild dance in safety. So her bow is headed across the stream, the bow man is called on for his very best, and away she dashes like a crazy thing. But there is a method in her madness; and as she glides beyond the reach of harm all hands feel relieved that the only really dangerous piece of water on the river has been safely passed.

"And now ashore, to empty the water, for she is about one-quarter full; ten precious minutes are lost here, which in this tearing current means more than a mile and a half. At Salmon River the crew get their first view of the sun, but it soon disappears again, the valley is so narrow and the overshadowing hills so high. At the mouth of Arostook this rough country is left behind, and Tobique is made at 6:32, two minutes behind time. Hardly a word is spoken by the crew as they settle down to steady work; the Andover Bridges are passed safely, and at 7:30, three minutes ahead of time, the Red Swan is rounded up at Muniac to allow the crew to change places. It is becoming evident that this is going to be no business of taking it easy and allowing the craft to drift with the current; nothing but hard and unremitting paddling will keep her up to schedule time. At Chicketehawk there are five minutes to the good, as another change is made, and away she goes cavorting under the Florenceville bridge, and on to Hartland, which is reached at 10:30, one minute late. Here the stern man takes sole command, and the bowman gives his undivided attention to the contents of a substantial parcel, for which he is indebted to the kindly forethought of mine host Mayberry.

"Presently another change is made and the rest of the crew go through the same interesting operation. Acker Creek is hardly passed, with its railway bridge perched away in the air, before "Hardscrabble," looms up ahead, and the roar of the river is heard tearing under the Woodstock Bridge. Woodstock is made at 11.46 twelve minutes late. Here a stop of twenty minutes is made to send a message to friend Hawthorn, and the crew would

fain take longer in this pleasant town. But that terrible schedule is unrelenting, and the Red Swan is once more under way. Mile after mile is put behind the now hopeful crew in quick succession; the rough water at Shogomoc is run with a shout; Poquiock, Nacawick, the Barony, slide by like a dream; Long's Creek finds the crew only nineteen miles from town; Indian Village is reached at 5.50, ten minutes ahead of the time, and Spring Hill finds that terrible schedule beaten by twelve minutes. The old canoe herself is beginning to get exultant, and seems to travel faster than ever. Opposite City Hall the watch is consulted for the last time, and shows 7.19, and the run is finished, with three minutes to spare. The genial Commodore is waiting expectantly below the bridge, and is the first to offer congratulations. Good night, Commodore, it is a good run. If I do say it who shouldn't."

NEW JERSEY ATHLETIC CLUB CANOE RACES.—On "Labor Day" in the regatta to be held on Newark Bay off the boathouse, the Committee on Canoeing of the New Jersey Athletic Club have made arrangements for three open paddling races. The races are to consist of one-half mile paddling, single, class IV. canoes; first prize, gold medal; second prize, silver medal. One-half-mile tandem paddling, class IV. canoes, first prize, gold medal; second prize, silver medal. 200yds. hurry-skurry upset, swim 75ft. to canoe, board, paddle round turning stake and at signal to upset, turn canoe completely over and with crew inside paddle across the finishing line. A. C. A. rules are to govern. Any deviation necessary at the day of the regatta will be announced before the start. The medals will be on exhibition at H. C. Squire's, 178 Broadway, New York city. Entries will close on Aug. 20. Gentlemen proposing to enter the above contests are requested to be on hand on Sept. 2, not later than 3 P. M., as there are other sports and a baseball game to follow.—W. H. MITCHELL, D. D. S., G. R. FROST, A. B. HERRICK, Committee on Canoeing, N. J. A. C. Entries may be sent to Dr. Wm. H. Mitchell, Box 265, Bergen Point, N. J.

NEW YORK C. C. INTERNATIONAL CUP.—In addition to the challenge by cable the New York C. C. has received a letter from the Royal C. C. stating that Mr. Stewart will positively come out, and that Mr. Baden-Powell may do so also. The notice is very short in which to prepare to meet the challengers, but the club has accepted both challenges and will hold trial races on Sept. 3, Labor Day, starting at 10:30 A. M. and 2 P. M. These races are open to all members of American canoe clubs, and an invitation to enter is hereby extended to them. The dates for the international races cannot be set until the arrival of Messrs. Stewart and Powell. Mr. Stewart arrived at Montreal this week with his canoe.

A. C. A. PRIZES.—The following letter has been received by the regatta committee: Troy, N. Y., Aug. 3.—Regatta Committee A. C. A.: It has not been convenient for members of this club to attend meets of the A. C. A. and one member only has seen fit to join the Association; we all, however, feel an interest in its welfare, and will do anything in our power to help the sport—especially the "McKendrick" side of it. I inclose postal note $2.50 for which please give the club credit for a second prize flag.—GEO. C. BASCOM, Secretary Mohawk C. C.

PAWTUXET C. C.—This club was organized on July 16 with 10 members and has since increased to 19. It is the only canoe club in Rhode Island. Its cruising ground is on the Pawtuxet, Providence and Seekonk Rivers and Narragansett Bay.

ATLANTIC DIVISION A. C. A.—Vice-Com. Stephens has appointed Messrs. E. W. Brown, Knickerbocker C. C.; B. H. Nadal, New York C. C.; and H. C. Ward, Brooklyn C. C., on the regatta committee of the division for 1889.

A. C. A. MEMBERSHIP.—Atlantic Division: Stacy B. Collins, Ernst C. Pressprich, New York; M. M. Davis, Brooklyn. Central Division: E. B Nelson, Rome, N. Y.

ST. LAWRENCE RIVER.—A correspondent asks for information as to rapids in the St. Lawrence River below the Richelieu.

MOUNT DESERT C. C.—This club held a reception on Aug. 4 at the new club house at Bar Island.

FIXTURES.

AUGUST.

11. New Rochelle, 35ft. Class.
—. New York, Goelet Cups, Newport.
11. New Haven, Cruise.
11. Savin Hill, Club.
11. West Lynn, Club.
11. Cor. Marblehead, Ladies' Day
11-20. Buffalo Cruise.
11. Quincy, Open.
11. R. C. Y. C. Open Handicap.
11. Southern, Pass Christian.
13. American, Open, Newburyport.
13. New York, Vineyard Haven
13. Newark Bay, Open. Cups, Vineyard Haven.
15 Great Head 2d Cham.
16. Monatiquot, Ladies' Day.
16. Pleon, Open.
17. Bay View Moonlight Sail.
18. Bay View Annual Cruise.
18. Monatiquot, 2d Cham, Ft. Pt.
18. Larch. Oyster Boat Race.
18. South Boston Club.
18. Cor. Marblehead, Open.
20. Great Head Moonlight Sail.
20. Miramichi, Cup.
22. Pleon, Third Cham.
22. Cape Ann, Open.
24. Cedar Point Pennant.
25. R. C. Y. C. Lansdowne Cup.
25. Savin Hill, Club.
25. West Lynn, Ladies' Race.
25. Beverly, Mon. Beach,
25-Sept. 8. Quaker City Cruise to New London.
27. Rhode Island, Open.
27. Quincy, 3d Cham.
28. Dorchester Club.
29. Bay View Club.
29. Great Head Club.
29. Monatiquot, Open Sweep.

THE LAKE Y. R. A. ROUND.

HAMILTON, JULY 28—AUG. 3.

THIS year a new port has been added to the Lake Round of races. Hamilton, the "ambitious city," is coming to the front in yachting as in other things, and her young but vigorous yacht club held its first regatta on July 28. A very large number of spectators were present and a fine fleet of yachts from all the Ontario ports. The Alice Enright, of Toledo, was expected, as she was matched to sail the Merle for $250 per side and the championship of the lakes, but she did not arrive in time for the regatta. The fleet reached Hamilton on July 27, and in the evening a reception and illumination were given in honor of the visitors. The course for the race was from the south pier, 5 miles to windward to a stakeboat, the 2d class sailing three rounds, 30 miles; the 3d and 4th classes, 2 rounds, and the 5th class, 1 round, 10 miles. The judges were Capt. Monck, Vice-Commodore Stewart, W. H. Judd and Harry Lee. Several first class yachts were present, but none started. With a light S.E. wind the second class was sent away as follows:

Aggie, sloop, Marlatt & Armstrong, Oakville.....10 31 35
Verve, cutter, N. B. Dick, Toronto.....10 31 36
White Wings, sloop, A. E. Jarvis, Hamilton.....10 31 55
Cygnet, sloop, A. M. Ewing, Toronto.....10 38 30
Condor, sloop, Wm. Davidson, Toronto.....10 39 30

White Wings cut in between the two leaders and the weather end of the line at the start, blanketing both and taking the lead. The first leg was timed:

White Wings	12 19 50	Condor	12 57 00
Verve	12 30 45	Aggie	12 53 30
Cygnet	12 35 30		

The fleet came in with spinakers to port, the wind being very light. The end of the first round was timed:

White Wings	1 42 45	Verve	2 10 30
Cygnet	2 09 00		

The others were far astern. All drifted out to the mark again, the times being:

White Wings	3 56 00	Verve	5 13 15
Cygnet	4 54 30		

About 6 P. M. the race was abandoned, there being no wind.

The third class had a very good list of entries, including the new cutter Psyche, designed by Mr. C. P. Kunhardt, a keel boat of moderate beam. The start was made at 10:45:

Psyche, cutter, S. Greening, Hamilton.....10 45 20
Majel, sloop, Com. Newell, Rochester.....10 46 00
Cyprus, cutter, J. F. Monck, Hamilton.....10 46 23
Alert, sloop, F. Irving, Hamilton.....10 46 42
Coquette, sloop, Hamilton.....10 46 43
Arthur Murray, sloop, R. G. Baxter, Burlington.....10 46 44
St. Elmo, cutter, George Webster, Hamilton.....10 46 47
Cacique, sloop, W. R. Anderson, Hamilton.....10 46 47
Surge, sloop, R. Crooks, Hamilton.....10 46 53
Cruiser, sloop, H. J. McAllister, Hamilton.....10 47 30
Merle, sloop, Allen Ames, Oswego.....10 47 42
Yolande, schooner, S. Y. Baldwin.....10 49 55

Psyche made one long tack to the north, while Merle tried shorter legs, but when they came together Psyche was well ahead, with Coquette second and Merle third, the times at the mark being:

Psyche.....12 39 30 Merle.....12 57 30
Coquette.....12 54 00

Though starting 15 minutes later, these three had beaten Condor and Aggie, of second class. After rounding, Psyche made a blunder in setting her spinaker to port, all the rest carrying theirs to starboard. She ran a long way out of her course in order to make the sail draw, while Merle passed Coquette. The times at the end of the first round were: Psyche 2.17, Merle 2.25. Psyche now stood for the south shore, and was finally lost in the haze. Merle drifted around the outer mark at 5.43, with Cyprus second to her, and then both gave up.

There were 13 starters in fourth class, as follows, all starting with third class at 10:45:

Flirt.....10 45 45
Mischief, W. D. Thomas.....10 45 55
Stella, G. F. Birely, Hamilton.....10 46 15
Triton, Isaac Wise.....10 46 20
Mollie, W. Robertson, Toronto.....10 46 20
Alert, J. R. Seaver, Toronto.....10 46 22
Neptune, J. Hopkins, Hamilton.....10 46 30
Greyhound, Mason & ——, Hamilton.....10 46 30
Vandetta, William Paterson, Hamilton.....10 47 23
Caprice, Charles Frey, Toronto.....10 48 22
Velnette, E. N. Wallbridge, Rochester.....10 48 45
Japyx, W. G. Townsend, Hamilton.....10 49 30
Mystery, T. W. Taylor, Hamilton.....10 49 43

In the fifth class were Adeline, Water Witch, Kestrel, Ariadne, Fleetwing, Seagull, Alliance, Erelass, Comet, Flight and Alvaetta. In the evening the visitors were entertained by the home club, sailing next day for Toronto, the Hamilton race being postponed to Aug. 3.

Only a part of the fleet returned on that date, and of these Verve and Caprice arrived too late to enter. The course was laid out five miles southeast of the South Pier, there being little wind in the morning, but after the start a strong S.W. wind came in, making a reach both ways, instead of a beat out and run home, as expected. Only two started in second class, the race being without interest.

	Start.	Finish.	Elapsed.	Corrected.
White Wings	11 34 33	2 50 19	3 15 46	3 15 46
Aggie	11 35 00	3 15 39	3 40 39	3 71 56

In third class the starters were Merle, Cyprus, Surge, Psyche, Coquette, Cruiser and St. Elmo. Merle started, but withdrew when she found that the course was not to windward. Cyprus also came to grief, losing her forestay and bobstay. Psyche led until near the finish, when her mast gave away at the hounds. The times of the leaders were:

	Start.	Finish.	Elapsed.	Corrected.
Cyprus	10 47 25	1 31 22	2 43 57	2 41 05
Coquette	10 49 20	1 34 32	2 45 12	2 45 12
Psyche	10 46 55	1 41 09	2 54 14	2 47 42

The fourth class started at 11 A. M.: Greyhound, Flirt, Mystery, Japyx, Stella, Vandetta. Greyhound led, but Mystery and Stella caught her at the outer buoy. Greyhound in rounding fouled the mark. Greyhound finished first, Mystery second and Stella third.

	Start.	Finish.	Elapsed.	Corrected.
Greyhound	11 03 19	12 37 18	1 33 59	1 30 03
Mystery	11 01 23	12 37 17	1 35 54	1 33 48
Stella	11 00 50	12 36 44	1 35 54	1 35 54

The fifth class was started at 2:30 with nine entries. The race was won by Alvaetta, of Toronto, Flight second and Adeline third.

TORONTO Y. C., JULY 31.

The wind on Monday was little better than on the preceding Saturday at Hamilton, but the race was sailed to a finish. What wind there was came from S.W. The course was laid between a buoy moored 100yds. to the south of Exposition wharf, thence due south to a buoy five miles out in the lake—once around for the fourth class, twice for the third class, three times for the second class. The entries were, Cygnet, White Wings, Aggie and Verve in 2d class: Myrle, Cyprus, St. Elmo, Escape and Vision in 3d class; Velnette, Caprice, Alvaetta, Irene and Adeline in 4th class. White Wings led her class easily until near the finish when she was becalmed. Cygnet came up with the breeze, shifted her spinaker from port to starboard in very quick time and finished first, but failed to save her time. The full times were:

SECOND CLASS.

	Start.	Finish.	Elapsed.	Corrected.

Adeline	Not taken.			
Irene	Not taken.			

The prizes were: Second class, first prize, $100, second $50, third $25. Third class, $60, $40 and $25.

The officers of the day were: Judges, Rev. E. Stewart Jones, Messrs. Hugh C. Deans and F. B. Polson; starters, Messrs. C. W. Postlethwaite and Hume Blake; time keepers, Wm. Dixon and Frederick A. Turner.

In the evening a dinner was given at the Reform Club.

ROYAL CANADIAN, JULY 31.

The course for the Royal Canadian Y. C. Regatta, on Tuesday, was the old "Red" course from a buoy off Exhibition Wharf, thence to bell buoy, from there to a buoy moored off Scarboro', thence to another out in the lake five miles and in to the bell buoy again—twice round for the second and once round for the third class boats, leaving all buoys to the starboard hand; 30 and 15 miles. The first to start was the third class at 10:15, the wind being strong from the west. Merle led, winning easily. At one time the yachts were obliged to turn in single and some double reefs The second class was started at 10:30, with four starters, White Wings, Verve, Aggie and Cygnet, the latter handicapped. Verve, Aggie and Cygnet all started on the wrong course, the latter losing a great deal in returning and rounding the right buoy. There was a strong wind and heavy sea during a part of the race, with a heavy squall near the end.

The fourth class did not start until 3:40, the course being around the bell boy. Alvaetta, a 19ft. open boat, did some very good work, beating the decked yachts. The full times were:

SECOND CLASS.

	Start.	Finish.	Elapsed.	Corrected.

Flight		4 52 16	1 52 45	1 52 42
Velnette	3 00 00	4 49 30	1 49 30	

The winner in the second race is not known, as several protests have been lodged.

From Toronto the fleet returned, as stated, to Hamilton, the final race being sailed there on Aug. 3. The round this year has been marked by light weather in the races and some heavy weather between ports, as well as by several disasters, while the entries have not been up to the mark. The first class has done nothing; the withdrawal of Iolanthe robbed the later races of part of the interest, and the race between Psyche and Merle failed through the latter's withdrawal at Hamilton. Oriole and White Wings will be present at the Mackinac regatta of Aug. 15, 17 and 17, where the latter will met the Alice Enright.

ANOTHER FAST FISHERMAN.—Capt. Geo. B. McCain, designer of the I. J. Merritt, Jr., has lately finished a new design for a still faster schooner, to be 108ft. over all, 98ft. l.w.l., 25ft. beam, 11ft. 9in. hold, and 12ft. 6in. draft.

CENTERBOARD QUESTION ON THE CLYDE.

AT the meeting of the Institute of Naval Architects at Glasgow, Mr. B. Martell, chief surveyor, Lloyd's Register of Shipping, read a paper "On the comparative merits of deep keel and centerboard yachts for racing purposes." After alluding to the opinion among many yachtsmen that yachts of the American design had in every respect superior qualities to the deep keel vessels, Mr. Martell said he proposed to examine the comparative merits of the different types, with a view to elicit a discussion among those who could claim to speak with authority on the question, particularly in a locality where so much enterprise and enthusiasm had been displayed in this interesting subject. After giving the dimensions of the yachts Thistle and Volunteer, Mr. Martell observed that the principal difference in the two was the relation of depth to breadth.

Summing up the results of his investigation, it appeared, he said, that the American type of yacht possessed greater stiffness, and therefore greater sail-carrying power; it had, by reason of the centerboard, greater resistance to leeway, was fitted with better sails for close-hauled sailing, and had practically no more skin friction and wave-making resistance at all ordinary speeds, while the only point on which the British type had the advantage was that she was safer in bad weather in the open sea with a large spread of canvas. It was not surprising that under these circumstances all the recent trials of speed between the British and American types should have resulted in the triumph of the latter. It now behooved British yachtsmen to consider whether it was expedient for them to make sea-going qualities a *sine qua non* in a racing machine, or to sacrifice high speed in bad weather at sea in order to obtain greater speed in the usual conditions under which these vessels would be raced. which was, after all, the principal reason of their existence.

Mr. G. L. Watson, in opening the discussion, said there were one or two points upon which Mr. Martell had not got the real facts. One of these was the relative stability of the two vessels. Mr. Martell had assumed that the Volunteer would take a heel of 15 degrees and the Thistle 16½ degrees, and on that basis a good many of his assumptions were made. He (Mr. Watson) asked several gentlemen who observed the race to get both on end to see which had the greater inclination. The three gentlemen, who were all careful observers and good yachtsmen, were of opinion there was a difference of something like 3 or 4 degrees in favor of Thistle, which was to that extent stiffer than Volunteer. He (Mr. Watson) thought it unfortunate that so much attention should have been directed to those races between Volunteer and Thistle. The public judged from those races of the relative merits of centerboard and keel. There had been hundreds of other races between centerboards and keels, and the result had been very different. The Clara, one of Fife's boats, had won almost every race she had sailed against centerboard boats. The Bedouin was still acknowledged to be about the fastest of her class, and her record was favorable compared with that of centerboard boats of the same length. Madge, when she went over to America a good many years ago, out of seven races won six against centerboards. The Pappoose had not only beat boats of her own length, but this year was beating boats of greater length. Coming again to our own country, where they were just beginning with centerboards, there was a new class, where the limit of length was 21ft., and no restriction as to centerboard or keel. The results of that he got that morning. In this class five boats were built, but two of them had fallen out. The keel boats, out of nine starts had six firsts and three seconds. Of the boats with the centerboard, one out of the seven starts had one first and five seconds, and the other, out of six starts, had two firsts and one second. His own opinion in regard to the centerboards and keels was, that the keel boat, if properly designed could always be made to beat the centerboard. That, of course, implied that Thistle was not properly designed. (Laughter.) He dared say that was about right. (Laughter.) Mr. Martell had referred to the sails, and tried to let him down easy at the expense of the sail. (Laughter.) That, he thought, was hardly fair. The sails of all racing boats in this country for the past seven or eight years were absolutely perfect. An absolute flat sail would not drive a boat as well as a slightly curved sail in light winds. On the first day Volunteer had rather an advantage in that respect, as her sail was not so absolutely flat as that of Thistle. That would have helped her a little. He had no doubt that the sailmakers in this country were superior to the Americans.

Professor Jenkins referred to some experiments at which he assisted the late Mr. Froude some years ago—experience upon the resistance of models. Their object was to determine the manner in which resistance depended as to breadth and depth. They found that the wave-making resistance varied approximately with the breadth of the vessel.—*Glasgow Herald.*

HULL Y. C. SECOND CHAMPIONSHIP REGATTA, AUG. 4.—Regular club courses, weather clear, wind S.W., strong breeze:

The judges were Messrs. H. H. Sheen and G. G. Saville.

OPEN BOATS AT CANARSIE.—On Aug. 4 a race was sailed at Canarsie, L. I., under the following conditions: All boats eligible measuring between 18 and 25ft.; entrance fee $12 each, with $100 added by the Canarsie Y. C. to go to the first, and 75 per cent. to the second; the third to save stake; course from Canarsie dock to Can Buoy at Rockaway Inlet and return. The times of the races were:

	Start.	Turn.	Finish.	Corrected.
Ida S.	4 31 10	. . .	6 25 40	1 54 20
Ours	4 30 50	5 37 45	6 18 25	1 45 10
Pirate	4 30 20	. . .	. . .	. . .
Julita	4 30 20	5 37 00	6 18 45	1 44 50
Willow Grove	4 30 20	5 39 30	. . .	. . .
Lady Glenmore	4 32 45	. . .	6 21 50	1 44 49
Leisure	4 30 35	5 40 45	6 24 10	1 49 00
Mattie	4 30 45	. . .	. . .	. . .
So So	4 31 15	5 42 45	6 25 25	1 49 25
Aurora	4 33 25	. . .	. . .	. . .
Sleepy	4 32 55	. . .	. . .	. . .

Lady Glenmore wins, with Julita second and Ours third. The judges were Dr. William A. DeLong, Walter W. Banta and T. J. Kellenbach.

PLEON Y. C.—A race for second class boats for the Wood challenge cup was sailed on Aug. 1, over the regular club course, in a light S.E. wind. The times were:

	Length.	Elapsed.	Corrected
Jay Gee, F. B. Litchman	12.07	0 55 45	0 52 48
Estelle, J. W. Dunlap	11.09	1 00 55	0 57 22
Edith, S. W. Sleeper	11.08	1 02 00	0 58 24
Annie, F. L. Rhodes	11.06	1 02 40	0 58 55
Monarch, F. O. Taylor	12.03	1 06 00	0 52 48
Dart, H. Jackson	10.09	1 22 15	1 17 57

The N. G. Wood challenge cup, valued at $250, goes to Jay Gee, and the second prize to Estelle. Jay Gee will hold the cup until she is beaten by a challenging boat, and will retain it should she hold it until Sept. 15. After the race the owner of Estelle challenged Jay Gee, and the race will be sailed within two weeks. The judges were A. G. Woods, F. L. Rhodes, H. L. Whitcomb and Harry Martin. On Aug. 2 a scrub race was sailed over a 6-mile course, in a light wind. Jay Gee won, with Phyth second and Estelle third.

DORCHESTER Y. C.—104th regatta, July 31; club course, 7 miles. Weather clear. Wind, strong S.W. Tide, flood.

	Length.	Elapsed.	Corrected
Rocket, H. M. Faxon	17.11	1 29 01	0 59 49
Mirage, John Dearborn	18 08½	1 31 48	1 03 26
W. E., J. E. Robinson	. . .	1 33 03	. . .
Sheerwater	. . .	1 36 09	. . .
Scamp, Francis Gray	19.05½	Capsized.	

Winners: First prize, Rocket; second, Mirage. No entries in fourth class. When off Farm Bar Buoy the wind came in very strong puffs, and on account of the nearness of the boats to each other the Scamp was not afforded sufficient sea room when forced to jibe, and was capsized. Judges—A. J. Clark, C. J. Means and H. Davenport.

LAKE MUSKOKA.—On Aug. 1 a race was sailed between the Mackinaw boats owned by Mr. Playfair and Mr. Thompson, of Toronto, the former winning.

BUZZARD'S BAY CITIZENS' RACE.—The fifth annual citizens' regatta for boats owned in Buzzard's Bay and Vineyard Sound, was sailed on Aug. 4 in a reefing breeze from S.E., with a heavy sea. The official summary is as follows: First Class—Catboats 23ft. and over. Course, 12 miles. Prizes, $10 and $6. Entries: Surprise, Ape, Mary, Mabel and Trump. Ape, 2h. 7m. 20s.; Surprise, 2h. 12m.; Mary, 2h. 18m. 42s.; Trump, 2h. 19m. 27s.; Mabel, 2h. 24m. 46. Second Class—Catboats under 23 and over 21ft. Course, 12 miles. Prizes, $10 and $6. Defiance and Success. Defiance, 2h. 5m. 27s.; Success, 2h. 13m. 15s. Third Class—Catboats under 21 and over 18ft. Course, 9 miles. Prizes, $10, $6, $4. Entries: Maltese, Mertie, Scud, Sachem, Mascott, Kildic, Marion, Trump, Kismet, Trojan. Trump, 1h. 58m. 18s.; Kismet, 1h. 59m. 12s; Sachem, 2h. 2m. 51s.; Mascott, 2h. 2m. 48s.; Mertie, 2h. 6m. 18s.; Scud, 2h. 9m. 9s.; Trojan withdrawn. Fourth Class—Catboats under 18 and over 15ft. Course, 9 miles. Prizes, $8 and $5. Entries: Redwing, Psyche, Bessie. Redwing, 2h. 10m. 10s.; Psyche, 2h. 12m. 42s.; Bessie, 2h. 28m. Fifth Class—Catboats under 15ft. Course, 7 miles. Prizes, $6, $4, $2. Entries: Wide Awake, Hiawatha, Pet, J. D. Ferguson, Annie. Annie, 1h. 3m. 18s.; Pet, 1h. 6m.; Wide Awake, 1h. 37m. 39s.; Hiawatha, 1h. 49m.; J. D. Ferguson, 2h. 49m. 24s. Sixth Class—Sprit and lug sailboats. Course, 5 miles. Prizes, $5 and $3. Entries: Henry Cook, A. S. Messer, Gosling, John Sylvia. A. S. Messer, 1h. 9m. 24s.; Henry Cook, 1h. 12m. 12s.; Gosling, 1h. 14m. 7s. Seventh Class—Sprit and lug sail. Course, 5 miles. Prize, $5. Entries: Ben Gifford, Fred Gifford. Fred Gifford, 1h. 13m. 57s.; Ben Gifford, 1h. 24m. 37s. The judges were E. D. Marsh and T. W. Sanford.

"YACHTS AND YACHTING."—Under the title of "Yachts and Yachting," Cassell & Co., have collected and published in a handsome octavo volume the various articles on yachting which have appeared in *Outing* within the last two or three years. The greater part of the book is taken up by the History of American Yachting, written by the late Captain Coffin, who by his experience of over twenty years as a yachting reporter, as well as his acknowledged ability as a writer was well fitted for the task. The story of the birth and growth of yachting in America is told plainly and clearly, and makes a most interesting and valuable narrative. Captain Coffin was always a champion of the centerboard sloop, and an active participant in the long controversy between the sloop and cutter, but his conclusions are in the main fair to both types. In the compilation of his records of races he had access to the papers of the New York Y. C. and many other important sources of information, and his work in this respect is the most complete and accurate yet published. The book also contains an interesting paper on steam yachts by Mr. E. S. Jaffray, former owner of the Stranger, together with articles on the late races for the America's Cup. It is illustrated by a large number of outline sketches of old and new yachts. As the book is likely to become a standard of reference it is unfortunate that some of the typographical errors which were noticeable in the magazine articles have not been corrected in putting them in more permanent form.

SAVIN HILL Y. C. RECEPTION.—The Savin Hill Y. C.'s illumination and reception, held at their club house on the evening of July 21st in., surpassed anything ever given in Dorchester Bay. There were upward of two thousand people on the beach, and over five hundred were inside the club's inclosure, partaking of its hospitality, listening to the delightful strains discoursed by Thayer's orchestra and enjoying the display of fireworks. The residents on the south side of Savin Hill showed good taste in the arrangement of lanterns, so that the back ground displayed an unbroken line of lanterns, while the club house front was covered and all the boats were well illuminated. The club had for guests members of the Quincy, Great Head and Dorchester clubs, and the officers of the South Boston. At the side of the club house a large tent was spread, under which caterer Seiler was kept busy serving lunch to the members and their guests. At 10 o'clock the visiting yachts, accompanied by those of the Savin Hill Club, started for home, and made a very pretty picture as they sailed out into the bay, their departure being celebrated by a general outburst of fireworks and colored lights. The ladies, always welcome on board a yacht, added no small part to the pleasure of the occasion, with their bright-colored dresses and pleasant happy voices. The reception committee included Com. J. H. Stark, Vice-Com. J. H. Ordell, Fleet Captain H. G. Patten.

CORINTHIAN Y. C. OPEN REGATTA.—The Corinthian Y. C., of Marblehead, has changed its dates a little, the Ladies' Day sail being set for Aug. 11, and the open regatta for Aug. 18, by which time the New York fleet will be in the harbor. Every effort has been made to secure large and good entries for the open regatta, and the race of the 40ft. class will be a special feature. The classes and prizes are as follows: Special class, yachts 30ft. waterline and less than 40ft; first class, yachts 25ft. sailing length and less than 30ft. water line; second class, yachts 21ft. sailing length and less than 25ft.; third class, centerboard yachts 18ft. sailing length and less than 21ft.; fourth class, keel yachts less than 21ft. sailing length; fifth class, centerboard yachts less than 18ft. sailing length; schooners and yawls will sail at seven-eighths of their actual measurement. Special class, first prize $30, second $20; first class keels, first prize $25, second $15, third $10; first class centerboards, first prize $25, second $15, third $10; second class keels, first prize $25, second $15, third $10; second class centerboards, first prize $25, second $15, third $10; third class, first prize $20, second $15, third $10, fourth $7, fifth $5; fourth class, first prize $20, second $15, third $10, fourth $7, fifth $5; fifth class, first prize $15, second $10, third $5, fourth $3. No prize will be given to a yacht which has not defeated a competitor.

THE RACE AROUND THE ISLE OF SHOALS.—On Aug. 4 seven yachts started from Pleasant Point, Annisquam, to race around White Island, the prizes being $30, $15 anp $10. The wind was strong at the start, 8 A. M., and Mignon sent her topmast and spinaker boom ashore, not expecting to need them. The starters were Gracie, Climax, Black Cloud, Evelyn, Mignon, Kulinda and Trudette. After a short time the wind fell with some rain, reefs were shaken out and spinakers set, spoiling Mignon's chances. Kulinda had her spinaker in a small and gave up. White Island was rounded as follows: Black Cloud, 11.36.50; Hazard, 11.40; Evelyn, 11.43.50; Gracie, 11.44; Trudette, 11.45; Mignon, 11.53.50; Climax, 11.55. The wind came stronger as the fleet beat home, but was variable and fluky. The order of the finish was Black Cloud, Hazard, Trudette. The official times were not made up.

NORTH SHREWSBURY Y. C.—A race was sailed over a 15-mile course on Sandy Hook Bay on Aug. 4, in a strong S. wind, the starters being: First class—Lizzie, Ed Bussell, and C. G. Martin, C. M. Peterson. Second class—Twilight, H. B. Duryea; Williwaw, Ed. Throckmorton, and Kitty K., Mr. Kelly. Lizzie won in first class and Twilight in second. The prizes were $30 and $45 respectively. The judges of the regatta were T. F. Chadwick, J. T. Cutting, William A. Chadwick and William Willey. After the race Mr. W. E. Connor challenged any yacht except the Lizzie to race his Nahli over a 10-mile course on Sandy Hook Bay for $50 per side. Mr. Kelly also challenged Twilight to sail his yacht Kitty Kelly for $20 per side, on the North Shrewbury.

LANDING ACCOMMODATIONS AT NEW YORK.—As Chairman of the Committee on Landing Facilities, Commodore Gerry writes to Secretary John H. Bird that arrangements have been make whereby yachtsmen may land at and have packages sent to the float at the foot of West Thirty-fifth street, where they will be cared for by Joseph May. A telephone has also been placed at this float by Capt. Morgan of the club, and one at the East Twenty-sixth street float by Commodore Gerry, for the use of members whose yachts may be lying at anchor in either of the rivers. The floats at Whitestone and Bay Ridge belonging to the Atlantic Yacht Club have been placed at the disposal of New York Club members by the courtesy of the former club.

VALOIS BOATING CLUB, MONTREAL.—Two sailing races formed a part of the programme of the Valois B. C. regatta on Aug. 4. The yacht race was started at 4.50 and the finish was in the following order: Madge, 6.09; Ishkoodah, 6.12; Lulu, 6.15; Minnie A., 6.32; Mabel, 6.35. The Marga was also in this race for a little while, until a squall struck her and over she went. A protest entered by the Lulu against the Madge for fouling was not entertained. The time allowance does not affect the yachts in this instance and they are placed as they finished. The sailing boat race, which started five minutes after the yacht race, was won by W. Wallace's boat, J. Jones second and Young third.

NEW YORK Y. C. CRUISE.—At the meeting on board the flagship on Aug. 8, the details of the cruise will be arranged; thus far it is not known whether the race for the Goelet cups will be sailed on Friday or Saturday. The Vineyard Haven cups will be raced for on Monday or Tuesday, and in all probability the fleet will sail on Wednesday for Marblehead, racing there on Thursday. On Saturday the open regatta of the Corinthian Y. C. will bring out all the 40ft. class, and many yachtsmen will stay to witness what promises to be one of the events of the season. A large number of yachts is preparing for the cruise, and the fleet will probably equal in size any previous year.

THE GLEAM—JOPPA COLLISION.—The decision of the Local Board of Steamboat Inspectors is as follows: "When the Gleam received two signals from the steamer Joppa in reply to her one she should have stopped and reversed her engines at full speed astern, and which would have avoided loss of life. We therefore find Captain Torrey guilty of unskillful navigation and hereby revoke his license as master and first class pilot." The Inspectors have also issued an order prohibiting a covering of any kind on lifeboats when under way. The Gleam's lifeboat was covered with a tarpaulin which had to be cut away with an axe before the boat was fit for use.

ATLANTIC Y. C.—The postponed race of July 28 was sailed on Aug. 4 with three starters, the courses being twice around buoys 18 and 20, 10 miles. The wind was fresh from south. The times were:

	Length.	Finish.	Elapsed.
Gleam, E. Fish	23.08	5 15 35	2 12 55
Frolic, T. Ward	24.00	5 21 48	2 19 05
Iris, Thompson Bros.	24.00	5 34 25	2 31 33

Gleam wins, beating Frolic 6m. 10s.

STARLING AND SAPPHIRE.—An informal brush is reported as taking place on Aug. 3 between the Burgess steamer Sapphire and the Frisbie boat Starling; the former being 115ft. l.w.l. and the latter 100ft. The two met near Bartlett's Reef Lightship, Starling bound east, turning and taking a place on Sapphire's port quarter, as the latter came up. The race lasted nearly half an hour, ending by Starling crossing her rival's bow and resuming her course.

ALTERATIONS TO SACHEM.—The schooner Sachem has hauled out at New Bedford, where under Mr. Lawley's directions a piece of lead weighing 3,150lbs. has been cut off the fore end of keel, where the addition was made last spring. About 900lbs. will be run into the deadwood aft, thus improving the trim and permitting the removal of about 2¼tons of lead now stowed in the run. The hull has been cleaned and potleaded for the cruise.

HINTS ON YACHT BUILDING FOR AMATEURS.—Under the above title Mr. Tyrrell E. Biddle, the well-known writer, has written a companion to his "Hints on Yacht Designing," published some time since. The new volume contains a clear description of the various steps of yacht building, with many excellent hints and suggestions, and the amateur builder will find it a very useful assistant. The book is published by George Wilson, London, Eng.

SEAWANHAKA C. Y. C.—The protest of Iseult against Eurybia in the annual race, on the ground that the latter had her sailing master on deck, has been allowed by the race committee, so the class prize, as well as the special prize in Class VIII., goes to Kangaroo.

BANTAM AND HEEDLESS.—A series of matches to be sailed off Newport has been arranged between Mr. Woodbury Kane's cutter Bantam and Mr. Edmund Warren's cutter Heedless, designed by Mr. Smith. The dates are not yet fixed.

NEW YORK Y. C. BOOK.—The new book of the New York Y. C. for 1888 shows a membership of 700 and a fleet of over 200 yachts, sail and steam. The club is now the largest in the United States.

QUAKER CITY Y. C.—This club has issued a very neat year book for 1888. The membership is now up to 100, with a fleet of thirty yachts.

SANDY BAY Y. C.—The regatta at Rockport was postponed on Monday on account of the fog and heavy sea.

WINNISIMMET S. AND R. C.—This club, of Chelsea, Mass., will hold its first sailing race on Aug. 11.

ADDRESS WANTED.—Will Mr. E. A. Donovan please send full address to this office.

SOUTHERN Y. C.—The regatta set for Aug. 4 was postponed for one week.

New Publications.

In "BOATING," by W. B. Woodgate (Little, Brown & Co., Boston), the "Badminton Library of Sports and Pastimes" has put forth one of its most attractive volumes. The book is an encyclopedia of all that an oarsman or sculler can wish to know. The author is an old Oxford man, who rowed in two winning 'varsity eights and has twice held the Wingfield Sculls and once the Diamond Sculls—about as much honor as any boating man can reap in an ordinary lifetime—so that what he has to say in the way of advice is well worth heeding. The chapters on "Training," "Coaching" and "The Captain" are particularly interesting, and it is easy to see that the counsel he gives in them is the outcome of years of intelligent observation and hard practical work. All rowing men will recognize the force of the following: "It is the captain who can make or mar a club. He is the general officer in command of the forces, while the president is more of a field marshal enjoying *otium cum dignitate* at home. The qualifications upon which a captain is or should be selected by his club are, in the first place, personal merit as an oarsman and knowledge of his craft; in the second, a due seniority, so that he may have a proper influence, both socially and in an aquatic sense, over those whom he is to command; thirdly, tact and common sense.

"A captain should be self-reliant without being obstinate; he should be good tempered but not facile; he should be firm but not tyrannical, energetic but not a busybody. A captain has usually a host of counsellors, and he, too, will realize the fallacy of the adage that in a multitude of counsels there is wisdom."

A feature of the book that will render it valuable to all lovers of rowing is the care and accuracy with which Mr. Woodgate has compiled the history of all the prominent sculling and rowing events that have taken place in England since rowing grew to be a national sport. All the winners from 1830 up to the present day are named, together with histories of their achievements. In the matter of the history of the various means used for propelling craft with oars, sculls and paddles, Mr. Woodgate has gone back as far as 3,000 B. C. The style throughout is clear, and in many places the reader unexpectedly falls upon quaint bits of humor. It would be unfair to speak of the book without noticing the high character of the engravings with which it is illustrated. Many are from instantaneous photographs, and they go far to make clear obscure points in the science of rowing that are often stumbling blocks of awful import to amateurs and even professionals. The drawings, by Frank Dodd, while all that could be desired from an artistic point of view, will gain him the friendship of all right-minded rowing men. His accuracy is wonderful, and the correctness of his detail work shows that he must be an oarsman of no mean ability.

THE BOSTON TEA PARTY, another of Lee & Shepard's "Classics for Home and School," follows "Stories of American History," and "Noble Deeds of Our Fathers," as the third of the patriotic series of supplementary readers. Every one knows that the American Revolution originated with the meetings of the Lebanon Club, who went down to Griffin's wharf and threw "His Gracious Majesty's" tea overboard with a spirit of resolution, which implied that they were quite ready to throw the tea things after them if there was any provocation. On a Fourth of July, long years afterward, the few surviving members of the club sat down to dinner with two generations of born Americans in the immediate neighborhood of the now famous Griffin's Wharf, and beginning with the little tea party they told in quaint, but graphic language the deeds of heroism and incidents of the great revolution which had come under their personal observation or in which they had borne part. These after dinner stories from the mouths of men who had participated in the exciting scenes they described, interspersed with personal reminiscences, are all reproduced and carefully revised in the work under notice, which is perhaps unequaled in its tendency to fascinate the American boys, and stimulate their patriotic ardor to enthusiasm.

CRICKET, by A. G. Steel and the Hon. R. H. Lyttleton, is one of the series of the Badminton Library, which is being published by Little, Brown & Co. of Boston, and Longman, Green & Co., of London, simultaneously, and a book to be read with pleasure and profit, whether the reader takes it up for the study of cricket, or for general social and ethical culture. The authors treat cricket as the business of life and throw into this subject a measure of honest enthusiasm, which renders it evident enough that from the cricketer's standpoint life is well worth living. The ostensible object of the book, the conveying of precise information on all that relates to the game, the definition of the several duties of

each of the eleven players and instruction for their guidance in every possible contingency that my arise, has been achieved with so much good judgment that the work will at once take its place as a standard authority which will force itself for acceptance on the most captious critic. The authors write *ex-cathedra* in more senses than one. To one class of readers cricket will be the subject matter of the book; to another class it will be but the medium for illustrating the author's homilies upon the temper and conduct which we should display and all the vicissitudes of the sterner game of life, using adversity for the development of the higher qualities, which he tells us are always best fostered under its influence. There is no effort at preaching, no conscious moralizing; the authors are simply men of culture and good taste, who are enthusiasts for cricket because it affords healty exercise for all their physical powers and mental faculties. A. G. Steel's style is especially charming; he is not too much in earnest to tell a good story, as for example, that of the smart Australian fielder, who, being roused to his duty by his captain, wheeled round, and seeing some dark object flitting by, sprung up and seized it, only to find that it was a swallow. Speaking of captains he remarks, "A good captain is born, not made," adding as if by an afterthought, "but very seldom born," evidencing a quiet vein of suppressed humor not unworthy of Mark Twain. The book was written for cricketers, but we would recommend base ball players to study it carefully, for they will find a great deal of it equally valuable for their guidance.

MEXICO PICTURESQUE, POLITICAL, PROGRESSIVE, is the joint production of Mrs. Mary Elizabeth Blake of Boston and Mrs. Margaret F. Sullivan of Chicago. Most Americans are aware that Mexico is a mountainous country on our Southwestern frontier, but very few of them have any conception of the beauty of its scenery, characterized by our authors as "beautiful beyond description," or any really precise information of its people and social condition. It may appear remarkable that we know really less of our sister republic than of France or Germany, but the fact is that in the first place it is actually less accessible, and more outside the area of travel for pleasure, and in the second place there is very little standard literature of modern Mexico in the market. The little work under review, written as it is in pleasant style and chronicling incidents, observations and reflections of a tour of the country, will be read with both interest and profit. The authors have spared no pains to acquaint themselves with all matters of interest in connection with their subject, and one lays aside the book with the lingering reflection that a three month's outing might be spent very pleasantly in the Mexican highlands. (Boston: Lee & Shepard. Cloth. $1.25.)

Answers to Correspondents.

G. E. J., Attleboro, Mass.—We cannot direct you with certainty.

C. J. E.—A cut of the sloop-yacht Gipsy was given in our issue of April 1, 1886.

C. D. B., Pittsfield, Mass., asks: I would like to inquire the proper way to reach Harrington Lake (in Maine) from Chesuncook Lake. Will some of your readers who have been there kindly advise?

H. C. B.—As I am going to Queensland this summer, will you please tell me the best caliber rifle to take? I am told I shall get kangaroo, walibi, etc. I have thought of getting a .32-40-165 single shot Winchester. Ans. A .32-40-165 single shot would be a perfectly effective weapon for Queensland, but in the British Colonies it is a great convenience to have a weapon that will carry government ammunition.

BERGALL.—New York, July 30.—*Editor Forest and Stream:* On a recent fishing trip of the "—— Club," composed of Gothamites on their summer vacation, an official business meeting was held, during which a constitution and by-laws were adopted. It was decided to have the same suitably printed and engrossed. Now arose a peculiar difficulty. No one could spell the name of the club. Organized for the purpose of capturing black fish and seabass, our excursions usually resulted in an entirely unnecessary supply of cunners, or what are locally known as begalls (?). Hence our chosen name. Suggestions like "By Gol," and "Big Haul," were discountenanced. In our confusion we decided to appeal to FOREST AND STREAM. Shall we have occasion to be deeply grateful or must we find a new name and an easy one to spell?—A MEMBER. Ans. The name is spelled variously, bergall, burgall, the last form having been in use since Revolutionary times. Other names are chogset, cunner, bluefish, sea-perch, blue-perch, perch, nippers and bait-stealers. The names bergall and burgall presumably come from the English form bergylt.

T. H., New York.—How is the bluefishing at Fire Island? How can I get there, and what tackle do I need? Ans. The fishing is good. Take Long Island R. R. to Babylon, where you can hire boats. If you desire to chum for them use a stiff rod from five to eight feet long, a reel holding 100yds. of No. 12 linen line, and the regular bluefish hook tied on jointed wire, which can be bought anywhere. You will find difficulty in getting menhaden for chum and bait there, and had better take it from New York. If you want to sail and troll for them, your boatman will furnish heavy lines and squids, but you will need rubber finger stalls, which he may, or may not, have.

R. A. B., Brooklyn, N. Y.—Is there anything approaching scientific accuracy in the view popularly held by fly-fishermen that success in taking certain fish is only attainable by particular flies varying with the season? Ans.—Perhaps not among uneducated fish. In streams that have been but little whipped, a hungry fish never hesitates to take a totally unfamiliar fly dropped in the stream; as a matter of choice he will perhaps give the preference to flies most nearly resembling those which he knows as palatable; but some very good catches have resulted from the use of flies unlike anything in heaven or earth or in the waters under the earth. All that is necessary is that it should move "like a thing of life," which leaves the fish no time for critical examination. But the case is very materially altered in well whipped streams. Suspicion is aroused by experience, and the fish will not take a natural fly until or unless he have an opportunity of examining him; after some days immunity he becomes more incautious and will rise to the flies with which he is familiar, but a strange fly will at once arouse his suspicions.

The St. Lawrence Gang.

This cut shows No. 1-0 (or Black Bass size) with living Minnow attached.

MANUFACTURED IN ALL SIZES FROM No. 5-0 TO No. 4, SUITABLE FOR

Muskallonge, Pickerel, Black Bass, Lake Trout, Etc., Etc.

All have patent treble hook with baiting needle, adjustable lip hook and treble swivel, and best silk metal wound gimp.

This is the most ingenious invention and radical improvement in trolling tackle yet made. Its manifest superiority to all gangs now in use is evident to every expert angler. A few of its peculiar excellencies are:—It is the only gang on which a bait can live. It is the only gang which can be adjusted to any sized minnow instantly and perfectly. It is not only the simplest but also the strongest gang made. It does not scare away the big and wary fish by a long array of treble hooks. The treble swivel insures perfect revolution of bait and reduces to the lowest possible limit the liability of kinking the line.

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, AUGUST 16, 1888.

VOL. XXXI.—No. 4. No. 318 BROADWAY, NEW YORK.

CORRESPONDENCE.

THE FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. Communications on the subject to which its pages are devoted are respectfully invited. Anonymous communications will not be regarded. No name will be published except with writer's consent. The Editors are not responsible for the views of correspondents.

ADVERTISEMENTS.

Only advertisements of an approved character inserted. Inside pages, nonpareil type, 30 cents per line. Special rates for three, six, and twelve months. Seven words to the line, twelve lines to one inch. Advertisements should be sent in by Saturday previous to issue in which they are to be inserted. Transient advertisements must invariably be accompanied by the money or they will not be inserted. Reading notices $1.00 per line.

SUBSCRIPTIONS

May begin at any time. Subscription price, $4 per year; $2 for six months; to a club of three annual subscribers, three copies for $10; five copies for $16. Remit by express money-order, registered letter, money-order, or draft, payable to the Forest and Stream Publishing Company. The paper may be obtained of newsdealers throughout the United States, Canadas and Great Britain. For sale by Davies & Co., No. 1 Finch Lane, Cornhill, London. General subscription agents for Great Britain, Messrs. Davies & Co., and Messrs. Sampson Low, Marston, Searles and Rivington, 188 Fleet street, London, Eng. Brentano's, 17 Avenue de l'Opera, Paris, France, sole Paris agent for sales and subscriptions. Foreign subscription price, $5 per year; $2.50 for six months.

Address all communications,

ANSWERS TO CORRESPONDENTS.

THE END OF WIMBLEDON.

WITH the close of the recent rifle meeting at Wimbledon, that common had its last use as a place for the annual gathering of the National Rifle Association. There was wide regret at the abandonment of the range where for over a quarter-century so much has been done for the advancement of modern rifle work. Circumstances, however, beyond the control of the Council compelled the change, and now Wimbledon remains only a name and a pleasant memory. As if to mark the event in a most memorable fashion, the marksmen have made the meeting just past a most successful one. The list of entries has been very large; and more important still, the scores have been up to the top notch of merit.

The fear now is that the *éclat* which attended the work at Wimbledon may not be transferred to another range, and that the prestige of the famous range may not pass to any other ground which may be selected. The Council have been busy in securing a new site, and the meetings will go on affording sport and benefit to thousands and pecuniary profit to not a few of the Volunteer soldiery of the Kingdom.

There are not a few, and in the ranks too, who would not grieve if all rifle practice were abandoned, or at any rate cut down to a point where it would be practically unappreciable. Those who fail to make good scores in some instances feel their self esteem hurt, and at once look with envy upon "those shooting fellows," and begin to think and preach that quite too much time and attention is given to banging away with the rifle. It is quite certain that curling up on the ground to aim and getting records for all sorts of weather into one's score book may not tend to keep the uniform spick and span, but the fact remains that a body of men in uniform and armed, but who are not capable of using those arms as intended, are likely to receive only laughter and scorn from a determined mob, while before an enemy trained in shooting they would stand no possible ghost of a chance.

In England it is a question whether the rivalry of the rifle range has kept up the Volunteer movement, whether without Wimbledon and its work there would be any English Volunteer bodies to-day. The sudden rush into citizen soldiering and the rush for the rifle ranges were pretty nearly simultaneous less than thirty years ago, and if the rifle shooting is not to be credited with whatever there is of the Volunteer movement, it is certainly to be credited with a large share of it.

Perhaps in this country, if properly fostered in those States where the military establishment has no firm footing, rifle clubs might lead to the growth of a national guard.

It is not surprising that the great crowd of shooting men who said good-bye to Wimbledon about a month ago should do so with feelings of uncommon regret. A history of that common and its range work might bear also the title of a history of all that is worth knowing of small arms work. It has seen great changes. At its start it had crude weapons; to-day no finer arms exist than those to be seen in the competitions held there. Queen Victoria fired the first shot in the great Queen Cup match with a carefully aimed Whitworth rifle; to-day not one of that make appears in the list of rifles used.

Wimbledon has done its work well; and the only honest hope now is that the progress which the N. R. A. has made may not experience even a temporary check by a change of shooting ground.

THE DYNAMITE FIEND.

IN another column one of our correspondents states that the dynamite fiend is again abroad in the land plying his detestable trade. This worthy deserves to stand a little lower among the lawbreakers than the clubber of deer and the jigger of trout. He of the "tail-holt" and club may kill a doe in the red coat, which leaves one or two little fawns to hustle for themselves before they are of proper age to hustle; and he of the jig may kill trout on, or near, their spawning beds; but in each case they get exactly what they go for in their special field. The dynamiter is not thus expert. Whether his specialty be the blasting of salmon, trout or black bass, with his dynamite he kills perch, eels, sunfish, rock-bass, bullheads, minnows—in fact, nearly everything in his vicinity but his worthless self, which last is to be regretted. By blowing up an acre or such a matter of water the dynamiter murders by wholesale; he kills what he desires and also what he has no earthly use for; he kills food fish and destroys fish food until even he is surfeited with the slaughter.

In this especial case the United States and the State of New York are using their best endeavors to bring to our very doors what is generally conceded to be the finest food and game fish that swims, the salmon; and so far as concerns the expenditure of money and brains to accomplish this result they are successful; which means an increased food supply for the people, sport and recreation for the angler, and many dollars in the pockets of the railroads, steamboats, hotels, boarding-houses, guides, boatmen, farmers along the banks of the river, and profit to the community generally. The pecuniary value of the Hudson as a salmon stream may be better understood by stating that Col. McDonald, U. S. Fish Commissioner, tells us that the river Tay, in Scotland, a stream not so large as the Mohawk, yields a rental for its salmon fisheries of £40,000, or $200,000, annually.

The dynamite fiend by his works says that he can render void the efforts of the National and State Fish Commissions to increase the wealth and the pleasure of the people, by simply blowing the salmon out of the water the first time they come up stream to spawn. It remains with the State Fish Commission, through the State game protectors, whom it controls, to see that the dynamite fiend does nothing of the sort. As we understand this particular case, mentioned by our correspondent, the evidence against the accused is that of an eye witness of their crime, and there should be no halting or limping of justice in dealing out to them the punishment provided by law for those who are found guilty of violating the law.

Chapter 530, Laws of 1887, provides that: "No person shall at any time kill or catch, or attempt to kill or catch, salmon in the waters of this State (New York) with any device or in any manner, save that of angling with rod or line held in hand. * * * Any person violating any of the foregoing provisions of this act shall be deemed guilty of a misdemeanor, and, in addition shall be liable to a penalty of one hundred dollars, or one day's imprisonment for each dollar of fine."

Only a rigid enforcement of this law by those in authority will encourage the U. S. Fish Commission to think that the people of New York State are earnest in desiring that the Hudson River shall be stocked with salmon, and that the dynamite fiend shall be punished for his outrages. The first reported infraction of the law seems to be a clear one, and we expect and believe that it will be rigorously pushed to a successful conclusion.

SNAP SHOTS.

TO judge by the letters which come to us inquiring for localities where big game, such as elk, deer, antelope, bear and mountain sheep may be found, a great many of the readers of FOREST AND STREAM are contemplating expeditions to the West this year. Such correspondents must remember that the day of big game plenty in the West is forever past and that it is no longer possible to give explicit direction where game can be found. The West is rapidly settling up, there are few spots where the hunters have not penetrated, and the larger wild animals are constantly driven from place to place. A section which abounded in game last year may be deserted this season. Moreover, there is a good deal of human nature among hunters, and it can scarcely be expected, after they have spent time and money—perhaps a good deal of both—in discovering for themselves choice localities where it is even yet possible to kill enough meat to keep the camp going, that they should reveal such situations to any one who may choose to ask them for this information. There are still places in the Rocky Mountains where fair hunting can be had, but those who know such places do not usually make them public.

In yesterday's reports of the yellow fever at Jacksonville, Fla., the telegraph told: "Dr. Kenworthy is the hardest worked man in town at present. He has a thousand and one details to look after, but he bears up under the pressure most heroically and has accomplished a vast amount of work in the last few days." Dr. C. J. Kenworthy is the "Al Fresco" who is familiar to our readers as an enthusiastic angler, an explorer of new hunting grounds, and a most entertaining writer on FOREST AND STREAM topics. We are sometimes forgetful that often the men who seek pleasure and recreation in the woods and on the stream are, when at home, to be classed among the hardest workers of the community. It is in their "play spells" that they gain that upbuilding without which, when the time comes, as it has now come to Dr. Kenworthy, they could not bear the tremendous responsibilities nor accomplish the heroic tasks.

When a man charged with jigging trout or killing "fingerlings" storms around and denounces the officials as blackmailers, the chances are as ten to one that in the end he will cool off, and if he cannot hush up the matter by a settlement in private, he will plead guilty and pay the price. That is just the way a case has ended where a New York physician was arrested for having taken trout of less than six inches in length. The case is recommended to the consideration of North Woods fishermen who systematically "skin" the streams of baby trout.

Brown's Creek, the Long Island stream which has been filled up with wild rice, forms the boundary between Bayport and Sayville. A fund has been contributed to dredge out the mouth of the creek; it is hoped that by providing a swift current the channel may be restored. The result of wild rice planting in this stream ought to be taken as a warning against repeating the experiment of sowing the cereal in sluggish streams which it is desirable to keep open.

Dr. J. Frank Perry, or, as he is better known to dog owners, "Ashmont," has prepared for distribution a circular containing his own published letters in relation to the National Dog Club and those of Mr. August Belmont, Jr., the president of the American Kennel Club. He proposes to lay both sides before the public and let the public judge. That is fair, at least.

Is not the attitude of "the boys" of Bismarck, Dakota, toward the game laws, as set forth in a communication printed elsewhere, a most extraordinary one to be held by sportsmen?

The Sportsman Tourist.

EARLY DAYS ON THE MISSOURI.

IV.—HELD AT BAY.

THE emotions excited in a battle with savages are totally different in kind and intensity from those produced in a battle with civilized people. The soldier is encouraged by emulation and sympathy. The cheering columns, the music of boisterous drums, the silver voices of heroic bugles, the grand wild music of war, the booming cannon, the rattle of the musketry, the flaunting flags, and all the "pride, pomp and circumstance of glorious war," swell, and almost burst the brave soul with warlike courage. Indian war is pitiless as famine, merciless as fire. Savages never attack unless they have overwhelming advantages. The odds are usually at least a dozen to one. There are no thrilling sounds to silence the sense of danger, no such thing as quarter, and a wound means capture, and a horrible death. Under such circumstances, the hunted man is a wild beast, turned at bay, and grim despair nerves him to sell his life as dearly as possible.

In February, 1868, a man named Bent and myself left the mouth of Milk River for Helena. That winter we had lived on "meat straight," so that when we started from there we were not burdened with a large commissariat, but depended on our rifles for our subsistence. A week's travel brought us to Fort Hawley, a Northwest Fur Company's post on the Missouri. A large camp of Gros Ventres had just arrived there, and every Indian we met asked us who we had killed. I only understood when it was explained to me that the Indian who actually kills an enemy blackens his face in honor of the event. To avoid becoming snow blind we had blackened our faces. Two Frenchmen had been killed just outside the fort a week before our arrival by Sioux.

After a few days' rest we continued our journey, and were caught in a succession of terrible snowstorms. The storms had driven all the game out of the country we were traversing, and the only living thing we saw on the trip was an old, scabby, blind buffalo bull, which we killed. He did not even have marrow in his bones. His tongue, liver and tripe were the only parts of him possible to eat, and they were not the luxuries of the season. For ten days we traveled through deep snow, living on rosebuds and water—a diet more poetic than substantial—when we met a party of miners who relieved our wants.

When I reached Helena, I met Mr. S. S. Huntly, who employed me to take a despatch to his division agent, A. Bradbury, who was at the mouth of the Musselshell River. He had started six men some time before, to carry the same despatch, but they had been driven back by Indians.

I had left behind me the last white settlement more than one hundred miles, when, riding leisurely along, I noticed a commotion among the buffalo, about three miles off to my left. I looked with my glasses and could see Indians rapidly riding toward me. Knowing of no Indians in that country who were not hostile I cinched my saddle, examined my rifle, and prepared for a race. I thought I had such a start I could easily outrun them, but I reckoned without my host. I had the base of the Snowy Mountains on my right hand, the lay of the country held me to my course, and the angle they were running on shortened the distance for them at every bound. On, on we swept over that trackless prairie, and at every glance I took over my shoulder the distance between us was rapidly decreasing. I came to Beaver Creek, and, O horror! where I struck it the beaver dams made it impassable for man or horse. I turned and had to run a mile before I found a place to cross. The Indians understood my predicament, and altered their course, and gained that mile on me. On, on we ran, the distance between us rapidly decreasing, and I realized to the full the sensations of the hunted fox. My only hope now was for a good position. I came to a little butte with a washed out ravine on one side, and there I turned at bay, more than one hundred miles from the nearest white man. What thoughts will come into a man's mind at such a moment! Should I ever see the golden beams of a rising sun? Was not it almost certain my quivering flesh would be munched, my bones picked and gnawed by wild animals; my fate unknown to every one except my merciless destroyers? On they came, their horses without saddle or bridle, stark naked; their copper-colored bodies with their brass ornaments glistening in the sun, their faces painted with black and red stripes, their hideous mouths filled with feathered arrows, which they held with their teeth. When about three hundred yards off I stopped them. One made the Nez Percés sign (a friendly tribe). I let him come up. He said he had captured a band of horses from the Blackfeet, and when they saw me they thought I was a Blackfoot hunting their trail. The main party he said had staid with the horses, the others stripped and ran me down; that when they had come close enough to see that I was a white man, they had run me so far they were determined to catch me. After various explanations he left with his party, and I resumed my journey to the mouth of the Musselshell, where I found Mr. Bradbury, and delivered my dispatch.

I had no intention of returning to Helena for some time, but a few men were going to Milk River, and I was induced to lend my Henry rifle to one of the party, who promised faithfully to return it in ten days; instead I heard the scoundrel had continued on to Benton, and was going from there to Helena. We started—H. Bradbury, Pomp Dennis, Martin, a man whom we called Seven Up, and myself. The afternoon of the third day we came to water and camped. After we had eaten we resolved to push on as far as we could and make a dry camp. Next morning, as soon as we could see, we saddled up and resumed our journey. About 9 A. M. Pomp Dennis and myself were riding some distance ahead when we noticed about three miles off something that looked like a buffalo; it started to run, and was soon out of sight, as we were in broken ground. We were then convinced it must be an Indian lying down on his horse. We called to our party to come up, and while we were deliberating what to do, we heard the thunder of the horses' hoofs. We were close to a small hill, and had hardly gained it when a war party of over fifty mounted Indians dashed on our startled view. No disciplined cavalry ever presented a better line. Their well conditioned horses, gay trappings, varied, brilliant-colored blankets, and gleaming, ornamented lances presented a terribly picturesque scene of savage war.

I could speak some Sioux and Crow, and was a fair sign talker, and when about two hundred yards off I threw up my hand and made the sign to halt. They stopped as one man. I asked them in Sioux: "Who are you?" The chief answered in Crow: "Absaraka" (Crow name for Crow). I then asked them in Crow what they wanted, and where were their lodges, but they could not reply. They had not supposed any of us could speak Crow. They wished us to think they were Crows (who were friendly), but they knew only the one word. The chief, when he perceived they could not pass for Crows, said in Sioux: "We are Sioux, but we love the whites, we will come and smoke together." The Indian to whom I was speaking was slightly in advance of his party; I stood on the brow of the hill, slightly apart from my companions, holding my horse with my arm passed through the bridle. I noticed the Indians appeared to be gathering for a rush, and called out, "Dismount or we will fire." I had barely said it when three Indians, who had, unobserved by my companions, who were intently watching the one I was speaking to, crawled up a coulee to within thirty steps of me, fired directly at me. The position of my head was about the middle of my horse's neck; one bullet hit his neck each side of me, the other in the saddle. We answered with a volley. The Indians took shelter, and shot down our horses. At the first lull in the firing we commenced to form breastworks with our dead horses, and dug holes with our knives and cups in the soft ground behind them to lie in. But now a horrible discovery was made. All our ammunition was in one sack, and it had been left in our last night's camp. Surrounded by the most hostile Indians in the world, without the hope of escape, all our horses killed, and not a drop of water since the day before, a burning sun, and disarmed. It was horrible! The Indians soon discovered our woeful plight. They did everything to draw our fire. Young warriors dashed by us in full career. Sometimes with only a foot, hand and lance visible; sometimes in scorn, with the whole body. O for some ammunition! Had we been armed as we should have been, and they armed as they were with a few revolvers, bows and arrows, and lances, we could have slaughtered them.

Our butte had a slight elevation about thirty steps behind us. In the afternoon three Indians crawled around behind it, and without exposing themselves, ricochetted arrows on us from the rear, Martin, Seven and myself charged them and took possession of the hill, which Martin and Seven held and fortified with a breastwork of earth and rock. Bradbury, Pomp and myself held the face of the hill the Indians were attacking; the two others with their breastworks held the rear. Motius never aggravated Titus Manlius more than those Indians did us to draw our fire. Toward evening a young buck, who had been very conspicuous, made a most aggravatingly close run by us, and Pomp, although it left him but one more shot, fired and killed him, but he was tied to his horse and we could not get him.

The Indians drew off a short distance; some were cooking supper, others appeared to hold a council. Among our party no one had more than three shots left; I had but two, and one of these I would not have fired at an Indian under the direst necessity. I had mentally reserved it for myself, and I suppose each one thought the same. Dark night was coming on. Wolves had never been hunted in that country, and were gathering in large numbers, attracted by the blood of the slain horses. Their snaps and snarls were suggestive, and their dismal melancholy howls wailed the sad requiem of our hopes.

It was very dark; the moon would be up in about two hours. Pomp, Bradbury and myself were discussing the advisability of making a run for it, but we could not see, and were afraid of running into the Indians posted around us. We were lying about twenty feet apart on the brow of the hill in our holes behind the dead horses. I had thrown a buffalo robe across my pit, and as it was chilly I threw half of the robe across my back, while I lay on the other half, and watched intently across my dead horse for sign of the Indians. It was at its darkest; everything deathly still, save the long-drawn howls of the wolves, when suddenly such a ghastly, horrible admixture of yells, as of pandemonium broken loose, arose in our front about ten steps off. Immediately after the yells came the revolver shots and a storm of arrows. At the sound of the yells we jumped to our feet to run back to where the other two men held their position in the rear. I had neglected to take off my spurs, and as I jumped, one of them caught in the robe that covered me. It did not stop me more than two seconds, but it seemed an age. I felt like a man with a nightmare. It was not more than thirty steps to where our rear guard was, and as we reached it we turned and could just distinguish in the dark what looked like a black wall. We fired one volley into it, and then ran down the other side of the hill into the black night and the sage brush. Not a word was spoken as we strained every nerve; but on through sage brush and bad lands, running for life. We kept together, and after awhile becoming breathless, had to come to a walk. Pomp told us he was shot through the arm with an arrow. I broke it in two and pulled it out. We continued all that night, running as long as we could stand it, and then walking. When the moon came up, we could see a trail that looked like that of horses. We gathered around to keep the light from showing, and lit matches to examine the trail, but could not tell if it was the trail of the war party, who might have gotten ahead of us, or of buffalo. We were almost dying from thirst, but were keeping in the worst of the bad lands so as to have that advantage over their horses and could expect to find no water.

Those horrible bad lands! How shall I describe them? Imagine an ocean of ashes and sage brush, torn and convulsed by a cyclone and gazed at by a Medusa—an alkali hell with the fire out!

Morning came; the sun shone out bright and hot; the thirst became unbearable. We left the precipitous bad lands and struck for where they formed a valley in the hope of finding water. In a hole we found some alkali water. Pomp and Bradbury drank first and as they came to the top of the bank, after drinking, they called to us below: "Here they are again!" and dashed toward the high bluffs. We three were exhausted; we drank the fetid water and slowly pursued our way up a coulee. We had done our best; we had but one shot apiece left, and that was for ourselves in the last extremity. After awhile we overtook Bradbury. Pomp, crazed with thirst, fever and wound, had bounded away with superhuman speed into the unknown bad lands. Bradbury was a cool brave man and when asked if he were certain he had seen the Indians, replied there was no possible doubt of it. He had seen them about two miles off, their gleaming lances and their horses. We continued our weary march all that day and part of the next night; the rest of the night we lay in a bad land coulee, our famished bodies pressed together to keep ourselves warm. The next morning about 10 A.M., after a battle, ninety miles of foot travel, and sixty-six hours without food and but little water, four of us reached the mouth of the Musselshell, where we were well cared for.

HENRY MACDONALD.

HUCKLEBERRIES.

OF all the wild fruits found in Washington Territory the huckleberry deservedly holds the first place in the estimation of all people, both white and red. Three kinds of these delicious berries are found here; two of them on the lower foothills of the mountains, at an elevation of from 200 to 500ft. above the valleys. These are very small, and, as they grow on bushes less than a foot in height, nothing but the dexterity and patience of the Indian women can solve the problem of their picking. When ripe they are distinguishable only by their color, one variety being white and the other black. On the tops and sides of our highest mountains, growing on bushes 2 or 3ft. high, the third variety is found, black in color, and with a size and flavor unmatched by anything to be found "in the States." During the latter part of every summer, caravans of ponies laden with these berries, and driven by mounted Indian women, file down the mountain sides, the delicious fruit loading the air with perfume as they advance, and offer the berries for sale at the door of every settler.

A well-grounded prejudice against the Indian idea of cleanliness prevents many a sale, even though the aroma of the splendid fruit tempts the neat housewife to forgetfulness, and fills the mouths of children with entreaty, clamorous to urge on the trade.

This naturally prompts the white people to expeditions of their own after berries, and the hardships and discomforts of the Indian trails and mountain sides are braved, even by delicate women and little children, whose brown cheeks and sparkling eyes tell, on their return, the story of rough but kindly contact with nature. My wife had long been eager to make a trip, but as she is something of an invalid, and as the chase of the mule deer had many times led me along the trails and taught me the difficulties of this mountain journey, all her pleadings of the previous summer had been in vain. Finally her entreaties overcame my fears, and on a fine morning in August last we started for Huckleberry Mountain, which stands between the Columbia and Colville rivers, and distant about twenty miles.

Our eldest son, aged nineteen years, with another young man of the neighborhood, accompanied us, although business allowed them to stay only one night in the hills. All the party were mounted on ponies, my wife's mount being an old brown cayuse familiar with all the Indian trails in the country, and whose steady jog trot was easy as the motion of a cradle.

After following the trail for a few miles, brushing aside the overhanging bushes, climbing over logs, rocks and fallen trees, my wife's courage arose, and she freely asserted her ability to climb mountains in search of huckleberries any day in the week.

Soon afterward we came to a place where the trail crept around the steep side of a hill. Here a very large upturned tree completely blocked the path; and its roots, in falling, had torn up the hillside, leaving a vast pit that yawned threateningly in front of us. Close to the upper edge of this pit, along the foot of a ledge of rock, led the new trail made since the tree fell, and although I knew a way to avoid the bad place altogether by another path far down the mountain side, still, as I had the most perfect confidence in the surefootedness of the old brown pony, the spirit of mischief prompted me to take the upper trail, and as my pony slowly picked his way among the loose rocks of the rather difficult place and brought me out on the further side, I glanced back to see the courage all fade from the face of my brave little wife, and a stare of blank amazement take its place. "Oh, Orin! I never can do that!" "Yes you can," I replied, "sit perfectly still, give him the reins and he will carry you around all right." Safely past, I indulged in a smile at her expense, and on the return we took the lower trail.

About twelve miles from home we came to a little brook, the ice-cold water of which was very welcome. Dismounting, we took a late dinner in the shade of a fir tree, when again we journeyed on up the mountain. About 4 P. M. we reached a favorite camping ground of the Indians, where, on the banks of a little brook, good grass and wood were found, and having secured berries enough for supper and breakfast, the ponies were hobbled, a tent was formed with two pieces of canvas, and a bed was made of fine bushes, soft and springy—the woven wire mattress of the woods. The boys spread their blankets in the open air a few rods distant. A hearty supper was enjoyed around the camp-fire, after which all slept the sleep found only in the open air, while through all the silent hours the tiny brook sang in our ears its little song of melody and peace, the sweetest lullaby that ever soothed the weary lover of the wilderness to rest.

In the morning my boy, who had gone out about 200yds. from the camp-fire, came hurrying back, calling in a low tone for me to come quickly with the big "Sharps" (that being the only gun in camp) and kill a mule deer that had just trotted over the hill. Taking the rifle I hurried along the trail about a quarter of a mile, when I saw the deer just going into a thicket. Yelling sharply to attract her attention, she stopped to look, when an express ball dropped her in her tracks. As the boys were obliged to return that morning, we sent back most of the meat packed on one of the ponies. The pony was new to this work and quite scared at his new burden, and, as the rather awkwardly lashed pack turned on the saddle, and swung round under his belly, he grew frantic, and a circus performance of the most exciting character quickly followed. He was at length quieted, the pack readjusted, and he carried the meat home in safety.

Up to this time we were quite disappointed in not finding berries very plentiful, but now quite a procession of neighbors, whites and half-breeds, on the same errand as ourselves, and guided by an old half-breed woman, sud-

denly appeared and invited us to join them, telling us that on the very summit of the range, that rose a thousand feet above our camp, and distant about two miles, berries were very plentiful. This was welcome news to us, and we hastened to pack up and join the slowly moving caravan that crept along the steep trail leading to the summit. The morning was bright and the warmth of the sun's rays began to make the climbing difficult. About 400ft. below the crest of the mountain, in a deep gorge, the last spring of water was found, where the supply for camp use on the summit was obtained, and all proceeded to secure as much of the precious liquid as could be carried up the remaining steep, in order to put off as long as possible the laborious trip for a second supply. The rest of the climb was the steepest I have ever seen in these mountains. In fact, a steeper trail would have been impossible for the ponies. Imagine the old uncle, toiling up the trail that zig-zagged up the rocky steep, leading the tired pony, and carrying in one hand the 11lbs. Sharps, and in the other a can containing three gallons of precious water, while the sun beat down on his devoted head with a power that soon caused the perspiration to drip from every pore of his skin.

Arrived at the summit, quite a crowd of people, men, women and children, white and red, were gathered to welcome us, and another party arriving in the afternoon, the mountain crest swarmed with people, while huckleberries on every hand blackened the bright green of the low bushes, tempting me to pause at every step. Tents, lodges and camp-fires were strung along the mountain crest, a miniature city laid out, and as night came on, and the darkness was driven back by a long row of campfires, and the children of both races turned themselves loose for a grand jollification, racing up and down among the logs and bushes from one camp-fire to another, Front street was very lively.

The next day until late in the afternoon the weather was fine, and we climbed up and down the steep mountain in search of berries, while my wife, to whom every hour of exposure to the warm sunshine and light air of the mountains was a blessing, surprised both herself and me with her ability to climb the most rugged places, almost without fatigue.

Returning to camp in the afternoon, we found an old medicine man of the Indian camp standing on an isolated peak of rock, gesticulating and chanting in a weird monotone some invocation to the unseen powers, but quite unintelligible to us. An Indian woman came to a neighboring camp-fire, and, when interrogated by a half-breed interpreter, informed us that the old man had said that he was going to make it rain, and also that he was going to make the deer come right up to the camp-fires. But, she laughingly remarked, that we need not be alarmed, as she herself would arrange affairs so that in spite of him, no rain should fall. Possibly the heavy masses of clouds, now swiftly rising from the west, had given the old man his cue.

Tents and lodges were put in the best order to meet a possible storm, large fires of dry logs built in front, and as dense masses of clouds moved swiftly on, enveloping the summit of the whole range, and the thunder began to mutter ominously, sure enough the rain began to fall. Having eaten supper under the dripping canvas we crept to bed, and as the night deepened, the storm increased and the lightning became terrific. A blinding flash, instantly followed by a most terrible burst of thunder, for an instant lighted up the mountain crest, and the fire-blackened skeleton of a tall tamarack was seen rocking in a gale, directly to windward of a camp of sleeping people. Fortunately the great stub, whose roots had

"Cast anchor in the rifted rock,"

withstood the rising blast, and the mountain camp was not turned into the scene of mourning we feared. The stunted trees of fir and pine alone saved the tents from being blown away. The rain began to creep in under the tent, dampening our bed; our fires were put out, but fortunately just at this time the rain changed to soft hail and damp snow, the water ceased coming in, and we passed the night quite comfortably.

The morning showed a strange August scene. The storm had ceased, though still dense masses of clouds surrounded us, threatening momentarily to resume the attack upon us, while snow and hail to the depth of two inches covered all the ground.

The fires were soon burning brightly, and my wife, not a whit the worse for the rough experience of the previous night, was busily engaged preparing breakfast, when the sharp cry of an Indian woman rang out, calling to the people just beyond us to shoot a deer just passing near the camp. I was skeptical about it, but walking out in the direction indicated, found plain as daylight, the sharp hoofprints of a jumping deer in the new fallen snow, 40yds. distant from the next camp-fire, and within 50yds. of our own. Another fresh track was found 75yds. further on. We felt for a moment inclined to concede the pretensions of the medicine man.

The threatening aspect of the weather warned us to shorten our trip, but the dripping bushes overhanging the trail menaced us with a thorough soaking in icy water and melting snow, should we retreat.

While holding a very sober council in front of our camp-fire we were delighted to observe a crowd of Indian women packing their ponies with berries, for a journey to the settlements. They would sweep the bushes for us, and we hastened to pack up and follow.

Bidding adieu to the snowy camp we descended the mountain, and when 500ft. below the crest, had left the clouds and the snow behind us, and emerged into the sunlight bright and warm.

The journey home was a very pleasant one, and our ten gallons of delicious berries soon silenced the clamorous welcome of the eager little ones. The trip was, on the whole, a most delightful one, and my little wife hastened to give me fair warning that if, through the mercy of God, our lives are spared through the coming year, about half of the summer must be spent by us, together with all of the children we can find ponies for, among the wild scenery of the mountains, with which she has fallen hopelessly in love. And if at the close of this long tale I tell a short story at her expense, of how, when on our ascent of the mountain we started from the spring for the final climb to the summit, she insisted, against my advice, in showing her sympathy for the tired old pony she rode, by walking the rest of the way, I persuaded her, (after she had looked around to see that no one was in sight), to wrap the hair of my pony's tail around her hand, and let him help draw her up the rocky steep, and how when half way up, an unexpected turn of the trail brought into full view an Indian camp, where half a dozen lazy Indians lay stretched in the shade, and who, allowing their hilarity to get the better of their politeness, laughed uproariously, causing her to drop the pony's tail as though it were a snake, and to become immediately absorbed in the contemplation of the beautiful scenery on the other side of the trail; if I cannot persuade her that the sin of printing such a malicious story rests entirely upon the conscience of the good editor of FOREST AND STREAM, I can at least remind her of the wise proverb that exhorts us never to spoil a story for relation's sake.

She was afterward consoled by the loud spoken approbation of an old Indian woman, who assured her that she was "heap good woman! alle same Siwash" (Indian) woman!

Finally, Mr. Editor, let me say that my *nom de plume* "Uncle Fuller," having lately become too much of the nature of public property, I will drop it, and write over my own name. ORIN BELKNAP.

WASHINGTON TERRITORY.

Natural History.

HOUND AND DEER.

WHEN on a vacation not many years ago among the lakes and mountains of the Adirondacks, late in the month of September, when the trees put on their autumn dressing, and every hilltop looks like a rich bouquet, when every sign indicated the sportsman's paradise, rifle practice, hounds yelping to be released from that cruel chain, sportsmen in their hunting rigs, chatting with the guides, speculating upon the chances of success in every one killing a fine buck—every one was put on the *qui vive* in a moment, by the startling announcement of one of the guides who said, "I hear a hound." Every ear was on the strain and a sparkle in every eye. Guns of every possible shape and size made their appearance, and every hunter as he firmly clutched his weapon grew an inch taller in about ten minutes. When the same guide cried, "I hear two hounds running like the mischief" (only he used the name of the fellow that makes all the mischief), one said, "I don't hear a sound," another, "Your hearing must be extra fine." A third quite disgusted sportsman laid aside his gun and sauntered away, when the whole party were startled by the welcome sound of two hounds in full cry, just coming over the mountain, on the opposite side of the lower Saranac Lake. Every thing was on the jump in two minutes. The disgusted sportsman came near breaking his leg over a box to get back to his gun. One pale little fellow in spectacles, who looked as if he had just been turned out to pasture, and needed it dreadfully, exploded his gun prematurely under the great excitement, and a general rush for the boats at the landing took place, for it was reported that the deer would come in on an old runway, about three miles up the Saranac.

The scene was a lively one, not unaccompanied with danger from several green but would-be renowned sportsmen, who started to the light boats; and in their hurry one found a cold bath, going head first into the lake and spoiling his fun. The rest, after considerable bustle and confusion, got off, and it was really an exciting sight. Fifteen of the graceful hunting boats on the lake, handled by those stalwart oarsmen, who think nothing of rowing fifty miles a day, were coursing with the speed of a hawk down the lake to head off the game. They all knew it would certainly now soon take to the water to throw off the dogs, which could be heard very distinctly across the lake in the wildest chase heard in many days. Those of us who remained behind could plainly see with the glass the whole exciting affair; and we soon saw a noble buck throw himself into the water from a bank ten feet high, and strike out boldly for life. Alas! only to meet a more relentless foe and a certain death, for by his fleetness nature had enabled him to escape his natural enemy, the hound. It seems unfair to take this advantage of a deer in the water; and I will not do it, preferring to take my chance on a runway, with my rifle, and let the deer get away if he can.

As the numerous boats, now fairly flying through the water, neared the graceful creature, the sharp crack of the rifle could be heard, and at length the fatal ball entered the head of the destined victim, and the now glorious hunter rejoiced as if he had gained a victory.

They had scarcely taken the deer into the boat when the two hounds, true to their instinct, came down on the track to the water's edge, and howled wildly at their disappointment; for thus far they go and no further. Their prey might escape, for they do not take to the water.

But by far the most interesting part of this hunt to me is yet to come, and to tell which all this rigmarole has been penned. The voices of the two dogs as they passed along the mountain had been recognized by their owners, and both claimed the deer. Such things have been known to cause a bitter feud. One was sure it was his dog, and the other was just as sure it was his; but the question of most importance to be settled was, which of the dogs started that deer? The deer was brought on shore and laid upon the green sward, where even the ladies, gentle creatures, admired it. Soon the boat arrived with the two dogs, and one of the old hunters cried out, "Send those hounds up here, and let us see whose deer this is." Never having heard so strange a story, I, half in doubt, said, "What nonsense is that you are talking?" "No nonsense, Doctor, wait and see."

Being deeply interested I approached closely, that I might the better observe the animals. One of them walked up to the deer, smelt him all over and seemed quite in doubt. Then the other dog came up with an angry growl, smelt the deer and deliberately laid himself down by the animal, while the first dog quietly placed his tail between his legs and walked away. I could not help expressing my amazement, and still doubting the fact I said to my old guide, "That dog that is lying by the deer has been the master of the other, and has cowed him." "On the contrary," said my informer, "the dog that gave up the deer is the better fighter, and whips that dog every time."

We learned during the day that the deer had been started ten miles down the river by the dog that claimed it, and the sound of his voice drew the other one, about four miles below the lake; confirming the test, and proving the wonderful instinct of the hound.

Making a note of this singular fact I proposed to follow it up, which I have done to my entire satisfaction, and will prove it to you and the readers of your interesting journal by and by, if you think it worth while.

TARRYTOWN, N. Y. H. C.

WHO KNOWS THE "FANTAIL" DEER?

LIVINGSTON, Montana.—*Editor Forest and Stream:* In reply to a letter from Rifle Creek, Colorado, in the FOREST AND STREAM of the 19th April, asking if there is such a deer as a "fantail" deer, you say "the 'fantail' deer is a whitetail, nothing more."

I have been waiting for some one of your many readers in this country to reply. Fearing they will not do so, I thought I would say something about the deer in the hope of interesting others in the subject enough to properly describe the deer, as I fully believe the "fantail" is "more than a whitetail," is a different variety of deer.

I was surprised not to see a description of this deer in Dr. R. W. Shufeldt's very interesting letter on deer in the FOREST AND STREAM, and I judge from this that the deer mentioned is not known to naturalists. As I may be at fault in making the statement that the deer known here as the "fantail," "gazelle" and "crumpled horn" is another variety, I will describe them as near as possible from recollection.

In February, 1879, Henry Fancher killed five on Little Timber Creek, at the foot of the Crazy Mountains, three bucks and two does. They were very small, not as heavy as a full-grown antelope. Darker than a whitetail at that season, their tails were eight inches wide and over fifteen inches long. If I remember correctly one of the bucks had four points, the other two, three points each. Their horns were very short and very much turned in, the points thicker in proportion to size than in a whitetail, not as sharp and of a light bluish color; the points were somewhat flattened. This peculiarity I have noticed in all "fantail" horns that I have seen. Their legs were shorter in proportion to size than antelope. I intended to save a complete hide, head and all, but neglected to do so, not supposing at the time they were so rare a deer. I have seen them in the Black Hills of Dakota and Wyoming and in Montana. No one would mistake one for a whitetail. There is a greater difference between them than between the mule deer and the blacktail. It may be impossible to secure specimens at this time, but there are a few head scattered about this country which ought to be saved and sent to some naturalist. I hope the readers of the FOREST AND STREAM will take an interest in the subject and write up what facts they may know about this little known deer.

I will secure a set of "fantail" horns and forward to the FOREST AND STREAM for inspection. GAZELLE.

[Our correspondent's notes are extremely interesting, and we hope with him that our readers who may know of the "fantail" deer will let us have all the information about it in their power. It is not known as a distinct species to naturalists. We have heard more or less of the "fantail" and "gazelle" deer in the Rocky Mountains for many years, but have ourselves never seen in the localities mentioned by our correspondent—through all of which we have hunted—nor elsewhere, a specimen. Let us have all the light possible on this subject from hunters and naturalists, and above all let us have some specimens.]

INTERESTING BIRD NOTES.—Our correspondent, Mr. J. L. Davison of Lockport, N. Y., writes us: "I have just finished my report of bird observations to the Department of Agriculture. My list included just 125 different species, twenty-two more than last year, and a few that I have never found breeding here before. Among these are the rose-breasted grosbeak and cerulean warbler. Of the latter I have seen but two specimens (both male) in ten years' collecting, while in June 1 found three nests within four miles of this city, and last week saw two broods of young birds flying about with the parent birds. The nest and eggs do not agree with Audubon's description quoted in Baird, Brewer and Ridgway's "North American Birds." Instead of being pensile, the nest is placed on the top of the forks of the limb, and the eggs, instead of being pure white with a few reddish spots about the large end, are a bluish white quite heavily marked with brown and lilac spots and blotches. I think Audubon must have seen *D. cærulea* near the nest of some vireo. On June 14 I found a redstart occupying an old nest of *V. olivaceus*, and could hardly believe it, until I had seen the female leave the nest three times; she had relined the nest and had laid three eggs.—J. L. DAVISON."

SHARKS ARE FREQUENT ABOUT NEW YORK.—The frequent catches of sharks this season in the vicinity of New York is a matter of comment. The newspapers love to record them as "man-eaters" whenever a shark over 6ft. is taken, but evidence is lacking to show that any of the different species found in our bays and harbor ever attack men. It is true that several persons who have been injured in the water have attributed their cuts to sharks, but it should be widely understood that sharks, as well as snakes, are of great variety, and most of them are harmless to man. Last week a shark of 6ft. was taken up the Hudson River, near Croton, and another of 1ft. less, in Cold Spring Harbor, Long Island, and in both cases they caused much fear among the bathers. The latter fish was the common "hound shark," a flat-toothed species abundant along the northern Atlantic coast. The truly dangerous sharks inhabit tropical seas and rarely visit our coast, never, to our knowledge, ascending the rivers. The frequency of the small sharks this year seems to show an abundance of food, especially in the bays and harbors, and this view seems to be a true one, for small fish are quite plentiful in most of the waters about New York.

AN EPIDEMIC AMONG HARES.—Smithsonian Institution, United States National Museum, Washington, Aug. 3.—*Editor Forest and Stream:* I have recently been asked to supply some information about the nature of a certain epidemic disease which is said to destroy great numbers of wild hares in our northwest country, at intervals of six or seven years. Turning naturally to the files of your valuable journal for some light on the subject, I am surprised to find no reference whatever to the matter. Now, cannot some of your correspondents who live in the Northwest furnish the required information regarding the disease? If it is widespread, its ravages must have been repeatedly observed. I should like very much to know if it affects the hares, and if possible to receive some specimens (preserved in spirits, or otherwise) of diseased individuals.—F. W. TRUE, Curator, Dept. of Mammals.

PROPOSED NATIONAL ZOOLOGICAL PARK.

WE published last week a small map showing the relation to Washington City of the area chosen for the proposed National Zoological Park, should Congress authorize its establishment. This week we give a larger map of this area, which is seen to be greatly diversified, and admirably fitted for the purpose for which it has been chosen. The broad stream which flows through this tract insures an abundant supply of pure water, a large part of the area is timbered or overgrown with heavy brush wood, and a rocky cliff 80ft. in height rises on one side of the creek. The contour lines, 20ft. apart, show the undulations of the surface. If, as is to be hoped, Congress shall assent to the bill establishing this park, the region selected seems to present all the necessary advantages for a zoological park.

RATTLESNAKE VENOM ANTIDOTE.

BALTIMORE, Md , July 22.—*Editor Forest and Stream:* Apropos of Dr. Caruthers's article on cure for snake-bite in your issue of July 19 I note in the June number of *Medical Classics* that "Dr. Briggs of Fort Worth, Texas, says that the charm weed of the Indians, which they use in the bites of venomous insects and reptiles is the *Lycopus virginicus*, or bugle weed. A decoction of the leaves is taken internally, an ounce to the pint, a teaspoonful every hour, and applied externally." Have any experiments that you know of ever been made with this plant? FRED.

Editor Forest and Stream:

I take the liberty of sending you this clipping from the New York *World*. It is a remedy of which I have heard, in two cases of snake bites, in which a cure was effected.

NEW YORK. J. S. CONLIN.

The *World* report comes from J. D. Legg, of Long Eddy, N. Y., who relates the case of Acden Davis, of Damascus, Pa. Davis was bitten, about dark, by a large rattlesnake in the ball of the thumb. "He hurried to the house and had a strong cord drawn tightly around his thumb to prevent the circulation of the blood as much as possible into and from the wound and thus check the spread of the poison. A horse was speedily hitched to a wagon and he was rapidly driven to the office of Dr. S. A. Kemp, at Callicoon Depot.

"Having seen in the *World* a few years since a description of the remedy for rattlesnake bites as used by the Geer family at Long Eddy, N. Y., Dr. Kemp made careful investigation of the matter and became convinced of the truth of the statements therein made, and that the remedy was indeed all that was claimed for it. He therefore advised young Davis to drive to John Geer's as quickly as possible, but first to partake freely of rye whisky. A bottle of this liquor was obtained and the horse's head turned in the direction of Long Eddy, distant eleven miles. It was now late in the night and, as the moon was down, very dark. The road was a rough one, but by careful and rapid driving as possible the dwelling of John Geer, the famous rattlesnake catcher, was reached before daylight.

"By this time, in spite of the tightly drawn cord around his thumb, the poison had made its way into the hand, wrist and arm, which were badly swollen. Davis had taken but two small drinks of the liquor and Geer promptly forbade the use of more, saying its effects would be to increase the circulation of the blood and thus spread the poison more rapidly.

"The effects of the poison seemed not to be entirely confined to the hand and arm, but in some way was affecting the stomach. He had several severe vomiting spells, after which he spit blood freely.

"Fortunately Geer knew right where to get the violet, a sovereign remedy for the bite of a rattlesnake, and, lighting a lantern, in five minutes' time had Davis eating its leaves. He then applied salt and indigo to the wound, first taking off the tightly drawn cord, which, however, had probably done good service in preventing the more rapid spread of the poison. Davis soon began to feel better. The pain, which was great, when he first came, soon ceased. The stomach sickness also left him, and, lying down, he slept for an hour, when Geer awakened him to give more of the violet and apply a fresh poultice of the indigo and salt.

"The swelling began to diminish, but he complained of a feeling of numbness that pervaded his hand, arm and shoulder, which, however, was soon succeeded by an intense prickling sensation that Geer ascribed to the action of the properties of the violet in overcoming the effects of the poison. At the end of twelve hours from the time he came to Mr. Geer's, Davis started to walk home, though the swelling had not yet entirely disappeared. Thinking he might be kept for several days, he had sent his horse home. Geer gave him a quantity of the remedy, cautioned him to walk slowly, not to go to work, but use the medicine till the swelling was entirely gone, and assured him he was as safe from all evil effects of the snake-bite as he could wish to be.

"This remedy has been known and used in this place and vicinity for over eighty years. It was first obtained by Joseph Geer (John's father) from a half-breed Delaware Indian named John Johnson, who used in 1800 to occupy a hut on the Pennsylvania side of the river opposite Long Eddy, and who for a pint of whisky would let a rattlesnake bite him and then cure himself with it. It is as follows:

"Apply to the wound a poultice one-half each of common salt and indigo, mixed with cold water, and renew every two hours. Eat freely of the leaves, or drink often of a tea made from them, of a variety of the blue violet (*V. sagittata*) commonly known as the "arrow-leaved" violet. If the bite be upon the leg or arm, bind the leaves in a circle around it above and just beyond the swelling. Moisten with cold water as often as they get dry from the fever created by the poison and renew two or three times a day."

VIRGINIA foxhounds have a reputation second to none. We are informed that those advertised by Mr. Lewis are of the right sort.—*Adv.*

A DAY WITH THE BLACK BUCK.

PLACE: The city of Lahore, in the far away land of the five waters—city of Moslem dome and minaret, and of Hindoo and Sikh temples. Time: Four o'clock in the afternoon of a genial October day, in the year of grace 1887; the first day in the season that I had discarded my *punkah wallahs*, and drawn a breath of relief at the thought that the fierce heat of summer was over for another year and the joyous life in the tented field awaiting me.

On this pleasant October day, at 4 o'clock in the afternoon or thereabouts, I had got through my office work, and was affixing my signature to some vernacular correspondence which my head munshi laid before me for the purpose, when there entered a gorgeously liveried, bushy-bearded old chuprassi of my acquaintance, who, with a low reverence, announced "A letter from the Doctor Sahib to Your Highness."

The work in hand completed and the munshi dismissed, I opened the missive and read:

"DEAR A.—Come over and dine with us this evening. There is a German here, just come in from Cashmere with a wagonload of heads and hides and horns, and he wants to add a black buck's head to the collection. He says he must leave Lahore to-morrow night, but I have told him that you know the haunts of all the game in the province, and can station him within a hundred yards of a black buck's tail, if there is such an appendage wagging anywhere within a day's journey of Lahore."

To this I replied, "All right. Tell your friend I will have the horses marched out to-night, and that we too must leave by the 10 o'clock train to admit of our being on the grounds in the early morning."

Then calling my bearer I told him to have the gray and roan saddled, and marched down to Metari, about sixteen miles distance on the railroad line to Amritsun. In days gone by, I had traveled in the cars of this line, and more than once shot a black buck from the window as I passed, and on arrival at the next station sent back my shikaree to pick him up. The antelope are now rarely seen near the line; too many hunting parties have gone out from the military station of Meean Meer and harassed them, but they have only gone a few miles back, and the back country is as familiar to me as that along the line.

I met the German at dinner, and thinking of the mount I had provided him, was pleased to note that he was a light weight. He was a slight, well proportioned man of about thirty, with the traditional fair hair and steely blue eyes of the Teuton race, clear glancing eyes they were too, and his general soldierly bearing left me no doubt that he had been trained to the saddle, and that if we could start a black buck in the open there would be some hard riding.

The Doctor and his wife, Von Bülow (the traveler) and myself made up the party at dinner, and after I had disburdened myself to the effect that we could hardly fail to put up a black buck between daylight and noon, the conversation turned principally on Cashmere, Von Bülow, under pressure, giving us some of his experience as an ibex hunter during the three months he had spent in the valley and surrounding hills. After dinner our hostess went to the piano and gave us two or three of Schubert's songs, Von Bülow followed with Lützow's "Ghostly Huntsman" and some other popular songs, and at 9 o'clock I sent him off to dress for the field, took him

to my own place, changed my costume and drove with him to the railway station.

We reached Metari about 11 o'clock; the horses had come in, the station master had provided a couple of charpoys with pillows, and after a pipe and a chat we lay down in our clothes, first arranging with the station master's cook to bring us a cup of coffee and a slice of toast at daybreak.

We were in our saddles at gray dawn and trotting away merrily toward Serai Amanat Khan, the site of a Government plantation, much frequented by black buck. The country we rode through was a broad, level plain, half cultivated, half fallow, the monotony broken only by little villages at two or three miles apart, with clumps of *Acacia arabica* about the village wells. At this season the only crop visible was an occasional small patch of sugar cane near a village. There were no fences to intercept one's passage, and although pathways generally ran from village to village, we took no heed of them, but made for our destination guided by familiar landmarks, and by the sun when it rose above the horizon.

Less than an hour's ride brought us to the forester's hut, where we dismounted and gave up our horses; and giving Von Bülow his line of march through the plantation, about a hundred and fifty yards from the water's edge, and telling him to stalk warily, I took the outer edge along the canal; and the trees being laid out in straight lines at right angle to our course, I was able to command a good deal of ground. I kept along a hundred yards or more in advance of Von Bülow, and had walked nearly half a mile when I sighted a buck and three does, only about eighty yards off. They were all attention listening for some sound in Von Bülow's direction, and evidently hearing his footsteps, trotted quietly away without seeing me.

The buck's jet black back, contrasted with his snow white belly, offered a very tempting mark, but being anxious to reserve the shot for Von Bülow, I trotted along and kept back of them until they came to a break in the forest, a piece of two acres or less of low ground, covered with coarse grass three or four feet high. They were now about 150yds. from me and standing on the edge of the grass. They paused a moment to listen, and then walked quietly in.

Retracing my steps I soon came on Von Bülow stalking warily right in the buck's tracks, told him what I had seen, and led him to the edge of the grass plot, while I went round to the other side and began to beat it up toward him. About the middle of the plot I started them, the does going in one direction, and the buck making straight for Von Bülow in a direct line between us. He got within twenty yards of Von Bülow before he saw him, and then turning sharp off offered a splendid shot as he bounded along with his feet clear of the tops of the grass at every bound. Von Bülow fired and missed, but at his second shot the buck dropped like a log, with a hindleg broken well above the hock. He scrambled up on his three legs without loss of time, and as he stood trembling I got in a shot high up the shoulder that finished him, leaving it only for Von Bülow to give him the *coup de grace* with his hunting knife.

My friend was exultant over his success, and after a party of coolies had been summoned and the carcass dispatched to the railway station, he was eager for another hunt; he said he owed his buck to me, and now he wanted to help me to get one. I told him there was a possible chance of finding one on the plains, and that if successful we could ride him down; he was astonished at the suggestion, and said he did not think it possible that a horse could run down a buck, but when I told him I had done it several times, and shot my buck standing at fifty yards or less, he was more eager for the chase than for another still-hunt in the forest. So getting our horses, we walked along quietly in the direction of Amritsur, as on that side the land was less cultivated, had more clumps of zizyphus bushes and no villages.

After riding about two miles we came to a clump of these zizyphus bushes, which we rode round, and had nearly cleared them when, at about five hundred yards distant, I saw a black buck standing on top of a sand hill some eight or ten feet above the level of the plain. I saw him but an instant, the next moment he had sunk quietly to earth and was no longer visible.

A council of war was quickly held, I gave Von Bülow a bee line for Metari, told him to canter on a mile or more, and look for cover, and that after ten minutes or more I would ride round, start the buck in his direction, and give him a mile's hard burst, after which he might push him at a good steady pace until he ran him down or should be able to turn him back to me.

I gave him a good ten minutes before I moved from my post, then rode on quietly ahead, and turning back upon the buck, came within about 150yds. of them, when they all sprung to their feet, and as I cantered up went straight away from me as I intended. There were about twenty of them, two or three young bucks under three years old, and not yet black in the back, and the old black fellow on the mound inclining to be a little gray, the rest were does and yearlings.

I went at the buck with a dash, he left the herd, which swerved to one side and let me pass them within the first half mile; so close indeed that I might have shot one as I passed without bringing my rifle to the shoulder. There was now about eighty yards between us, horse and buck both going at a rattling pace, and after little more than a mile run I caught sight of Von Bülow cantering away ahead. Before we came up to him, the buck came to some newly ploughed ground too heavy for his liking and swerved off toward the railway line, and I had to ride parallel to him to keep him from doubling upon his tracks, but once round the ploughed land he struck off on his old course, and made almost straight for Von Bülow, who was waiting for him to come up. He had got within a hundred yards of Von Bülow, when the latter sprung from his horse and prepared for a shot, but the buck saw the motion and swerved toward the railway line. By the time I had headed him off Von Bülow was in the saddle again and after instructing him to push the buck hard for two miles and then try to head him back toward me, keeping close to his tail, I dropped quietly behind and produced my smoking apparatus.

By the time I had lighted up Von Bülow was but a dim speck in the distance, making straight for the Metaru station, a course which brought them nearer to the railway fence at every stride. I walked on quietly in his wake, and had gone perhaps half a mile, when I heard two distant shots following each other in quick succession. Another half mile and I caught sight of Von Bülow in the distance, evidently returning upon his tracks, but half a mile nearer the railway line than I was. Putting my horse's head about I cantered off toward a distant clump of bushes, and getting into their cover I saw the buck about a quarter of a mile off, heading straight for me and Von Bülow following close at his tail. As they drew nearer I dismounted after motioning to Von Bülow to do the same. Looking through the bushes I saw the panting buck struggling on not 50yds. from me and raised my rifle.

At that instant he came to a halt, and the next instant Von Bülow's bullet struck the ground close ahead of him, a second bullet whistled by in quick succession, and then as the poor beast walked quietly away, I raised my rifle and dropped him.

"That was a splendid chase," said Von Bülow, as he came up, "but, mein Gott, how I shall shoot straight after I shall gallop ten miles with the rifle jumping in my hands! No, that was not possible; I can catch up to him every time, but I cannot shoot him when he stand still!"

The buck was soon strapped to my saddle; a few miles' walk brought us to Metari station, where the horses were taken in charge, and well groomed and cared for; and when the midday train came along, we got our venison aboard, and reached Lahore in time for a substantial one o'clock breakfast.

Von Bülow started for Vienna the same night, vowing eternal friendship, and taking the two bucks' heads with him, and "the first venison of the season" was sent round to my friends. SHIKAREE.

NAMES OF GAME BIRDS.—II.

WE have already expressed in general terms our high appreciation of Mr. Trumbull's admirable book, just published, under the title "Names and Portraits of Birds which Interest Gunners." While those who are interested in game birds will gain from that review of the volume a general idea of its character, something more detailed and specific is necessary to convey to such of our readers as may not have seen the work an understanding of its scope. This, it seems, may best be done by taking up one of the birds mentioned in the book and giving quite fully Mr. Trumbull's description of it and most of the names which he has found applied to it.

One of the best examples for this purpose is the ruddy duck, a species which is generally distributed over this continent, is everywhere more or less abundant, and is known to almost every one. This duck, *Erismatura rubida*, is number 31 in Mr. Trumbull's list. His description of it is as follows: "Body broad and flat; neck, wings and legs short; feet large; bill almost as noticeably broad at end as shoveller's, No. 14; tail of stiff, pointed feathers, wedge-shaped, and often cocked up comically in the air. The full dressed male very showy; sides of head below eyes white to throat; top of head and the nape bright black; upper parts of body, with sides and neck, rich brownish red or mahogany color; wings and tail brownish black; lower plumage silver white, waved with dusky gray. Feet bluish gray, with dark web. Bill blue.

"As usually found, however, the bill and feet are darker, and the plumage practically that of the female, viz.: Upper parts blackish, intermingled with dull reddish brown; the lower and lighter part of head (see picture) grayish white with a dusky bar running back from bill. Lower parts of body similar to plumage first described, but very much duller in tone. Indeed in this more common dress the species has a cheap, soiled and 'shopworn' appearance."

"Length about 16in., extent 22in. to 23in."

Two excellent figures of the bird are given.

As all who are familiar with the species know, and as many of its names—to be given further on—indicate, the little ruddy duck is usually very fat, and on this point Mr. Trumbull says:

"Though this duck is a gourmand and greatly inclined to obesity, it is as quick a diver as any known species. When wounded it pluckily tries to escape to the last gasp, bleeding all the time like a prize pig. I hear of its being sometimes undone by a too bountiful food supply. Gunners near the mouth of the Maumee River tell of finding these self-indulgent little creatures floundering helplessly fat on the water, and in certain seasons floating about in a dying condition, or dead, in considerable numbers."

But however interesting the habits of this species, the names which are applied to it in various localities are to our mind still more so. Ruddy duck is the book name of this species, given to it by Wilson as long ago as 1814, and this, though very expressive of the character of the full plumaged male, yet conveys but little notion of the bird as we usually see it. Much more characteristic are the names *stifftail* (Philadelphia, Somers Point, N. J., Washington and Savannah, Ga.), *quilltail coot* (Tuckerton, N. J.), *bristletail* (St. George's, Del.) and *spinetail* (Turnbull's "Birds of Eastern Pennsylvania").

At Machiasport, Me., this species is called *bluebill*, a name applied also to several other species in various localities. Other New England names are *broadbill* (Newport, R. I.), *broadbill dipper* (Fairhaven, Mass.), *hardheaded broadbill* (Stonington, Conn.), *dipper*, *dopper* and *dapper* (Provincetown, Mass.), *bumble bee coot* (Portsmouth, N. H.), *creek coot* (Cohasset, Mass.), *spoonbill* (Plymouth, Mass.), *sleepyhead* (Cohasset, Mass., and Newberne, N. C.), *darb duck* (Rangeley, Me.), *goose widgeon* (Plymouth, Mass.), *widgeon coot* or simply *widgeon* (West Barnstable, Mass.), *hardhead* (Falmouth and Martha's Vineyard, Mass., and Stonington, East Haddam and mouth of Connecticut River, Conn.), *tough head* (Martha's Vineyard, Mass.), *booby* (Newport, R. I., Stratford, Conn., and on Long Island and in Virginia). But this is only a beginning. In New Jersey this bird is called *sleepy broadbill* at Barnegat, Tuckerton and Atlantic City; at Pleasantville *sleepy duck;* at Somers Point *sleepy coot* and *stifftail;* at Red Bank *salt-water teal;* and at Manasquan *hickory head.*

Proceeding down the coast, we have some of the names already given and a number of others, as *mud dipper* (Eastville, Va.), *coot* (Baltimore, Md.), *butterball* (Havre de Grace, Md., Norfolk, Va., Newberne, N. C., Savannah, Ga., Golden City, Mo., Palatka and Sanford, Fla.). At Norfolk the bird is also called *butter duck*, *butter bowl*, *batter scoot*, *blather scoot*, *blather skite and bladder scoot*, the last four names perhaps having reference to its habit of fluttering along the water in its efforts to take wing.

In the books this bird is called *heavy-tailed duck* in Doughty's "Cabinet," *sticktail* in the index to Giraud's "Birds of Long Island," *dun diver* in DeKay's "Zoölogy of New York," *ruddy diver* in Samuels's "Birds of New England," and *dun bird* in Nuttall's "Manual."

Three Maryland names are *greaser* (Havre de Grace), *water partridge* and *steel head* (Patuxent River). "In the markets of Washington the ruddy is known as *rook*. Just think of it, a duck called a rook under the very shadow of the Smithsonian."

All along the coast of the Southern States these birds are very abundant in winter, and a number of very expressive names have been applied to them. At Newberne, N. C., the ruddy duck is called *paddy* and *noddy*, names which are expressive of the unsuspicious nature of the species, and also *light wood knot*, something very hard. Near Morehead, N. C., *paddywhack* is used, and at Wilmington *dunkey* and *dickey;* at Charleston, S. C., *leatherback*, in Georgia, on the Savannah River, *dumpling duck*, and on the Ogeechee *hard tack*. Near Detroit, and on the St. Clair Flats gunners call the ruddy *fool duck*, *deaf duck*, *shot pouch*, this last a capital name. In Chicago and on the Illinois River in Putnam county, it is called *bullneck* and *stub and twist*.

Other names Mr. Trumbull gives, but these are enough examples to give at present. The list here enumerated shows very well how much territory the author has covered in gathering together the material for his book. A thorough sportsman—perhaps he would call himself a gunner—Mr. Trumbull has thrown himself heart and soul into this work, and has admirably accomplished it.

With this book in his hand the gunner need never be at a loss to name the birds which he shoots, and as the work becomes better known it must become more and more popular. It is only necessary to let the shooting public know that such a work exists to insure a very considerable sale for it, and we recommend every duck shooter to provide himself with a copy of "Names and Portraits" before he starts out on his fall campaign.

CONNECTICUT FARMERS AND SPORTSMEN.

Editor Forest and Stream:

Farmers and sportsmen throughout Connecticut are cordially invited to attend an adjourned meeting of the Connecticut Association of Farmers and Sportsmen for the Protection of Game and Fish, Aug. 17, to adopt constitution and by-laws and the election of officers for the ensuing year. I beg to submit the following as the policy of said association:

To protect game and fish within this State to the reasonable, legitimate and equal benefit and use of the community for the purpose of food and enjoyment, sport and recreation, and in that behalf to promote the due and speedy enforcement of all laws relating to such protection.

To protect the farmers against those persons who mutilate stock, tear down fences or walls and do shooting on Sunday.

To prevent all violations possible of such laws as relate to fish and game within the State.

To make and prefer information against violators of such laws, and to detect, prosecute and bring to justice all offenders against such laws, and punish them according to law, and supervise such prosecution.

The territory over which this association will exercise supervision and influence shall be the State of Connecticut.

Each member is bound to observe the game or fish laws.

To use all consistent efforts to detect violation of such laws, and report to the officers of the association, or to the public authorities in that behalf, all violations of such laws coming to his knowledge or information, to the end that the offenders may be prosecuted and brought to justice.

Last Friday afternoon the organizing meeting was held in Senator McLean's office, Hartford, and was largely attended, considering the slight prominence given the call for the meeting. A large number of prominent gentlemen from this city and several other cities were present, and all took hold of the plan of a State game and fish protective association with great zeal.

Dr. William M. Hudson was called to the chair and Mr. A. C. Collins acted as secretary. The need of and possibilities of the association was thoroughly discussed by Messrs. Lyman Jewell, Dr. Hudson, Mr. Whitlock, of the Waterbury Game Club; Mr. A. C. Collins, S. J. Bestor, Allen Willey, Senator McLean, Mr. Nichols and several others.

The membership fee will be one dollar, and any one can take as many memberships as he chooses by paying one dollar each. The money will be used in sending special agents through the State where we are convinced that the game and fish laws are being violated, to collect evidence and prosecute the offenders.

Every officer will work without pay, only special agents will be paid any salary. It is hoped that every gun club and game club will co-operate with us, and we feel assured that we can do them good. The headquarters will be at Hartford, Conn., where all subscriptions for membership and complaints are to be made. Farmers and sportsmen attend the meeting called Aug. 17, Hartford, Conn. In case you cannot attend, write the secretary signifying your willingness to aid the association.

A. C. COLLINS, Secretary pro tem.

HARTFORD, Conn., Aug. 13.

THE YELLOWSTONE PARK.—At the recent meeting of the Missouri State Sportsmen's Association this resolution was offered by Capt. H. C. West, of St. Louis, Mo., and unanimously adopted: "Whereas a bill has been introduced in the Senate of the United States by the Hon. G. G. Vest for the better protection of the game and fish that abound in the Yellowstone Park, known as Senate Bill 283, and whereas a petition is now in circulation setting forth clearly why the Yellowstone Park should be protected; therefore be it resolved by the Missouri State Sportsmen's Association in convention assembled in the city of St. Louis, that this Association expresses itself as being heartily in accord with the provisions of the Vest bill, and hereby respectfully request the members in Congress from Missouri to support said bill, and that all sportsmen in attendance at this convention agree to sign the petition aforesaid for the purpose mentioned therein,'

FOREST AND STREAM GUN TESTS.

VICKSBURG, Miss., Ang. 9, 1888.—*Editor Forest and Stream:* You will confer a benefit to lovers of the shotgun by your proposed gun tests.

Only to-day an argument was had as to the merits of coarse-grained vs. fine-grained powder, the advocates of the former claiming that it gave equal penetration with less recoil. Will you test that for us?

In the minds of some there are doubts as to the benefits of placing more than one good wad on the powder. Your trial could speedily determine a small matter like that.

However, the most important matter to determine is the proper charge of a gun of given gauge and weight. I claim that the gauge and weight must determine the charge. For this purpose it assuredly appears that the gun ought to be fired naturally from the shoulder, or at least from a rest that will yield after the way of a live sportsman as much as possible.

Your test will most likely show that, after a certain charge is reached—say 4 to 4½ drams of good powder, and 1¼oz. shot for a ten-gauge gun of 9½lbs. weight—that any ammunition in excess is a detriment in three respects—pattern, penetration and recoil. Your test will result in the saving of tons and tons of ammunition and thousands and thousands of headaches. The 5 and 5½ dram fellows, who load to kill at 100yds. and beyond, will have to succumb. It will give their blue shoulders a rest.

Let us also know how the same charge of powder will affect the different sizes of shot, whether one size shows a disposition to scatter more than another.

Will you also try whether a felt wad is the proper thing to put on the shot? Try a stout cardboard that blows to pieces and see if better results are not obtained, especially as to the evenness of the distribution of shot.

Along with your test please give us a table of the velocities of the various sizes of shot. This will enable a man of a mathematicl turn to do a little figuring as to the matter of drawing ahead of a teal that is a wee bit behind time, and going down the wind.

And tell us, if you please, what is the best charge to tumble a shiny old gobbler at 50yds. with his head high and bill straight toward you—his neck but little larger than your thumb, and head no bigger than a silver dollar, and admirably shaped for glancing shot. Have put a little thought on that thing myself.

And tell us how to load buckshot in a chokebore so they will not flare out at an angle of 45° and bark all the timber in a vast area of woods.

Could you give us a pattern—firstly on a 30-inch circle, secondly on an 18-inch circle or thereabouts, and thirdly on a paper about the area of a section of a pigeon or teal duck, say 4×5 inches? The first and second might be put up just in front of the penetration cards, and all three patterns be taken at one discharge, the third one being marked off in the front penetration card.

But why suggest? We know from your admirable test of the rifle what the test of the shotgun will be. It will do away with much guessing, and enable us to arrive at sound conclusions without haphazard work in the field. Give us your trials by all means. W. L. P.

"LET HER GO, GALLAGHER!"

FOSTORIA, Ohio, Aug. 4.—*Editor Forest and Stream:* The mention of the "Gallagher carbine," by "G. O. S.," on page 513, of the issue of July 19, was, in part, replied to by "D. G.," in the issue of July 26, on page 5. The name of the inventor of the gun or carbine is Mahlon J. Galloger (not Gallagher), of Savannah, Ga. The arm was patented July 17, 1860, and was manufactured by Overman & Richardson, at the corner of Twelfth and Thompson streets, Philadelphia. I think the guns were all made for the Government. The peculiarity of the cartridge was that one-half was held in the breech, while the front portion was contained in the barrel. The common army percussion cap was used to explode the cartridge, as the capped cartridge of the present day was not then in use. A small hole in the rear end of the cartridge, in juxtaposition with a similar hole leading to the gun tube or nipple, on which the cap was exploded, was the means of conveying fire to the cartridge. To load the gun the lever, which constituted the trigger guard, was thrown down, and this action caused the barrel to move forward in a right line for a little distance, then swing on a pivot or tip up similar to the breechloading shotguns of the present. The brass cartridge could then be inserted, and by returning the lever to place the barrel would tip back to the breech and slide back in a line until it was closed, holding the cartridge in place, one-half being in the barrel and the other half in the breech. When the barrel was thrown forward and "tipped up," it was supposed the projecting end of the cartridge would be sufficient to enable the one using the gun to remove it with the thumb and finger, but as the breech would foul and the cartridge stick pretty tight in the barrel, there was an extractor made with two holes, one in which a finger of the hand was to be placed and the other hole to be slipped over the cartridge and thus remove it. The guns were well made for the kind, and gave a very good account of themselves during the first portion of the rebellion. W. B. HARRISON,

Author of the "Gunsmith's Manual."

THE GAME OUTLOOK.

BISMARCK, Dak., July 31.—*Editor Forest and Stream:* We expect fine sport next month. The largest coveys of prairie chicken ever noted here are to be seen this year, sixteen to eighteen in a flock. I have heard from some of the boys in the East who expect to come out. Dr. F. McKown, of Albany, N. Y., wrote me he would be here. The law does not expire till Sept. 1, but that is too late for good shooting and the boys pay no attention to it, and they expect to begin on the 15th of August as it used to be. I write this for the information of some who have written to know.

Thousands of ducks have hatched on the lakes and creeks this year. A gentleman living eight miles north told me he counted forty young mallards, almost full grown, in a little creek near his house. He said he had watched them all summer from little goslings up; a pretty sight to have this kind of game by your door. He can stand in his door and easily throw a stone to where these ducks hatch.

There will be fine duck shooting here next fall, and we expect thousands of geese to visit us, as so many went north, and they are certain to come back to feed on our grain fields in the fall, and stay with us from the 20th of September to the last of October.

The same gentleman who told me of the ducks told me there is not a morning, that if he cares to look, he can see deer on the bottom in front of his house, a natural meadow five miles long and one mile wide, skirting the Missouri River, along which there is brush and timber.

W. H. WILLIAMSON.

WOODCOCK IN DUTCHESS COUNTY, N. Y.—Nantucket, Aug. 9.—*Editor Forest and Stream:* Since writing you I have learned that the season for woodcock opens in Dutchess county on Sept. 1 instead of Aug. 1, as I wrote you.—PETER B. HAYT.

DUBUQUE, Iowa, July 22, 1888.—*J. F. Breitenstein, Esq., Keokuk, Ia.:* Dear Sir: The last paper shells, U. S. Climax, you loaded for me were the best I ever used. I won the club medal with them at the last club shoot, and July 4 I won more prizes than any two men on the grounds. I shall use them in all principal matches I shoot in. Yours truly, (Signed) A. H. PENNOYER. *Adv.*

PUTNAM, Conn., Aug. 9, 1888.—*U. S. Cartridge Co., Lowell, Mass.*—Gentlemen: The sportsmen in this vicinity are making a distinction between the different makes of cartridges, and now almost without exception call for the U. S. cartridges, as in their experience they give the best results. I have fired a few thousand this summer ranging from .22 to .38-caliber, and find them accurate and the rifles easily cleaned. Respectfully, (Signed) LYMAN E. HILL.—*Adv.*

Sea and River Fishing.

Angling Talks. By George Dawson. Price 50 cents. Fly-Rods and Fly-Tackle. By H. P. Wells. Price $2.50. Fly-Fishing and Fly-Making for Trout. By J. H. Keene. Price $1.50. American Angler's Book. By Thad. Norris. Price $5.50.

TWO WEEKS ON THE DEAD DIAMOND.

BOSTON, July 29.—*Editor Forest and Stream:* I must confess that I had many misgivings regarding Amasa Ward and his camp, as one Saturday morning nearly a month since, in company of two congenial spirits, we seated ourselves in a luxurious Pullman and started out of the Boston and Lowell station headed for Colebrook, N. H. My friends were yearly visitors to Hell Gate Camp, and for two months they had been telling me of the trout fishing in the Dead Diamond and its tributaries, of the grand scenery, the bracing air, the fertile land, in fact a veritable land of "milk and honey" for the sportsman, until I began to seriously doubt its existence. But I have been, and I have seen, and my wavering faith has been established on foundations as firm as the granite hills through which the beautiful Diamond runs. How many are there out of the scores of men who love the rod and reel, and who yearly visit the lake regions of Maine and Canada, who can tell you aught of the Dead Diamond? Year after year they go to the Rangeley or Moosehead Lakes, and leave almost unvisited a territory which in numbers at least can furnish more fish than any other New England waters. And let me assure you that big fish are not uncommon in these waters; that is if a man will be satisfied with fairly big fish. He will get no 8 and 10-pounders, but of trout running from ¼lb. to 4lbs. in weight there are plenty, and who that loves the rod for the pleasure it affords him cannot be satisfied with such?

We left Boston at 9:30 A. M., June 30, arriving at Colebrook at 8 P. M. After a good night's rest at the Parsons House, at 8 o'clock with our guide, Albert Wallace, we started on our drive through Dixville Notch to Wentworth's Location, distant about thirty miles.

The last words Harry Litchfield said to me as I walked out of his store on Washington street the day before we started were, "If you don't get a fish, if you don't have a rise even while you are gone, you will come back to me and say that you have been amply repaid." How many, many times those words came to me during our ride that beautiful morning. Dixville Notch; did you ever stand on the crest of the ridge midway of that mighty chasm, and gazing upward at those rocky shafts, towering hundreds of feet above you, and not feel yourself gradually dwarfing and shrinking into infinite littleness? That is the way I felt in the presence of those gigantic sentinels. We arrived at the Umbagog House about 1 o'clock, dined, and at 2 o'clock were once more on our way, following the Androscoggin past Errol's Dam over Errol Mountain, and in the valley beyond striking the sluggish Magalloway, which we followed up to Wentworth's Location, about ten miles from the Umbagog House. At the Location we left the main road, and turning abruptly to the left drove about a mile cross lots to Bennett's.

It is here that the Dead Diamond empties into the Magalloway, and Bennett's house is on the point of land midway between the two rivers and not over two hundred yards from where they join. The Dead Diamond here will average nearly 100ft. in width, and on it, a quarter of a mile above Bennett's, are the remains of an old dam; below the dam is a tremendous pool, and below the pool for nearly half a mile the shallow running water forms rips, as they are termed here. As I am in honor bound to write impartial history, I might as well admit at once that the sight of that stream roused me to a degree of enthusiasm that was very amusing to my phlegmatic friend, the "inventor." But when a small boy assured us that there were plenty of trout on the rips at that moment, I grew a trifle demonstrative, I guess. My grip came out of the wagon in short order, my waders went on, and with rod, reel and creel adjusted, in an incredibly short time I had introduced an Orvis white-winged coachman to a pound-and-a-half trout, through that prince of mediums, a 7oz. Nichols split bamboo. In my eagerness I neglected to coat my face and hands with "fly medicine," consequently, though we fished only about an hour, they got in their work on me in great shape, and the blood was running from a score of places on my face and neck. However, I did not mind that much; we had taken fourteen trout averaging nearly a pound and a quarter apiece (if that won't reconcile a man to a few bites, what will?), and later on four tired and hungry men sat down to a trout supper at Bennett's.

Amasa's camp is twenty-five miles up the Dead Diamond from Bennett's, and we expected him to meet us there that night and start up the river with us next morning; but he did not come, and that insured us another day's fishing at Bennett's before we went in. After supper some one suggested that we try the temper of the trout in the big pool below the dam; it instantly met with the approval of the whole party, and in a very few minutes we were standing on the ledges which mainly composed its banks. The fish were rising freely, and now and then a big one would come to the surface and "break" like the swirl of an oar. I located one of these quite near the dam, and with our guide went above to see if a white-miller would induce him to fasten. One cast, but no response; to the second he answered, and I struck him instantly. He was evidently surprised, and as he rolled we caught a full-length view of him; he was a beauty, and the guide called "a 4-pounder." Quick as a flash he sounded, the reel sung, then stopped; the pressure on the rod relaxed, and—I had lost him. It was a sore disappointment, for it was the largest trout I had ever hooked. Another of our party was equally unfortunate, losing a still larger fish after nearly ten minutes' play. Still, we took nine trout weighing about 11lbs., which was eminently satisfactory. The next day we fished but very little, as we had all that we could eat, and it was our established policy not to kill a fish we could not use.

In the afternoon two boats came down from the camp for us, and that night we took all our heavy luggage about a mile above the dam, turned the boats over it (in case it should rain during the night), and had everything ready for an early start in the morning. The day came bright and beautiful; and at just ten minutes to seven the boats were pointed up the river for "Hell Gate Camp." The freight was divided between the two boats as evenly as possible, one taking all the luggage and one man, while the other took the two heavy-weights of the party. The guides used neither oars nor paddle, but standing in the stern with a long iron pole shoved the boat skillfully and rapidly.

The day was a glorious one and the trip was perfectly enchanting; to me every bend in the river was a series of exclamation points. The water was clear as crystal and cool as the coldest spring. Trout were constantly rising and from the shallow water we could see them dart like flashes for the banks. Deep still pools were numerous, and, as we passed each of them, we sighed and mentally exclaimed, "What a place for a three-pounder!" But no line was wet on the upward drive. To say that the river is crooked can give no one an idea of its sinuous course. Our guide told us that "as the crow flies" it is but sixteen miles from Bennett's to Hell Gate, but by the river it is twenty-five. There was much besides the trout and scenery to interest us, for scarcely had we started when the guide pointed out to us the fresh tracks of deer, where they had come down across the sandy beaches to drink, and eat the tender grasses growing from the river bottom. Deer signs continued all the way up and occasionally a much larger imprint in the sand showed that moose were not wholly extinct in these woods.

At about 11 o'clock we reached Half-mile Falls, which are somewhat more than half-way up, and while the guides were hauling our boats through we found a suitable place to take our lunch. Resuming our way we forged ahead very briskly, and at about 3 o'clock pulled up to the landing at Hell Gate Camp. Amasa stood on the bank to receive us, having been notified by the discharge of a rifle by one of the party a half-mile down the river. We lost no time in getting our traps ashore and up to the camp, and I venture to say that every one was glad that the journey was at an end, for it is just a trifle tiresome to sit in a boat seven or eight hours, even if the surroundings are delightful. That we were hungry goes without saying (Johnny in particular, whose appetite kept a little ahead of him during the trip), and in a very short time we sat down to a dinner of broiled trout that would have done credit to any hotel *chef* in the country.

The site of the camp is well chosen. Standing on the piazza you look almost due west and see the river pouring through Hell Gate (a flume not more than twenty feet in width, with perpendicular granite walls, as though cut by man, through which the river flows for nearly 200yds.) over a succession of ledges, and then spreading out into the magnificent pool below. This pool is Amasa's "trout preserve," and out of it he has taken a trout weighing 6lbs. 2oz. The camp consists of three distinct buildings, all connected, yet separated by log partitions; the cook house, the main building containing the tidiest of dining rooms, and a large comfortable sitting room, and the sleeping apartments, which are models in their way. The walls and partitions are of peeled spruce logs, as white and clean as when the bark was first removed, and the space between the logs is solidly caulked with dry moss. The floors are spruce plank two inches thick, smoothed and laid in a manner to do credit to any carpenter. The bunks are wide and roomy, and are very comfortable for two if the camp should be crowded. They are filled to the depth of six or eight inches with fine soft fir twigs, over these are spread woolen blankets, and the occupant has the choice of two or three blankets over him. The pillows are filled with the same fir boughs, and when a tired man throws himself upon them he wastes very little time before he is enjoying sleep.

The fishing here is unsurpassed, that is, unless a man is looking for the biggest fish of the season. An hour's casting any evening will reward you with as handsome a creel of trout, running from ½ to 1lb. in weight, as were ever lifted from any water. Amasa has about twenty boats and canoes, all built by himself, and they are fine specimens of boatbuilding art. The fishing season extends from the 15th of June to Sept. 1, when the shooting season begins. Deer are as plenty nowhere in New England as within a radius of twenty miles of "Hell Gate Camp." Parties going in would do well to engage accommodations and guides well in advance. Amasa will engage guides, if desired, by giving him reasonable notice. His address during the open season is Wentworth's Location, N. H.; during the winter, Colebrook, N. H.

My friends give him a call. He has worked hard to establish his camp, he works hard to please you while you are there, and my word for it, you will never turn your back on "Hell Gate Camp" dissatisfied.

J. W. BARNEY.

LARGEST GREENWOOD LAKE BASS.—Jersey City, N. J., Aug. 9.—*Editor Forest and Stream:* In company with Mr. A. Collerd, Jr., I caught an Oswego bass out of Greenwood Lake last week weighing 6lbs. 14oz., the same being the largest bass taken this year. I used a light reed pole in casting, with a small frog on a single hook as a line. No doubt our success was largely due to the knowledge of John Smith, the well-known guide at Brown's Hotel. However, we are greatly elated over our catch.—R. B. SMITH.

MAINE FISHING.

RANGELEY, Me., Aug. 6.—*Editor Forest and Stream:* It seems strange to me that Kit Clarke will still persist in his false statements in regard to the Rangeley Lakes, as his articles are getting weaker and weaker the more he writes. In regard to my statement of catching 500 trout in seven hours, he says I did not say where nor in what year this illustrious event occurred; but to humor him I will say that they were caught July 2, 1888, in the Kenebago Stream, which empties into the head of the Mooselucmeguntic Lake, and that it was not steady casting, like his noted angler of the Upper Dam, as we made several stops and the record was not ruined.

Fishing has not been so good on the Mooselucmeguntic Lake for years at this time of the year as at present. F. L. Tuttle and W. L. Boylston, of Jamaica Plains, caught on Aug. 1 twenty-four trout weighing 44½lbs., which shows that fishing at the Rangeley Lakes is not "a thing of the past." W. A. ROBINSON.

RICHARDSON, Me., Aug. 4.—*Editor Forest and Stream:* I send you the catches of Aug. 1, 2 and 3, made on the Mooselucmeguntic Lake, one mile from the Mooselucmeguntic House, on what is known as the middle grounds, in order to show that the fishing here is improving instead of being played out, Kit Clarke to the contrary notwithstanding. The following is a true list of the number and weight of the trout taken:

Aug. 1. Caught by W. W. Boylston and Frank Tuttle, of Boston—four fish of 2lbs. each, three of 2½lbs. each, four of 6, 4½, 3½, 2½lbs. respectively.

Aug. 2. By W. W. Boylston, of Boston, and Chas. W. Smith, of Forestville, Conn.—eight of 1½lbs. each, two of 2½lbs. each, five of 7½, 6½, 5, 3¾ and 3½lbs. respectively.

By L. Hubbell (Clark Hill, guide)—seven of 1lb. each, two of 2½lbs. each, one of 9lbs. and one of 3lbs.

By W. G. Clark and wife, of North Attleboro, Mass., (R. Crosby and Ames Ellis, guides)—thirty-four of 1lb. each, six of 7½, 6½, 6½, 5½, 5½ and 4½lbs. respectively.

Aug. 3. By L. Hubbell—eight of 1lb. each, four of 5½, 3¾, 2½ and 2lbs. respectively.

By W. G. Clark and wife—ten of 1lb. each, two of 2lbs., two of 3lbs., two of 4lbs., one of 10½lbs., one of 6½lbs. and one of 6¾lbs. HENRY M. PIERCE.

Editor Forest and Stream:

In your issue of Aug. 2, Mr. Kit Clarke, commenting on Mr. W. A. Robinson's report "myself and another man in seven hours' fishing caught 500 trout," says: "In seven hours there are four hundred and twenty minutes, and therefore the above gentlemen took one and a fifth trout every minute steadily during the memorable hours." As there were two men fishing, each caught 250 fish in the four hundred and twenty minutes, or one fish in about 1.60 minutes. This is not such a remarkable record for Maine. Tim Pond and other waters near it can beat that in number of fish, but of course they cannot come anywhere near the weight of the Rangeley catch. ISAAC TUTTLE.

Editor Forest and Stream:

The following letter from Mr. George Hart, of Waterbury, Conn., may, with his permission, be printed:

WATERBURY, Conn., July 28.—*My Dear Captain:* I saw yours of June 30 in FOREST AND STREAM, and it is quite amusing to me to read Kit Clarke's tale of the Rangeleys being played out; yet I hardly think it is so; in fact, Captain, I am quite sure there are a few trout there yet, and if alive I hope to prove it next year, as I have this, and several before this year. Did you ever hear of our party going without a meal for want of trout? I mean fresh trout, caught the day we cook them. If so, drop me a line.

In regard to those taken the first day we went to Sinker Island, we had at night, or rather 3 P. M., Durand 48 and Hart 37 trout, making 85 trout in all. We had the 65 at noon, when we went to your house to dinner. These were all taken with a fly, many times two at a cast; and none of them were small, and a good many were over a pound in weight. The next day there was not less than the same number, and I think more, for there were others fishing there. On the 28th Mr. Hill took 19 with fly there; one weighed 2¼ lbs., and most of them a pound and over—a fine lot of fish. I am sure the lake is full of fish. Perhaps all don't have the same luck that we do, but we get a lot of fish, and good ones at that. Hoping to meet you in '89, I am, yours very truly, GEORGE HART.

I did not ask Mr. Hart to write the letter; he did it of his own free will.

In regard to the 500 trout taken in seven hours by W. A. Robinson and another man, I had it from both of them that they did it; and surely 250 fish could be easily taken by one man with two or three flies on his leader in seven hours, and give him plenty of time for lighting his pipe, eating a sandwich, etc.

The place where the trout were taken was the Kenebago Stream, and the date was the 1st or 2d of last July. At that season, when the water begins to warm up in the lakes, the trout run up all the streams, running into the lakes in large numbers. The Kenebago Stream is a favorite summering place for both large and small trout. Fishing is prohibited by law there Sept. 1; it should be the season through. Their catch was made seven to nine miles above the mouth of the stream, on the falls. Here for three or four miles there are large rocks and deep pools, with spring brooks running into the main stream at short intervals. Here, as well as in other places of the same sort, when an angler strikes it right, it is only a question of honor and conscience how many trout he will slaughter.

Twelve years ago the prevailing sentiment was, "kill all you can catch," but for the last few years it has been steadily changing to kill only what is needed for the camp or hotel table. This has done a great deal toward keeping the fishing where it really is. It surely is not all of fishing to kill a large amount of fish. For about three weeks lately quite a party of ladies and gentlemen have been with me at Camp Bemis; about every afternoon they would charter my small steamer and go trolling on the lake for trout. On starting out they would choose sides, and each side would try for the most fish, and they got a great deal of sport fishing in this way. Many a trout was caught, counted for the side that captured it, and returned to the water. Only what were needed to supply the table were kept; or if one of the party was going out and a small box was wanted, all would contribute to help make up the box. Taking trout out from the woods is rapidly going out of fashion at the Rangeleys; and many of the spring fishermen, after they have fished for a week or ten days, and have caught from fifty to a hundred trout, turn them all back into the lake, and return home without taking a single trout along. Of course this is not to be expected of a man who has come from a long distance, paid out a large sum of money in the region and worked hard for his fish. But we don't think any less of the gentleman who is generous enough to do it.

Now, one word to that poor, unfortunate angler who wasted so much time casting his fly below the Upper Dam without a rise. Let me advise that if he ever musters up courage to try our lakes again he hire a guide, if only for a few days on the first of his trip, and instead of trying to make a big show in casting a fly, get posted up a little on the habits of trout. There is a higher power than even this wonderful and egotistical Kit Clarke that causes the sun to shine or Jack Frost to appear, and by this largely governs the coming in and the going out of the trout at Upper Dam. When they are not below the dam they are somewhere else; and that somewhere else is the place he must fish in to be successful.

I do not deny that I am pecuniarily interested in this region. I have put eighteen years of work in here in the woods and on the lakes; and Camp Bemis, Island Camp, and steamers Metalluck and Mallelockett are the results. This little property stands me too high to let false statements like what Mr. Clarke has published in your paper go by unnoticed. F. C. BARKER.

CAMP BEMIS, Me., Aug. 8.

Editor Forest and Stream:

I notice that some of your correspondents have been writing down the Rangeley Lakes with respect to those waters affording present sport to anglers. An experience dating back to 1860 at the Rangeley Lakes certainly enables me to form a correct idea as to the real truth of the matter. The number of the anglers visiting the Rangeley Lakes has of course largely increased, and while the individual angler may not make the remarkable catches of fifteen or twenty years ago, yet he will have no difficulty in realizing better sport than in any other waters in the world. It can be truthfully said of the Rangeley waters at the present time as in the past, that nowhere can trout of the enormous size taken there be captured. In no other waters of the extent of the Rangeley Lakes are such enormous numbers of trout hatched artificially and liberated. Thousands of young landlocked salmon have also been placed in these lakes. The State supports a well-equipped hatching house at the outlet of the Rangeley Lakes, which is under the personal supervision of the Hon. H. O. Stanley, who has been one of the Commissioners of Fisheries for the past fifteen years. A large majority of anglers, too, are influenced by the accessibility of these waters. They can be reached in thirty-six hours from New York, and there are no hardships attached to the sport. Commodious camps are found at convenient points through all this great chain of lakes, covering a distance of sixty miles. Corroborating the foregoing, I have before me a record of a catch by Mr. Walter S. Clark, of North Attleboro, Mass., made on the 2d and 3d of the present month. These trout were taken in Lake Mooselucmaguntic, about two miles from Camp Kennebago, the headquartess of the Oquossoc Angling Association.

I am sure that any of your readers who visit these waters cannot fail to be amply repaid. The best route is via the Eastern R. R. from Boston to Portland, and then by the Maine Central and Sandy River R. R. to Phillips, Me., and from there by stage coach twenty miles to the Rangeley Lakes. GEORGE SHEPARD PAGE.

NEW YORK, Aug. 11.

[Mr. Clark's record is given in the letter from Mr. Henry M. Pierce.]

Editor Forest and Stream:

It seems that the August fishing is turning out better than usual at Mooselucmaguntic Lake, if we may believe the reports. There is a good record for early August, and in a measure it makes up for the dull fishing in July. The reports do not say how the fish were caught, but such work is usually done at that lake by very deep trolling, and that frequently over ground that has been for several days baited by chopped up minnows and larger fish. The record of fly-fishing is not very good, especially in the neighborhood of Moosehead. There are only a few sportsmen from the vicinity of Boston now at the Maine lakes, though a number will go in the month of September. Mr. Walter Hill, prominent in the house of John Squire & Co., Boston, started Monday for a few days' fishing at Alligator Lake. He is accompanied by Senator Wilson, who is somewhat worn down with his duties at Washington and in need of a few days' outing.

SPECIAL.

TROUT AND FLY.

NEW YORK, Aug. 11.—*Editor Forest and Stream:* It is amusing to read the articles on trout taking the fly. One angler has great luck with the fly in certain waters; another tries it and cannot kill a fish excepting with bait. Angler No. 2 goes for angler No. 1 for telling fish stories, and angler No. 1 calls angler No. 2 another; and so the fight goes on. And yet both are often right.

Whether it is Lake Edward in Canada, or Moosehead in Maine, or Pend d'Oreille in Idaho, the trout, and black bass, too, for that matter, will not leave the deep cold water to rise into the warm surface water for any fly, not even the "patent fluttering." That is the whole business in a nutshell. I have fished in lakes that either in June or September afforded the finest fly-fishing one could ask for, and in August the angler could cast until his arm ached, morning, noon and night, without seeing a sign of a fish. Now and then one may find a lake so cold that the July and August sun does not drive the fish down, but they are rare. Human beings take the shady side of the street in summer and the sunny side in winter; and trout are very much the same way.

From twenty-five years experience I can say that it is utterly useless to expect fly-fishing in large lakes in July and August, with rare exceptions. So no matter how good the reports are of fly-fishing in May and June, do not expect the same in hot weather.

LAKE SUNAPEE.—A guide book to Lake Sunapee is published by L. Arthur Dodge, Sunapee, N. H.

SALMON IN THE HUDSON.

Editor Forest and Stream:

My letter to FOREST AND STREAM two weeks ago announcing that salmon had made their way up the Hudson till stopped by the Mechanicville dam, has brought me several letters on the subject. One, from Mr. Robt. C. Lowry of New York city, is very pleasing, as showing the practical interest taken by anglers in the movement by the United States Fish Commission to stock the Hudson with salmon.

Mr. Lowry asks if the Mechanicville dam is the only bar to the salmon reaching suitable spawning grounds, if so, he is confident that he could receive enough money among salmon anglers to build a fishway over the dam. I had to reply that there were eight dams between Troy and the point where the larger part of the salmon fry were planted, which makes the passage of the salmon too great an undertaking for private purses.

While speculating on the chances for the salmon to find a spawning ground in Hoosick River or other streams between Troy and Mechanicville, when the spawning instinct was strong upon them and the fish found further ascent of the Hudson impossible, it was reported to me that the salmon had disappeared from below the dam at Mechanicville and several had been found dead along the river banks. Fast upon the first report came a second, that scoundrels had been using dynamite below the dam to kill the salmon, and my informant had picked up a dying fish of 8½lbs. The only part of this outrage that is at all pleasing is, that the men were seen at their nefarious work, that the penalty is severe and that the machinery of the law is now in operation to punish them. When a justice has informed these fellows what it costs to kill salmon with dynamite, I do not think there will be more candidates for their places at the bar for some time to come.

Mr. Mather is now engaged in examining the Hudson to find how many salmon have been taken in nets, the condition of the fry in headwater streams, the number and nature of the obstructions between Troy dam and proper spawning grounds, and a proper place for placing the salmon next year in order to take their spawn. This is being done to report to Col. McDonald, at whose request the examination is being made, and I am sure that the most damaging part of the report will be that on the first appearance of the salmon above tide water they were killed with dynamite. Dynamite is a specially deadly agent in destroying fish illegally, and there should be a law making it specially unpleasant for those who use it to kill fish. A fixed term of imprisonment would prove the most effective discourager to the dynamiter of salmon and other fish. A. N. CHENEY.

GLENS FALLS, N. Y., Aug. 12.

TROUT WEIGHTS AND SIZES.

Editor Forest and Stream.

Noticing your favor from Mr. Cruttenden, of Cazenovia, I would say that the length of a trout is a comparatively small element of its weight. The 5lbs. 13oz. trout of Mr. Mills was nearly 24in. long, but only a trifle over 5in. in depth. In Olmstead Pond this spring I caught a trout 19½in. long that weighed 3½lbs., and two days later Mr. Louis Webb, of New York, caught one of exactly the same length in the same pond that weighed 4lbs. Mr. Tallman, of Ogdensburg, caught a trout this spring in Panther Pond that was, I think, 22in. long, but it weighed over 3½lbs., and some years ago a trout of but 19in. in length was caught on the inlet that weighed over 4½lbs. The depth and width of the trout seem to be the points where weight counts. Could not some of the sportsmen who have caught some of the big trout in Maine waters give the readers of FOREST AND STREAM some measurements and weights, from which possibly a comparative standard of the weight of a trout could be drawn by obtaining the cubic contents of the fish?

The fishing for the past ten days has been very poor, owing doubtless to the hot dry weather.

A. AMES HOWLETT.

FOR CATCHING "FINGERLINGS."—Lake George, N. Y., Aug. 8.—Dr. Ellsworth Elliott, Jr., House Surgeon of the New York Hospital, was convicted to-day before Justice Clifton at Hague, Warren county, on a charge of violating the game laws of the State on May 23, in catching and keeping brook trout under six inches caught from the streams that run through that town. The conviction was on a plea of guilty interposed by the doctor, and the magistrate fined him $45, which the doctor paid and immediately left the town and county, expressing his determination to obey the laws of the land if he should ever pass another vacation period on the shores of Lake George. It will be remembered that the doctor was arrested June 27 last in New York city by Game Constable Burnett of Warren county, and that his lawyer then attempted to procure his release upon a writ of habeas corpus issued by Judge Barrett of the Supreme Court, but that this was denied upon the hearing under the writ before Judg e Andrews the next day, and that Judge Andrews held him to bail to appear before the Justice at Hague yesterday. Dr. Elliott at the time claimed that his arrest was a scheme to get him into Warren county for trial, and amounted to blackmail. The prosecution was brought about by the Lake George Fish and Game Protective Association, of which Robert Lenox Banks is president, under whose direction game constables patrol along the 66 miles of lake shore, bent on enforcing the law.—*New York Times, Aug. 9.*

FISHING IN THE KILLS.—For years the fishing in the Staten Island Kills has been ruined by the sludge acid of the oil refineries on the island. The waters were so polluted with this refuse that yachtsmen disliked to sail through the sticky stuff, and oystering was a thing of the past. The fishing is fair there now, and porgies, weakfish, etc., are daily taken. This is the result of a prompt enforcement of the law by order of Mr. E. G. Blackford, Shellfish Commissioner, who directed Oyster Protector Merserau to bring action against all parties who violated the law by flowing the refuse from oil or chemical works into those waters. Several large firms were fined, and the practice, which has been a source of complaint for years, has been stopped.

KEOKUK, Iowa, March 12, 1888.—*J. F. Breitenstein, Esq., Keokuk, Ia.:* Dear Sir: The box of U. S. C. Co. paper shells that I received from you last fall I tried, and found them to be all that you claimed, and better than any shell I ever used, not one of them missing fire. Yours truly, (Signed) T. J. LOWRIE. *Adv.*

THE TROUTING SEASON.—As a whole, the trouting season, which is now near its close, has not been up to the average of the past few years, according to the reports from the trout regions east of the Mississippi. There may have been a few exceptional localities where it was good, but it is generally conceded to have been a poor year for trout. In conversation with anglers in eastern New York and the adjacent territory we find that many of them somehow connect the scarcity of trout with the famous "blizzard" of last March, although in what way is not clear, especially as the same lack of trout has been noticed in a large portion of the country which lies west of the track of the blizzard. In talking with many observant anglers we find a difference of opinion concerning the past season, some of them claiming that the trout are as plenty as ever, but refuse to be taken, while others believe that there are fewer fish than usual. If this state of the fishing was not spread over so large a country it might be easer to formulate a theory to fit the fact than it is at present. In the streams an angler can often judge of the frequency of trout by the number that he sees, but in the lakes and deep pools there is no way of judging of their numbers. We do not fear that the crop of trout would so suddenly fail in so many places at once, and would not be surprised if the next season make up for this poor one.

Fisheulture.

FOOD OF THE FISHES OF THE MISSISSIPPI VALLEY.

BY PROF. S. A. FORBES.

[Read before the American Fisheries Society.]

(*Continued from page 49.*)

THE two species of black bass differ, according to my observations, in the character of their food, the large-mouthed species eating more fishes, and small-mouthed more crayfishes. Here, also, the gizzard shad made more than half the food.

The common sunfishes are readily divisible into four groups, based on their feeding structures and their food: one characterized especially by the wide mouth, including the black warrior and the blue-cheeked sunfish, took a noticeable amount of fishes, the ratio varying from a third to a half, the remainder of the food being chiefly insects, crayfishes, and smaller crustaceans. Those with small mouths, pointed teeth in the throat, and short gill-rakers, like the most abundant of the river species, took scarcely any fishes, but fed chiefly on insects and crustaceans, the latter principally the forms of medium size (amphipods and isopods). Some of this group likewise took a large amount of vegetation, amounting to a third or fourth of the whole.

A group with small mouths, and blunt conical teeth, illustrated by the common bream or pumpkin seed, was distinguished especially by the number of small snail-like mollusks eaten, these making, in my specimens, more than a third of the food. The remainder was chiefly aquatic insect larvæ, the medium-sized crustacea and water plants.

The fourth group, illustrated by the croppies, have the mouth long but narrow, and the gill-rakers numerous and long. By these a few fishes are taken, but the food is chiefly insects and the smallest crustaceans—those commonly referred to as Entomostraca, a food resource which they are enabled to draw upon by the straining apparatus in the gills.

Passing to the pike or pickerel of our western rivers, I find that the common large river pike, *Esox lucius*, is almost wholly piscivorous, a single specimen only out of the thirty-seven examined, having taken a number of dragon flies. About a fifth of the fishes were sunfishes (half of them croppies) and black bass. Twenty of these thirty-seven pike had taken gizzard shad, which made, in fact, nearly half of the food of the entire group. Minnows were found in only two, and three had eaten buffalo fish.

The striking features of this record are the importance of the gizzard shad, the abundance of the spiny-finned fishes, including some of the most valuable kinds, and the insignificant number of minnows and suckers taken.

The "grass pickerel," a species which rarely reaches a foot in length, had eaten tadpoles of frogs, and fishes, and insects, the latter making more than a third of the food, and consisting chiefly of larvæ of dragon flies.

The gizzard shad, mentioned above as an especially valuable element of the food of the higher fishes, feeds itself almost wholly upon mud, with which the long and coiled intestine of every specimen was filled from end to end. This mud contained, on an average, about twenty per cent. of minute vegetable *débris*, with occasionally a little animal matter.

The great minnow family I can scarcely pass by, since it contributes so largely to the food of other fishes, although itself of little or no direct advantage to mankind. I found this family dividing into several groups based upon the length of the intestine and the form of the pharyngeal teeth. In the first of these groups, containing several of the more abundant sorts, about three fourths of the food consisted of soft black mud, the remainder being both animal and vegetable matter, chiefly the latter. These fishes all had very long intestines and smooth grinding teeth in the throat. In another group quantities of mud are also taken, but with this many Entomostraca; while in groups three and four, containing by far the greater portion of the family, the food is essentially different, about three-fourths of it being insects and small crustaceans, and the remainder vegetation. I note especially here the value of the mud-eating minnows as food for larger fishes, since while abundant and easily maintained, they do not compete with the young of the larger fishes to whose sustenance they may be applied.

One of the most striking characteristics of the fish fauna of the Mississippi Valley is the prominence of the sucker family, several of which are among the most abundant of our larger fishes. About one-tenth the food of this family taken as a whole consisted of vegetation, eaten chiefly by the buffalo fishes, and in them composed largely of distillery slops. The family is, however, essentially carnivorous, mollusks and insect appearing in nearly equal ratio in the food. The former are taken much the more generally by the cylindrical suckers, and the latter about equally by all except the stone roller, which collects great quantities of insect food by pushing about the stones in running water. A large proportion of the insects eaten are small larvæ of gnats (Chironomus). Some of the deeper-bodied species with long gill-rakers, especially the river carp, feed largely on Entomostraca, this latter species swallowing also considerable quantities of mud.

The catfishes, taken together, are nearly omnivorous in habit, and their feeding structures have a correspondingly general character. The capacious, wide gullet, and short, broad stomach admit objects of large size and nearly every shape. The jaws, each armed with a broad pad of fine, sharp teeth, are well calculated to grasp and hold soft bodies as well as hard. The gill-rakers are of average number and development, and crushing jaws in the throat, broad, stout arches below, and oval pads above, covered with minute pointed teeth, serve fairly well to break the crusts of insects and the shells of the smaller mollusks, and to squeeze and grind the vegetable objects which occur in the food. The most peculiar feeding habit relates to the larger bivalve mollusks, the bodies of which are frequently found almost entire in the stomachs of these fishes and always without a fragment of a shell. I have been repeatedly assured by fishermen that the catfish seizes the foot of the mollusk while the latter is extended from the shell, and tears the animal loose by vigorously jerking and rubbing it about. One intelligent fisherman informed me that he was often first notified of the presence of catfishes in his seine, in making a haul, by seeing the fragments of clams floating on the surface, disgorged by the struggling captives. Finally, these are the only habitual scavengers among our common fishes. The larger deep-water species from the great rivers are strictly piscivorous, so far as known. Very small stone-cats feed on the smaller insect larvæ and the medium-sized crustacea. The spotted cat, blue Fulton, or fiddler, feeds largely on mollusks, but is, nevertheless, chiefly insectivorous. It differs from most of the river catfishes by eating water plants to a considerable extent. The common bullhead is more strictly omnivorous than any other kind, its food being composed about equally of fishes, mollusks, aquatic insects and vegetable structures, with a very considerable ratio of crustaceans added. The great mud-cat, or Morgan cat, reaching a weight of over 100lbs., seems to feed entirely upon fishes.

The abundant and peculiar dogfish, or "grindle," is strictly carnivorous, about one-third of the food being fishes, a fourth of it small mollusks, and nearly half crustaceans, chiefly crayfish.

The gars are strictly piscivorous, feeding especially upon the gizzard shad.

The most remarkable of our fishes, in structure and feeding habit, is the shovel-fish, or "spoonbill," of the Mississippi and its larger tributaries. It is a large species, reaching a weight of thirty pounds and upward, and a length of six feet or more, including the paddle-like snout. Although so large, the greater part of its food consists of the smallest aquatic crustacea and insect larvæ, strained from the water by means of an extraordinary apparatus in the gills, composed of long and slender gill-rakers, a double series on each arch, and over five hundred in a series. Interlocking as these do when the gill apparatus is extended, they form a strainer sufficient to arrest the smallest living forms above the Protozoa, and with the immense opening of the mouth and equally free provision for the exit of water from the gill chamber, enable this fish to strain out enormous quantities of these minute animal forms, especially those most commonly reserved for young fishes. It takes also, in midsummer, insect larvæ of medium size, but evidently avoids vegetation, and never swallows mud.

FOOD OF THE YOUNG.

By an examination of three hundred and one specimens, representing twenty-seven species, twenty-six genera, and twelve families of Illinois fishes, I learn that the food of many species of fishes differs greatly according to age; and that, in fact, the life of most of our fishes divides into at least two periods, and that of many into three, with respect to the kinds of food chiefly taken. Further, in the first of these periods a remarkable similarity of food was noticed among species whose later feeding habits are widely different. The full-grown black bass, for example, feeds principally on fishes and crayfishes, the sheepshead on mollusks, and the gizzard-shad on mud and Algæ, while the catfishes are nearly omnivorous; yet all these agree so closely in food when very small, that one could not possibly tell from the contents of the stomachs which group he was dealing with.

In the earliest stage, all the fishes studied, except suckers and minnows, depend for food on the smallest crustaceans, commonly called Entomostraca, and on certain small worm-like larvæ of gnats or gnat-like flies scarcely larger than these crustaceans, and usually occurring with them. By far the most abundant of these insect larvæ was that known as Chironomus. The suckers and minnows differ from our other fishes by being toothless while very young, as well as when adult, while our other toothless fishes, gizzard shad, whitefish, etc., have in youth a set of evanescent teeth. These toothless young I found feeding in part on still smaller prey than the others, taking the smallest animal forms (wheel animalcules) various Protozoa, and Algæ so minute that the whole plant consists of a single vegetable cell. The food of the whitefish fry was determined by keeping several hundred of them in a large aquarium kept constantly supplied with all the living objects which a fine gauze net would separate from the waters of Lake Michigan.*

While small fishes of all sorts are evidently competitors for food, this competition is relieved to some extent by differences of breeding season, the species dropping in successively to the banquet, some commencing in very early spring, or even, like the whitefish, depositing their eggs in fall, that their young may be first at the board, while others delay until June or July. The most active breeding period coincides, however, with that of the greatest evolution of Entomostraca in the back waters of our stream; that is, the early spring. That large adult fishes with fine and numerous rakers on the gills—like the shovel fish and the river carp—may compete directly with the young of all other species, and tend to keep their numbers down by diminishing their food supply—especially in times of scarcity—is very probable, but is not certainly true as a general thing; for these larger fishes have other food resources, also, and may resort to Entomostraca only when these are super-abundant, thus appropriating the mere excess above what are required for the young of other groups. Of the fishes which emerge from their earliest stage through increase in size with failure to develop alimentary structures especially fitted to the appropriation of minute animal forms, some become mud-eaters, like the Campostoma and the gizzard shad; a few apparently become vegetarians at once; but most pass into or through an insectivorous stage. After this a few become nearly omnivorous, like the bullheads; others learn to depend chiefly on molluscan food—the sheepshead and the red horse species; but many become essentially carnivorous. In fact, unless the gars are an exception, as they now seem to be (attacking young fishes as soon as they can swallow), all our specially carnivorous fishes make a progress of three steps, marked, respectively, by the predominance of Entomostraca, insects and fishes in their food; and the same is true of those strictly fitted for a molluscan diet.

*See note following this paper.

[TO BE CONTINUED.]

A DINING CAR LINE TO THE PACIFIC COAST.—The completion of the all rail line between Portland, Ore., and San Francisco gives the Pacific coast traveler an opportunity to patronize the famous Dining Car and Yellowstone Park Line, the Northern Pacific Railroad. The sportsman traveling in the West, whether a lover of the rod or gun, naturally seeks this road, penetrating as it does the lake park region of Minnesota, and running through the valleys of such trout streams as the Yellowstone, Gallatin, Hell Gate, Clark's Fork, Spokane, Yakima and Green Rivers, for a distance of fully 1,500 miles, as well as lying immediately contiguous to the finest hunting grounds in the United States, viz., The Big Horn, Snowy Belt, Bitter Root, Coeur D'Alene and Cascade Mountains. Information in regard to this region can be obtained by addressing CHARLES S. FEE, General Passenger and Ticket Agent, N.R. R., P. St. Paul, Minn.—*Adv.*

TOURISTS seeking rest and recreation during the hot summer months can obtain valuable information from the illustrated guide books entitled "A Summer Jaunt" and "Summer of 1888" issued by the Wisconsin Central Line. These books are descriptive of the summer resorts in Wisconsin and Minnesota, reached by the Wisconsin Central Line, and will be sent free to any address upon application to JAMES BARKER, General Passenger and Ticket Agent, Milwaukee Wis.—*Adv.*

The Kennel.

Dogs: Their Management and Treatment in Disease. By Ashmont. Price $2. Kennel Record and Account Book. Price $3. Training vs. Breaking. By S. T. Hammond. Price $1. First Lessons in Dog Training, with Points of all Breeds. Price 25 cents.

FIXTURES.

DOG SHOWS.

Aug. 22 to 24.—Third Annual Show of the American Fox-Terrier Club, at Saratoga Springs, N. Y. (Including all terriers.) Entries close Aug. 15. H. P. Frothingham, Secretary, 2 Wall street, New York.

Aug. 27 to 31.—Toledo Dog Show, Toledo, O. John Farley, Sec'y.

Sept. 11 to 14.—First Dog Show of the Buffalo International Fair Association, at Buffalo, N. Y. Entries close Sept. 1. C. W. Robinson, Secretary.

Sept. 18 to 21.—First Annual Dog Show of the Syracuse Kennel Club, at Syracuse, N. Y. Howard B. Rathbone, Secretary.

Sept. 24 to 27.—Fifth Dog Show at London, Ont. C. A. Stone Superintendent.

Sept. 25 to 28.—Second Annual Dog Show of the Bristol Park Agricultural Society, Bristol, Conn. Entries close Sept. 22. C. F. Barnes, Secretary.

Oct. 9 to 12.—First Dog Show of the Virginia Field Sports Association, at Richmond, Va. B. H. Grundy, Secretary, Room 26, Shafer Building. Entries close Oct. 1.

Oct. 23 to 26.—Second Annual Show of the St. Paul and Minnesota Kennel Club, at St. Paul, Minn. J. E. Stryker, Secretary, Room 98 Globe Building.

Nov. 6 to 10.—Dog Show of the Richmond County Poultry and Pet Stock Association, in connection with Augusta National Exposition at Augusta, Ga. H. Madden, Superintendent.

Feb. 12 to 15, 1889.—Fifth Dog Show of the New Jersey Kennel Club, at Jersey City, N. J. Geo. L. Wilms, Secretary, 142 Monticello avenue, Jersey City, N. J.

Feb. 19 to 22, 1889.—Thirteenth Annual Show of the Westminster Kennel Club, New York. James Mortimer, Superintendent.

Feb. 26 to March 1, 1889.—Second Annual Show of the Rensselaer Kennel Club, Troy, N. Y. Alba M. Ide. Secretary.

March 5 to 8, 1889.—Second Annual Dog Show of the Albany Kennel Club, at Albany, N. Y. Geo. B. Gallup, Secretary.

March 12 to 15, 1889.—Second Annual Show of the Fort Schuyler Kennel Club, Utica, N. Y. James W. Dunlop, President.

March 19 to 22, 1889.—First Annual Dog Show of the Maryland Kennel Club, at Baltimore, Md. W. S. Diffenderffer, Secretary.

March 26 to 29, 1889.—First Annual Dog Show of the Massachusetts Kennel Club, at Lynn, Mass. D. A. Williams, Secretary.

April 2 to 5, 1889.—First Annual Show of the Rochester Kennel Club, at Rochester, N. Y. Harry Yates, Secretary.

April 9 to 12, 1889.—First Annual Dog Show of the Mascoutah Kennel Club, at Chicago, Ill. John L. Lincoln, Jr., Secretary.

FIELD TRIALS.

Sept. 11.—Third Annual Field Trials of the Manitoba Field Trials Club. Derby entries close July 1. All-Aged entries Aug. 1. Thos. Johnson, Secretary, Winnipeg, Manitoba.

Nov. 1.—Second Annual Field Trials of the Indiana Kennel Club, at Bicknell, Ind. P. T. Madison, Secretary, Indianapolis, Ind.

Nov. 19.—Tenth Annual Field Trials of the Eastern Field Trials Club, at High Point, N. C. (Members' Stake, Nov. 15.) W. A. Coster, Secretary, Saratoga Springs, N. Y.

Dec. 3.—First Annual Field Trials of the Southern Field Trial Club, at Amory, Miss. T. M. Brumby, Secretary, Chattanooga, Tenn.

Dec. 10.—Second Annual Field Trials of the American Field Trials Club, at West Point, Miss. C. W. Paris, Secretary, Cincinnati, O.

Jan. 14, 1889.—Sixth Annual Field Trials of the Pacific Coast Field Trial Club, at Bakersfield, Cal. N. P. Sheldon, Secretary, 320 Sansome street, San Francisco, Cal.

COURSING.

Oct. 15.—Third Annual Meeting of the American Coursing Club at Great Bend, Kan. F. K. Doan, Secretary, 1210 Olive street, St Louis, Mo.

A. K. R.—SPECIAL NOTICE.

THE AMERICAN KENNEL REGISTER, for the registration of pedigrees, etc. (with prize lists of all shows and trials), is published every month. Entries close on the 1st. Should be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (50 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription $1.50. Address "American Kennel Register," P. O. Box 2832, New York. Number of entries already printed **6435.**

THE NATIONAL DOG CLUB OF AMERICA.

Editor Forest and Stream:

At a meeting of the executive committee of the National Dog Club, recently held, it was voted that the club give at the coming Buffalo show fifteen bronzed medals, as special prizes, for the best American bred dog or bitch of the following breeds: Mastiffs, St. Bernards, deerhounds, English setters, Irish setters, Gordon setters, pointers, toy dogs, sporting spaniels, pugs, collies, fox-terriers, greyhounds, bulldogs, terriers (except fox).

The secretary of the Buffalo show has been advised of the intent and rendition of Rule XXIII. of the National Dog Club rules, and it will be enforced by him as follows: "Any person guilty of misconduct of any kind in connection with dogs, dog shows or field trials, who has been disqualified by any reputable club, will be held as disqualified by the National Dog Club. If the person so disqualified desires to have the disqualification removed the executive committee of the National Dog Club will duly consider his case, but only when supported by affidavits."

Dr. J. H. Meyer was elected to fill the vacancy in the executive committee caused by resignation of Mr. Harrison.

H. W. HUNTINGTON, Secretary.

BROOKLYN, N. Y., Aug. 11.

The National Dog Club through its executive committee has sent out this appeal in behalf of fair play to Buffalo:

To the Breeders and Exhibitors of America:

If a constant reader of the sporting press you are doubtless fully informed of the inviduous attacks which have recently been made upon the National Dog Club of America. To these attacks, however, it is our purpose to allude, only inasmuch as they bear on the management of the Buffalo show, innocently drawn into discussion and threatened with injury thereby.

Among the accompanying reprints which we send you is one of an editorial from the *Turf, Field and Farm*, which appeared July 20. Therein you will learn why the Buffalo management, after consulting with Dr. Perry, the president of our club, *who advised them to join the American Kennel Club*, decided to recognize the National Dog Club, and elected to show under its rules. They believed they had no honorable alternative. Their decision once known, every possible influence was brought to bear to induce them to reverse it and show under the rules of the American Kennel Club, *which had already declined to permit them to do so unless they formed a "paper corporation," a course which they rightly assumed to be a dishonorable subterfuge.* The management were notified by that club, both by letter and through a delegate, that unless they threw over the National Dog Club, the American Kennel Club would ruin their show, by withholding their dogs and in other ways.

The Buffalo management has resisted the pressure brought to bear on them, and declined to make any change, practically on the eve of their show. And yet the deluge of letters from the American Kennel Club and its supporters, threatening destruction, has continued unabated.

The National Dog Club was declared to be unable to survive the opposition of the American Kennel Club, and it members were denounced in no measured terms, while th

latter organization modestly (?) claimed, in contrast, to be made up solely of gentlemen. Finally, a large number of copies of one sporting journal, which contained a letter of the president of the American Kennel Club on this subject, was sent to breeders for the purpose of misleading them.

It would be exceedingly wearisome to attempt to describe the many efforts which have been made by the American Kennel Club, not only to injure the new club, but also to ruin the Buffalo show. And yet it says, through its president, that there has been no prejudice excited against the National Club.

Surely these tactics employed cannot be classed as honorable, and we ask you, as fair-minded men and fellow breeders, whether they meet your approval, and whether, if you are a member of the American Kennel Club, you indorse its cowardly methods? If you do not, we appeal to you to aid us in making the Buffalo show a great success, and thereby give expression in a practical manner to your condemnation.

The premiums offered at Buffalo are very generous. But few managements have ever been as generous, and none more so.

The list of specials is large, and we do not believe that there was ever a show held in America where the winnings promised to be heavier. The National Dog Club give bronze medals for every important breed of dogs entered, and many prizes in money, valuable cups, etc., are offered by its friends.

Again, for the Buffalo show we bespeak fairness and your support. The two clubs can decide between them any issue which has been raised. Let not an innocent party suffer because he has accepted the support of one, after he was denied recognition by the other. Very truly yours,

J. FRANK PERRY,
For the Committee, the National Dog Club of America.
METROPOLITAN HOTEL, New York City, Aug. 6.

The executive committee of the National Dog Club have republished in pamphlet form the newspaper correspondence *pro* and *con* relating to their club, and are sending it out. By giving both sides, as set forth in the letters of Mr. August Belmont, Jr., and those of Dr. J. Frank Perry, they permit the breeders of the country to weigh the merits of the discussion and draw their own conclusions. The reprinted letters are prefaced by this address:

To the Dog Breeders of America:

Inclosed herewith you will find reprints of several communications which recently appeared in the sporting press. They comprise all statements of importance, which have thus far been made public, either friendly or unfriendly to the National Dog Club of America. With but a few words we lay these communications before you.

It is, of course, evident to all that where the interests of many individuals are involved—more especially if those individuals reside at long distances from each other—the best, if not the only, practical way for them to accomplish what they desire is through organization. This is an accepted fact in all departments of life. Properly organized, any number of persons can effect more, and effect it more quickly, than the same number could accomplish working individually.

There are many breeders of dogs who reside at points where there are no kennel clubs. They have rights which can only be secured by a breeders' club such as ours. Again, as you well know, many of the members of the kennel clubs now existing have never bred, nor have they held direct interest in, dogs, and, consequently, can have no actual knowledge of what is needed to promote the welfare of our fraternity.

The American Kennel Club has been likened by its president to the Supreme Court of the United States. That is not a proper comparison. The American Kennel Club is a court of appeal for *clubs*. The National Club is a court of appeal for *breeders* and *the public*, and, as such, can come in conflict with no *existing* organization. If the associate membership proposition of the American Kennel Club—which has been made since we organized—is adopted, that body will then be junior to the National Dog Club, and be open to the same abuse, now heaped upon our club, for entering the "field" of another organization.

With these views, briefly expressed, we lay the matter before you to judge upon. It is for you and your associates, the breeders of America, alone to decide whether or not you will organize in your own interests, and in the interests of the public with which you are intimately connected.

When the National Dog Club was first organized, its founders would only communicate with, and invite the cooperation of a few breeders, owing to the fact that it was expedient to hold the first meeting at the Boston show, and the time before it was short. We now beg leave to tender you a most cordial invitation to join us. Our annual dues are but $5. That sum should be forwarded, with the application for membership, to the secretary, H. W. Huntington, 148 South Eighth street, Brooklyn, N. Y.

Hoping to have the pleasure of welcoming you to our ranks, we remain, very truly yours,

EXECUTIVE COMMITTEE,
The National Dog Club of America.

Editor Forest and Stream:

I have read with great interest the letters of Dr. Perry and Mr. Belmont in regard to the two kennel clubs, and desire to give expression to my views with relation to the matter.

No one interested in the dog world can, on the whole, regret the new life that has been infused into it by the discussion in question. If this increased vitality keeps up, and be turned to account, there must result a gain all round. All, however, will desire to see harmony.

One or two thoughts have occurred to me that I have not seen elsewhere.

Mr. Belmont evidently accepts Dr. Perry's statement that the American Kennel Club has been "snail-like." I cannot deny that myself, and I find the feeling among those I know to be pretty unanimous with regard to this point. The National Dog Club, in my opinion, is certainly deserving of praise for having accomplished the difficult feat of waking up the American Kennel Club.

Mr. Belmont seems to claim in his earlier letter that the American Kennel Club has filled the field. Yet in his speech at the last meeting he acknowledged that it does not, by proposing an associate membership, which would give individual breeders a representation. "I sincerely believe," he says in his last letter, "that the breeders do require an association of their own, and I, as a breeder and exhibitor, desire one greatly." Still he had made no move toward obtaining it until after the National Dog Club was formed; or, if he had, the movement had been without result. If the National Dog Club had not come into existence, I, as an individual breeder, would have been without representation unless there had been a local club in my vicinity.

Dr. Perry's proposition regarding the dog show rules strikes me as a very fair one. If the American Kennel Club adopt the changes—and every breeder will acknowledge they should be in force—that will end the matter. Even I myself should certainly then show under the American Kennel Club's rules. At present I should show under the National Dog Club's rules, because they are, in my opinion, the better, although there is yet room for improvement.

If "a lot of prominent American Kennel Club gentlemen" were asked to join the National Dog Club, it naturally suggests itself, it would have been better for them to have accepted, and so, as Dr. Perry says, have kept the new club harmonious with the old one. They could easily, by acting together, have prevented any hostile movement on the part of "the enemy." This possibility of concerted action on the part of the American Kennel Club members whom they invited to join them, must have suggested itself to the founders of the National Dog Club, and the fact that they were willing to risk it has been to me one of the strongest proofs that their intentions were friendly from the beginning. Mr. Belmont certainly pays himself and his associates a very poor compliment in supposing that their conduct has been such in the past that any one could imagine they would be "figureheads" in any enterprise. FAIR PLAY.

CHESAPEAKE BAY DOGS.

FRANKFORD, Pa., Aug. 4.—*Editor Forest and Stream:* I was afforded much pleasure in the perusal of an article on the Chesapeake Bay dogs from the able pen of Mr. E. A. Palmer, of Nebraska. It brought to my mind several pleasurable incidents, in which the enjoyment depended almost wholly or in part on a noble dog of that breed. This dog was the best retriever I ever saw. I have seen and owned bird dogs and spaniels, which were almost infallible in retrieving, but none could approach the Bay dog, and this is what gave rise to my opinion.

About ten years ago in company with my cousin Rob, who was the proud owner of the dog in question, I was enjoying a few days ducking on the Sassafras River. Ducks were quite plentiful, and even canvasbacks more than common; redheads nearly as good as the former, along with cobheads and black ducks, were quite thick; a few geese and an occasional swan helped matters considerably. We constructed a blind on Ordinary Point during the afternoon, and by the appearance of the weather concluded that if we got there early the chances were pretty fair for some good shooting in the morning, but in ducking "you cannot sometimes most always tell." However, before daylight we were comfortably stowed in the blind, our big negro boatman, George, having had a pretty hard tussle with wind and waves in rowing us across the river to the point, for it was blowing quite sharp and by daylight increased to almost a gale. Rob was armed with a good 10-bore Colt. I had a heavy 8-bore muzzleloader, for although the ducks were quite plenty they were very wild from being shot at so much, and a heavy gun was necessary. We also brought a Winchester .32 for wounded birds. Taylor, the Bay dog, and George, the boatman, completed the outfit.

We began shooting as soon as it was light, and had varying success as neither of us were crack shots, but with the help of George and the dog we managed to gather twenty-one ducks in a couple of hours. The wind now blew a gale and the river was fearfully rough. Just then we heard a swan trumpeting—it was coming up the river but beyond the reach of shot. Seizing the .32 I opened on him, and at the fourth or fifth shot had the good luck to tumble him down with a broken wing. Now came the difficulty. George absolutely refused to go after it, said the river was too rough, and it was. By this time the dog Taylor was almost beside himself, whining and almost crazy to go. Bob loosed him; he ran to the end of the point and jumped in, and swam in the direction that the swan had disappeared. We stood almost breathless and watched him out of sight. Twenty minutes passed and no Taylor. Half an hour went by and no sign of the dog. I felt sorry we let the dog go, and we did not fire a gun after the dog left. Rob looked down his nose and said he guessed he'd seen the last of old Taylor. We packed up and got ready to go home when George sung out, "Ki! yi! bress de Lawd, heah's Taylah!" And sure enough, here came the good old dog, nearly fagged out, staggering along the shore, dragging that big swan. He had been gone a little over three-quarters of an hour.

About noon the wind went down enough to enable us to cross the river, and we went home better pleased with the ending of our day's shooting than we had had reason to expect. I could give other evidence of this dog's good qualities, but I feel that I have trespassed already too much on the editor's good nature. J. C. S.

[The further incidents will be welcome, and we hope that "J. C. S." will favor us with them.]

RICHMOND DOG SHOW.

WE have received the premium list of the dog show to be held at Richmond, Va., Oct. 9 to 12, by the Virginia Field Sports Association. Over $1,900 is offered exclusive of special prizes. In the classes for mastiffs, rough-coated St. Bernards, smooth-coated St. Bernards, large pointers, small pointers, English setters, Irish setters, black and tan setters, collies and fox-terriers, the prizes are, champion, dogs, $20, bitch, the same; open, dogs, $20, $10 and certificate; puppies, $10 and certificate for each sex. In Clumber, field and cocker spaniels, bull-terriers, and pugs (dogs and bitches), the prizes are, champion, $10; open, dogs, $10, $5 and certificate, bitches the same (except Clumbers); puppies, $10 and certificate, dogs and bitches (class divided in spaniels). In beagles and bulldogs the prizes are, champion, dogs, $10, bitches the same; open, dogs, $10; $5 and certificate, bitches the same; puppies, $10 and certificate. The remaining classes have $10, $5 and certificate, except that in a few of the less important ones the second prize is a certificate. There is a class provided for Virginia native setters of any breed, with prizes of $10, $5 and certificate for each sex, and $5 and certificate for puppies. The judges so far as announced are J. M. Tracy, James Mortimer, Col. F. G. Skinner and A. C. Wilmerding. George H. Hill is superintendent. Entries close Oct. 1. The address of the secretary is B. H. Grundy, Room 26, Shafer Building, Richmond, Va.

Editor Forest and Stream: Please publish the fact that since the premium list of the Virginia Field Trials Association was published our management has, at the instance of the American Gordon Setter Club, added the following classes for Gordon Setters: Champion dogs and bitches, $20; open dogs, $20, $10 and certificate, bitches the same; puppies, $10 and certificate. To the above the American Gordon Setter Club has added a prize of solid silver valued at $25 for the best Gordon setter dog. These classes will be judged by Mr. Harry Malcolm, who has been suggested by the A. G. S. Club. They are in addition to the classes for black and tan setters, which will be judged by Mr. J. M. Tracy.—JNO. S. WISE, Pres. (Richmond, Va., Aug. 9).

COONS.—Windham, Conn., July 23.—*Editor Forest and Stream:* I am here spending my summer vacation as usual, and getting my coon dogs Rover and Nero into hunting condition. I read with great interest the accounts of coon hunts published in your paper and so do the natives about here. Have a few questions to ask, which would be of interest to me if they could be answered by some of your coon-hunting readers, thus adding to coon knowledge, which I am sorry to say is very meager. My idea is to invite correspondence through the FOREST AND STREAM, so if you think them of sufficient interest please publish them. Do coons holloa at night? Some say they do not. At what age do coons breed and how often? Will coons breed in captivity? Does it injure a dog's scent for trailing for the time being to kill a skunk?—J. L. B.

SYRACUSE DOG SHOW.—Syracuse, N. Y., Aug 2.—*Editor Forest and Stream:* The Syracuse Kennel Club are very sorry that they have been so delayed in issuing their premium list for their show of September 18, 19, 20, 21, but hope to send it out during this week. The entries close September 3, and we ask those wishing premium lists to apply at once and send on their entries as soon as possible. William Tallman is to be the superintendent, and Spratts Patent (Limited) is to do the benching and feeding. Every one is greatly interested in the show, and the club looks for a great success.—HOWARD B. RATHBONE, Secretary.

THE SCENT OF SKUNKS AND DOGS.

OUR correspondent J. L. B. asks if the odor of a skunk will prevent a dog from following a trail? We have often seen dogs, while hunting, come in contact with skunks and get completely saturated with the effluvium, but in no instance was there any apparent injury to their olfactory organs. Old Sounder, a favorite foxhound of long ago, was an inveterate foe to the perfumed rodents and neglected no opportunity to shake every vestige of scent from them, much to the disgust of his many admiring friends. On several occasions we have seen him when following a fox, swerve from his course and shake up a skunk and then resume his trail and run it as true as ever trail was run. We have owned several pointers and setters that would tackle a skunk whenever found, but we could never discover any diminution of their scenting powers. At the chicken trials in Minnesota in 1882, the setter dog Pink B. ran into a skunk and the incident is thus described in our report:

"Just here a skunk put in appearance and as he leisurely ambled along Pink spied him, and apparently realizing that nature had been remiss in not making game of the rodent, he undertook the job on his own account and sailed in regardless. Every one knows that 'a rose by any other name would smell as sweet,' but we assure you that a Pink is a different sort of a posey altogether, for without any change of name—although come to think over it, Short did use some other name. Pink came out of the scrimmage with a most decided change of odor, at least it seemed so to us, but Pink soon convinced us that his smell was all right by handsomely pointing at a long distance a single bird that had remained on the stubble."

In FOREST AND STREAM of Sept. 21 1882, an article on scent was published from which we reprint a portion, as there appears to be an analogy in the case:

"That the nose of the dog is a most wonderful organ no one at all conversant with the performances of hunting dogs will for a moment doubt. How marvelous the power that enables the pointer or setter to accurately follow the intricate windings of the trail that was traced by the wandering bird perhaps hours before. How wonderful his ability to follow the footsteps of his master, even through a crowd, upon the pavements where all scent, seemingly, must be obliterated by countless other footsteps. How perplexing the fact that he can unerringly follow the track of our horse, driven at speed over the cobble stones or dusty road, and surely find us, although many teams have crossed and recrossed our path. Often have we puzzled our brain in endeavoring to solve the mystery of this wonderful power, but in vain; and long ago, like Dundreary, we resolved that 'this was a thing that no fellow could find out.' We once saw a brace of dogs road the trail of a grouse athwart the effluvium from the carcass of a dead horse, which the air blew directly in their nostrils, and the heavily laden air reminded us—by contrast—of the 'spice-laden odors of Araby the blest;' with never a doubt nor fault they followed the bird and came to a staunch point within twenty yards of the odorous mass. We could scarcely believe the evidence of our eyes nor place any confidence in the sense of the dogs until, with bated breath, we rushed in and flushed the bird. We then and there foreswore all future attempts to elucidate the unfathomable mystery surrounding the subject."

DOG TALK.

THE *Stock-Keeper* vouches for this: A lady was visiting her friends at the seaside, where there was a fine dog, whose master was in the habit of giving him money every day to buy meat for his dinner from the butcher's cart. The lady, admiring the handsome intelligent animal, called him to her as she sat at breakfast and fed him from her plate. The dog at once went to his master, and standing on his hindlegs pawed and scratched at the gentleman's breast pocket. At first the master failed to understand and ordered him away; but the dog persisting, he finally said, "Well, I do believe he wants his money," and offered him a coin, which the dog instantly took, and trotting back to the visitor deposited it in her lap, with a wag of his tail and a look which seemed to say, "I always pay the butcher, and why not you?"

We receive by nearly every mail requests for pedigrees. In case those wanted are of registered dogs comparatively little labor is necessary, but when the dog has no record it is in many instances impossible to give the information wanted. Inquirers should in all cases give all the facts in their possession regarding the dogs in question. If they or their parents have been shown, give place and date, also name of breeder as well as any other information that will assist us in tracing them. Those who have printed pedigrees of their dogs will confer a favor by sending a few of them to us.

Entries for the Buffalo dog show close Sept. 1. The Buffalo exhibition directors are expecting half the people of the continent there; and as no extra admission charge will be made to the dog show part of the exposition, it will be attended by a big crowd.

Dog show managers should always send us a supply of premium lists and entry blanks, as we almost invariably have calls for them, generally on the day that the entries close.

Mr. Frank F. Dole has removed to his old home, New Haven, Conn., where he has located his kennel—the Royal Bull-terrier Kennel. His address is 1004 Chapel street.

We are informed that Mr. John S. Wise, of Richmond, Va., will soon remove to New York. His many friends in this city will gladly welcome him.

There will be a dog show at Greensburg, Pa., Sept. 18 to 21, in connection with the annual fair of the Westmoreland County Agricultural Society.

Mr. W. H. Moller, who recently lost the champion pointer bitch Water Lily, has replaced her with Juno S. from the Clifton Kennel.

Everybody and his dog will, from present indications, be at the Richmond dog show, and a general good time is expected.

The Birmingham (Eng.) dog show committee have decided that in future the judging at this show will be open to the public.

Mr. John Reed will terminate his connection with Spratts Patent Sept. 1.

MR. BELMONT'S CHARGES.

Editor Forest and Stream:

In case Mr. August Belmont, Jr., has not replied to my letter in your issue of Aug. 2, will you allow me to call the attention of your readers to the fact that the first time he is brought up with a round turn to give proof in support of one of his wild assertions, the bottom falls out of his accusation.

After reading his many effusions, particularly his reply of last week to Mr. Rewalt's stinging epistle, I trust for the good of the dog world Mr. Belmont will favor us with a column every week, for now that the prevaricating clown of the canine world has begun to discuss horses, we have nothing left to laugh at. JAS. WATSON.

"A BIT OF KENNEL HISTORY."

Editor Forest and Stream:

Since reading Mr. Mason's letter in your last issue, I have jogged my memory and find that I did, in a letter published in the *Turf, Field and Farm* of Feb. 17, 1888, publicly invite Mr. Mason to edit the Stud Book. By reference to the letter, which you designate as a derisive letter about Mr. Mason as an English gentleman, in your editorial of July 26, 1888, you will find I use the following language: "Now let us adopt this as a substitute for Rule 2; that all dogs in America shall be registered in a book, and that said book shall be published by Chas. H. Mason, an English gentleman, under such conditions and terms as he may adopt."

This is the only invitation or request I ever made to him to become the editor of the Stud Book, and his statement that I personally requested him to take Mr. Vredenburgh's place as editor, is absolutely untrue, and it must have come to him in a dream. Perhaps the wish was father to the thought, he knowing that he was the only man in this country who was capable and competent to edit the Stud Book. The fact that another was doing it preyed upon his mind and consequently begat the dream. It must have come to him in this way, because he is not only an English gentleman but too much of a gentleman to repeat to a newspaper for publication a private conversation in his own house with his friend.

Then again, if I had had said conversation, I know Mr. Mason would not repeat it, because I don't know, nor do I pretend to know, anything about dogs or doggy matters, and he says himself that he published a letter several years ago in the FOREST AND STREAM saying he would not have a discussion with an ignoramus like me, or words to that effect.

Margaret Fuller, when quite young, made this statement: "I have now met all the minds of this country worth meeting, and I find none comparable to my own." Poor Margaret now lies dead, while poor Mason—well, in the language of Marcus Antonius:

> "O, mighty Cæsar! dost thou lie so low?
> Are all thy conquests, glories, triumphs, spoils,
> Shrunk to this little measure?—Fare thee well."

C. J. PESHALL.

JERSEY CITY, August, 1888.

SPANIELS AS PETS.

Editor Forest and Stream:

Your issue of Aug. 2 contained a letter from Mr. H. F. Schellhass on the adoption by the American Pet Dog Club of certain constitution and by-laws, wherein spaniels under 28lbs. (meaning cockers), and beagles were listed with pugs, Blenheims and other breeds, as pet dogs, and suitable subjects for their protection, duly added to their list, and installed as such upon their books, to all of which Mr. Schellhass objects, and on behalf of the spaniel I object. Now the question naturally arises as to whether the Pet Dog Club has not extended its functions beyond its reasonable sphere? Spaniels and beagles have, from time immemorial, been kept and used for the hunt—they are so kept and used today. Why then classify them with what are known as pet dogs—breeds that are used almost exclusively for ornamental purposes, kept entirely as house dogs, and never used by the sportsman (with the exception, perhaps, of some of the terriers). The Pet Dog Club might have—having gone as high as 28lbs.—increased their weight limit a trifle and taken in some of the larger breeds, Great Danes for instance, they being possessed of the twofold advantage of not already having a specialty club in this country to protect their interests, and no remodeled and Americanized standard that has stood (as is the case with the American Spaniel Club) the wear and tear of years, been accepted by all clubs, used by all our foremost judges, and what is more, indorsed by none other than the late lamented J. H. Walsh ("Stonehenge") himself, said letter of approval being in my possession. Ergo, aside from venturing on ground already occupied, the Pet Dog Club, when it selects "Stonehenge's" standard for cockers, is offering us second-hand goods, ours having been formulated in 1881, being by several years newer than his, and as I remarked before, having received his indorsement unqualified. I have let an issue of your paper come and go in the hope that some one of the members of the Pet Dog Club would have something to say in reply to Mr. Schellhass and in defense of their action. As a member and officer of the American Spaniel Club I protest against their assuming authority in any manner over the cocker spaniel. A. C. WILMERDING, Sec'y A. S. C.

NEW YORK, Aug. 13.

MANITOBA FIELD TRIALS.

Editor Forest and Stream:

Following is a list of the entries for the All-Aged Stakes of the Manitoba Field Trials Club:

FANNIE M. (D. Smith), English setter bitch (Count Noble—Pearlie).

PRAIRIE (D. Smith), English setter dog (Dash B.—Qu'Appelle Belle.

GROUSE (D. M. Blackwood), Gordon setter dog (Major—Young Flora.

JENNY DEANS (S. Birkett), English setter bitch (Baron Doveridge—Border Belle.

DICK BONDHU (Thos. Johnson), English setter dog (Dashing Bondhu—Duchess Primrose).

CAMBRIA (Thos. Johnson), English setter bitch (Cambridge—Pet Laverack).

PITTI SING (Thos. Johnson), English setter bitch (Baron Doveridge—Norah).

BIRTLE (Hubert Galt), pointer dog (Croxteth—Bella).

SASKATCHEWAN (George Tempest) pointer dog (Bang Bang—Phœbe.

BRUCE M. (T. A. Montgomery), English setter dog (Cable—Bredna).

DASH B. (Manitoba Kennel), English setter dog (Dash Bryson—Lucy.

MANITOBA BELLE (Manitoba Kennel), English setter bitch (Pride of Dundee—Jeanette).

VAN R. (C. A. Boxer), English setter dog (Dime—Frost II.).

QU'APPELLE BELLE (C. A. Boxer) English setter bitch (Mark J.—Betsy). THOS. JOHNSON, Secretary.

DEATH OF HOWARD HARTLEY.

WITH sincere regret we hear of the death of Mr. Howard Hartley. Although Mr. Hartley had not been seen often at dog shows or field trials of late years, and though virtually unknown to the latest growth of fanciers who began yesterday and rule to-day, yet his statuesque figure and open, hearty face was well known to show goers of four or five years since.

Mr. Hartley was one of our earliest setter men, having imported Rake somewhere about 1868 to '70, and this importation he followed up by purchasing Ruby, Royal Ranger, Daisy Queen, Gaily, etc., and subsequently bought the crack Queen Alice at a long figure. His last importations of note were the black pointers Flotsam and Jetsam.

Mr. Hartley was stricken with paralysis about a month since, from which he partly recovered, but a relapse set in and complications made their unwelcome appearance to which he speedily succumbed. Although somewhat lacking in that steady persistency which commands success, he was yet a most popular fancier, winning the regard of all by his kindliness of heart, and in all things was the perfect gentleman in the best sense of the word. Mr. Hartley left a widow and one son to mourn his loss, and they have the sincere sympathy of all who knew the deceased.

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope of large letter size. Sets of 200 of any one form, bound for retaining duplicates, are sent for 30 cents.

NAMES CLAIMED.

☞ **Notes must be sent on the Prepared Blanks.**

Elora Dot. By H. Card, Elora, Ont., for black, white and tan beagle bitch, whelped March 21, 1887, by Blue Cap (Blue Cap—Blue Bell) out of Minnehaha (Dandy—Beauty).

Hilda. By Geo. H. Elder, Green Spring Farms, Tobin's, Md., for sable, white breast and feet, collie bitch, whelped May 3, 1888, by Strephon (A.K.R. 2730) out of Couthie (A.K.R. 2708).

Bloodwood. By Elliott Johnston, Wachapreague, Va., for tawny sable and white collie dog, whelped May 3, 1888, by Strephon (A. K.R. 2730) out of Couthie (A.K.R. 2708).

Couthie II. By Elliott Johnston, Wachapreague, Va., for black, white and tan collie bitch, whelped Aug. 10, 1884, by Birckhead's Help (Elder's Mack—Lurman's Toby) out of Sonsie (A.K.R. 1332).

Black Princess. By Hiram Card, Elora, Ont., for black Newfoundland bitch, whelped July 12, 1888, by Blucher out of Queen (Sancho—Juno II.).

Fleet View Randolph, Spot Dash's Boy, Fleet View Victoria, Fleet View Belle and Fleet View Queen. By Fleet View Pointer Kennels, Lynn, Mass., for liver and white pointers, two dogs and three bitches, whelped July 24, 1888, by Spot Dash (Sir Philip Sydney—Topsy) out of imported Belle Randolph (Duke of Westminster's Sam—Juno III.).

Jack. White, black and tan markings, imported fox-terrier dog, age and pedigree not given, by Rideau Kennels, Ottawa, Can., to D. A. Radcliffe, Port Arthur, Ont.

Nettie. White, black and tan markings, imported fox-terrier bitch, age and pedigree not given, by Rideau Kennels, Ottawa, Can., to D. A. Radcliffe, Port Arthur, Ont.

KENNEL MANAGEMENT.

☞ **No Notice Taken of Anonymous Correspondents.**

C. C. R., Simcoe, Ont.—I have a setter puppy about three months old over whose eyes a film seems to be growing; it is on the surface of the pupils, and not underneath, where I believe a cataract would grow. Can you suggest a remedy, and is there any danger of the pup going blind? Ans. Get a solution of zinc sulphate, 2 grains to the ounce of water. Drop a little into the puppy's eyes night and morning. Think the pup will recover.

Rifle and Trap Shooting.

RANGE AND GALLERY.

THE QUEBEC RIFLE ASSOCIATION.

OTTAWA, Aug. 7.—The annual meeting of the Province of Quebec Rifle Association began on the Rideau ranges here to-day. The total number of entries was 168.

Major Blaiklock, the secretary of the association, has during the past two or three days got everything into splendid condition, and consequently the work has gone on without a hitch.

The first match was the Nursery, open to all members of the P. Q. R. A. (whether by direct contribution or through affiliated associations) who had never won an individual prize at any Provincial or Dominion match; range, 400yds.; 7 rounds; Snider rifle; possible score, 35; Government pattern; position, any with head to target. For this event, with which was coupled the team match, there were cash prizes to the value of $107. There were quite a number of entries, including Ottawa men.

The following are the winners and their scores:

Pvt Parke, 8th Rifles	34	Sert-Maj Findlay, 54th Battg.	28
Bombr Dilly, M G A	32	Pvt Lemigh, 43d Batt	27
Col-Sergt Ferguson, 1st PWR	31	Pvt Ward, 43d Batt	27
Sergt Heron, 54th Batt	30	T C Slade, M R A	27
Lieut-Col Cole, 42d Batt	30	Pvt Presley, 41st Batt	27
Pvt Gooding, G G F G	29	Pvt Walsh, 50th Batt	27
Pvt D Cameron, 6th Fusiliers	29	Pvt Dunson, 8th Royal Rifles	27
C S Scott, M R A	28		

Over twenty-seven were counted out on 27.

The next competitions were very interesting ones, skirmishing and volley firing, the conditions of the former being: Distance from about 500yds. to 200; 10 rounds; targets exposed 15 seconds at a time; and of the latter, 5 rounds at 300yds., with 3 points deducted for each shot fired out of time.

The results were announced as follows:

Skirmishing.			
43d Batt (1st team)	106	G G F G (2d team)	77
6th Fusiliers	80	5th Royal Scots	77
Volley Firing.			
Prince of Wales' Rifles	51	G G F G (2d team)	38
43d Batt (2d team)	50		

The next match was what is know as the "Association," open to all members of the P. Q. R. A.; 500 and 600yds. number of shots 7 at each range; Snider at 500yds. and Martini-Henry at 600yds.; position, any with head to target. The value of prizes exclusive of cups, amounted to $308, divided as follows:

First prize, $25; second, $20; third, $15; fourth, $10; fifth, $8; ten prizes of $5 each, $50; twenty prizes of $4 each, $80; all cash:

Sergt Hartley, 8th	64	Pvt Hall, 79th	55
Staff-Sergt Wynne, 5th	60	Lieut R J Spearing, 53d	55
Staff-Sergt T Mitchell	60	Pvt H W Edwards, 585h	55
Pvt T Waters, 6th	58	Mr G Hutchinson, M R A	55
Lieut H H Cole, 42d	58	Sergt Duford, 8th R R	54
Pvt G Lavers, 6th	58	Sergt H Johnson, 85th	54
Sergt Dowker, M G A	56	Sergt A S Kimmerley, 47th	54
Capt McMicking, 44th	56	Corp J Riddell, 6th	54
Staff-Sergt Jamieson, 43d	56	Pvt McJanet, 43d	54
Sergt C H Clarke, 53d	56	Pvt J A Armstrong	53
Capt McDonald, T R C	56	Pvt Ward, 13th	53
Lieut-Col J P Macpherson	56	Capt H Waldo (Ret list)	53
Pvt A Thompson, V R	56	Corp E Pratt, 6th	53
Sergt Clarke, 5th	55	Corp Morris, V R C	53
Pvt T Scott, 6th Fusiliers	55	Capt C B Jamieson, 6th	52
Capt Bell, 43d	55	Sergt G Thompson, T R C	52
Staff-Sergt Margetts, V R C	55	Pvt J P Nutting	52
Capt Luluham, M G A	55		

Sergt. Hartley's score, coming as it did within six points of a possible, was considered highly creditable work. Later in the day, however, Mitchell, of the Toronto Rifle Associat(on, took the shine out of everything by making a possible, planting 7 bullets on the bullseyes at the 500yds. range. Gen. Middleton was on the ground a large portion of the afternoon. Lieut.-Col. Mattice is officer in command.

Following were the winners in the association team matches: First prize, $30 and silver cup; second, $25; third, $18; fourth, $12; fifth, $10; sixth, $5.

Fifth Royal Scots	263	6th Fusiliers	260
Sherbrooke R A	262	8th Royal Rifles	248
Toronto R A	260	G G F G	246

Aug. 8.—The second day's contests took place under quite favorable auspices, for although the weather was rather fickle, still there was nothing worse to spoil the sport than variable winds and sun, and a shower toward the end of the day.

The great contest to-day was that for the magnificent Jubilee Cup, presented by the Corporation of the city of Montreal to the team from the battalions of that city which shall make the highest aggregate score in the active militia matches. This is said to be the handsomest cup in the Dominion.

Following are the individual scores in this match: Active militia match, open to the active militia of the Dominion of Canada, staff and officers who have retired retaining their rank, being members of the P. Q. R. Association by direct contribution or through affiliated associations; ranges 200, 500 and 600yds.; first prize, $30 and Dolan cup; second, $25; third, $20; fourth $15; fifth, $10; two prizes, each $8, $16; ten prizes, each $5, 50; eighteen prizes, each $4, $72.

The Dolan cup can only be taken by riflemen from Quebec province, and it was therefore won by the second man on the list.

Pvt Hilton, 45th	83	Col-Sergt Dalrymple, 5th	81
Lieut-Col Miller, 8th	82	Sergt Kimmerly, 47th	80
Pvt H W Edwards, 58th	82	Staff-Sergt Miller, 10th	80
Pvt Hall, 79th	81		

Two 72s were counted out.

The next match was the merchants' match, in which the conditions were as follows: Open to all members, range 600yds., number of shots, 7; rifle, Martini-Henry:

Sergt Johnson, 85th	29	Capt Hood, 5th	27
Pvt Hilton, 45th	28	Pvt Carberry, 5th	27
Capt Jamieson, 60th	28	Pvt Thompson, T R C	27
Pvt Wardell, 1st	28	Col-Sergt Marks, 6th	27

Thirteen 23s were counted out of the list. The Montreal corporation cup was won by the 5th Royal Scots with a score of 421, the 6th Fusiliers being second with 410. At a meeting of the members of the association the following officers were elected: Pres., Sir A. P. Caron; Vice-Pres., Lieut.-Col. McEachren, C.M.G., Lieut.-Col. Ouimet, Lieut.-Col. Miller, Capt. Trenholm. Executive members of Council, Lieut.-Cols. Brosseau, Rowe and Martin, Majors Moorehouse and Blaicklock, Captains Sims and Busteed.

Aug. 9.—The Province of Quebec Rifle Association matches were finished to-day. The weather was bright and rather blustery in the morning. It is worthy of remark that the marksmen have expressed themselves as well satisfied with the 1888 ammunition which was served to them. There is a good deal of dissatisfaction in regard to the volley firing match, which took place on the first day. It was announced to-day that the order of merit as first given out was a mistake and the proper award places the teams as follows:

8th Battalion	50	Fifth Royal Scots	41
G G F G	47		

The volley firing contest has caused considerable grumbling at any rate, and this amended decision has only made matters worse. The regulations state that for each shot fired out of time three points shall be subtracted from that team's score. One team, which fired twice before the word of command was given and made ragged firing each time, had only five deducted from its score. Another had two. Now under the rule, competitors cannot understand how less or more than three or a multiple of three could be subtracted.

The first match of the day was the frontier match, open to all members, 7 shots, 500yds., possible 35:

Sergt Mitchell, T R C	30	Sergt Reardon	28
Pvt Armstrong	29	Major Perley	28
Sergt MacCarthy	29	Pvt P Waters, 6th	28
Sergt Clarke, 5th	29	Capt Whitman, 60th	28
Pvt Matheson, 79th	29	Sergt Cooke, T R C	28
Pvt A Thompson, 8th	29	Lt Col Macpherson	28
Pvt A Thompson, 3d	29	Pvt H W Edwards, 58th	28
Sergt Newby	28	Pvt J P Nutting	28
Capt Thomas, 54th	28		

Nine 25s counted out of the prize list.

Extra series, open to all members; position as in No. 2; rifles, Snider range, 500yds.; possible score 25:

Lt Spearing, 53d	25	Mr Vicat, Richmond, R A	24
Corp Doyle 43d	25	Col-Sergt Dalrymple, 5th	24
Sergt Mitchell, T R C	25	Pvt G D McMartin, 5th	24
Pvt Waters, 6th	24	Sergt J Kimmerley, 47th	23
Pvt E E Hutchinson, 43d	24	Sergt J Fairbairn, 43d	23
Sergt Dewfall, 8th	24	Pvt J Ward, 5th	23
Corp J Adams, 13th	24	Capt Hood, 5th	23
Lt Beattie, 60th	24	Capt Bell, 43d	23

The first prize was $25 cash, the rest of the prizes being articles of various kinds. The shooting in it as will be seen by scores was very good.

Martini-Henry match:

Pvt Pressley, 41st	33	Trooper Cooper, P W	29
Sergt C H Clark, 43d	32	Pvt Thompson, 3d	29
Capt Hood, 5th	32	Pvt Higginson, 43d	28
Pvt D Smith, 6th	31	Pvt McJanet, 43d	28
Sergt G Thompson, T R C	31	Mr Vicat, R C A	28
Capt L Thomas, 54th	30	Pvt J Scott, 6th	28
Sergt Johnson, 85th	30	Pvt J Davidson, 8th	28
Pipe Sergt Clarth, 5th	29	Pvt R McAfee, 1st P W	28
Mr Hutchison, M R A	29	Pvt J Lavers, 6th	28
Sergt Goodwin, V R C	29	Pvt Sutherland, G G F G	28
Capt J A Adams	29	Staff-Sergt Pink, 43d	28
Sergt Mailliane	29	Pvt J D Taylor, 43d	28
Col Sergt McRea, 1st P W	29	One 28 counted out.	

Optional match, open to all members; number of shots, 7; range 500yds.; rifles Snider or Martini:

Sergt T Mitchell, 10th	35	Sergt J Wynn, 5th	32
Sergt J Gowdie, 8th	34	Pvt Hilton, 45th	32
Sergt Kimmerley, 47th	34	Sergt Reardon	32
Capt McMicking, 44th	34	Sert Crooks, Q O R	32
Pvt D Mitchell, 13th	33	Staff-Sergt Huntington, 50th	31
Pvt McMartin	33	M J W Cole, M R A	31
Pvt Edwards, 38th	33	Mr Vicat, R C A	31
Sergt Sweet, 60th	33	Lieut Cole, 42d	31
Pvt Hutchison, 43d	32	Pvt Ellis, 43d	31
Sergt W Marker, 6th	32	Sergt Hartley, 8th	31
Capt Thomas, 54th	32	Pvt Keogh	31
Staff Sergt Clarke, 53d	32	Corp Carroll	31
Sergt Macdonald, 43d	32	Lieut Spearing, 53d	31
Corp E Pratt, 6th	32	Pvt Pressley, 41st	30
Sergt Hall, 79th	32	Pvt G Thompson	30
Capt Whitman, 60th	32	Sergt Margetts, 14th	30
Col J P Macphersoa	32	Corp Morris, 13th	30

Fourteen 30s counted out.

BOSTON, Aug. 11.—There was a large number of riflemen at Walnut Hill to-day, and with good weather conditions they managed to get some excellent records.

Rest Match—200yds.

J. R. Munroe	10	11	11	11	12	12	8	12	12	—110

LOWELL, Mass., Aug. 11.—The rifle team of the Richardson Light Guards, of Wakefield, came to Lowell this afternoon to shoot off a tie in a series of three matches between them and the Mechanic Phalanx team, of this city. One man from each team was absent, and the match was shot with teams of six each. The visitors were taken in a barge to Capt. Pratt's range at Middlesex Village, and the shooting was begun at 4 o'clock. The light was bad, but the other conditions were good. The Wakefield team won the match by 11 points. Following is the summary: 200yds., Creedmoor rules, 7 shots per man, visitors allowed one sighting shot:

Wakefield.		Mechanic Phalanx.	
Private Babbitt	5444455—31	Private Foster	4445534—29
Private Killam	4445445—30	Sergt Farnsworth	4354444—28
Sergt Gibon	4445344—28	Private Hazeltine	4443444—27
Private Horton	5444443—28	Private Kincaid	4434443—26
Capt Taylor	4443534—27	Lieut Worthen	0433444—22
Sergt Flanders	4203443—20	Lieut Wilson	3424422—21
	164		153

SAN FRANCISCO, Aug. 5.—Three rifle clubs were represented at Harbor View shooting range to-day, and the almost continuous crack of the guns proclaimed the fact that the members were striving for the much-coveted medals. The weather was perfect and very good scores were the result of the shooting. The California Schützen Club held its monthly medal competition with the following result: Champion class medal won by F. Kuhls, with 426 rings; first class medal, Capt. Klein, 421; second class medal, C. Meyer, 382; fourth class medal, J. Carrol, 379; cadet class, first class medal, P. Wertheimer, 344; second class medal, A. Stettin, 304. There was another shoot late in the day, the prize being a handsome bearskin rug. The lucky winner was George Helm, with the score of 71 for three shots. The Germania Rifle Club did not have so many men on the grounds as their fellow marksmen in the California Schützen Club, but they managed to use a good allowance of powder and lead. The result was: First class medal won by A. Robertson, with 376 rings; second class medal, C. Adams, 377; third class medal, F. Thensel, 321; first best center, G. H. Bahrs, 24; last best center A. Zeeches, 20. In the Eintracht Schützen Club competition the winners were: Capt. Kuhls, champion class medal, with 439 rings; L. Smith, first class medal, 369; H. Patt, second class medals, 342; A. Frost, third class medal, 342; last best shot, A. Stamer, 24.

TORONTO, Aug. 11.—The return telegraphic match between Halifax Garrison Artillery Rifle Association and the Toronto Association came off this afternoon on their respective ranges, and resulted in a win for the home team by 43 points. The final match will doubtless be shot next Saturday.

CREEDMOOR, Aug. 11.—The eighth marksman's badge match was shot at Creedmoor to-day. The following were the winners:

	200.	500.	Total.
W J Underwood, Co H, 7th Regt	22	24	46
H M Field, Co F, 23d Regt	19	24	43
A Z Bowen, Co G, 22d Regt	19	23	42
H C Fowler, Co F, 23d Regt	20	22	42
F S Kennedy, Co F, 7th Regt	20	21	41
G T Munson, Co K, 23d Regt	22	19	41
J J Tcenan, Co F, 13th Regt	19	21	40
W N Bavier, Co B, 32d Regt	20	20	40

Winners of Medals.

G A Lane, Co A, 13th Regt	22	23	45
W A Stokes, Co I, 23d Regt	24	21	45
D Bacon, Co K, 7th Regt	20	24	44

TORONTO, Aug. 7.—A variable cross wind to-day was the means of keeping the scores of the Toronto Rifle Association rather low. At 600yds. it was very irregular. Several of the club's best shots are in Ottawa. Scores at practice:

	200	500	600		200	500	600
R Bennie	29	35	23—87	W Jack	30	26	17—73
W G Fowler	26	33	23—82	J Agnew	24	21	24—69
J Lanskall	30	30	22—82	F Brown	26	21	21—69
J Bruce	30	27	22—79	W J Urquhart	28	21	20—69
T Kelly	30	30	19—79	A Bell	30	23	16—69
A Curran	31	32	24—78	W O Vanloon	25	28	13—66
W Ashall	28	22	26—76	J Anderson	26	24	15—65
G Lewis	28	28	20—76	W McSpadden	24	18	21—63
W Mowatt	28	30	17—75	J Johnston	21	25	13—59
W Harp	30	19	25—74				

CANADIAN SMALL-BORE WORK.—A friendly match between King City and Tottenham was shot by telephone on Aug. 2, and resulted in favor of Tottenham. The Tottenham team only joined the Ontario Small-Bore Rifle Association about a month ago, and feel proud in defeating a team like King City in their first match. Tottenham's grand total was 400, and King City's 393. The score:

King City.				Tottenham.			
	100.	200.	T'l		100.	200.	T'l
I W Crossley	41	35	76	Levi Medcalf	45	33	78
A Irvine	27	08	35	I R Bond	36	25	61
R Cull	23	31	69	John Hay	40	32	72
Dr Norman	38	21	59	Dr McKenna	42	27	69
E J Davis	41	35	70	M Nelson	35	18	53
I H Rose	42	42	84—393	S Windsor	31	36	67—400

SPRINGFIELD, Mass., Aug. 9.—Members of the City Guard made these scores at Lake Lookout Range this afternoon, 200yds.:

Bull	4455445—31	Bowers	4444544—29
W E Hosmer	5445454—31	Syner	3544354—28
McDonald	5444445—30	Taft	3444443—26
Merrick	4444554—30	Dr McKenna	3444443—26
Daggett	4455345—30	Smith	3444443—26
Southmayd	5444544—30	Dean	2444435—26
Wilcox	4454445—30	F G Hosmer	5453443—26
Sterling	3454445—29	Cordis	4243343—23
Johnson	4544444—29	Mclnery	4333334—23

DOVER, N.H., Aug. 10.—In the rifle contest between the Cocheco Rifle Club and the Antrim Rifle Club, of Pennsylvania, the Cochecos won by 148 points. The score was:

Cocheco Rifle Club.

J H Wentworth	71	86	80	92	83—412
J B Stevens, Jr	72	90	79	81	79—407
H B Horton	67	71	76	68	61—344—1163

Antrim Rifle Score.

E J Drake	62	73	61	65	74—335
C E Burgess	56	70	48	60	61—293
C hris Claflen	47	58	58	60	59—282— 915

ROCHESTER, N. Y., Aug. 6—There was a meeting of the Schuetzengilde this evening, to arrange for the Schuetzenfest to be held at Windsor Beach on Aug. 20, 21, 22 and 23. Henry Heinold was appointed Schuetzenmeister, and Col. Joseph Erbelding, Joseph Wagner, F. Ziegler, Charles Gottschalk and F. Schwikard were named as adjutants. The shooting will begin each day at 10 o'clock and the Fest will close with a grand ball and midsummer night festival. The programme will be much the same as last year.

INFANTRY FIRE.—Gen. Sheridan had great faith in the value of a trained infantry fire, and was always glad to see attention paid to target practice. John Austin Stevens, who met Gen. Sheridan when he was in Europe during the Franco-German war, said: "I met Gen. Sheridan at a breakfast given by Dr Bélard, and I asked him why he was on the Prussian side in the war. He replied: 'Mr. Stevens, I came abroad for one purpose—to ascertain the value of artillery as against trained infantry. I went over the battlefields where the dead were hastily buried and turned over the bodies to discover the nature of their wounds, and the experience confirmed my judgment that artillery was useless. I do not believe in artillery as an auxiliary in war.' Gen. Gibbs, who was with Gen. Sheridan in the Shenandoah Valley in his advance against Early, once said to me: 'No cannon was ever fired at Gen. Sheridan that he did not capture.'"

BOWMANVILLE, Ont., Aug. 11.—At the trial here to-day of the Dominion of Canada ammunition, 1888 issue, Mr. W. S. Russell made the remarkable score of 99 out of a possible 105, at 200, 500 and 600yds., Snider rifle, 31, 35 and 33 points; total 99. At the Quebec Association Rifle meeting, the good quality of the new issue ammunition was generally commented on, and one peg for hanging growling speeches on at the annual meetings seems to be gone.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

CENTRAL ILLINOIS TOURNAMENT.

JERSEYVILLE, Ill., Aug. 3.—The Central Illinois Sportsman's Association held its tenth annual tournament at Sportsman's Park, in this city, July 24, 25, 26 and 27. The shoot was a success in every way, and the association made some money. It was a mistake in having it so early in the season, as the weather was very hot, and a great many of the shooters are farmers and were busy with their hay harvest, etc. Next year we will have it some time in September.

C. W. Budd went home ahead financially, and the possessor of one of the finest pointer puns in the land, and says he would not take a farm for it. Jim Stice won a Democratic plug hat, and wore it home, claiming it was a Harrison hat. L. S. Carter captured the individual championship gold badge, killing 17 live pigeons straight. C. M. Powers, of Decatur, won a handsome silver goblet. The Decatur team, composed of L. S. Carter, C. M. Powers, W. A. Henninger and I. W. Budd, won the team badges, four handsome gold medals. Fred A. Fodde, of St. Louis, acted as referee all through the tournament and gave good satisfaction as usual.

The convention was held the night of the 24th, and elected the following officers for the year: Cam. R. Hutchison, President, Jerseyville, Ill.; Dr. E. L. Spencer, Vice-President, Bunker Hill, Ill.; L. S. Hansell, Secretary, and John Fox, Treasurer, Jerseyville, Ill.

The following are the scores:

July 24.—Shoot No. 1, 6 standards, 3 moneys and 4 prizes:

G Beatty	010111—4	"Dukes"	111001—4
C M Powers	110001—3	C R Smith	101001—3
W C Smith	011111—5	Ed Robley	111111—6
C Heiligenstein	111001—4	Ed Spencer	011101—4
L S Carter	101101—4	J R Stice	011100—3
L S Hansell	001110—3	C McAninch	011100—3
Dr Spencer	011101—4	C R Hutchison	110111—5
H Govro	100111—4	M A Warren	100101—3
C E Strawn	110111—5	R Whitehead	101111—5
F Chappell	111100—4		

Robley won first alone. Ties on 5 divided money and Hutchison won prizes on shoot-off; Dukes third, Stice fourth.

No. 2, open to all, 4 moneys, 9 American clays:

Heiligenstein	101111111—8	Chappell	101110111—7
C W Budd	111111111—9	Warren	101111100—6
Stice	111111011—8	W C Smith	101111111—8
Ed Spencer	111111110—8	Dr Spencer	111011101—7
Robley	111111110—8	Carter	101111111—8
Dukes	100111100—5	Govro	111101011—7
Powers	101111101—7		

Budd first, Stice, Ed. Spencer, Smith and Carter second, Govro and Dr. Spencer third, Warren fourth.

Extra shoot, 9 standards, 3 moneys: Metcalf 7, "West" 7, Chappell 7, Powers 6, Solomon 6, Hansell 7, Beauvais 7, Ed. Spencer 5, W. C. Smith 6, Dukes 8, Stice 7, Dr. Spencer 5, Budd 9, Strawn 8. Budd first, Dukes and Strawn second, Stice third.

No. 3, 6 singles and 2 pair Keystoness, 4 moneys:

Strawn	111110 10 10—7	Ed Spencer	011001 11 11—7
Stoeckel	100101 11 00—5	Hutchison	111111 10 01—8
Dukes	111110 11 11—9	Robley	111111 11 11—10
Tack	011001 11 00—5	McAninch	111010 10 10—6
"West"	110110 00 10—5	Powers	111011 11 10—8
Whitehead	001101 01 01—5	Govro	110110 11 11—8
Chappell	100011 11 11—7	Metcalf	110001 00 11—5
Stice	111010 11 11—8	Parent	101010 11 00—5
W C Smith	100111 01 11—7		

Robley wins first, Dukes and Carter second, Powers third, Strawn fourth.

No. 4, open to all, 9 Keystones, 4 moneys:

Dukes	111111111—9	Strawn	010101110—5
Stice	001111010—5	Powers	011111111—8
Ed Spencer	111101110—7	W C Smith	011011110—6
"West"	111110100—6	Chappell	101111010—6
Whitehead	101010110—5	Robley	111111111—9
Beauvais	010011110—5	Hutchison	011111110—7
Parent	110011001—5	Govro	111110001—6
Metcalf	101111111—8	Dr Spencer	011001101—5
Budd	111111010—7		

Dukes and Robley first, Metcalf and Powers second, Ed Spencer and Hutchison third, Chappell fourth.

Extra shoot, 6 Keystones, 3 moneys: Stice 5, Chappell 5, Ed Spencer 5, Robley 5, Dukes 6, Beauvais 4, Metcalf 4, Budd 5, Solomon 3, "West" 4, Hansell 3, Powers 5, W. Smith 4, Dr. Spencer 3. Dukes first, Stice, Chappell and Powers second. W. C. Smith third.

No. 5, 10 live pigeons, 5 prizes, 30yds. rise, both barrels.

Whitehead	1211111012— 9	Beatty	1111001111— 8
Dukes	1111100111— 8	W C Smith	2010012200— 5
Chappell	1112021110— 8	Hutchinson	1111121011— 9
Stice	1112101012— 8	Metcalf	0101111110— 7
Warren	1100201221— 7	Solomon	1121211111—10
Parent	1000200022— 4	Robley	2112111201— 9
Powers	1212101112— 9	Carter	1111111111—10
Heiligenstein	1011121212— 9	G R Smith	0111112100— 7
Strawn	2101102212— 8	Skelly	1211020100— 6
McAninch	0201221101— 7	Burleigh	0212111000— 5
Ed Spencer	1102120111— 8	Liming	1221201001— 7

L. S. Carter wins the individual championship gold badge, killing 17 birds straight. Whitehead, Robley and Powers, 2d; Stice, Ed. Spencer and Beatty, 3d; Warren, McAninch, Metcalf, Liming and C. R. Smith, 4th; Skelly and Burleigh, 5th.

Extra shoot, 6 standards, 3 moneys: Stice 6, Budd 6, Beatty 3, Hansell 6, "West" 4, Chappell 5, Carter 3, Powers 6, Ed. Spencer 5, W. Smith 5, R. Solomon 4. Stice and Budd 1st, Chappell 2d, "West" 3d.

No. 6, open to all, 6 pair Keystones, 4 moneys:

Extra, 6 clays, 3 moneys: Stice 6, Budd 6, Scott 5, Parent 5, Carter 5, Lee 5, Henninger 5, Powers 5, Chappell 5, Strawn 4. Budd and Stice first, Lee second, Strawn third.

JAMAICA PLAIN, Mass., Aug. 6.—The long looked for came at last, a ladies' day at the Jamaica Plain Gun Club. Wednesday afternoon, Aug. 1, was the day set for the celebration of the great event, and a more delightful day could not have been made to order. The fact that the affair was arranged and carried out by the "fair sex" was a sure guarantee of success, and such it was in every sense of the word, and it will be recorded as a red-letter day in the history of the club. After shooting at a few sweeps a collation was spread, and to say the least the boys demonstrated the fact that they could eat if they could not shoot. The most interesting feature of the occasion was the ladies' special prize match, at three pair blue rocks and five clays, two valuable prizes were given and a "booby," owing to a friendly rivalry existing between our veteran ex-president, whose many years experience at bullseye and trap has made him a very dangerous contestant to meet, especially when there are ladies in attendance, and our esteemed Capt. L. D. Charles, Esq., who, possessing a large amount of executive ability, and being a splendid shot under ordinary circumstances, is pitiful to behold when ladies attend our shoots; his colossal nerve seems to forsake him, and, to use his own expression, "he can't shoot a little bit." In this match the prize was a valuable gold-headed cane, won by Geo. Ingersoll, the second handsome pair of sleeve buttons, won by M. Brown, who prizes them so highly that he thinks of having them set in his eye-glasses so he can alway have them before him. The Booby prize was a very fine breechloading gun with two "arrows," and was won by C. H. Cilley without a struggle and no ties to shoot off. Capt. Charles presented the prizes to the winners, each accompanied with a remarkable piece of oratory and a sort of a did-you-ever-get-left look in his eye. The shoot lasted till a late hour, and all went home convinced that a ladies' day at the trap is quite the thing. Try it boys. Following are the scores:

First event, 6 blue rocks—Boothby, first; Brown, second; Lewis, third.

Second event, 6 clays—Brown, first; Chapin, second; Charles, third.

Third event, 5 blue rocks—Brown and Ingersoll, first: Cobb, second; Boothby, third.

Fourth event, novelty—Charles and Boothby, first: Chapin, second; Baker, third; Cilley and Ingersoll, fourth.

Fifth event, walk-up match, 5 clays—Cilley and Cobb, first; Boothby and Chapin, second; Green and Ingersoll, third; Lewis, fourth.

Sixth event, ladies' match, 5 clays, pair of blue rocks—Ingersoll, first; Brown, second.

Seventh event, merchandise match, fifth one of a series of ten, being shot at the regular shoots—Brown and Baker, first; Chapin and Charles, second; Slocum, third; Ingersoll, fourth; Cilley, fifth.—Alookeron.

NEW YORK, Aug. 7.—Eureka Gun Club of New York, at Moore's shooting grounds, Secaucus, N. J.; 12-bore 16, and 10-bore 18yds. rise. National rules, sweepstakes.

At 5 American clays and 5 standards:

Wahlers	0000111101—5	Schortemeier	1101010101—6
Diffley	1011111110—8	Strope	0100010001—3
Dr Gill	1010101015—5	Quick	1111011011—8

Diffley and Quick first, Schortemeier second.

Second event, same conditions:

Wahlers	0110010000—3	Schortemeier	1011111111—9
Diffley	1011111110—8	Strope	0100001001—3
Dr Gill	1010101110—6	Quick	1111101001—7

Schortemeier first, Diffley second.

Third event, regular monthly prize shoot, best seven in ten scores to count; 10 American clays and 5 standards; winner retains medal until next shoot:

Wahlers	0101011011000000— 6	Schortemeier	1111011010111111—12
Diffley	1111111111010011—13	Strope	1001001100100001— 6
Dr Gill	1111011001010101—10	Quick	0111101001111111—11

Diffley won medal for August.

Fourth event, doubles, 1 American clay and 1 standard; 5 pair:

Wahlers	0100100010—3	Strope	0000110101—4
Diffley	1010111000—5	Quick	0000010011—3
Schortemeier	1011100005		

Schortemeier first on shoot-off, Strope second.

Fifth event, at 5 American clays and 5 standards:

Wahlers	1010001111—6	Strope	1101111010—7
Diffley	1101111001—8	Quick	1111101110—8
Schortemeier	1111101111—9		

Schortemeier first, Quick and Diffley second.

Sixth event, at 7 clays:

Wahlers	0101000—2	Strope	1111100—5
Diffley	1111101—6	Quick	1111111—7
Schortemeier	1111011—6		

Quick first, Schortemeier and Diffley second.

The slim attendance was owing to the uncertainty of the weather.

HAMILTON, Ont., Aug. 6.—The Wildfowlers' monthly shoot for their cup this afternoon; attendance small. 25 blackbirds, 5 Hamilton traps, 18yds. rise, National rules:

J Bowron	1111101111011111111111101—22
John Smyth	1011101101101011101011—18
Josph Smyth	0111111110101010101110—16
T Stephens	0001010101100111111111—17
J Pelt	0100101111101111101111011—17
Clifford	1010110111010100111101111—17
H Graham	1001010111011011111111000—16
G Hore	1010000110101101101111111—16
C Hunt	1110110101001010001110111—16
A Smyth	0011001101000111010100010—11
W Moore	0010111001010000101011100—11
J L Sullivan	1010010111001000000010111—11

J. Bowron scored one win.

Match at 7 blackbirds, 5 traps, 18yds. rise:

Bowron	1111111—7	Clifford	0111111—6
Graham	0111111—6	Hunt	0111010—4
John Smyth	1111111—6	Pelt	1011101—5
A Smyth	1111110—6	Joseph Smyth	1100000—2
Stephens	1111110—6	Cliff	0001000—1

Bowron first; John Smyth won second in the shoot off.

Five blackbirds: Bowron 4, Pelt 4, John Smyth 4, Stephens 3, A. Smyth 2. Bowron first, Stephens second.

Five blackbirds: Stephens 5, Bowron 4, Pelt 4, Graham 3, Hunt 3. Stephens first, Bowron and Pelt divided second.

WELLINGTON, Aug. 11.—To-day has been a regular old-fashioned one at the Wellington Gun Club's range. The attendance was large, the shooting lively and the scores good. In the consolation matches scores were made as follows: Snow, 22; Wardwell, Stanton and Melcher, 21 each; Nichols and Bates, 20 each; Brown, 19; Moore, C. E. Savage and G. H. Savage, 18 each; Schaefer and Chapin, 17 each; Hutchinson and Baxter, 16 each; White and Conant, 14 each; Stone, 13; Grimes and Bond, 12 each. Hutchinson won the Grimes badge, after a warm and long contest. Winners in other events were: Six blue rocks, Hutchinson and Chapin; six pigeons, Moore and Swift; six pigeons, Moore, Stanton and Herrick; six blue rocks, Hutchinson; six pigeons, Moore and Stanton; six blue rocks, Stanton; six pigeons, Stanton 12 pigeons, De Rochmont, Chapin and Melcher; 13 blue rocks, Brown and Snow; six blue rocks, Stanton; three pairs pigeons, Bond and Herrick; six blue rocks, Bates; six blue rocks, Brown, Moore, Courtney and Stanton; six pigeons, Stanton, Moore and Melcher; six blue rocks, Wardwell and Nichols.

OTTAWA, Aug. 11.—The St. Huberts Gun Club held their last shoot to-day until November next. It was a sweepstakes, at 15 Ligowskis, 15yds. rise, 5 traps. Dr. Martin scored 13, G. Trudeau 13, A. Throop 13, R. Dalton 12, B. Rathwell 11, Dr. Harsey 10, J. Deslauriers 9, G. White 8, D. Madul 8, B. Swhile 7, J. Stewart 7. E. White 7. In shooting off the ties, Dr. Martin broke 7 out of 10, and Trudeau 6 out of 9, Throop missing his first bird. Sweep at 10 birds each: Dr. Martin 9, Throop 9. The doctor broke three straight and won on the shoot off.

HARTFORD, Ct., Aug. 11.—The Colt Hammerless Gun Club men had a pleasant time to-day for their weekly shoot and the scores were very fair. The first sweepstake was won by Stannard, Highby, second; Johnston third, Melrose, fourth. The regular shoot was then commenced and resulted in Nicholas winning the medal by a score of 21. The scores were as follows:—Nichols 21, Melrose 19, Willey 18, Burbridge 17, Johnson 17, Bushnell 16, Higby 16, Stannard 15, Colt 15, Wood 14, C. Burnham 10, H. Burnham 11. The second sweepstake was won by Capron, Nichols second, Higby of New Britain third and Melrose fourth.

TORONTO, Aug. 10.—The third shoot for McDowall & Co.'s gold medals at Peoria blackbirds was shot at their grounds this afternoon. The competition will close next Saturday. The following are yesterday's scores:

First Class.

Paul	1111111111011011011—17	Saunders	1110111101031000100l—11
S'clair Sr	1010110110110111111111—15	Charles	1101010011100001001—10
M'Dowall	1111001001011110111—14		

Second Class.

Fisher	1101011110110101101—14	Romain	1110110001100101001—10
Sawden	1011010101010011110—12	Dick	1100011111001010101—11
Rice	1000110001101111101l—12		

Third Class.

S'clair Jr	1111010110011111101—15	Tomson	0100110111011110011—13
Pearsoll	1101101011110010111—14		

The following are the scores of those who shot their second string:

First Class.

I Sinclair, Sr	0011110011010110100l—11

Third Class.

S'clair Jr	0101111111101111011—16	Tomson	0110010100010101901— 9

BOSTON, Aug. 11.—The Brighton Gun Club held a well attended shoot at Oak Island this afternoon, at which the Boston, East Boston and Jamaica Plains clubs were also represented. The principal event was the match between the Brighton and East Boston clubs' teams, which was won by the latter, the individual scores being as follows:

East Boston Club.		Brighton Club.	
Flanders	1110111001— 7	O'Connell	1110101109—6
Hargraves	1111111101— 9	M Coyle	1110111001—7
Whitcomb	1111111111—10	Breivogel	0010000011—3
Norton	0011111010— 6	J Coyle	0010011110—5
Brown	0111100111— 7	Charles	1101111011—8
Alexander	0110111011— 7	Bowker	1111110110—8
Solleri	1110 — 3—49	Solleri	10110 —3—40

Following are the winners in the sweepstake events: First event, 7 clays, M. Coyle and O'Connell. Second event, 7 Peorias, Charles and Hargraves. Third event, 3 pairs clays and Peorias, Whitcomb. Fourth event, 7 Peorias, Hargraves and Whitcomb. Fifth event, 7 clays, O'Connell. Sixth event, 3 pairs clays and Peorias, Hargraves. Seventh event, 7 Peorias straightaway, Hargraves. Eighth event, 5 Peorias, Hargraves and M. Coyle.

EMERALD GUN CLUB.—New Dorp, Staten Island, July 26.—Match at 10 live pigeons, 5 ground trap, 21, 25 and 30yds. rise, 80 yds. boundary. Shot under Emerald Gun Club rules

J Measel, Jr	1111100000—6	T Codey	0100000000—1
H Rubino	1100101110—6	L Gehering	0110101001—5
Dr Hudson	1010011101—6	J Howard	0110000010—3
T Chrystal	1011000111—6	P J Keenan	1111100000—5
N Measel	0011110010—5	G Remsen	1111100111—8
P Beetz	1101000000—3	J H Voss	1101100111—7

Remsen first gold medal, Rubino second gold medal, Chrystal third gold medal. Match shot Aug 9. Scaview Park, New Dorp, Staten Island.—March at 10 live pigeons, 5 ground trap, 21, 25 and 30 yds. rise, 80yds. boundary:

J Measel, Jr	1111110000—6	L C Gehering	1110111111—9
P Butz	0100010 00—3	T Codey	1110011010—6
N Measel	1100111111—9	J Klein	1001011111—7
Dr Hudson	1110001101—6	J H Voss	1011011111—8
P J Keenan	0101000110—4	F Schraider	0110100111—6
S McMahon	0001020010—2	G Remsen	0001010111—5
T Chrystal	1011001111—7	M McMunn	0110100011—5
T P MacKenna	1111100110—7		

Ties on miss and out for first at 2 birds, 33yds. Measel, 00; Gehering 01, wins first gold medal, first time. Ties on miss and out for second at 3 birds, 25yds. MacKenna, 010; Klein, 011, wins second gold medal, second time. Chrystal wins third, second time.

MONTREAL, Aug. 7.—The final shoot of the Dominion Gun Club for a handsome gold medal took place to-day. The prize was to be awarded to the best score made in four handicap matches. The matches took place at intervals of a week, 15 Peorias each day being the targets. In the first two competitions Emond took a lead that looked big enough to win. The next match saw Tom Lesage to the front with a nice lead of four birds, and everybody thought he had a dead sure thing, but the last match yesterday changed the look of things. In the first round all tied on 3 birds out of 5, leaving Lesage still 4 ahead and only 10 birds to shoot at. Then Emond went in and 5 straight birds flew away from him, making the score stand: Lesage 36, Wallace 37 and Emond 35. When the last round was started there was great excitement. Lesage was nervous and only grassed 2 birds out of 5. Wallace came next and knocked 3 inanimate pigeons into smithereens. Then Emond stepped up. Five kills would tie for first place. Bang! "Broken," said the referee, and he said it four times. The last shot would decide it. Emond looked nervous. "Ready," "pull," "bang," it was a straightaway. "Lost bird," said the referee, and the big blonde was happy. The last miss had saved him and he won the series and the medal by just one bird—the last one. Following is the score of the three leaders:

	First.	Second.	Third.	Fourth.	T'l.
C H Wallace, 22yds	10	9	10	11	40
W Emond, 22yds	11	10	8	10	39
T W Lesage, 20yds	11	9	13	5	38

NEWARK, N. J.—The Roseville Gun Club recently challenged the Woodside Gun Club to shoot a team match at 25 clay-pigeon per man. The challenge was promptly accepted, and the match will be shot on the Woodside's ground next Saturday afternoon. The teams will comprise eight or ten men each, and the shooting will be under the National rules. The losing team will pay for the birds.

SIOUX CITY.—Capt. Bogardus has made a match with J. H. Bailey, of Dakota, to shoot at 100 pigeons at 30yds., in this city, on Aug. 14.

NEW YORK SHOOTING GROUNDS.—We had hoped to give in this issue such parts of the constitution and by-laws of the newly organized New York Suburban Shooting Grounds Association as would explain its character. They will be given next week. At the recent meeting held in Jersey City the following officers were elected: Chas. Richards, President; Aug. Schmitt, Vice-President; Chas. M. Hathaway, Treasurer; O. E. Morton, Secretary. Board of Directors—Chas. Richards, Aug. Schmitt, Chas. M. Hathaway, O. E. Morton, Chas. Tatham, Hugh O'Neill, Chas. B. Reynolds, J. P. Dannefelser, David Ellis.

LUMB VS. DAVIS.—Frankford, Philadelphia, Aug. 11.—The second match of the series between Mr. A. L. Lumb and Mr J. H. Davis at 50 clay birds was shot on the grounds of the North End Gun Club this afternoon. This match, like the first, resulted in favor of Mr. Lumb. A. L. Lumb 44, J. H. Davis 39.—J. C. S.

Yachting.

Small Yachts. By C. P. Kunhardt. Price $7. Steam Yachts and Launches. By C. P. Kunhardt. Price $3. Yachts, Boats and Canoes. By C. Stansfield-Hicks. Price $3.50. Steam Machinery. By Donaldson. Price $1.50.

FIXTURES.

August.

17. Bay View Moonlight Sail.
18. Bay View Annual Cruise.
18. Monatiquot, 2d Cham, Ft. Pt.
18. Larch. Oyster Boat Race.
18. South Boston Club.
18. Cor. Marblehead, Open.
20. Great Head Moonlight Sail.
20. Miramichi, Cup.
22. Pleon, Third Cham.
23. Cape Ann, Open.

25-Sept. 8. Quaker City Cruise to New London.
27. Rhode Island, Open.
27. Quincy, 3d Cham.
28. Dorchester Club.
29. Bay View Club.
29. Great Head Club.
29. Monatiquot, Open Sweep.

THE NEW YORK Y. C. CRUISE.

As far as racing goes, it must be confessed that the present season has proved a failure, especially so when the predictions and promises of last winter are taken into consideration. All through the dull season there was plenty of talk of great things to be seen this year, of new yachts building, of old ones altered and repaired, of fierce fights in the schooner classes, of renewed interest in the 70ft. class of single-stickers, and of races that should do something toward settling the question of type. In spite of all this, now that the principal races of the year have been sailed, yachtsmen are as much in the dark as ever; in fact, not one conclusive result has been reached. Of all the races sailed there has not yet been one closely fought battle in a good breeze between the larger yachts, save perhaps the one between Grayling and Sea Fox in the Sewanhaka C.Y.C. regatta and the meeting of Volunteer and Puritan in

the Eastern race at Marblehead, and in the first of the two the result was inconclusive as to the real merits of the boats, while as to the second the superiority of Volunteer was already established. Not one of the great questions of the season has yet been answered—which is the fastest, Sachem, Grayling or Sea Fox; Bedouin, Shamrock or Katrina; can the compromises beat the old flat type in any ordinary weather; and are the latest and deepest boats better than the more moderate compromises? Not one of these questions has been settled; the most that has been shown is that Grayling has been improved by her alterations, that she has a most formidable rival in Sea Fox, and that Katrina is a decided success and likely to lead her class.

As for the sport, there has hardly been any; in all the spring races the entries were for the most part poor, but few classes showing a fair number; added to which the weather was light and flukes were plenty. Sachem and her sister, the new Marguerite, did less than nothing at New York; the first class sloops did not start; Katrina found only Fanny as a rival. Bedouin, Shamrock, Gracie and Titania being absent; while Cinderella and Clara were both out of commission. None of the New York boats went East, and the regatta at Marblehead was no better than those at New York. There were strong hopes for better things on the cruise, especially in the race for the Goelet cups, but these too have not been realized thus far, and unless owners wake up and some racing weather is found for the proposed fall races, the whole history of the season, as far as the large yachts is concerned, will be very quickly written.

The original programme for the cruise included an extra race, that for the cups offered by the citizens of Vineyard Haven last year, to be sailed for off Oak Bluffs, after which the fleet would disband, but this was altered later on, the cruise to be extended to Marblehead, where the Eastern Y. C. had arranged for a regatta, the sum of $1,500 being appropriated for prizes. The rendezvous was set as usual for New London, the date being Aug. 8, and by evening the greater part of the fleet was in the harbor. On the way from New York the steam yachts Corsair and Electra had an exciting brush, in which the Corsair led. At night a meeting of the captains was held, at which it was decided to proceed to Newport as soon as the weather permitted, there being then a dense fog, to sail for the Goelet cups on the day after arrival, then to proceed to Vineyard Haven, laying over one day to race for the Vineyard Haven cups, afterwards sailing to Marblehead. Mr. Geo. L. Schuyler was elected a member of the regatta committee in place of Mr. Alexander Taylor, Jr. Orders were issued that ensigns should be carried at half-mast on Saturday out of respect for General Sheridan. This year, for the first time, prizes were offered for the yacht in each class which should make the best average on the daily runs from port to port, the first run being from New London to Newport, and in spite of the bad weather, with rain and fog, preparations were made for an early start on Thursday morning.

New London to Newport, Aug. 9.

Contrary to expectation the morning was clear and bright before the hour for starting, with a light S.W. wind and smooth water over all the Sound. The starting line was off the Sea Flower Beacon, and the fleet, to the number of 55 sailing yachts, with the steamers Electra, Corsair, Magnolia, Sagamore, Sapphire, Wampanoag, Say When, Sentinel, Vision, Starling, Vedette and Fedalma, were off the beacon by 10:30. Owing to a blunder with the signals Gitana, Atalanta and Halcyon crossed before the proper time. Iseult, Crocodile and Portia, all small craft, started before the fleet. Grayling, Puritan, Sea Fox and Troubadour were near the line and went over in good season, but Volunteer, Sachem and some others of the fast ones were in the pack astern and could not work clear for some miles, being hindered by their slower neighbors. The preparatory signal was given at 10.47 and the start at 10:57, the interval allowed for starting being 20 minutes. The starters were: Gitana, Atalanta, Halcyon, Grayling, Troubadour, Sea Fox, Pocahontas, Puritan, Marguerite, Varuna, Hildegarde, Bedouin, Iroquois, Fanny, Norseman, Sachem, Lydia, Elma, Katrina, Palmer, Columbia, Athlon, Azalea, Gaviota, Princess, Lotus, Curlew, Mayflower, Whim, Ambassadress, Alarm, Miranda, Volunteer, Magic, Triton, Nymph, Dauntless, Cinderella, Nonpareil, Wanderer, Intrepid, Moutauk, Thistle, Medusa, Dare, Huron, Whileaway, Harbinger, Regina, Portia, Iseult, Crocodile.

The leaders were Puritan and Sea Fox, the former to windward, with Grayling, Troubadour and Mayflower next. The wind soon freed enough to permit spinakers to starboard, and all the yachts set them. Puritan gained on Sea Fox, and finally passed her when off Ram Island, but Grayling was unable to overtake either of the leaders. Mayflower was doing very well, while Volunteer, now clear of the fleet, was still some distance from the head of the procession, with Katrina close to her. Sachem, too, had worked clear, and was now after Grayling, while Marguerite was doing but little. When off Watch Hill, both Bedouin and Marguerite struck on the rocks, and laid until hauled off by the Cactus, of the Lighthouse Department. Mr. Rogers reports that the rock on which Bedouin struck lies between the beacon on Sugar Reef and the beacon on Watch Hill Reef and has but 12ft. of water at high tide, though Montauk, drawing 12ft., passed safely between it and the Sugar Reef Beacon. When off Watch Hill the fleet passed the big raft, on its way from the Bay of Fundy to New York. Spinakers were set after Point Judith was passed, and the fleet was soon at anchor off Newport after an uneventful run. The official summary of the times is:

FIRST CLASS SCHOONERS.

	Length.	Elapsed.	Corrected.
Ambassadress	150.05	6 27 35	6 27 35
Dauntless	112.83	5 53 04	5 33 04

Portia	Not timed.		

The measurements were not complete, but the winners in the various classes were Palmer, Sachem, Iroquois, Lydia, Puritan, Fanny, Hildegarde, Bertie and Regina. In the harbor were a number of yachts waiting to join the fleet. It was decided to sail on Friday for the Goelet cups, over one of the usual courses, around the buoy off Block Island and a mark off West Island, or around the Sow and Pigs and Hen and Chickens Lightships.

Goelet Cups, Newport, Aug. 10.

The New York Y. C. certainly owes much to the liberality of Mr. Ogden Goelet in providing the prizes which bear his name, and which have come to be looked forward to as the principal ones of the year. For seven successive seasons the prizes, in each case a cup valued at $1,000 for schooners, and one valued at $500 for singlestickers, have been given by him, the conditions being that the yachts entering, from the New York and Eastern clubs, shall not have hauled out to clean bottom after the commencement of the cruise. As the courses are among the best in the country, and far better than the New York course as regards wind and tides, the race has been looked forward to by all to decide the question of the leading schooner, and it was no small disappointment that the results should be without value through the fickle weather. In looking at these results, such as they are, it is necessary to throw out entirely the first half of the course, some 18 miles. Up to this point there was nothing but flukes and the chances of light winds from different quarters, favoring one yacht or the other. From the first mark, the Sow and Pigs Lightship, to the second, Hen and Chickens, the wind was about the same to all, quite light and well aft, while on the beat of about 14 miles home, it was stronger, but greatly in favor of the leaders, who were running into the wind as it freshened from the west. Allowing for this fact the times from Hen and Chicken show fairly well the work of each yacht, but unfortunately only the leaders were timed at the finish. The day was clear and warm, the water perfectly smooth, and the wind in the morning about N.N.E. and light. The fleet ran out about 10 A. M. and found the signals flying for the Sow and Pigs course. The start was given at 10:30, the following yachts going over:

SCHOONERS.

Elma	85	3	R. L. Belknap.
Dauntless	116	7	C. H. Colf.
Grayling	82	8	L. A. Fish.
Magic	80	6	T. N. Motley.
Miranda	86	4	G. H. B. Hill.
Montauk	94	10½	J. E. Brooks.
Iroquois	80	00	T. J. Coolidge, Jr.
Intrepid	100	8	L. Phenix.
Palmer	104	4	R. Stuyvesant.
Ramona	110	11	C. A. Postley.
Troubadour	92	00	L. H. Smith.
Sea Fox	89	5	A. Cass Canfield.
Sachem	86	8	Metcalf & Owen.

SLOOPS.

Volunteer	85	11	C. J. Paine.
Mayflower	85	6½	E. D. Morgan.
Puritan	81	11	J. Malcolm Forbes.
Katrina	69	6	Auchincloss Bros.

In the schooner class Dauntless allows Ramona 1m. 11s.; Palmer, 2m. 22s.; Intrepid, 6m. 25s.; Montauk, 9m. 33s.; Sea Fox, 11m. 3s.; Sachem, 13m.; Troubadour, 13m. 40s.; Miranda, 14m. 47s.; Grayling, 16m. 32s.; Iroquois, 17m. 38s., and Magic, 18m. 46s.

In the sloop class Volunteer allows Mayflower 53s.; Puritan, 3m. 41s., and Katrina, 11m. 13s.

Marguerite did not start, Bedouin was out, but not in the race, while the absence of Shamrock, who was not on the cruise, was a subject of general regret among the many who wished to see her and Katrina together. Mr. Burgess steered Sachem himself, while Mr. Smith was on board of Katrina. Elma made her first appearance in a race since the change of rig, but under very unfavorable conditions, her owner, who had been absent for some time, only joined late on the morning of the start, so that she was late in getting into position, and he lacked the practice with racing canvas which the other yachts have had during the spring, besides being very heavily ballasted for such light weather. The times at the start were:

Volunteer	10 30 57	Troubadour	10 32 52
Mayflower	10 31 51	Katrina	10 33 17
Miranda	10 31 52	Intrepid	10 33 32
Sea Fox	10 31 58	Grayling	10 33 40
Sachem	10 32 09	Magic	10 33 49
Palmer	10 32 25	Dauntless	10 34 25
Montauk	10 32 25	Elma	10 35 00
Puritan	10 32 40	Iroquois	10 36 36

Ramona came last with a handicap of 2m. 9s.

All went over on port tack, with clubtopsails and jibtopsail set, but the wind was so light that the race was slow. The fleet strung out, with Volunteer first, and Mayflower, Puritan, Sea Fox, Palmer and Miranda in the first division, while some of the larger schooners brought up the rear. For the first hour and a half the yachts made some progress, though it could hardly be called racing, and then, before West Island was reached, the wind fell completely and left them to drift. About noon there were catspaws from the south, but with no weight in them, one boat or another being favored in turn for a few minutes. For a time the fleet had a little wind and then at 2 P. M. it died down, leaving the leaders still at a distance from the first mark. For another hour there was nothing to do but drift with the ebb tide and make the most of such flukes as fell in the way. Several set spinakers, which helped them a little. Volunteer being in the middle of the fleet, managed to come out ahead at the mark, and turned with a lead of ten minutes on Volunteer. Just how it was done was not evident, but it is certain that only a bald fluke set her so far ahead of the fleet after her place in the early part of the race. The times at Sow and Pigs were:

Sachem	3 27 33	Troubadour	3 53 22
Volunteer	3 37 32	Mayflower	3 53 32
Sea Fox	3 43 15	Dauntless	3 55 46
Puritan	3 45 58	Montauk	3 56 36
Miranda	3 48 26	Magic	3 59 00
Grayling	3 49 07	Ramona	3 59 30
Katrina	3 49 51	Elma	4 01 00
Iroquois	3 50 42	Intrepid	4 11 00
Palmer	3 51 27		

Katrina was in very hard luck at the Lightship, the wind left her so near to it that it seemed as though she would go by on the wrong side and she lay idle for some time before getting around. All jibed round and started on port tack for Hen and Chickens, nearly five miles away. Sachem, now well ahead, set a spinaker to some advantage, but those who tried it further astern gained nothing, as the wind was too light to fill it. Sachem was nearly an hour and a quarter in covering a distance of less than five miles, so the strength of the wind can be easily rated. The times at the Hen and Chickens Lightship were:

Sachem	4 40 03	Troubadour	5 00 45
Volunteer	4 44 49	Palmer	5 01 00
Sea Fox	4 48 06	Montauk	5 06 00
Puritan	4 51 00	Ramona	5 07 15
Grayling	4 52 01	Magic	5 07 15
Katrina	4 52 38	Elma	5 08 00
Miranda	4 58 21	Dauntless	5 10 00
Mayflower	4 58 53	Intrepid	Not timed.
Iroquois	4 59 33		

Thus far the race had been absolutely devoid of interest, but the S.W. breeze now promised to freshen and make a fair fight over the remaining fifteen miles to the finish. All stood off on the port tack after rounding, Sachem and Volunteer far ahead and gaining every minute as they ran into the increasing breeze. Sea Fox had a good lead on Grayling at the mark, as much as 2½m., and for a time held it well, going on starboard tack at 5:25, two minutes after Grayling had tacked astern and to leeward of her. Katrina had turned the mark close aboard of Grayling, and made an ambitious attempt to hold on to her, but the slippery schooner soon shook her off. Sachem held the lead for a time, but Volunteer finally headed her and held first place to the finish. Grayling steadily crawled up on Sea Fox and after 45 minutes placed herself to leeward, where the black boat tried in vain to shake her off. She had her maintopmaststaysail set, while Sea Fox had none, both carrying clubtopsails. From 6 P. M. to the finish the fight was kept up, with a final victory for Grayling. With the fresher breeze Elma began to wake up, and for an hour after passing the Hen and Chickens she sailed very fast, working her way up past Magic, Ramona, Montauk, Palmer and Troubadour, and sailing about even with Miranda for a time. When on the starboard tack she lost part of her advantage, being delayed for a time by a long tow of coal barges, and finally finished after Miranda, Montauk and Palmer, none of them timed. Sea Fox, Grayling, Puritan and Katrina sailed for a time in company, Katrina holding well on to the larger ones, and ahead of them finally. The full times were:

	Start.	Finish.	Elapsed.	Corrected.
Volunteer	10 30 57	6 52 32	8 21 35	8 21 35
Katrina	10 33 17	7 19 49	8 46 32	8 35 19
Puritan	10 32 47	7 15 35	8 42 58	8 29 07
Grayling	10 33 40	7 19 34	8 45 54	8 29 22
Sachem	10 32 09	7 12 57	8 40 48	8 27 48
Sea Fox	10 31 58	7 23 34	8 51 26	8 40 23
Mayflower	10 31 51	7 33 05	9 01 14	9 00 21
Miranda	10 31 53	Not timed.		
Palmer	10 32 25	Not timed.		
Montauk	10 32 42	Not timed.		
Troubadour	10 32 52	Not timed.		
Intrepid	10 33 32	Not timed.		
Magic	10 33 49	Not timed.		
Dauntless	10 34 25	Not timed.		
Elma	10 36 00	Not timed.		
Iroquois	10 36 39	Not timed.		
Ramona	10 40 00	Not timed.		

In the sloop class Volunteer beats Puritan 17m. 31s.; Katrina 13m. 4s. and Mayflower 38m. 46s. on corrected time. Katrina beats Puritan 3m. 48s.

In the schooner class Sachem beats Grayling 1m. 30s. and Sea Fox 12m. 37s. on corrected time.

As before stated, these times amount to nothing, the only fair comparison must be based on the work from Hen and Chickens. The elapsed times over this leg were:

Volunteer	2 02 44	Sachem	2 32 54
Puritan	2 24 35	Mayflower	2 34 12
Katrina	2 27 11	Sea Fox	2 34 48
Grayling	2 27 33		

The corrected time for 16 miles would only change one of the boats, making Katrina second to Volunteer. Sachem wins the Goelet Cup, but as far as the honors go she has yet to pay Grayling for the defeat at New York this spring. Puritan did good work and ahead with the schooners, but failed to beat Katrina, the little steel boat doing decidedly the best work of the day, save Volunteer. In the beat of 15 miles in a moderate breeze she outsailed on even time the three fastest schooners in the country, all longer by 13 to 20ft., to say nothing of Mayflower, with her 15ft. extra length. The latter made a poor showing all day, being at no time in a good place. It was late when the fleet anchored in Newport again, but the orders were for an early start for Vineyard Haven.

One noticeable feature of the year is the prevalence of white yachts, in fact one often has to rub the eyes for a minute to make sure of some old and well-known craft, completely changed by her new outside. All the Burgess boats are now white, and of the old craft America and Gitana have come out this year, the latter especially looking quite different. Troubadour changed her color last year and Grayling so early in the season that men are now used to it, but at a glance both Gitana and America are apt to puzzle the observer. Whether or no the change is an improvement in appearance is a matter of taste, but no perceptible increase of speed has yet been evident in either.

Among the new Burgess boats not the least noticeable was the schooner Vintor, the eye being attracted by her freeboard and size rather than by anything specially taking in her appearance. Though of the same general style as Sachem and Marguerite she is much heavier and boxier in appearance and by no means a handsome vessel. Being only a cruiser and of small size, 65ft. l.w.l., she is somewhat fuller in model than the larger boats, but at the same time she is lacking in grace and lightness on the water.

Three of the new boats lay close together and offered a fair chance for comparison, Baboon, Nymph and Pappoose. The difference in appearance between the first two strikes one at once, Nymph is certainly not a handsome boat according to modern ideas. She is heavy in appearance, with a high rail, the lines of rail and planksheer not harmonizing, especially aft, where the bulwark shows very wide. Baboon, on the contrary, though with the same overhang and general sheer plan, is far and away handsomer, sitting lightly and easily on the water. Her counter is cleaner and her rail is quite low, the planksheer, or more properly the gold stripe, curving in harmony with it. The freeboard of the two is probably the same, but the difference to the eye is very great. Among the new boats in Newport Harbor was Herreshoff's latest yawl, similar in model to the Consuelo, built by them, but with two batten sails, both boom and gaff; a large cat mainsail and a mizen. Mr. Bryant's new schooner, Alert, joined the fleet at Newport with her owner on board; a handsome and bold-looking cruiser, in every way a credit to her amateur designer. The arrangements and fitting up below are excellent, while the deck has a very trim and ship-shape finish. The new schooner Œnone was expected at Newport, but did not arrive.

Newport to Vineyard Haven, Aug. 11.

The morning was clear and cool, with a moderate breeze from the east, and in answer to the signals to sail at 10:30 for Vineyard Haven the greater part of the fleet worked out of the harbor early and made for the start off Brenton's Reef Lightship. The course was to windward and the yachts went over on the port tack, rounding the stern of the Electra. As Palmer came round she scraped along Hildegarde's side, carrying away the latter's port boat, but doing no further damage. Regina had just crossed the line when Grayling came up with Mayflower directly astern of her. The latter overtook the Grayling and ran her bowsprit squarely against the schooner's mainboom, causing it to buckle, but the stick held, and in answer to the great pressure from leeward paid the yacht's head off. Regina was so close to Grayling that the latter's boom struck her mast, carrying away topmast and headgear, smashing a boat, and heeling the sloop badly. Three of the guests on Regina leaped overboard and swam until the end of Grayling's main sheet was thrown to them, when they seized it and were towed until picked up by boats from some of the yachts. Mayflower continued past Grayling and the latter ran her bowsprit through the mainsail of a catboat with a pleasure party of ladies on board, but fortunately did no further damage. Regina and Grayling were separated, the former returning to Newport a partial wreck, the latter continuing the race with the loss of her topmast stay. The order of the leading boats at the line was: Puritan, Lydia, Clio, Montauk, Volunteer, Pocahontas, Katrina, Iroquois, Crocodile, Sea Fox, Gitana, Huron, Athlon, Sachem, Halcyon, Miranda, Whileaway, Harbinger, Columbia, Norseman, Regina, Palmer, Cinderella, Vision, Grayling, Bedouin, Mayflower.

As far as the Sow and Pigs the wind held ahead and Volunteer steamed away in advance of the fleet, easily taking the lead. Puritan was second and Sachem third, with Sea Fox next. About 1:30 the wind went round to S.E., and Volunteer was able to lay her course through Vineyard Sound, going inside the Middle Ground. After a couple of hours the wind died out and left the fleet at the mercy of the flood tide, which was running very strongly against them. It had been intended to finish off the Sea View House, and a large crowd was gathered to see the end of the race, but as it was evident that the yachts could not reach there before very late at night, the times were taken as they passed the West Chop Light, the leaders coming in with the ebb tide and about 7:30. The official times are as follows, but some revision may be necessary, as the table was made out at a late hour:

FIRST CLASS SCHOONERS.

	Start.	Finish.	Elapsed.
Norseman	10 46 06	7 58 00	9 12 54
Palmer	10 47 07	7 59 45	9 12 38

FIFTH CLASS SLOOPS.

	Start.	Finish.	Elapsed.
Athlon	10 44 52	8 05 06	9 20 34
Bertie	10 45 48	. . .	. . .
Cinderella	10 47 35	. . .	. . .

SIXTH CLASS SLOOPS.

Crocodile	10 44 28	. . .	. . .
Regina	10 46 40	. . .	. . .
Nymph	10 52 20	8 08 58	9 16 38

Winners are: Schooners—First class, Alarm; second, Montauk; third, Grayling; fourth, Iroquois; fifth, Harbinger. Sloops—First class, Puritan; third, Bedouin; fourth, Medusa; fifth, Athlon; sixth, Nymph.

The fleet laid at anchor over Sunday at Vineyard Haven. At a meeting of the captains it was decided to change the original programme and not to go round the Cape. Instead of this it was arranged to sail for New Bedford as soon as the Vineyard Haven race was finished, the course being around the Sow and Pigs Lightship and up Buzzard's Bay. On the following day the fleet will run back to Newport and sail next day for cups offered by the citizens of that place, the course to be the same as for the Goelet cups.

Monday morning broke with a S.E. wind and heavy sea, but a good part of the fleet were ready in good season for the race, the conditions being as follows: The course to be from a line drawn from horizontal striped buoy off Oak Bluffs wharf to the flagship, anchored about a quarter of a mile northeast from it, thence around the bell buoy about a half mile south of Nobsque light, leaving it on the port hand, thence around black buoy, No. 25, off Gay Head, leaving it on the port hand and returning over the same course to the starting line. The length of the course is 36 miles. The prizes are: For all keel schooners, $250; all centerboard schooners over 80ft., $250; all centerboard schooners not over 80ft., $200. For sloops, cutters and yawls—Class 1, all over 80ft., $250; class 2, all over 61ft. and not over 80ft., $200; class 3, all over 58ft. and not over 61ft., $150; class 4, all over 46ft. and not over 53ft., $100; class 5, all under 46ft., $100. In case of postponement the race to be sailed on the first favorable day.

Gen. Paine decided on Sunday not to enter Volunteer, and she made no preparations to start. Alert, Mr. Bryant's new schooner, was under way early under lower sails, and Dauntless had one reef in her mainsail, Miranda, Bedouin, Palmer, Mayflower, Katrina, Sachem, Iroquois, Grayling, and even the little 40ft. Baboon with her Corinthian crew were ready in good season. The flagship, with a party of ladies and gentlemen on board, ran out and anchored off the Sea View House about 10 A. M. It was then blowing very heavily with a high sea, and at 10:30 the regatta committee decided to postpone the race. A short time later the rain ceased, the wind fell considerably and the weather was all that could be desired, but the fleet lay at anchor all day.

The action of the regatta committee gave general dissatisfaction to all the yachtsmen in the fleet. The whole season has gone by without a breeze fit for racing in any of the regattas; the cruise from which so much was expected has dwindled down to three drifting matches thus far, and when at last the long looked for day arrived and the sailing contingent were ready at the start, the race was postponed in the interest of the ladies and spectators on shore. The fleet has lost a number of yachts already—Dauntless, Gitana, Elma, Magic, Montauk, Clio, Madeline, and several steam yachts, including Corsair, left after the postponement was announced. During the morning Dauntless lost her jibboom at the Cape, returning under foresail and jib. With one reef in her mainsail and second jib the little Baboon was flying about, making good weather of it while the wind was at its worst. The race was postponed to Tuesday if the weather should prove suitable.

The race for the Cottage City prizes was sailed in a stiff southwester with a jump of a sea, which put the yachts on their mettle in the windward work. Keels and cutters showed up to great advantage. It was the second time Bedouin met the deep centerboard Katrina and the cutter again came out ahead. Among the schooners the victory hangs between the imported Miranda and the new keel Alert, the finish being so close that remeasurement is necessary to decide. These keel schooners, though in a class by themselves, beat the centerboard Sea Fox and the famous Grayling and came within a minute of the Sachem, the latter winning in the centerboard class. Puritan beat Mayflower in the big singlestick class, Hildegarde had a sail over in the third, Bertie beat Athlon in the fourth, and the semi-cutter Hesper probably beats the celebrated sloop Vixen in the fifth.

FIRST CLASS SCHOONERS.

QUINCY Y. C. OPEN REGATTA, AUG. 11.—On Aug. 11 the Quincy Y. C. sailed its open regatta in a fresh N.E. wind, the courses being 8 and 7 miles, the former for first class. The times were:

FIRST CLASS.

	Length.	Elapsed.	Corrected.
Moondyne, W. H. Shaw	24.08	1 34 41	1 08 53
White Fawn, W. H. Cherrington	24.08	1 35 20	1 09 23
Secret, E. F. Linton	22.06	1 38 22	1 10 21
Posy, R. G. Hunt	22.02	1 38 47	1 10 26
Echo, Burwell and Isham	24.05	1 37 59	1 11 49
Folly, J. F. Sheppard	26.04	1 37 45	1 13 13
Wraith, C. E. and P. Hodges	22.06	1 42 15	1 14 14
Erin, John Cavanagh	26.00	1 39 55	1 15 07
Seabird, C. L. Joy	22.08	1 43 48	1 15 58
Halcyon, J. R. Hooper	21.03	1 50 37	1 21 18

SECOND CLASS.

Mabel, William Bennett	19.11	1 23 50	53 51
Peri, Frank Driscoll	18.06	1 26 10	57 30
Scamp, Frank Gray	18.04	1 28 29	59 46
Tartar, J. B. Forsyth	19.11	1 26 49	59 50
Eli, W. P. Barker	19.10	1 27 27	1 00 25
Myrtle, R. C. Poor	19.00	1 29 11	1 01 14
Hester, P. R. Blackmur	19.11	1 30 02	1 03 05
E. W. D., E. W. Dixon	18.06	1 32 51	1 03 25
Nereid, C. F. Colby	20.01	1 30 30	1 03 42
Hebe, H. Edwards	19.06	1 33 41	1 05 44
Undine, W. H. Doble	19.06	1 35 40	1 08 15

SPECIAL CLASSES.

Zoe, C. E. McField	18.01	1 24 41	55 41
Eureka, E. B. Rogers	20.00	1 23 24	56 31
Flora Lee, E. B. Glover	16.08	1 29 40	58 49
Diadem, L. Hayward	18.01	1 28 48	59 48
Snarleyow, W. M. Maybury	17.10	1 32 48	1 03 31

THIRD CLASS.

Mirage, John Dearborn	17.05	1 28 15	58 26
Rocket, Secretary Faxon	16.03	1 31 37	1 00 18
Wildfire, H. A. Keith	17.02	1 32 32	1 02 25

Mabel S., John Shaw	17.09	1 38 31	1 09 57

MONTGOMERY SAILING C.—Twelfth weekly regatta, Aug. 12.—Course, Norristown to Indian Creek and return, distance five miles. Weather cloudy, with light rain at the start. Wind fresh easterly.

	Length.	Start.	Finish.	Corrected.
Gracie, skiff	12.00	1 30 40	3 03 30	1 23 30
S. H. Querner, tuckup	15.00	1 40 00	3 07 00	1 27 00
Sadie, canoe	16.00	1 34 40	Withdrew.	

It was a run to the buoy, and a beat home, nearly dead to windward. The canoe Sadie led at the outer mark, being 1m. 30s. ahead of Gracie, but was beaten in the windward work. Judge, Alfred Rochell.

VISION AND FEDALMA.—These steam yachts had a race on Long Island Sound last week while on the New York cruise, the stakes being $100 per side. Fedalma won.

CAPE COD Y. C.—The final race of the Cape Cod Y. C. for 1888 was sailed on Aug. 11, resulting as follows:

FIRST CLASS.

	Elapsed.	Corrected.
Madge, Cumming & Howe	1 43 23	1 21 21
Percy Allen, Frank S. Allen	1 46 20	1 22 27
No Name, A. Lake	1 57 54	1 32 07
Fawn, James Smith	2 08 01	1 46 55

SECOND CLASS.

Leola, E. E. Nickerson	1 58 00	1 29 20
Carrie L., George Clark	2 08 15	1 36 46
Mystery, George Dinnel	1 56 18	1 27 20
Pemigewassett, W. M. Crosby	2 11 17	1 30 54

THIRD CLASS.

Mischief, E. Snow	1 46 17	1 29 00
Sachem, A. O. Hurd	1 41 42	1 18 55
Una, George Paxton	Withdrew.	
Rob Roy, H. Hewins	2 09 49	1 43 20
Tempest, E. Smith	2 11 39	1 46 40
Princie, P. Doane	1 54 38	1 33 59
Susan, J. Ryder	2 15 53	1 42 59

The winners for first prizes in the classes for the season are: First class, Madge; second class will race off Aug. 18; third class, Mischief. This regatta closes the races for the season, excepting for second class boats. The judges were Capt. S. K. Kingman and Albert Smith.

SANDY HILL Y. C. AUG. 6-7.—The annual regatta of the Sandy Hill Y. C. off Rockport was postponed from Aug. 6 to 7 on account of the lack of wind, being finally sailed in a good N.E. breeze and heavy sea. The course was six miles. Out of fourteen starters only eight finished, as follows:

FIRST CLASS.

	Length.	Elapsed.	Corrected.
Black Cloud, A. Brown	24.00	2 35 00	2 27 50
Trudette, L. M. Haskins	25.05	2 48 00	2 43 09
Sivea, Rev. Mr. Ward	25.11	2 48 00	2 43 21

SECOND CLASS.

Mavis, F. E. Smothers	20.10	2 18 02	2 36 03
Good Luck, J. B. Farrell	20.00	2 57 15	2 47 09

THIRD CLASS.

Alpine, W. P. Tarr	16.02	2 53 03	2 31 51
Madcap, Wheeler	18.06	2 58 25	2 38 01
Climax, Sauders	18.06	3 02 42	2 46 29

Osceola capsized at the start.

NEWARK BAY Y. C.—The sweepstakes regatta of the Newark Bay Y. C. was sailed in a very strong blow on Aug. 13, the course being on Newark Bay, two rounds, making 10 miles. Only 7 out of 24 entries started, the times being:

CLASS D—CATBOATS 18FT. AND OVER.

	Length.	Start.	Finish.	Elapsed.	Corrected.
Ada B	22.06	3 16 30	4 56 00	1 39 30	1 37 50
Smuggler	24.02	3 15 20	Withdrew.		
Lizzie V	21.03	3 19 04	4 57 30	1 38 26	1 37 31

CLASS E—CATBOATS UNDER 18FT.

Annie C	17.10	3 18 00	5 03 20	1 45 20	1 45 20
Gala Water	16.03	3 17 00	5 08 02	1 51 02	1 51 07
Daisy	15.08	3 17 08	5 07 48	1 50 40	1 48 36
Juliette	16.04½	3 15 00	Withdrew.		

The judges were: Philip Lumbreyer, Edward E. Van Buskirk and Garret L. Post. Regatta committee: Andrew Van Buskirk, L. G. Seavey and Charles H. Mayhew.

LAKE MAHOPAC DEAN HOUSE CUP.—The second race for the Dean House cup took place on Aug. 11. The usual course marked by buoys was sailed over twice, making ten miles in all. The boats entered were Mist, Capt. Stuart; Mischief, Capt. Pomvert; Flora, Capt. Fabian; Trifler, Capt. Dusenbury; Mattie, Capt. Saportas, and Dart, Capt. Engler. The wind—when there was any—was from the south. The yachts started about 3 o'clock and crossed the line in the order named. The run to the first buoy was made with the wind a little aft of the beam and Flora's attempt to set a spinaker was not altogether a success. Trifler was blanketed by Mischief for a considerable distance and the boats rounded the first buoy in the following order: Flora, Mist, Trifler, Mischief, Mattie, Dart. It was a beat to windward to the next buoy, and Trifler passed Mist and rapidly overhauled Flora, rounding the second buoy only a few seconds astern. Mischief and Mattie rounded shortly afterward close together. Mist and Dart dropped out of the race. The next leg was about one-quarter mile to leeward, and Trifler passed Flora. The two boats then lay for several minutes in a complete calm, and Flora catching the wind first ran away from Trifler and finished the first round with a good lead, which she maintained and increased to the finish, Trifler only gaining on her in the short beat of a mile to windward. The boats crossed the finishing line as follows: Flora, Trifler, Mischief, Mattie. Flora was sailed by a professional crew of four men and was the only boat using a spinaker. She beat Trifler 4m. 15s. corrected time. This gives Flora and Trifler one race each for the Dean House cup. The cup must be won twice. The third race is set down for Aug. 18.

A FATAL CAPSIZE ON THE DELAWARE.—On August 8 the centerboard sloop Flora B., of Pennsville, Del., capsized in a squall on the Delaware River about two miles off that place, drowning four women and a little girl, who were in the cabin. The party, consisting of the owner of the boat, Capt. Elijah Wheaton, with his wife, Mrs. Thomas Finnegan, Mrs. Sadie Wheaton and her daughter, Jonathan Turner and his wife, and Clayton Balton, started in the morning for Penn's Grove, ten miles up the river, to attend a picnic. At night the weather was threatening, but at 6 P. M. the yacht was under way. When about two miles from home, at 7 P. M., a heavy squall struck and threw the yacht on her beam ends. She had almost righted when a second squall struck her, capsizing her completely. All of the ladies were in the cabin, as it was raining heavily, and they were unable to get out. John Turner seized one by the arm, but was obliged to release her. The three men were thrown into the water, but finally reached the yawl, towing astern, but they could do nothing to aid those on the yacht. The tug E. L. Cain, Capt. Harris, was bound out with a schooner in tow when she saw the capsize, and casting off her line she made for the sloop, picking up the three men and towing the boat to the beach a short distance above Pennsville. Next morning the bodies were removed from the cabin of the vessel, several of them being badly bruised. The mishap is like hundreds of others which we are called on to chronicle. A shoal and a poorly ballasted boat of great beam and heavy rig, reefing is deferred, as in the case of the Sarah J. Craig, until it is too late, when a final puff of wind settles the matter by capsizing her entirely.

ARRIVAL OF STRANGER.—Mr. Warren's cutter, which left Boston on July 20, has arrived safely at Liverpool.

THE LAST OF RULE 8.—A special general meeting of the Yacht Racing Association was held in London on Aug. 1, at which a resolution was passed expunging Rule 8, to take effect after the close of the present season. Notice was given by the Council that at the meeting in February next the following clause would be proposed for insertion in the rules: "No steam, hydraulic, electric or any motor other than manual power be used for working the lifting or lowering gear of a centerboard or plate." Rule 8, which has been on the books of the Y. R. A. since its organization in 1875, reads as follows: "Sliding Keels.—No yachts which are fitted to shift keels, or to otherwise alter their form, shall be permitted to enter."

THE LAKE FLEET.—Buffalo will make an addition to her fleet with a new cutter, to be built in September from design No. 23, furnished by C. P. Kunhardt. The plans call for a deck length of 28ft.; waterline, 21ft.; beam, 6ft.; draft, 4ft. 6in.; least freeboard, 21in. The clipper stem rakes 2ft. forward on rabbet and the counter overhangs 5ft. aft, running out to a feather edge. The iron keel weighs 3,600lbs., and lower sail area is 530sq. ft. This yacht has a flush deck with companion slide and skylight in one length and a small cockpit aft. There is 4ft. 9in. headroom in cabin over a floor 22in. wide. The keel is 12x6in., frames 2½x2¼ at heel. Planking 1in., decks 2x1¼.

A CAPSIZE AT BOOTH BAY.—On Aug. 13, Messrs. Erank E. Upham, of Dorchester, and his cousin, Frank J. Thrasher, of Boston, were out in a centerboard boat near Pumpkin Island, off Booth Bay, Me., when the craft capsized. Thrasher, who was a good swimmer, helped Upham, who could not swim, on to the boat's bottom, and turned her into the breakers near Pumpkin Island. After great difficulty Thrasher succeeded in carrying his companion through the surf only to find that he was dead. Thrasher remained on the barren island over night, and then swam to Heron Island, where he found help.

DISASTERS ON LAKE ONTARIO.—On Aug. 13 a very severe storm passed over Lake Ontario, doing much damage to shipping. The sloop Katie Gray, of Oswego, went ashore at Sodus Point, her crew getting off safely; the damage to the yacht is not reported. The fleet of the Rochester Y. C. was very severely handled, a number of yachts being driven from their moorings and capsized or beached. Two yachts under sail capsized in the harbor, a young man being drowned in the cabin of one, being sick at the time and lying below. His two companions on deck were saved.

RACING ON THE LAKES.—*Editor Forest and Stream:* An extraordinary statement in the Belleville *Ontario* has been started on the rounds of the press. That paper gives out that the Hamilton cutter Psyche was beaten one hour by the Merle at Toronto, July 31. No such race ever took place, the *Ontario* having mistaken some other boat for the Psyche. The only meeting between the latter and the Merle was at Hamilton, July 29, of which an account has appeared in your last issue.—A. C.

METEOR.—On the night of Aug. 2, when off Penfield Reef Light, Com. Bateman's steam yacht Meteor was in collision with the coasting schooner Ada Ames, the yacht losing her foremast at the deck and mainmast at the cap, while both stacks were injured and the port side badly scraped. The schooner struck her about 15ft. abaft the port bow. The schooner also lost her bowsprit and head gear. Meteor was towed to South Brooklyn for repairs.

NEW ROCHELLE Y. C., PRYER CUP, AUG. 11.—The race for the cup presented by Com. Pryer for yachts of 35ft. l.w.l. was sailed on Aug 11 over a 17 mile course, from the club house around the buoy on Execution Reef, buoy at Matinnicock and return. Only three boats started: Wacondah, Henry Doescher; Phantom, Dr. Henry Schweig and D. W. Kohn, and Curlew, Charles H. Noxon. Wacondah won by 1m. 10s., Curlew not finishing.

SAPPHIRE AND STARLING.—Mr. John Stetson has challenged Mr. E. A. Seccomb to race Starling against Sapphire, for $1,000 per side, the course to be 50 miles. Mr. Seccomb has also a match with Mr. Brown for a race with Fedalma.

MACKINAC REGATTA.—A number of yachts are at Detroit in readiness for the regatta. Oriole of Toronto and Verve of Chicago are present. White Wings of Hamilton has never entered and her owner had no intention of being present.

PLEON Y. C.—The ninth regatta was sailed on Aug. 8, the winners being: First class keels, Mary Robert Bridge; first class centerboards, Anna L.; second class centerboards, Perhaps; keels, Estelle. Estelle wins the championship flag.

CAPE ANN Y. C.—The decision of the executive committee of the N. E. Y. R. A. in regard to the Tappan cup race is that it shall be resailed, barring out the yacht which fouled the stakeboat.

BEVERLY Y. C.—The open sweepstakes race of the Beverly Y. C., 135th regatta, will be sailed on Sept. 1 off Monument Beach, starting at 1 P. M.

BANSHEE AND PAPPOOSE.—A match has been arranged between these boats to be sailed off Sandy Hook in September.

CORINTHIAN Y. C., MARBLEHEAD.—The Ladies' Day was postponed for the second time from Aug. 11 to 15.

16X29 RACING CANOE VAGABOND.

THE visit of the English canoeists in 1886 settled finally the question of heavy vs. moderate displacement in racing canoes, but at the same time there were several other points which were by no means clearly decided. The principal one of these, moderate ballast or no ballast at all, has hardly been settled finally yet,

16x29 RACING CANOE "VAGABOND."

but at the same time the ballast canoes have been greatly in the minority of late, and have not pushed their side of the question at all in the races of the past year, nor are they likely to this year. Just now the "no ballast" canoes are in favor, consequently the displacement is cut down to the last ounce. This reduction of displacement has, so far as we know, been done mainly in one way only, by reducing the beam and bilge, cutting the model away greatly, as in Pecowsic and Lassie, boats of considerable deadrise. This of necessity makes a very unstable boat, and however fast she may be, there can be little comfort in sailing her. The canoe here shown was designed in February last by Mr. W. P. Stephens for Mr. C. J. Stevens, N. Y. C. C., the specifications being for a racing canoe 16×29, not to displace over 275lbs. with crew on board. In keeping within this small limit of displacement, the aim has been to preserve the greatest amount of stability consistent with the limit of beam, and to this end the deep V-section has been abandoned and all superfluous projections in the form of keel and deadwood cut away, the bulk being arranged so as to preserve the greatest area of waterline plane. The rocker at both ends was given for the purpose of reducing the surface and also to aid in turning, a point in which many canoes have been deficient.

So far as the canoe has been tried, she has proved very stiff and easy under sail, and the question now comes up: Could not the same principle be well utilized by extending the beam to 31½in. with a length of 15ft., retaining the same displacement by cutting away the depth of hull below water, giving somewhat of a saucer shape to the midship section. Such a canoe should be very stiff without ballast, the crew could sit far out to windward, and the lines would still be fine beyond anything in the shape of a yacht. We know thus far of no canoe of such a model, the nearest approach to it has been in boats like Notus, with a flat floor, boats that really are fitted to carry a heavy load, but which are sailed above their lines. Neither of the two methods, by narrow beam, depth and V-section, or by a flat-floored boat of the usual model sailed at a very light draft, commends itself as a thoroughly satisfactory solution of a light displacement problem; and the best method would seem to be through a comparatively great beam, but with a bottom specially designed within the given limit of displacement. In the Vagabond this was as stated 275lbs; the estimated displacement to the l.w.l., 4in. draft, is 257lbs., while the actual weight of boat, fittings and crew, as carried, proved to be 247lbs. The dimensions are:

Length	16ft.
Beam, extreme	29in.
l.w.l.	25¾in.
Draft	4¼in.
Freeboard	6in.
Sheer, bow	5½in.
stern	3in.
Displacement	256.75lbs.
Displacement per in. immersion	109lbs.
at 5in. draft, about	370lbs.
Area midship section	.48sq. ft.
Area lateral plane	4.37sq. ft.
centerboard	2.17sq. ft.
Total	6.54sq. ft.
L.W. plane	19.60sq. ft.
C.B. from stem	8ft.
C.L.R. from stem	7ft. 10¾in.
inc. board	7ft. 5in.

The Vagabond was built by McWhirter Bros., West New Brighton, S. I., and is of ribband carvel build. The sail plan is rigged as shown in the FOREST AND STREAM of April 19, 1888, the sizes of the various sails being: Mainsails, 65ft., 50ft. and 35ft.; mizens, 15ft. and 10ft. The weights of the sails and spars complete are respectively 9lbs., 7lbs., 5½lbs., 3lbs. and 2lbs.; probably the lightest lowering rig ever put on a canoe. The spars are smaller than described in the article referred to; in fact, the largest mast and yard have proved a little too light. The canoe will carry easily a larger area, and a new suit is now being made for her. The weight of hull is 92lbs, board included, the latter about 8lbs. The rudder weighs 2¾lbs., and is a plain brass blade of the Barney pattern, running well below the keel, but not fitted to raise. The canoe is fitted with simply a circular well, 18in. diameter, in which the canoeist can put his feet; no provision is made for sitting below or for steering by the feet.

THE AMERICAN CANOE ASSOCIATION.

LAST week the American Canoe Association opened its 9th annual camp not far from its birthplace on Lake George, where it was first conceived in 1879 and formally organized in the following year. Up to 1879 there was but one club and only a hundred or so of canoeists in the United States. Many open canoes were then in use in Canada and a few in the United States, but of decked cedar canoes there were probably not over 150 in the United States up to 1879; all of the Rob Roy or Nautilus model. In 1879 the New York C. C. held a regatta on New York Bay, the first for five years, and in fact the first successful canoe regatta sailed in this country.

During the same summer a number of canoeists visited Lake George and were present at the rowing regatta off Crosbyside, and some extra prizes were offered for canoe races, which were hurriedly arranged. Just above Crosbyside, the headquarters of the boating men, was the beautiful home of one of the earliest and most enthusiastic of America's canoeists, Mr. N. H. Bishop, and it was in his fertile brain that the idea of a national association of American canoeists first originated, and the general scheme, as well as its details, were planned. Mr. Bishop was at the time disengaged from business, and he took up the new idea with all that dash and energy that characterize his many adventurous cruises. In the highest story of his beautiful house, overlooking the lake far and near, he set up an amateur printing press, and in 1879 began his missionary work in behalf of canoeing. He was soon in correspondence with the leading English, Scotch and Canadian canoeists, and in a little while had made the acquaintance by letter with the few American canoeists, then disunited and isolated; a couple of dozen in New York, two or three in Cincinnati, one in San Francisco, and others in different localities. It was solely through Mr. Bishop's labors that the arrangements were made for the meet of canoeists at Crosbyside, Lake George, in August, 1880, with sailing and paddling races, those present to organize a national association.

Help was promised from all quarters, but the promises were not kept, and when the first meeting was called to order only thirteen men responded. The New York C. C. sent Messrs. W. L. Alden and W. P. Stephens; Mr. Arthur Brentano and one or two more, who organized the Knickerbocker C. C., on their return, were also present. From Cincinnati were Messrs. Longworth and Wulsin, and from Boston Messrs. Meredith and Hubbard. Mr. Rushton was also on hand. This baker's dozen of canoeists

camped, paddled, sailed and talked; the result being that all went home full of enthusiasm and ready to come back next year to the second meet of the American Canoe Association which they had organized, with Mr. Alden as commodore and Mr. Bishop as secretary.

During the next year the growth of the young organization was somewhat slow, canoeing had not yet overcome the strong prejudice and ridicule which it met at first; but the meet was successful and well attended. It was held on the Canoe Islands, owned by Messrs. Bishop, Longworth and Wulsin, near the present camp on Long Island. This year the first Canadian delegation (five canoes), led by Mr. Edwards and Col. Harry Rogers, were present.

In 1882 the Association had increased greatly, and a most successful meet was held at the Canoe Islands. In the following year a move was made to Canada, the camp being held at Stony Lake, with the result that many Canadian canoeists joined.

As the meets increased in size it became evident that the Canoe Islands were too small, while the winds on Lake George were not the best for canoe sailing, so in 1884 the camp was held on Grindstone Island, in the St. Lawrence River, between New York and Canada. This beautiful spot so pleased the canoeists that the camp was held there in 1885-'86 as well, the latter year being marked by the visit of the two English canoeists, W. Baden Powell and Walter Stewart, with the Nautilus and Pearl, and their defeat by the American sailors. The A. C. A. trophy was raced for this year for the first time, a handsome silver bowl, to be held by the winner for one year and returned to the next meet to be raced for again; canoeists of all nations to be admitted to the competition.

In 1887 the Association visited a new spot, Bow-Arrow Point in Lake Champlain, one of the most beautiful of all camps. This year it goes back to Lake George, camping on Long Island, about five miles from Caldwell, at the head or south end of the lake.

The growth of the Association has been all that its organizers expected, the total number of members from 1880 to 1888 being over 1300, the present membership being over 1000. At the same time its influence has been widely felt in the extension of canoeing throughout the country. In place of the one club in 1879 there are now over 100, while the handful of canoeists in the United States has grown in eight years to 3000 or more.

This present week will be spent in camp, the chief event being the cruise on Friday, while next week the races will take place.

DROWNING ACCIDENT AT BAR HARBOR.—On Aug. 11, at 8:30 P. M., Mr. M. Reed, of Albany, and Miss Fanny Milliken, of New Orleans, started out for a paddle in a birch canoe. As they did not return boats were sent in search of them, but in vain. Next morning the canoe was picked up by a lumber schooner near Egg Rock, five miles from Bar Harbor. It was floating bottom up, but with paddle and deer skin inside. The night was calm but very dark, and how the capsize occurred will never be known. The birch bark canoes are noted as being cranky and very dangerous except in skilled hands, but they are generally used by pleasure parties about Bar Harbor.

THE CANADIAN CRUISERS.—Messrs. Allan W. Johnson and Hugh Hartshorne arrived on Aug. 7 at New York in the canoe Nora, having cruised from Brantford, Ontario, a distance of over 900 miles.

Answers to Correspondents.

☞ **No Notice Taken of Anonymous Correspondents.**

L. D. S., New Orleans.—We have never published the lines you wish. The yacht is a good sea boat, practically safe. For a cruising yacht not less than 6ft. is desirable.

C. H. K., Phila.—You will find time allowance tables in the club books of any of the large yacht clubs, also in Kunhardt's "Small Yachts." There is no universal method in use; each club has its own rules.

R. E. C., Elizabeth, N. J.—You have had an advertisement for two or three years past, but not this year, of some one I think in Murray or Chambers street, of a mosquito net to go over the head for fishermen or sportsmen, the advertisement saying that Gen. Dix always used it in snipe shooting in the Great South Bay. I suppose you can give me the name and address of the advertiser. Please do so at your earliest convenience? Ans. T. J. Conroy, 65 Fulton street, New York.

W. A. K., Woodstock, Ont.—Our pond is large and is fed by several spring creeks, the pond and creeks being well stocked with brook trout. Some of the members have proposed to place carp in the same pond, but before doing so would like your advice as to whether the two kinds of fish named would do well together or not, or would it be a serious mistake to adopt this course? We would prefer to retain the trout to all other fish, but if carp would not interfere it might be a valuable addition, as we thought they might remain in the pond proper and leave the stream to the trout. Ans. Leave the carp out. They may not do much harm, but will not grow much in your cold water, and will eat food that had better be left to the trout.

J. P. T., Boston.—Near my native home lies a beauty of a lake among the hills east of the White Mountains. It has a hard sandy bottom on one side, rocky on the other, and in places is 70 or 80ft. deep, it is two miles long by one-half wide, with a slow rivulet entering at one end and out at the other, the water is cold and was once well stocked with pickerel, perch, etc. Eight years ago black bass were introduced, sometimes they are caught there now, though I never saw one. The former inhabitants however are few and far between. What would be the result of placing a pair of salmon there? Would they live? Would they breed? (I have always suspected springs in the pond from its coldness). Could they make headway against the bass? Ans. If by "salmon" you mean the lake trout we think they would thrive in the deep waters where black bass do not feed. The true salmon would not live there. It would be best to introduce several thousand fry instead of a pair of fish.

NEW YORK, Aug. 9, 1888.—*U. S. Cartridge Co., Lowell, Mass.*—Gentlemen: Your new primers give me the best of satisfaction. I have averaged nearly 90 per cent. of kills both on live birds and targets ever since I began to use them. Yours truly, (Signed) M. M. F. LINDSLEY, Supt. American Wood Powder Co., West Hoboken, N. J.—*Adv.*

Palmer's Pat. Knapsack.

This knapsack is the invention of Capt. Geo. H. Palmer, U. S. A., and has been approved by a Board of Army Officers, convened for the purpose of selecting the best knapsack. After examining a large number of knapsacks, haversacks, etc., they gave Palmer's equipment their unqualified approval. It has also been adopted by the Militia and letter carriers in different parts of the country. It is equally well adapted to the use of pedestrian tourists, mining prospector, or any one who wishes to make long or short trips on foot, and carry more or less luggage.

We are the sole manufacturers under license from the patentee for these knapsacks for all purposes except the regular army, militia outside of the State of Illinois, and the letter carrier department.

WILD GEESE,

Including the
Snow Goose, Brant, Ducks and Beach Bird Shooting,
ALSO
Sea Bass Fishing
AT
BATTURE AUX LOUPS-MARINS,
SEAL ISLAND,
Forty-five miles below Quebec.

This renowned island, the exclusive property of Mr. Arthur Toussaint of Quebec, is now for sale. It has always ranked as the best shooting ground in the Province. As many as 195 black ducks were killed last fall by one gun during portions of two tides. The island, which is covered with grass, is about one mile long and seven acres wide, and at low water about four miles long and two miles uncovered. There is a small house and barn, also ice house. A paradise for sportsmen, and will be sold at a reasonable price to a club or others, or sporting privileges leased. Shooting commences Sept. 8.
Apply to Proprietor at Quebec.

SPORTSMAN DRUGGISTS.
I offer my valuable drug store for sale, best in Northern Iowa, at a bargain for cash; within the limits of the sportsman's paradise for prairie chickens, grouse, ducks, etc. Combine business and pleasure. No commission to agents. Title perfect. County seat, on C. M. & St. Paul Ry. Write for particulars to H. C. PRICE, M. D., owner, Cresco, Howard Co., Ia. jy12,2mo

BARGAINS. IF YOU WANT TO BUY, SELL OR EXCHANGE **GUNS, DOGS.** Etc., send 2 cents for a copy of the *Exchange and Mart*, the Want Paper. Bargains of every description, Curiosities, Useful, Sporting, Scientific Articles, etc. 17 Congress st., Boston.

SPECIAL ATTENTION TO
Yachtsmen & Camping Parties

We are prepared to furnish Canned Fruits, Vegetables, Pickles, Preserves, Jellies, Catsups, etc., etc., that will satisfy the most fastidious taste. An experience of over 40 years enables us to make a selection from the BEST OF EVERYTHING that nature can produce and science preserve. WILLIAM H. COHEN & CO., 229 & 231 Washington st., New York.

In the Stud.

AT STUD. FEE $25.
The Champion Mastiff
WACOUTA NAP.

Winner of the following prizes: 1st. Buffalo; 2d, Newark; 2d, Providence; 1st and special, Pittsburgh; 1st and special, Detroit; 1st, special and head of winning kennel, St. Paul; champion and head of winning kennel, Milwaukee—all in 1887.

To those who wish to breed mastiffs of size, weight, power and activity, free from the faults due to so much intense inbreeding—dogs that exactly meet the requirements of the mastiff standard, Wacouta Nap is especially commended; for no dog in America promises as well to eliminate the faults in the blood of bitches of deeply inbred strains as this one.

ST. JOE KENNELS,
Niles, Mich.

IN THE STUD

To a limited number of approved bitches,

THAT GRAND MASTIFF DOG

Sears' Monarch

(A.K.R. 6037).

A Prize Winner Every Time Shown.

Fee $50.00.

An excellent litter of puppies by Monarch now ready for delivery. If taken at once $25 each.

ANSWERS TO CORRESPONDENTS.

THE TRAGEDY OF THE TOBIQUE.

WE have had occasion in times past to record atrocious crimes committed by depraved men whose murderous instincts were fired by the acts of officials charged with enforcing the game laws. There were the members of the Shacker band in the town of Wesley, Maine, who out of revenge fired houses and barns, poisoned cows and beheaded horses; and again, the deer doggers who murdered Game Warden Hill at Fletcher Brook. These crimes of Maine's ruffian deer hunters have now been eclipsed by that of New Brunswick's salmon poachers.

Much ill feeling has been engendered in New Brunswick by the custom obtaining there of leasing salmon and trout streams to parties who come from abroad. Many local anglers, respectable citizens, feel that they are deprived of their rights in such waters; and this feeling is shared in an intense degree by that riff-raff element of society which furnishes the salmon spearers, trout netters, deer trappers and inveterate poachers and trespassers.

One of the leased streams is the Tobique River; and there has been bad blood between the lessees and the poachers. This has now culminated in a startling tragedy. It is a sickening story.

Among those who own fishing rights on the Tobique is Major C. F. Howes, of Philadelphia. For a month Major Howes and his wife have been salmon fishing on the river.

Last Saturday a number of men were detected engaged in fishing on that part of the stream owned by Major Howes. They were warned off, and after some altercation sullenly obeyed. That night the Philadelphia party camped at Galquac. Sunday morning they started down the river. There were in all ten persons, in three canoes. At a point thirty miles from the mouth of the river the canoes were fired upon by parties concealed in ambush in the woods on the New Brunswick side, forty yards distant. The fire was aimed at the leading canoe, in which were Major Howes, his wife and two Indians. The third-shot struck Mrs. Howes in the head; she fell forward and died instantly. The firing was continued upon the second canoe, in which was Miss Howes; then the occupants of the third canoe returned the fire, and the assassins retreated.

The accepted theory is that the murderers were the poachers who had been driven off the day before. Difficult as it may be to accept the theory that out of revenge for having been ejected from the salmon grounds these depraved men should deliberately murder a woman, it is perhaps the theory which must be accepted, for there is no other to take its place. Suspicion rests strongly upon two men in particular; and at latest report a sheriff's posse was out in pursuit.

"THEY ALL DO IT."

THE officials of Lewis county, New York, are desirous of learning the whereabouts of Dr. Alfred G. Bailey, the young man of Cleveland, Ohio, who was arrested for deer killing and escaped from the sheriff. It is reported that the fugitive was piloted by the guide Mike Zimmer through the devious windings of the wilderness and tortuous trails over the line into Canada, where the Cleveland doctor is now no doubt establishing a practice among the members of the "American colony." This is certainly "hard lines," and all the more rugged when we consider the mitigating plea made by the doctor's father, that as to killing deer out of season, "they all do it" at Lowville, and that his son, a medical student from another State, should not be punished for innocently following the custom of the country. The peculiarity of this plea is that while it does not soften the exile of the young doctor it bears down rather hard on Lowville. It is very similar to the plea of New York's "boodle" aldermen, some of whom are now in the "American colony" in Canada, and some in prison, they sought to extenuate their crime by saying that it was the custom to give and take bribes in New York. The plea may have been based on truth; but what light it sheds on a noisome atmosphere. If the Bailey pleading that prominent and "respectable" citizens of Lowville disregard the game laws and kill deer out of season be well founded, what is the particular standard of decency observed in that locality?

SNAP SHOTS.

A BUFFALO bull was killed by some Crow Indians week before last within four miles of Billings, Mont., on the south side of the Yellowstone River, and a little band of five or six head is reported northeast of the same place. It seems likely that these are almost the last stragglers of the buffalo that have for years been known to range on the heads of Porcupine and Dry creeks, tributaries of the Musselshell. It was from these that Mr. Hornaday secured his fine series of specimens for the National Museum, and an occasional one has been killed from time to time since then. By this time, however, they must be nearly or quite exterminated, and the only ones to be found now in the United States—except in the neighborhood of the National Park—are the few stragglers in Texas, those left by Mr. Jones when he returned from his raid into the Lone Star State after living buffalo to increase his herd.

A dispatch from Hamburg, Germany, announces that thirteen crocodiles escaped last Monday from a steamer in which they had been brought from Africa and took refuge in the river Elbe. Great consternation is said to be caused among the population living along the river bank by the escape of these reptiles. This is a case of involuntary introduction of exotic species which is quite unusual in character, but it will do no greater harm than to cause anxiety to the local population. The crocodiles will live only a short time, but no doubt for years they will continue to alarm the small boys and girls of the Fatherland. We may expect before long to hear of the killing of some of these saurians by German sportsmen, who are likely to turn out *en masse* and watch the river banks on the chance of getting a shot at a wild crocodile in Germany. The glories of boar and rehbock shooting will pale before this new attraction.

A Connecticut canoeist set out on a bridal tour in a canoe. Experienced canoeists will agree with us that unless the groom is a skillful paddler the couple will be likely to have a falling out very early in the honeymoon.

Much satisfaction is expressed at the positive results of the efforts of the Maine Commissioners in fostering the fish and game supply. The success of their work has been in many cases phenomenal. This season has seen the biggest run of salmon in the Penobscot River for years. Landlocked salmon planting in the lakes has shown some specimens of rapid growth, perhaps unsurpassed; for instance, in Wilson Pond in the town of Wilton, a landlocked salmon of 7lbs. weight was taken this spring where the young fry were planted only four years ago. From Nicotous Lake landlocked salmon of 4lbs. were taken of four years' growth. The landlocked salmon is also a marked success in Rangeley. In Webb's Pond, in the town of Weld, fish of 11, 12 and even 14lbs. have been taken; this latter pond was planted some ten years since. Deer are reported abundant from every quarter. Caribou have shown themselves in almost every part of the State, and frequently have been seen crossing the railroad tracks. Although the Commissioners have not the means afforded them to entirely suppress hounding deer, enough has been done to more than triple the amount of game, and to triumphantly demonstrate that the suppression of that practice alone would abundantly stock the Maine forests, even without further effort for enforcement.

From this time on until the early days of September shore-bird shooting ought to be at its height. From Cape Cod south all along to the "Capes" the birds are scattered. They are nowhere found in such tremendous hordes as in the olden time when we were young; but sometimes it is possible to get a morning's shooting even now. The hard storm of Tuesday last has probably caused a general movement of the birds along the coast, and we shall look for a report of some good bags. Although shore-bird shooting seems to many men rather tame by comparison with an upland tramp after quail and woodcook, the pursuit of the roaring ruffed grouse, or lying in a blind for fowl; yet, as it comes at a season of the year when there is no other shooting to be had, it is welcomed by the man who wants to get his hand in for the shooting which the cooler weather brings.

Every one knows how hard it is to find a thoroughly congenial companion for camp life. The days in camp are severe in their tests of compatibility; if two persons can agree in camp, they will find little difficulty in living harmoniously elsewhere. The judge who presides over the Superior Court of Sonoma county, California, appears to have an appreciation of this quality of camping, for he has permitted proceedings in a divorce suit before him to be stayed on condition that the parties thereto go camping out together. No further action will be taken until they return. It is needless to say that if they live in love and peace in camp, the divorce suit will be dismissed forthwith.

Brooklyn's stray and unlicened dogs are taken to as pound, and if unclaimed are drowned and sent to a Maspeth factory. Here the skins are removed, and the carcasses are converted into fertilizers. The skins are sent to an establishment on the Hudson River, where they are tanned and then used in the manufacture of "kid" gloves. Let not Miss Frivolity unduly bewail the pet pug wrested from her arms by thieving dog catchers; for in due time he will reappear to her, his grosser elements transmuted into roses and lilies and gloves for the delicate hands which once caressed his hide.

Vineyard Sound, Buzzard's Bay and all eastern parts of the Sound are filled with drift nets, to the extent of almost excluding troll fishing from sailboats. This causes great loss to boat owners, and almost unvarying disappointment to parties who hire the boats for bluefishing. Now that the Massachusetts Fish Commissioners have a constable for their express use, why do they not suppress this crying evil? It has been brought to their notice time and again. Mr. Brackett has all the law he needs on his side, if he would only employ it.

The New York Elevated Railway has the largest passenger traffic of any railroad in the world; it carries 525,000 people daily. A rule of the company forbids dogs in the cars. This is perfectly proper, even though the popular apprehension of danger from the dogs be wholly unfounded. Of the passengers some hundreds of thousands presumably object to the company of dogs and their feelings must of necessity be respected.

EARLY DAYS ON THE MISSOURI.

V.—AN ILL-FATED SETTLEMENT.

IN 1866 a company was formed at Helena for the purpose of opening a route to the nearest point on the Missouri River, which would be below the rapids and other obstructions on the upper river. The projectors, by examining a map, had selected for their point the mouth of Musselshell. A more unfortunate selection could scarcely have been made. The route was infested by hostile Indians, impassable for heavy teams, and seventy miles of it was a desert without grass or water. Several slight attempts were made to go through, but nothing was actually accomplished until the early part of 1868. Most of the stockholders were undoubtedly actuated by honest motives, but the directors must have been fully aware of the rascally intentions of their paper city. It was founded in fraud and ended in massacre. The town itself consisted of a few straggling huts built on a miserable sage brush bottom, overlooked on one side by ghastly bad land bluffs, whose gigantic, hideous ravines were sparsely covered by gnarled and stunted pines, with twisted limbs that looked as if every inch had been born in agony and grown in torture; on another side, a dirty, slimy alkali creek, fitly named Crooked Creek, pours its noisome slum into the Musselshell. The Musselshell at this point was in the spring a torrent of bad land mud; in the summer, an alkali quicksand. Along its banks struggled for existence a few melancholy cottonwoods, looking like so many deadly Upas trees shedding their baleful influence, and whose withering air appeared to breed desolation. The few stunted blades of grass that sickened through the bad land soil were yellow and withered. The bloom of June brought no beauty to this hideous place, nor did the white pall of winter give it majesty. Fit scene and center for the most frightful horrors and massacres.

Why the Indians should be so hostile in this particular neighborhood has always been a mystery to me. Had they been capable of philosophic reflection they would have known that their most deadly malice could not have been better gratified than by the unmolested settlement there of their most deadly enemies. About twenty or thirty men, mostly hunters or woodchoppers, made this place their headquarters, and as they made their money at the risk of their lives, no one wished to leave any of it unspent in case he should be killed. Men living thus, without law or social restraints and with plenty of money, would naturally be engaged in some wild scenes, and I have witnessed there orgies that would bring a complacent smile to the face of a leering fiend; but I have also witnessed acts that would add a brighter halo to the head of an aureoled saint. In the neighborhood and country tributary to it there have been more than thirty different massacres, the recital of which would be a monotonous rehearsal of disgusting atrocity—a task I shall not attempt, but will content myself with relating a few characteristic incidents.

In the spring of 1868 Mr. Higgins, of White Sulphur Springs, came down there for some reason best known to himself, with a fine train of mules. His mules and several horses that were owned by different parties were herded in a point formed by the Musselshell and Missouri rivers. The settlement was in a narrow neck between these two rivers, and it was supposed the stock was pretty safe, as in order to get away with them they would have to run by the settlement, as it was impossible to stampede them across the stream. Mr. Higgins and some men were guarding the stock, however, when a mounted Sioux party rushed in on them, killed two men, shot Mr. Higgins in the arm and took every hoof of the stock. The whole thing was done like a flash of light. At the yell of the stampede men rushed out of their cabins and tents and opened fire at the whooping Indians as they pursued the frantic stock, but no Indian was killed. One young buck on a magnificent horse, after they had gotten the stock away, turned back and again ran through the firing crowd, making signs of derision as he swept by on his flying horse.

One foggy, misty day in the summer of 1868 the Sioux attacked the Crow camp, a short distance from Musselshell, and got away with about 800 head of horses. I was in the Crow camp at the time, but it would occupy too much space to describe the stampede of the horses, the yells of the Sioux, the bitter imprecations of the Crows, the mounting in hot haste of the Crow warriors for pursuit, the harangues of the old men, the loud beating of the tom-toms, the rise and fall of the war chant of the women, the varying success of the battle, as fortune inclined one way and then the other; the exultant songs of victory when some enemy fell, the cutting off the hair and maiming of themselves of the relatives of the slain, the wails and lamentations over the dead.

The Indians kept up a series of skirmishes against the settlement during the early spring of 1869. A white woman, Jenny Smith, was wounded and scalped alive, and a Crow squaw was shot through the lower part of the body in the first attack. For a couple of weeks any one who ventured out any distance was sure to be fired at and run in. For a short time again the Indians apparently had left, when some men who ventured out to get some wood were run in by a small party. This small party, of a dozen or fifteen Indians, would make constant petty attacks and run off again if they received the slightest opposition. The majority of the settlement took great precaution for their personal safety, and would on no occasion venture outside the shelter of their houses. A very few men were all that would offer decided opposition to these constant attacks, but continual success on the part of the whites, and the apparent cowardice of the Indians, finally induced almost every one to run after the Indians whenever they made any sort of demonstration. The only horse in the settlement was picketed and iron hobbled close to one of the buildings. One morning a few Indians crawled through the sage brush, cut the horse loose, and endeavored to get him away with the hobble on. Nearly every one ran after them, and the heavy firing caused them to abandon the horse and seek safety in flight.

A couple of mornings after this occurrence they opened fire at a couple of Crow squaws, who were gathering sage brush for firewood. The Indians numbered sixteen, and almost every white man rushed after them in a body. The Indians ran toward the Musselshell and then ran up the bottom. They were not running very fast and the whites were gaining on them when suddenly there came a shot, which killed Jack Leader, from a coulee on the bank of the Musselshell, and the whites saw an ambush. Had the Indians seized the moment of panic no white man could have escaped the massacre. The whites turned to run, one man then saw the danger of flight and stopped it with a leveled rifle. The Indians had probably been trying to bring about this ambuscade for several days. Their principal force was cached in a square coulee on the bank of the Musselshell. Their plan was to make feint attacks with a small party, so as to induce all the whites to run after them; their decoy party was to run by the hidden Indians; when the pursuing whites came close to the ambush the Indians were to jump out, and in the surprise and panic kill every white man. It was well and ably planned, and probably owed its failure to some nervous Indian, who had fired too soon; but even as it was, it would have been successful had they made their onslaught in the moment of terror and panic that followed their first shot.

Most of the whites gradually withdrew to the settlement or to a safe distance from danger. Five or six men kept their position within thirty or forty steps of the now besieged Indians. We thought there was quite a number of them, but did not know how many. After a short time another white man, named Greenwood, was shot through the lungs and had to be carried back. We resorted to various artifices to get a shot at the Indians. Two men would lie close together behind a clump of sage brush; one would show his hat on a stick to draw a shot from the enemy; the other would fire at the flash of the Indian's gun. A couple of hours were passed in this way, and it began to look as though we should not accomplish anything, when, fortunately, it began to rain. We were armed with breechloading rifles, the ammunition of which rain would not injure; the Indians were armed with flint-lock guns and bows and arrows, and as they were stripped naked for war, they could not protect their arms from the rain. We were getting impatient, and relying on their arms being useless on account of the rain, started to change their position, but were appalled at the sight of their numbers in the coulee.

The only possible way to reach them was for some of us to cross the Musselshell, get in their rear, open fire from there and drive them out of their coulee, when those on the other side of the Indians would have a chance at them, and thus place them between two fires, I suggested this plan to Frank Smith and Joe Bushaway. They agreed with it, and we three prepared to cross the river. We crossed the river about forty steps above the Indians' position. The Indians, when they saw us make this movement, came to the mouth of the coulee and tried every means to get their guns off. One would aim a gun and snap the flint, another pour powder on the pan. They did manage to fire off a few of their old fukes, which went off with a noise like that from so many cannons. Other Indians tried to shoot us with arrows, but their wet bow strings possessed such feeble force that the arrows could scarcely reach us. The stream was miry behind the Indians—where we crossed it was tolerably solid, but the water in the deepest portion took me to the armpits: the other men, being taller, did not have so much trouble. The two others wore buckskin shirts; I was dressed in buckskin complete, and in crossing the stream my buckskin pants lengthened and interfered with me so much that I was obliged to kick them off, although I had about $500 in the pocket, and throw them to the opposite shore, where I afterward recovered them; but during the remainder of the battle I had nothing on but a shirt. Nearly all the men belonging to the settlement were back about half a mile from the Indians. We three had crossed the stream and were opposite the Indians, about sixty steps off, and had commenced to fire on them, when this mob, seeing us in our flesh-colored buckskin clothes, mistook us for Indians, and opened a heavy fire on us, obliging us to retreat across the river again. When the Indians saw our plan, the uselessness of their arms and the trap they had placed themselves in, they realized their fate. A gloomy Nemesis scowled retribution for the massacre of many a white man. We could see the smoke from the circling pipe and hear the low wail of the death song.

By this time Jim Wells, Dennis Halpin and others, who were on the opposite side of the Missouri River when the fight commenced, had crossed the Missouri when they heard the firing and had hurried up to the front. This time Jim Wells, Frank Smith and Frenchy crossed the Musselshell at a better point and opened fire on the Indians from the rear. The Indians jumped out of the coulee with wild terror, panic and fear, and were met with a withering volley from those on the bank, which caused them to run almost anywhere in their blind terror. There was not a cheer nor a yell; not a sound but that of the panting of the breathless, horror-stricken Indians, and the rattle of the firearms which sounded terribly distinct against that lowering rainy sky as the deadly cross-fire swept their tumultuous, panic-stricken flight. I recollect one great big Indian—horror and death staring in his wild eyeballs—blind in his terror, who almost ran into the party on the bank, but a bullet stretched him on the plain, and as he furiously grasped the sage brush his sobbing, gurgling breath ended in death.

Another, a handsome boy, with chattering teeth and stiffening hair—pity should have spared him—but black death and unpitying fate sealed his eyes.

In their wild despair they plunged into the river. Some were shot as they mired, others dragged their wounded bodies to the brush. No Indian would have escaped had it not been for this mob a half a mile off. They fired indiscriminately at friend or foe, and prevented us from closing in on the Indians. It is the curse of undisciplined bodies, that their panic fear invites massacre, and their want of union snatches the fruits of success out of the very grasp of victory. Men who took an active part in the battle scalped the Indians, but no brave man otherwise mutilated the dead.

Several Crow squaws who were living in the settlement, when they heard the heavy firing with which the battle closed, came out about half way and were engaged in a war dance, and the high notes of their peans sounded weirdly through the mist and rain. After the battle I passed by them on my way back to the settlement to get some clothes for myself, and their flattering attentions were rather embarrassing in my undressed condition.

An old fraud by name of Capt. Andrews, cut the heads off the dead Indians, removed the flesh and brains by boiling, labeled the skulls with awe-inspiring names, and started on a lecturing tour throughout the States, in which, I have no doubt, he made Baron Munchausen ashamed of himself.

Thirteen Indians were left dead on the ground, and the camp when they came in to gather up the remaining bones and lament the dead, acknowledged that more than thirty died on the route to the camp, and only one out of the ninety odd who were in the fight escaped without a wound.

Next day we found the cache where they had stripped for the fight, in which there were more than a hundred robes, a great many moccasins and two war bonnets. The robes and moccasins were sold and the money given to the wounded man, Greenwood. Wells and myself received the two war bonnets. Wells's war bonnet was a circlet crown of war eagle feathers. The head piece of mine had horns and plumes (an insignia of the very highest rank) and the waving tail, made from the tail feathers of war eagles, was more than five feet long.

The settlement declined into a mere trading post, and its final fate was characteristic of the place. When Carroll was established Musselshell was abandoned, and two men were hired to chop into cordwood what remained of the buildings. When they had their work finished some Indians captured them, tied them to the cordwood and burned everything. When the howling winds from off the desert bad lands swept away the ashes of that murderous fire, the last vestige of civilized man disappeared from this ghastly place. Once more this ill-fated spot was left to the growl and snarl of wild beasts and the home of the hoarse croaking raven, whose circling flight over the fatal spot looked like the wraith of some murdered white man or slaughtered savage—fit scene for wailing ghost and goblin shade.

HENRY MACDONALD.

Natural History.

THE SCIURIDÆ.

I.—THE WOODCHUCK.

WITH us the squirrels are represented by an interesting group of animals, which in classification naturally fall into six well marked genera, including the woodchucks, the prairie marmots, the chipmunks or ground squirrels, the spermophiles, the true or arboreal squirrels, and the flying squirrels (see my last article, "The U. S. Rodentia," for the several species in each of these genera). Taken as a whole, the group perhaps shows its greatest difference, both in habit and structure, between two such forms as a woodchuck and a flying squirrel; while on the other hand, a chipmunk and a spermophile, in these two particulars, are very much more nearly related to each other.

A WOODCHUCK (*A. monax*).

Woodchucks, as we are well aware, belong to the genus *Arctomyx*, and with two of the species out of the three in our fauna, I have but little or no personal acquaintance. Of the hoary marmot (*A. pruinosus*) I have never seen a specimen, and at the present writing have no good account of the animal at my hand. My knowledge of the Rocky Mountain marmot (*A. flaviventer*) stands pretty much in the same case; although several years ago I shot a specimen of this species in the Medicine Bow Range of the Rocky Mountains in Wyoming, but he fell in a position where it was impossible for me to recover my prize. There were a number of them out together, standing near their burrows, and every once in a while one of the party would give vent to a rather prolonged and peculiar whistle, whereupon some of them would sit up on their haunches and others take to their burrows in all possible speed. They reminded me very much of the accounts I have read of the Alpine marmot of the Continent.

Last summer I saw here at Fort Wingate, New Mexico, an animal that I took to be a Rocky Mountain marmot, but the momentary glimpse I had of it did not absolutely satisfy as to the fact, and I lost him to view among the rocks before I had the opportunity for a fair shot. It was evidently a marmot, however, of a size not quite equal to our Eastern woodchuck, and appeared to be of a bright rufous brown above, and paler on the under parts. My annoyance at losing him was not easily appeased, as mammals of any kind are more than rare in the neighborhood, and over three years' residence has shown me but few of the typically Western types.

Many years ago, during my boyhood days, which were mostly spent in happy old New England, I did my share of both shooting and trapping woodchucks, and even helped eat a roasted one on an occasion. But I also did more than this, for several times I had them as pets, and closely studied their habits in nature and in confinement.

Through some parts of the State of Connecticut it would be hard to pick out a clover field of any size that

did not have a woodchuck burrow in some part of it. Sometimes they choose a site somewhere under the stone-wall which surrounds the field, or if there is a large rock, as is often the case, anywhere about the middle of the field, the animal will burrow under this as a very choice location. Finally the roots of an old apple or other tree are often chosen for its stronghold, the burrow being dug down among them, the owner seeming to possess a realizing sense that no one would ever dream of attempting to dislodge him from such quarters. As is the case with the excavations made for their habitations by most fossorial mammals, the burrow of a woodchuck at first descends obliquely into the earth, then passes nearly horizontally for several feet, rises moderately for the last half of its length to terminate in quite a spacious and round chamber, which constitutes the "living room" of the entire family. In it the female brings forth her litter, and the young remain there until they pair off and dig their own homes elsewhere.

Such a burrow may be at least 30ft. in length, so long that one never thinks of digging a woodchuck out, but I have seen farmers bring up two or three barrels of water on a cart and drown the occupant of this subterranean establishment at short notice, and rejoice most heartily if the pair and perhaps seven or eight quarter-grown young are caught in at the same time. Very often I have captured them in steel traps set at the mouth of the burrow, taking the precaution to sprinkle it all carefully over with fine dirt. One old woodchuck, I remember, constructed his burrow almost in the center of a twenty-acre clover lot, and every attempt to capture him in any kind of a trap utterly failed. It was the rarest thing in the world to even catch him standing up at the entrance of his burrow during the day, but frequently we would see him just head and shoulders out of it. It seems to me I must have fired thirty or forty times at him under such circumstances from the outer side of the stone wall which surrounded the field, and that too with a heavy old-fashioned muzzleloading Kentucky rifle, which at 75 to 100yds. was good nearly every time for all small game. But here every shot failed; a cloud of dust would puff up at the very entrance of the burrow each time and I would confidently walk over to pick him out, but no, next day at noon he was there again, looking out as smiling as ever. He was captured finally by my tying a Colt's revolver to a stout stake driven down within a few feet of the burrow and training the aim down the entrance and then tying a long string to the trigger, I waited behind the wall till he again showed himself, when the success of the device sealed his doom. Upon examining him, it was found that he had been "barked" in several places by the rifle balls, including a long graze across one shoulder; the tip of his chin was gone, and the hair parted along the top of his cranium. Their heads make difficult shots at 75yds., owing to the color of the animal being so much like the earth about the burrow, and I have always since believed that they succeed in dodging just a little bit at the flash. This woodchuck measured from tip to tip 22in., and was the largest specimen I have ever examined; the general form and coloration of this species is so well known that to save space we will waive reviewing it here; and I suppose, too, it is quite generally appreciated that different individuals often show marked variation in their color. Sometimes the pelage is very dark, and in others notably light, especially upon the nether parts. The animal is never taken, however, for its fur, though I have heard it said that its hide is cured for whip lashes, but have never personally known of their having been collected with the view of thus utilizing them. They are fond of sitting up on their hams like prairie marmots and spermophiles, and eat with their forefeet while in this attitude; and farmers have a good right to be their enemies, for they not only eat up quantities of their clover, but tramp it down to no little extent besides. Then during their foraging excursions at night, the season when they really venture away from their burrows for any distance, they destroy and consume quantities of the young green corn and melons.

During October in the Northern States these animals become enormously fat, and soon after take to ground for the following six months, which are spent in hibernation, a habit that is carried out with equal fidelity in the captive animal. In time they become very tame as pets, but have few or no interesting traits to recommend them. Woodchucks show no disposition whatever to live in companies like the marmots of the Western prairies, though if I remember correctly its northwestern relatives, the hoary marmots, thus congregate, sometimes as many as thirty or forty being found in the same community. When pressed they are pretty good runners, reminding one somewhat in their squat appearance of a badger, and like this latter animal will bite severely if captured by the hand. If cornered in a wall they chatter and grunt, and occasionally give vent to a loud and peculiar whistle-like squeal, from which they get the name bestowed upon them by the Frenchmen of Canada, of *Siffleur*, the whistler. Upon several occasions I have seen woodchucks climb a tree for several feet, and if they can by so doing reach a large horizontal limb they will stretch themselves out upon it for a noonday sun bath. They are not nearly so numerous as formerly, though notwithstanding the persistent warfare maintained against them by farmers and others, there seems to be no immediate danger of their total extermination.

My cut of a woodchuck illustrating this paper was copied by me from a figure in Goodrich's Natural History, and adapted for the present purpose.

R. W. Shufeldt, M.D., C.M.Z.S.

A Big Buck with a Bell.—Alex. Moss writes to the New York *Sun* from Modoc, Miss., Aug. 9: On Thursday last I killed a deer, a buck, the largest ever seen in this county; gross weight 347lbs. The horns 3in. from the head were 1¾in. in diameter. There were six points on one horn and seven on the other—13 points. Around the neck of the deer was a bell attached to a wire rope. On the inside of the bell was plainly engraved: "J. S. Dunn, Lansing, Mich. June (or Jan.), 1881." The wire rope had been spliced in sailor fashion, and was no doubt done before it was put on the deer, and allowances made for the neck growing. There was but a small portion of the material of which the rope was made left, save the wire. It was very tight around the deer's neck, and the hair was white where the rope touched. The bell had no clapper, and was made of brass and copper. This point is sixty miles above Vicksburg, on the Sunflower River.

THE DOMESTICATION OF WILDFOWL.

EACH year something happens to prevent complete success in breeding and domesticating our beautiful wild ducks, and each year a resolution is made that they shall be managed differently and success must surely follow. Last year I bred wood ducks only. The pintail escaped with her young, and hens killed my young mandarins by kicking them while scratching for food. The little fellows would go to the hen to be warmed and she would scratch the gravel and kick them. Hesitating between this evil and the other one, of trusting the ducks to set and have them abandon the nest or escape with the brood, I bought an incubator with a regulator, which did not regulate, and, after cooking two lots of hen's eggs, abandoned it and decided to try both of the old plans, and succeeded in getting some mandarin ducks and blue-winged teal, but failed on wood ducks. The success in both cases being with the ducks as mothers.

The old mandarin duck laid fifteen eggs; four were put under a hen May 1, and three were hatched, two lived for nine days and were killed. About May 18 the duck began sitting on eleven eggs, and on June 22 brought off six birds. This was in an inclosure around a fountain in the yard, the nest being in a box about 3ft. from the ground. A wood duck had then been setting about a week in the same inclosure and came off and tried to kill the young. In removing her one of the young mandarins escaped and was lost. The five remaining ones were pinioned at two weeks old and one died from an injury four weeks later. At present writing the four young are nearly grown and the bills of the males begin to show a shade of pink. The male mandarin loses his gorgeous plumage in June and does not regain it till September, as is the case with the male wood duck.

Of wood ducks there were twelve pairs, all but one pair in an inclosure of two acres of swampy land containing a large spring pond, alders and grass. Nests were made of boxes and nail kegs, with holes in the side and a board walk for them to reach it. The one pair were in the fountain mentioned above and were birds raised last year, the others were wild birds kept from two to three years in confinement. The young bird laid four eggs, but they were not fertile. One of the old birds laid six eggs and then abandoned them, and we put them under a hen which hatched two, but they did not take food and died. The time of incubation was thirty days.

One of two blue-winged teal made a nest on the ground and on July 6 began setting on ten eggs. In twenty-three days she came off with four young. One of these was missing a few days after, one broke its leg and died at two weeks of age, and another was found with a broken neck when nearly four weeks old; only one is now left.

The female widgeon, shot by Mr. Endicott in Barnegat Bay last October, mated with an English widgeon drake but did not lay, and no mate has been obtained for the solitary female green-winged teal which is now four years old. Next year the wood ducks will have a separate place for each pair, the food will be changed from corn to wheat, buckwheat and other small grains, and better results are hoped for. No one seems to have made a success of breeding these birds in confinement and consequently I have to learn through repeated failures what are the requisite conditions for them, but having had a partial success there seems to be no reason why mandarins, teal, and wood ducks may not be bred with as much certainty as are the black ducks and mallards.

Fred Mather.

Cold Spring Harbor, N. Y., Aug. 20.

Game Bag and Gun.

BREAKING CAMP.

WE were at Camp Le Roy, on Roaring Brook. After a most enjoyable vacation of two weeks spent in a bark shanty, reveling in hemlock boughs, amid the wildest part of the Adirondack mountains, by a beautiful stream, with a party of sportsmen as keen as a similarity of taste could call together, the time came to break camp and return to the busy and now still more uncongenial pursuits of the dull rounds of every day life. The hunting had been very successful, and the fishing, though late was not bad. Mallard and greenwing teal and the partridge had frequently graced our board and were fully appreciated, thanks to open air life and slumbers induced by the soothing aroma of hemlock boughs. Venison had been the staple food of our wildwood table, venison done to perfection, and in a variety of forms, from a broiled steak to a rump roast, as only our guides could prepare them.

Several of our guides deserve more than a passing notice. Our Hercules stands over six feet in his stockings—when he has them on—and has not one pound of extra flesh on his body. His proportions are simply splendid. I have seen him back an enormous buck (minus the neck and antlers), which few in camp could stand under, carrying it half a mile without a rest. He pulls a splendid oar, and in fact is a model guide.

Then our caterer, cook, hunter, and secret counsellor must be seen to be appreciated. If Mr. Editor will visit Camp Le Roy our Jerry will give him a roast that will make his mouth water for a year every time he thinks of it.

The great character of our party was the driver, Charley—a chap who is as hard to catch asleep as an old weasel. He is as trim built as an Indian runner, as quick as a greyhound, and can so exactly imitate the hound in full chase that it will puzzle an old hand to tell which is the real hound. He seems made of whalebone, trimmed with india rubber. He will start out toward the east with a couple of dogs attached by a chain to his waist, another he leads, and his own two travel in front; with them he holds general conversation on the way. Within three hours he will start each dog after a separate deer, and by short cuts or by some hocus-pocus, he will be up with one or more of them coming in from the opposite direction, join his voice, and by the time the deer is killed, he is on hand to join in the hilarity and fun usual on such occasions. This inimitable fellow has but one fault, and I do not know that you would term it such; you might say it was proof of his game—he cannot eat venison; it makes him sick, and we had to feed him on pork.

But the time had approached when all that makes a life of toil endurable must end. One of our party was about to take his leave of us a little in advance, and we sent him off with a fine saddle of venison securely packed in a sack, for fear of his too soon forgetting the old camp by Roaring Brook. We also sent to his good lady, who was waiting for him at no great distance, a fine brace of partridge. More anon about that saddle of venison. But those who lingered by the sparkling brook were to have one more hunt in the early morning, to secure, if possible, a whole deer, to grace in triumph the successful return of one of our favorite nimrods. The evening did not give promise of a prosperous hunting morning, but what cares the huntsman for weather? In the first of the dawn everything was astir for a rapid hunt, and then a farewell to the hemlock couch for a season. The sky was dark and the clouds close down to earth; but our party started with the understanding that one deer only was to be killed; and then a rapid stampede for our boats three miles down the river. One hour after we left camp a splendid buck was shot, and the Hercules of our party took it on his shoulder and started as if carrying a baby, antlers, hide and hoofs, for our shanty a mile away. This he reached with but one stop, through a fine rain, descending as gently as a summer dew, and as wet.

All being ready, a farewell salute was fired, and the party, seven in number, started on a slippery carry of three miles for the boats. We will skip that tramp, and I only wish we could have skipped that day, but every dog must have his day and the longest journey ends at last. We reached those boats the sorriest looking soaked party imaginable. The rain continued to increase until it poured, and hunters, guides, dogs and game were soaked. Through it all good nature and laughter reigned, and only the dogs were a little cross. Still we had a row of twelve miles to reach our destination, and over a broad sheet of water, where the wind whistled and the waves dashed madly, as if determined to swamp our frail cockle shells and show us the other side of our beautiful canvas. Still, though we were wet and soaked, all was good humor, and as the hours flew by the clouds began to break away far up the lake toward the western horizon, promising a gorgeous mountain sunset, and later a resplendent double rainbow appeared, stretching its broad arches over and touching with each end the mountain sides, suffusing the atmosphere all around with its soft twilight rays, promising the cold, wet and weary hunters a better and a brighter day on the morrow.

About that saddle of venison I will have to defer explanation until another time.

Tarrytown, N. Y.

A DAY ON GRAND RIVER.

SENECA, Missouri.—For three weeks in March we had had fine duck shooting and had killed a great many mallards, pintails, spoonbills, teal and several other varieties. On this occasion Walker and I went to try our luck once more on the Grand River, in Indian Territory. The train was on time, and at half past nine o'clock we opened fire on some mallards, but the brush was very thick and Walker only got one shot. I succeeded in getting in the second shot and with it I dropped an old drake, but only crippled him and he made for the bank, and as luck would have it, when I started to get him I slipped in another shell. When he discovered me coming stumbling through the willows he began to flop and scramble up through the brush, and when he reached the open he started to fly, but I soon brought him down, and this time to stay.

We left him on the water for a decoy and he served us well, for it was not long until two others came flying over. I attracted their attention by calling, and they made a short turn and came near W. He fired and killed. I fired and made a clean miss. This gave us two decoys, and as the water was too deep to wade, we had to wait for our ducks to float out to the edge, which took a full half hour; but while we were waiting two teal sailed down to our decoys and W. fired and killed both of them. This gave us four ducks, and now we must try for another place.

We went to the river, but did not get any shots there. Then we went to a pond in the river bottom, but did not find any ducks there. Now we began to think our only chance was to go back to the river and risk getting some there as they would fly by us. When we came to the river we saw two alight down near the bank, but we had to cross a slough before we could get in gunshot of them. We "cooned it" across on a sycamore log, and then were close to our game; but the willows were very thick, and while we were looking for an open place to shoot through they flew, and I succeeded in winging an old drake, but he fell so far out in the river the current took him down at a lively rate, until all at once he made for the bank. We went after him, and when we were near him he made for the river. I put in a quick shot, but he was too far out, and went floating down about 20ft. from the bank. I had to follow him very near a mile before I could get him; I would not have followed so far but he came nearer the bank all the time, but very slowly. I would get long sticks and reach for him, but he was always just out of reach, until at least he came with a turn in the current near the bank, and I succeeded in getting him after a hard scramble through the willows.

Then we went to the prairie, where there are some ponds. Here a beautiful sight met our eyes, but it was hard luck for duck hunters, as there were no blinds for us to slip up behind. The pond is out on the edge of the prairie and covers about two acres. It was literally covered with mallards. We stood within 150yds. and watched them play for half an hour, for this was all we could do. If any brother sportsmen have been in this fix they will know how we felt when we walked up and saw them fly away out of gunshot. Then we came back to the first pond where we found more ducks, and what is so strange to me, there was a man ploughing in the field and he would come within seventy-five yards of where the ducks were, and would yell out at his horses, but the ducks would not raise their heads. But as soon as they would hear a twig crack they were on the look out.

We succeeded in making a good bag and came home on the six o'clock train. This ended our duck shooting for this season as the weather turned off fine and warm.

F.

The Flathead Lake Country, in Montana, is said to afford good hunting with wildfowl and deer.

A BUNCH OF BEAR STORIES.

I.—BILLY AND THE BALD-FACE.

FORT SIMPSON, British Columbia.—You may remember that some time ago your ever-entertaining correspondent "Forked Deer" wrote of a "golden" or "yellow" bear of California, which he believes to be only found in one part of that country. It may be of interest to "Forked Deer" and others to know that a small yellow bear is found about the head of the Kit-Laub, or Gardiner's Channel or Inlet, about 100 miles south of this. They do not appear to be common, as but few come in among many blacks and browns. Not having seen an entire specimen, I cannot give dimensions accurately, but from the size of the skins I should judge them to be about two-thirds as large as an ordinary full-grown black. In color they are a yellowish-white; in some cases slightly tinged with rusty on the shoulders. I am of the opinion that they are sports, but whether of black or brown I would not like to say. I have not heard of their having been seen anywhere else on the coast.

The bear of which the most marvellous stories are told by the Indians, and which is held by them in the greatest dread, is a large brownish-gray fellow, found in the mountain ranges of the Skeena River, and those between the Skeena Forks and Bobine Lake, and called by them *Tahamool*.

When one hears of his size, of his strength and of his cunning, his satanic ferocity and the power his great gray face has of turning a bullet, one naturally hopes that if ever he has the luck to meet "Old Baldy" he may be armed with gun or rifle the best.

"*Mat-tick* [grizzlies]! Hah! they are bad! So are the brown bears, but they are nothing to *Tahamool*. He cares for nothing. He will rush out and tear you to pieces ere you are aware of his presence. He will smell you a mile away, and he makes a rush to get you. Beware of *Tahamool!*" Thus speaks Poor Lo of this, his deadly enemy.

Being a believer in the doctrine that no bear attacks without due provocation, I one evening sought out an old miner friend who had prospected the country in which the bald-faces are most plentiful, and asked his opinion on this, the bear of bears. "Do you think, Billy, that the 'bald-face' will attack on sight? I mean, of course, to except a dam with cubs."

"Well, I dunno," said Billy. "Got a pretty bad scare once with one. The only live one I ever came across, and I've always respected the tribe since. But then that was a she, and she had a couple of cubs."

Billy pulled at his clay pipe for a while after this, until I started him out by asking him to spin the yarn, and thus he began: "About three years ago my partner, Jake Harper, and I were up in the Kitsum Kaylum * country prospecting. We had camped some distance from the creek, away up in the mountains, and calc'lated to do up a good section of country. Before we came up the Indians had warned us of the bears, telling us to look out, as there were *Tahamool* up there, and that they were very dangerous. We hadn't paid great heed to all this, as the bears of that sort we had seen killed had looked to us like nothing more than large browns, sort of gray with age, and mostly with the face quite gray. In fact, we thought so little about bears that the first day out we took nothing but pick and shovel, leaving our rifles in the tent.

"We took away up a mountain spur, which finally led us to the crest of a sharp ridge; one side of which was a sheer precipice, while the other sloped away down into the cañon at whose mouth our camp was pitched. Mighty steep was that side, too, and covered with broken slate and boulders. The crest was nearly level. In some places sixty or eighty feet wide, while in others it was not more than five or six. There were a few large boulders scattered along, and some scraggy pines, with here and there a clump of brush.

"We had reached perhaps half-way along this place when we heard a noise of stones clinking and scrub rustling; and looking up, we saw a big bald-face, making straight for us; and just ahead of her were two cubs. They were still some distance from us; and we figured it up that the old woman had scented, but not seen us, and was making good tracks to get out of the way. Not caring to interfere with her little private arrangements, we took a sheer off to one side and waited for her to pass.

"She passed? She passed just enough to smell where we had turned off and then she turned too and came for us with a growl that froze us stiff. There was a sudden dissolution of partnership about then, I tell you!

"Jake made a break toward the edge, never, I suppose, taking a thought of where he was going, for the bear charged after him first, down hill the other way a little; and then, seeing that I was not followed, I came back to the top of the crest and had a look. At first I could see nothing, hear nothing. Then I heard the old bear come crashing along, and before I could make a move to get anywhere, she broke cover within fifty yards of me and at me she came.

"Our mongrel dog had followed me that day and he looked at her stupidly. I sicked him on, hoping that he would engage the brute until I could get to a place of safety, but he had no more than reached her when back he came toward me and Madame Bear after him. Then it was that I tried to knock out all previous records. I ran straight. I ran crooked. I dodged among the rocks, but still the savage brute gained on me, with wide open jaws dropping foam. She made an occasional snap at the dog who, if he did not worry her, at least kept somewhat in her way or I should never have escaped. Her cubs kept time in the race as I could see in my hurried backward glances. Though fast losing breath I still had presence of mind and began to consider the situation as I ran. Clearly I was going to get chawed up on the level, I must try her down hill.

"By this time we were not ten feet apart. I must let her pass me. I made a sudden spring to one side behind a small brush clump, and the bear, unable to stop on such short notice, shot past me like the wind.

"Before she could turn I was going down hill, with a good start and a fervent hope that she would be satisfied to leave me and go her way. No! there she has turned and after me again, and at such a pace that I see it is all day with me unless I can make another double on her. I accordingly jumped aside again when I got a good chance, and the steep hillside favoring her descent, she went a long way past before she could check herself. I had meanwhile climbed to the crest again and run along it a little bit, but before the bear got quite up I started down hill again. It was astonishing how soon she reached me again! I began to lose heart. I was tired out and could see no way to shake her off. She, on the other hand, seemed to be getting fresher and more active. I now noticed that the loose slate was beginning to move under the scurry. The mountain slope was getting steeper. Now for one last effort! I was too tired and moving down hill too quickly to jump again. I just had strength to throw myself sidewise on to a large boulder which lay imbedded in the loose debris, and hold on. The bear shot past like a streak, and so close to me that I could feel her fur brush my arm. The dog rolled clear over me and recovered himself a little lower. Meanwhile, the old bear, unable to stop herself, went on down, the rolling mass getting bigger as she went. She finally reached the scrub near the foot of the slope, and after shaking herself and gathering up her precious twins, who had by that time reached her, she looked up toward where she had last seen me as though meditating another attack. She changed her mind, however, and started off down the ravine leading toward our camp.

"Then I picked myself up; tired and bruised, and started off to look for poor Jake's remains—for dead I was sure he was—but I was thankful to hear him shout, and shortly after to see him safe and sound and greatly relieved at having found me alive. He took me to the place he had been cornered in. Good heavens! On the extreme edge, and overhanging the precipice, was a comb of packed snow; the remains of a great drift. The whole strip was about 16ft. wide, and probably overhung 8 or 10ft. It was fast melting, and no one could tell what minute it might drop. Jake's tracks led to the extreme outer edge, and those of the bear about to where the solid rock ended. Instinct must have told her that further than that would be unsafe. I wouldn't have gone on that snow comb for all the gold in this country! Neither would Jake, if he had had a chance to choose, but the old gal had pressed him so close that he was fairly forced there. Saved his life, anyhow!

"Not another word was spoken until we reached camp when Jake pulled open the tent flap, grabbed his old rifle, and launched out against bears generally, and our female friend particularly. I fully indorsed his opinions. Two savage men might have been seen a few minutes after, stealing through the woods up the cañon, but that bear was not seen again on that trip. Lucky for her she wasn't! Although the yarn takes a good while to tell, the whole affair took but a short time in reality."

I glanced up at Billy's face, as he stopped speaking and the drops stood on his forehead at the recollection of his terrible experience.

For a few minutes we all smoked in silence, then I asked: "Do you think, then, that those bears will attack from sheer viciousness?"

"No, I don't, although that one went for us. You see her cubs troubled her badly, and one could not tell but what she had been hunted and worried a day or so before, for the Indians hunt that section pretty freely."

* A tributary of the Skeena River.

II.—AMONG CALIFORNIA REDWOODS.

Fourteen years ago Crescent City was, and I suppose still is, a point of some importance on the northern coast of California, the principal industry being the lumber trade. The harbor, while not a commodious one, affords good protection from the summer winds which sweep down the coast, but is exposed to the "southeasters," which at times blow hard during the winter season; and it is entered by a crooked channel among the numerous outlying reefs.

While engaged in hydrographic surveying in the vicinity, an anchorage was frequently sought at this place, which afforded us conveniences for tidal observations, and where a limited supply of fresh provisions was obtainable; and it was during a somewhat protracted stay in this port that Stanton and I determined to see something of the interior of the country.

With this object in view, we landed one morning properly equipped for a week of investigation, and having hired a horse and wagon from the only livery stable in town, we set out on the Jacksonville road, which extends in a northeasterly direction, and enters the redwood hills about five miles from the coast. After three miles of travel through the redwoods, we drew up at the first house we had seen since leaving Crescent City, a log hut, which served as a stopping place for the teamsters who were engaged in hauling chrome ore from a mine about ten miles further on, situated near what was known as Tack's or the Low Divide.

The only occupant of the house at the time of our visit was the proprietor, Tom Ford, a genial Irishman, who divided his time in attending to his occasional customers and in cultivating a small tract of about ten acres of level ground extending back of the house, and surrounded by woods. Of course we were hungry, and after having disposed of the dinner which Tom prepared for us at short notice, we decided to walk down to the further edge of the farm in hope of seeing a bear, having been assured by our host that he frequently saw them crossing the fence at the extreme corner of a piece of ground upon which he had lately raised a crop of oats, a small portion having been left uncut in the corner.

Taking our rifles and accompanied by Tom and a large brindle dog, the guardian of the place, we started for the oatfield, and when about half way there, sure enough a large black bear suddenly raised up out of the oats, and after taking a short, but apparently satisfactory look at us, dropped out of sight and made off. Why we did not shoot I know not and did not know at the time, but I suppose we were so taken by surprise, neither of us having put much faith in Tom's story of the bears he had seen in the field, that we were "rattled." After an interchange of opinions expressive of disgust at each other's want of preparation, we crossed the corner of the field, and climbing the fence took our course through the woods. After a time we heard the dog barking vigorously. "He's treed a bear," said Tom, and after following up the sound for some time we finally found the dog, but no bear; nothing in the neighborhood of more consequence than a squirrel.

This was repeated several times, until wearied by our exertions, we stretched ourselves out on a fallen tree, where we remained until we noticed that it was growing late, and we were a long distance from the house. We thereupon set out on our return, which we found no easy matter, the way being mostly down hill, night coming on, and the road a rough one. However, with Tom and the dog in the lead, Stanton and I following, now climbing three or four feet to the top of a redwood log, and then sliding down from it some eight or ten feet on the lower side, occasionally placing a hand in the darkness on one of the large snails so abundant in the redwoods, its cold, slimy touch sending the chills up and down one's back, and finally scrambling down the rocky, briery bed of a creek, we emerged from the woods and found ourselves among a growth of ferns, some ten or twelve feet in height, which we had noticed shortly after leaving the house, as adjoining the corner of the oatfield. The moon had now risen, and its light was a grateful relief from the gloom and darkness of the woods, and as we knew the house was near by, we stepped out more lightly.

By this time Tom and his dog had gotten some distance ahead, and we had hardly entered the fern patch, when the barking of the dog was again heard, added to which was an occasional shout from Tom Stanton wanted to hurry ahead, but bearing in mind our experiences of the afternoon in treeing bears, I endeavored to dissuade him, and while uncertain whether we should at once return to the house, or investigate the cause of the disturbance, we heard Tom's voice shouting, "He's got a bear up a tree, hurry!" and we doubted no longer, but hurried. Crossing the corner of the oatfield and jumping the fence we found Tom and the dog at the foot of a large redwood tree, just in the edge of the woods, the moon's rays dimly lighting the scene, and enabling us to discern a large black object clinging to the trunk of the tree about thirty feet from the ground. "He's coming down!" shouted Tom, and climbing on a log about fifteen feet from the base of the tree, we began to shoot. During the time that the bear was sliding down, we managed to get in two shots apiece, and although the moonlight was not sufficient to enable us to see the sights on our guns, it mattered little, as we were so near that the fire seemed to reach from the muzzles of the rifles to the body of the bear. When about eight feet from the ground and just as I fired, he let go and dropped.

Naturally supposing that we had killed him, or so disabled him that escape was impossible, I threw another cartridge into the chamber of my Winchester and was about to jump down off the log and investigate, when the bear, emerging from the darkness about the foot of the tree, ran against the log on which we were standing, scrambled over it and disappeared up the hill. To say that we were surprised would hardly express the situation. When we began to shoot, the dog ran off, evidently afraid of the guns; Tom Ford ran off, evidently afraid of the bear. It took some little time to get man and dog back again, and then the bear had such a start up the hill that it would have been some time before we could have found him, if at all, so after considering this, and our tired condition, we concluded to let that bear go. A short walk took us to the house, where, after a good supper and a discussion over a comfortable pipe as to what we should do on the morrow, we turned in.

CHETKO.

III.—A SCRIMMAGE IN NEW HAMPSHIRE WILDS.

Edwin Schoff, of Pittsburg, N. H., a farmer and hunter, went to turn out a horse in a back pasture lately, and having a trap set for a bear near the pasture, thought he would tend it before going home. On approaching the trap he saw a bear in it, and not having a gun with him he returned home and got two of his neighbors to go back with him—Willie Johnson and Luke Towle. He also took his two hounds, Bessie and Dom Pedro. Coming in sight of the bear in the trap he saw two other bears or cubs that seemed to be waiting for a chance to get into the trap. Schoff, being in advance of Johnson and Towle, when he saw the cubs made for them, and the old mother bear made for him, with the trap on her foot; it had no clog, so she could make pretty good time with the trap dragging. Schoff kept his eyes on the old bear and followed up the cubs, leading the hounds; but presently the cubs got out of sight in the thick woods and he let the hounds go on their track. The old bear had got dangerously near him, too, and he had nothing but a pistol for firearms.

Luckily about this time the old bear got snarled up in the brush, and the dogs had treed the cubs; and Johnson and Towle—having heard the outcry of the dogs and the old bear, who, by the way, had made the woods ring with her screeching—came up, bringing ropes with which they intended to bring in the old bear alive.

The two cubs had climbed a tall spruce tree, and Towle went up after them. When he came to the first one he shook him off the limb he was on, and he fell to the ground, about twenty-five feet, and Johnson and Schoff seized him and tied him with the ropes to a tree.

Towle, meantime, followed the other cub to the very top of the tree and seized him by the nap of the neck and backed down the tree with him, and when within eight feet of the ground the cub turned his head and bit him. He threw him to the ground, which so stunned him that the men on the ground easily tied him also.

They now turned their attention to the old bear, who was nearly out of the trap, and had broken her leg in the melee; so they fired seven shots from the pistol into her head before she succumbed. They then carried their live young bears home; and they attract much attention by their cunning pranks, and are getting quite tame and docile. When the old bear made such a bellowing when she got hung up in the brush, Towle said he was glad he was in the tree out of her reach.

Pittsburg is a wild place in the depth of the forest, far from the outside world, and is inhabited by rough backwoodsmen, forming a small hamlet of the hardiest frontier men in all New England, and is a renowned hunting ground for big game, where the moose, caribou, deer and bear may be found in abundance. And the Indian devil is secure in his lair—defying the arts of civilization.

J. G. R.

VENISON IN THE NEW YORK MARKET.—How about the venison in market on the 15th? How quick it must have been killed and shipped after midnight.—NEW YORKER.

[The venison is of last year's stock, has been kept in cold storage and is now taken out and put on sale when the season opened. It is for the most part Western venison.]

A CAMP HUNT IN ARKANSAS.

OUR hunt had been the theme of discussion on several occasions. Dick and I were rather impatiently awaiting the arrival of a friend who was desirous of being one of the party. A most jolly fellow and accustomed to "roughing it," his presence, we knew, would add much pleasure and a great deal of life to our party. The weather changed for the worse, and rain fell in torrents, making the river and smaller streams that crossed our road unfordable; and there was another delay of several days.

However, one Monday morning I went over to see Dick about the start, and in a very short time we determined to set out that very afternoon and try to cross the river at what is known as the Two-shoot Ford, having learned that the river had fallen slightly and that there was a possibility of crossing, as the water found its way through two channels at this point, making the ford not quite so deep. The rest of the day was spent in preparations for the hunt until 3:30 P. M., when, with packs adjusted and mounted on our horses, we set our faces westward and struck out on the trail to the Two-shoot Ford. Arriving here, we noted the height of water and the swiftness of current, and with some hesitation turned our horses' heads up stream and started diagonally across. It was nip and tuck, but we made it barely without swimming, though we had to perch well up on the saddle, not being desirous of getting wet, for the day was anything but warm and a ride of some twelve miles was before us. We crossed the second channel with ease, and after an uneventful ride, arrived at our destination for that night a little after dark, at the hospitable home of the best woodsman and most successful deer hunter I have ever met, Rex Jacobs. And I do not hesitate to say that he has few, if any, superiors in woodcraft anywhere. He stands full six feet in his stockings, built from the "ground up," muscular, wiry, quick in every action, with a good length of leg, though not out of proportion, and no superfluous flesh, a swarthy complexion, a restless eye, and an ear always on the alert for any extraordinary sound. He is of a jovial good nature, and with more than the average intelligene, and a voice once heard not likely to be forgotten for depth and richness. Such a specimen of fine manhood was our host, as he bade us a warm welcome to his hospitable home that drear December night.

The house consisted of two large rooms under one roof, with a gallery extending the whole length in front and a spacious hall between. At the back of the house were two smaller rooms, made by closing up what otherwise would have been a back gallery. Gallery is the name here applied to what is known elsewhere as piazza or porch. A huge fireplace occupied the center portion of one end of each large room, in which blazed a cheerful fire. The cooking was done and the meals served in a separate building—a log house—which stood just back of the main building.

It had been arranged that Jim and English B., nephews of Rex, and both good hunters, should meet us here the following morning. Of the former we could hear nothing, and the latter, thinking it impossible for us to cross the river, had crossed further up in a boat and gone into camp for the express purpose of seeing us.

That evening for supper we had some delicious venison, cooked by Mrs. Jacobs. After a most refreshing sleep, and long before we were ready for it, day was at hand. We had breakfast, and then hour after hour passed and still no sign of the boys. About eleven o'clock Calvin B. came in, and in a few minutes our horses were caught, saddled and packed, each one taking a bag of corn in addition to our blankets, provisions, etc. With Rex in the lead we struck out for Cross Mountain. Before we had gone a half mile a drizzle set in and continued to increase, promising us a wet and disagreeable night, for it must be borne in mind that we were not provided with a tent, and there was no shelter to be had on the mountain.

About two miles from where we had expected to make camp, Calvin recollected a cave, but a short distance from our road, and a consultation was held as to whether it would not be expedient, considering the weather, to camp in it for the night. We decided that it would be, and turning to the right into a dim trail were soon at the "rock of refuge," where we hurriedly unpacked and unsaddled, and soon had ourselves stowed away under the shelter of the overhanging rock.

This "cave" was nothing more than an overhanging mass of rock, projecting at an angle of about 45°, from the western extremity of a small mountain spur. There was a small cavity, with a complete arch overhead, at the extreme end, and at 18in. from the floor, and extending across the narrow end of the cavity was a flat rock with a sloping back, a most inviting seat had it been dry. The whole space was in the form of a V.

Rushing and foaming six feet in front of our retreat was a creek, which, swelled by the increased volume of innumerable rivulets and lesser streams, was momentarily rising; its waters lashed into foam as it whirled and rushed over boulder after boulder, fallen logs and ledges of solid rock.

We collected materials for a fire and were soon busily employed making a pot of coffee. That drunk, with a biscuit and piece of cold pork, we sallied out for our afternoon hunt. It had stopped raining just enough to encourage us to venture out; however, with the exception of Dick, we kept our "slickers" on, but notwithstanding we all returned just before dark thoroughly wet from the water on the bushes as well as the rain, which began to fall soon after we started out.

Under such unfavorable circumstances there was little likelihood of any game being killed, everything being in close cover. Rex was the last one to get in, and as he walked up with a fine gobbler slung across his shoulder the rest of the party, who had returned empty-handed, hailed his appearance with joy.

I had been fortunate enough only to see three deer. I walked to within 65yds. of a young buck. He was lying down under a ledge of rock, and seeing me first bounded off, taking particular pains to keep as many trees between himself and me as possible, a common habit they have of "taking the tree on you" whenever they can do so, both when running and when they stop, especially the old bucks. I began following him on a double quick and had gone some 400yds. when I jumped two does. They were lying in a clump of bushes, and I saw them just as they sprang, and throwing my rifle up gave them two shots as they went off, at 100yds., but of course with no effect, for I merely had a glimpse of their white tails as they disappeared over a ridge. Rex had seen two deer, making five that had been seen among the party.

It would be difficult for me to describe the intensely disagreeable night passed in that long-to-be-remembered cave. A lot of loose rocks lay about the cave, which we threw out, only to find a flow of mud and water. It was too late to look for flat rocks to pave the floor, and we had neglected to bring a hatchet, though I had laid one out, but forgot it at last; so we could cut no brush. There was almost a spring in the back of the cave, where the water leaped in through some crevice in the rock, which did not improve matters.

So to the turkey we turned with one accord, to while away the weary hours. No time was taken to pluck him of his downy coat, but, with hunting knife in hand, his skin was quickly peeled, and slices of beautiful white meat were soon broiling over the fire on the ends of forked sticks. He was not fat, but very tender, and with a flavor that his domesticated brother cannot rival.

Little sleep was obtained by any of us that night; so we smoked and shifted about from place to place, as ever and anon a new leak in our rock roof would be discovered by a drop that would find its way down one's neck or into one's eye or ear, whereupon various ejaculations would be indulged in to the discredit of the said raindrop.

The harder it rained the faster the drops fell, until drops grew into streams, and I do not believe there was a space of two feet square that was the forty-second cousin to a dry spot under the sheltering spread of our rocky refuge. After smoking and standing about our flickering fire, that only fat pine knots kept alive, until tired out nature demanded repose, first Dick and then I coiled ourselves up as best we could on top of our corn bags—the bags still being full of corn on the cob—and attempted to catch a little sleep. Our example was soon followed by Calvin and Rex; but little sleep did any of us get; and to make matters worse, our fire almost extinguished and the supply of pine knots exhausted, we were compelled to sally forth into the darkness and literally feel for wood of whatever kind we might stumble on, for it was useless to try to see.

Finally the dreary night succumbed to the approach of day, and by the time we had gotten our breakfast the creek had risen until it threatened an inundation of our camp, and a small stream had already found its way completely around our fire, cutting us off from it.

About noon English came in, having noticed where we had turned out of the road, and thinking that we had taken to the cave. That night we all got in to camp early enough to floor the camp with rock, which raised us out of the mud, and with our hunting knives we cut a lot of pine bushes, which, when laid on the rocks and covered with blankets, made our condition slightly better than on the preceding night.

The next day, Thursday, the elements still unsettled and very threatening, we pulled out for Rex's home, and glad enough were we to get under the shelter of his hospitable roof.

On Friday Dick and I, being thoroughly disgusted with the continuance of bad weather, would have gone home, but could not cross the river, which had risen again. Dick accompanied Rex to the post office, eight miles away; and taking my rifle I turned my face down Cow Creek. I went to the river, four miles, and on my return ran on to what appeared very much like preparations for a "wild-cat," commonly known as a still. There was no one in sight, but I made the rocks rattle from under my heels as I rapidly left that vicinity in the rear. My laced boots and hunting coat were not calculated to make a favorable impression on the mind of the native, who at all times in such places regards any unusual style of dress as denoting an U. S. M.

About 10 o'clock Saturday morning, with provisions, feed, blankets and a wagon sheet for a tent on the wagon, we started on hunt No. 2. Rex drove and I sat beside him, while English and Calvin B. lay about on the softest spots they could find among the dunnage. We pitched upon a pretty camping place, on a haw branch, and as soon as we had gotten in shape, all struck out in different directions and returned about sunset empty handed.

Captain Perringer, a friend of Rex's, passed by, and told some of the boys who had gotten in ahead of me that there was a deer hanging in a tree about three miles back along the roadside, with a blouse over it, and that he had never thought until past it some distance that the blouse over it meant for him to bring it on to camp, and that he "reckoned that Rex had killed it."

We had seen Perringer at Allison's Mill, and of course Rex calculated upon him bringing the venison to camp, as he had a wagon and lived but a short distance beyond where we were located. It was getting dark, but English and Cap mounted a couple of horses, and in a gallop that assured a speedy return, started for the deer.

Not long after they had left Rex came in and we heard just how it was. He had killed a deer soon after leaving us and carried it out to the road, hanging it in a tree and putting his jacket or blouse over it for the express purpose of attracting Capt. Perringer's attention. He had not gone far from where he killed his first deer, when he saw a drove of them and killed another, and after a long chase killed still another, making three deer during the afternoon, a much better outlook than on our first hunt.

There was another member of our party I have not mentioned, and a most useful little fellow to his master and a great favorite to us all. Raleigh was a fat, good-natured and good-looking cur dog, and he never failed in tracking a deer if the scent was anything like fresh, trotting or walking just ahead of Rex, adjusting his pace to that of his master.

On this occasion we did not rely on any more rock caves, but stretched the wagon cover over some poles, and this afforded us a very fair shelter. Each night a big log was cut and rolled in front of our tent, against which a good fire was kept going, replenished from time to time with pine knots.

Next day being Sunday we took a stroll for our health—just to keep in training—and being afraid to leave our guns in camp took them with us.

When I got back, about noon, there was a fine fresh saddle of venison hanging in a tree, and a large set of horns just under it.

"Halloo!" says Cap as I came up, "ain't that a buster? Dick killed him, and that makes one the start of you." And poor, unsophisticated I smiled faintly, and with the remark that "by the gods of war, he's a fine one!" dropped down on a convenient log and began to moralize why some people would break the Sabbath! I noticed that Dick didn't appear to be as highly elated as I expected he would be after committing such a deed, but I'll own up that I was gulled, and what is more, they kept it up on me for a couple of days, and then fearing that I might walk myself so death to get even, quietly told me that it was not Dick who had killed the deer. I had my revenge.

On Monday it was Cap's luck to bring in a little horny fellow, his first deer, and he was not a little proud and greatly elated. Calvin also brought in a nice buck, and left another hanging in a tree across Robinson's fork.

The next day Rex, Dick, Cap and I decided to ride over the line into the Nation to a section of country that we had hunted over earlier in the season. We breasted the woods to Ash Creek, jumping several deer, but not getting a shot. Here we left our horses, and two of us on each side of the creek commenced our hunt. I had not gone far when a doe jumped from a clump of bushes, not thirty steps ahead, but owing to the dense undergrowth—an old "hurricane"—I did not have an opportunity to shoot. She did not go more than 150yds. before she stopped, and I slipped into a hollow and began a stalk, but she did not wait for me, and when I came to where I ought to have seen her she was not in sight.

A little while previous to this I had heard two shots across the creek and below me, and I had not gone 50yds. from where I left off my stalk when I caught sight of a yearling buck and doe coming up a gulch to my right and nearly toward me, evidently frightened from the rifle reports below. I tried to stop them when they got abreast of me, but without success, as they did not appear to care for a "blate," so drawing for the buck I fired, and apparently without effect, for they whirled away from me, then into a little ravine and down the mountain side, but they did not get out of sight until I had pumped four more balls after them. The boys, speaking of it afterward, said that it sounded like a considerable skirmish, and as I put in the shots while the deer were traversing only about 50yds., I guess the boys were about right. However, I found considerable blood and followed it some distance, but finally lost all track and gave it up. Now, I am confident that had Rex and his dog been at hand I'd have gotten my game. Nothing is more discouraging to me than to wound anything and then lose it. I'd rather it were a clear miss.

I went on down the creek about half a mile and then turned back, as it was agreed, before we left our horses, to be back by 1 o'clock. I found Cap busily employed eating hickory nuts, and immediately joined him. It may not be believed, but I have seen, and have in my house now, hickory nuts as large as English walnuts from this part of Arkansas. Dick and Rex soon joined us, and we saddled and breasted back to the river, as we had come, empty-handed.

Rex had fired the shots I had heard at a long distance, but without result. Cap had fired once, and Dick saw some turkeys. At the crossing of Robinson's Fork we found the deer that Calvin had hung in a tree the day before, and another that he had killed since we passed there this morning, so we loaded the venison on our horses and were soon in camp. By this time we had eight deer strung up, and they made a very pretty appearance. I have not spoken of the delicious venison that we enjoyed; plump back strap and tenderloin, split in two and broiled on the end of a forked stick over glowing coals, and when nearly done a slice of fat pork allowed to melt and drip over it; or fat ribs stewed thoroughly! And for bread we had meal and water and a little salt mixed together and baked in an old-fashioned bake oven; this, with sorghum and coffee, constituted our diet, and we all enjoyed it thoroughly, judging from the amount of meat and pones of bread that disappeared thrice a day.

On Wednesday we hunted about camp in all directions, Cap being the only lucky man, however, and brought in another young buck.

Next morning we held a council of war, and it was agreed to strike camp and pull out for home. Horses were saddled and harnessed, wagon loaded with our venison and camp equipage, and in a short time we were moving, some breasting to the right and some to the left. I was the first one to get to the ford on Rolling Fork, next came the wagon, and after a wait of fifteen minutes Calvin came along with a young buck that he had killed a couple of miles back.

We waited some time for the others and started on. We all got together again at Allison's Mill, and as Dick came up to the wagon I pointed to the fresh-killed deer, and said, "Well, Dick, I got one. Did you see the pile of stones I put around his blood at the ford?" And I had my revenge when I saw that he had swallowed the bait.

In an hour from here we were at Rex's home, and as soon as dinner was over Dick and I mounted and rode home. And so ended as pleasant a hunt as I was ever on. Rex had wanted a thousand pounds of venison, and it was secured. ANTIMONY.

ANTIMONY CITY, Ark.

SHORE BIRDS.

SALEM, Mass., Aug. 13.—The past week has shown up some birds about here, and at Ipswich and Plum Island. One man got sixteen summers at Mill Pond Branch, Salem, a few days ago. A Peabody man got four uplands in Poor Farm pasture, Ipswich, a week ago. They have been heard but not seen at Plum Island until yesterday, when I saw fourteen. One or two jack curlew have been seen. Small birds have been fairly plenty, though rather scarce just now. I mean peeps and ringnecks. A few sanderling (*C. arenaria*) or white birds are along; also a few beetleheads (*S. helvitica*). No terns around just now. Some coots are beginning to come along, and black ducks (*A. obscura*) are moving about. The marshes are in excellent order for birds, and though mosquitoes and midgets are troublesome at times, yet the greenhead flies are unusually scarce. For full explanation of my local names brother gunners can refer with both profit and pleasure to Gurdon Trumbull's book. It is a regular dictionary of bird lore. X. Y. Z.

CONNECTICUT.—Thomaston, Aug. 15.—There are good prospects for ruffed grouse in this vicinity, with some quail.—E. M. C.

IN THE WOODS.

NERVOUS prostration did you say, my friend? Well, there is one sovereign cure for that deplorable condition. If you will buckle on a pack, shoulder a gun and "take to the woods" its a dead certainty you will tramp off your nervousness and give your poor brain a chance of life. It was late in October when the writer finally gave up "trying to make arrangements," and simply turned his back on the office, and took passage over Boston and Maine with his pack, rifle and odd traps compactly telescoped for transportation to the Kohog's happy hunting grounds along the Magalloway River and the vicinity of Umbagog Lake.

On our trips the past three years we had entered the woods by the buckboard route, but this season it was decided to return to first principles. Accordingly we hunted up a staunch canoe and made necessary preparations. Next day was Sunday and the loggers who lounged around promiscuously eyed our traps and queried as to destination. "Up river, did you say? But you can't do it, it's all frozen up." To tell the truth the air was frosty next morning as we turned out. There were our logging friends and they greeted us with, "Well, what are you going to do about it?" For answer we loaded up and breaking the ice, launched the canoe. Of course it was slow work until we got out into the middle of the stream, but we chopped the ice with our heavy paddles and finally got under headway with Baker the guide in the stern and Bill at the prow.

That first night we were pretty tired as we drew up to camp and Baker suggested we sup off of "logger's chuck." This was a sandwich made of raw salt pork laid between two slices of bread, and the first sample was not eaten with that relish which came from late experience.

We had found ice most of the way up river, but by selecting the thinner places had no serious trouble. We finally drew up on the banks of Upper Metallic Pond, some 25 miles from the upper settlement (Wilson's Mills). We struck a deserted logger's camp—small, but in pretty fair condition, except from the dirt. A bunk in one corner made good quarters for a bed. There was a small stove in the center, and a table at one side. Being tired, we stuffed the stove with wood and wrapping our blankets about us turned in at ten and lay there for a while taking in the situation and admiring the rays of bright moonlight which stole in through the cracks in the roof.

The following morning Bill crawled from between his blankets and found the water in the stove kettle frozen and the mercury indicating 10° above zero. However, a rousing fire soon thawed both men and kettle, and after breakfast we set about "cleaning the crib," as Baker expressed it, and by 11 o'clock wrought quite a change. And no sooner were we tolerably settled than in walked a grizzly-looking trapper. A more surprised customer you never saw. "Where did you come from?" he inquired. Even while he stood looking around the door opened again and in came his young partner. When he saw us his eyes stuck out like pot hooks and he asked "where from?" Being answered from the settlement his exclamation was, "By the gol dingers, thought the river was frozen so no one could get up."

We told them in a quiet way that for the past ten years we had made our annual visits as planned beforehand and that a trifle like a little ice would not deter us this time. They sat down, and after a little lunch began gathering what they could find of that which afterward proved to be their property—much to our surprise. Baker was forced to slip off a pair of moccasins he had grappled on to, and a pair of mittens mysteriously came to light after they had hinted what they were hunting for.

We brought from our boxes left by the river bank provisions and supplies for immediate wants and in the afternoon took a tramp in the woods. Returning about five we fired up again, and between us managed a bill of fare fit for Young's or Delmonico's: broiled partridges, baked potatoes, griddle cakes, hard bread with quince preserves, with cocoa.

We spent full two hours at the table, and then without ceremony Bill rolled over into the bunk and was soon asleep. Baker washed the dishes and then sat up till ten to smoke.

One morning Bill called Baker's attention to something he felt crawling down his back. A "long back" or "gray backs," as the boys called them in '63 and '64. Baker thought them not worth while noticing as he had felt a number of them moving him about and thought they helped keep the blood circulating.

As usual the writer was anxious to visit the old familiar places, and Lincoln Pond was one of the most interesting. We had visited it many times, but last season the lumbermen had made havoc with the forest for a mile or more back from the river, so that it was impossible to follow the old trail. Consequently the compass was brought into use, and after one or two unsuccessful attempts we reached the pond. It was frozen all along the shore, but dragging our old birch canoe from its place of concealment we broke the ice and soon had our craft afloat. Before getting off, however, it was necessary to build a fire and heat some pitch to caulk up several cracks in the old birch. We had a grand paddle over this clear sheet of water, and although it was a cold November day, with occasional snow squalls, we enjoyed it much. The lumbermen have not as yet cut any of the forest above the pond, and it is a wild, beautiful spot.

Drawing the canoe ashore and placing it under cover, probably not to be used until another season, we shouldered our packs, and with a few partridges picked up by the way, struck out for camp. "What's this?" said Baker, as he opened the door and sighted on the table a half loaf of bread and some pork. "Some one's been here. Yes, and by the looks of that jar helped themselves to preserves." We were glad our visitors had found something to their liking, and they thoughtfully left the pork and bread in exchange.

It is an unwritten law in the woods that a man shall, when hungry, help himself to whatever he can grapple on to, and leave his acknowledgment in the shape of a note of thanks or money, or he may leave other grub in place of what he takes.

One evening as we were sitting in camp we heard some animals prowling around, crunching the bones left from our game supper. "A skunk," said Baker, and proposed that we capture it, as to his mind they were fine eating when properly cooked. Taking down his Winchester, Bill made ready to shoot the instant Baker opened the door. Drawing bead by light of bright moon the Winchester cracked and Baker banged the door. We decided to wait till morning before inspecting. In the morning we found the upper part of his neck shot off, allowing him no time to fire his salute. Baker out with his hunting knife and gave an exhaustive lecture on the principles of dressing such an animal. After careful inspection it was pronounced ready for the baking pan. "You will perceive, Mr. Kohog, there is no odor, and do you mind how plump he is. Now brace up the fire, Bill, and I'll clap him in." It was not long before the stove glowed with almost white heat, and with it came a gentle perfume from the oven, sufficient to paralyze the fireman and thick enough to cut in sizes to suit. We both made tracks for the outside. Still Baker insisted it must be imagination, as he had been very careful in dissecting, but he evidently had made some slight mistake.

The fireman was ordered in to replenish the fire, and he did not hang around, but made a bolt for the outside, concluding the blue canopy of heaven would furnish him shelter that night. Finally the oven was opened by Baker. He drew back, but renewed the attack, and was victorious in getting the savory morsel to the table. But to eat it was another thing. Poking it over he dug out a choice piece, which he tasted, and pronounced good—for skunk. Bill declares the piece he was inveigled into tasting still lingers in his mouth; but he consoled Baker by saying it was doubtless a good thing for us, as it would surely keep out the moths. To cover up the fact of our having roasted the beast, a thorough airing of camp was necessary. If any woodsman should want to make use of that fry-pan before spring, it would be as well not to sniff it too closely. We both took a solemn oath on the pork barrel that mum should be the word.

We spent a week or more in the camp and vicinity, living well and having a royal good time. Meantime the river kept closing up more than ever with ice. One morning a council was held with the conclusion that we should be obliged to reach the settlements through the woods. Next day all our traps were overhauled and repacked, with only a pair of blankets apiece and guns and ammunition left out. We then took the boxes to high ground, and, placing them snugly, put the canoe over them bottom up, and calculated they would be safe from rise of water in case they remained until spring.

That last night in camp we had an unusual layout, and kept up the festivities until the chilly air of midnight drove us between the blankets. We were astir betimes in the morning, and after a hearty breakfast set forth with our faces to the settlements, twenty-five miles away. We made good progress along the tote road until about noon, when the way became difficult on account of windfalls and brush. In trying for a short cut through the swamps we found ourselves lost, but by night time we struck the river again, and judged by the lay of the land that we had made but half the distance.

Fortunately Baker discovered an old log camp. The roof was nearly gone and it was decidedly airy, but we patched up one end, and building a fire on the floor, made ourselves as comfortable as possible. We managed to get a few cat-naps early in the night, but at midnight gave it up and spent the remainder of the night bracing up the fire. In the morning we lunched off a sandwich of pork and wheels (large crackers) with hot tea. We had no difficulty in crossing the river, as during the night it had frozen solid. We decided to travel by compass and struck out over the mountains, determined to reach the settlements that night. We tramped into our old friend Clark's just as the sun went down, and throwing off our packs were satisfied to sit down and rest, watching the preparations of the cook with a good deal of interest.

"Come, boys, sit down to supper," was a call responded to with alacrity. The cook watched us, and as it became evident we were going to make a clean sweep, hurried off to the pantry and soon returned with generous slabs of beef, which were soon sputtering on the hot griddle. "Guess you boys have not had much to eat in the woods," said the cook.

After that hearty supper we were glad to turn in for the night, but on the succeeding morning were as good as new. Baker went out for a still-hunt of a few days, but after a rest and a short visit with friend Clark, who is a genial, big-hearted Yankee, the scribe struck out for home. Cured of nervousness, did you ask? Well, rather, my friend.

KOHOG BILL.

RIFLE LOADING FOR SMALL GAME.—New York, Aug. 16.—*Editor Forest and Stream:* I have been experimenting recently with "gallery cartridges" for my Winchester rifle .40-60. I use the regular shell, loaded with 6grs. of powder and a round ball; and at short range, say from 50 to 150ft., the result is excellent. My object was to obtain a cartridge to kill small game with while off on my hunting trips. The regular charge makes a heavy report, which disturbs large game, besides tears small game all to pieces. The above named cartridge makes but a trifling report, and while it has sufficient penetration to kill grouse, squirrels, etc., it does not tear them. The cartridges cannot be used in the magazine, but they can be slipped into the barrel and unloaded without disturbing the regular shells in the magazine. These shells were loaded for me by the Union Metallic Cartridge Co., of Bridgeport, Conn.—WAKEMAN HOLBERTON.

ASHBURNHAM, Mass.—The prospect is for the best partridge (ruffed grouse) shooting this fall we have had for years in this section.—H. C. N.

This has been a good season for bears in Maine. A Lewiston furrier says that he has already bought fifty-five skins, and thinks the crop will beat last year's, which was 344 pelts.

A remarkably attractive lobster was caught at Norwich a few days ago. Its upper parts were of the delicate tinge of old-fashioned blue china, and beneath the color was a beautiful bluish white.

A Harvard professor, who is passing the summer on Canobie Lake, N. H., has a cottage built on a raft made of fifty-three empty oil casks, and the dwelling is towed about the lake whenever the owner wants a change of air and scenery.

TOURISTS seeking rest and recreation during the hot summer months can obtain valuable information from the illustrated guide books entitled "A Summer Jaunt" and "Summer of 1888" issued by the Wisconsin Central Line. These books are descriptive of the summer resorts in Wisconsin and Minnesota, reached by the Wisconsin Central Line, and will be sent free to any address upon application to JAMES BARKER, General Passenger and Ticket Agent, Milwaukee Wis.—*Adv.*

A NIGHT WITH A BONE SHARK.

SAN FRANCISCO, California.—The delightful summer and winter resort Santa Cruz is beautifully located on the north side of Monterey Bay, sixty miles due south of San Francisco. Its surroundings in every way are delightful and pleasurable. It has a magnificent beach for bathing, fine sheltered waters for sailing and boating. Is surrounded with the richest of soil, extensive, most productive and profitable orchards and vineyards, has extensive and well kept hotels and boarding houses, beautiful residences with fine gardens where the finest flowers are in continuous bloom. The mountains of the Coast Range, immediately back of it, have the richest soil of any mountains in the world, grand scenery, and on them in many places can be found primeval groves of giant redwoods (*Sequoia sempervirens*), the most valuable and noblest tree in the world, except its half brother the giant redwood or big tree (*Sequoia gigantea*) of the Sierras. In these mountains back of the city there are rich sheltered valleys, where one can mature every fruit, and bloom in its richest magnificence, every flower, and grow every shrub of the temperate and semi-tropical world, or to cut the matter short, Santa Cruz is a "good place to be at" (as the Southerners say) at any time of year.

The waters of Monterey Bay and the Pacific Ocean thereabout are wonderfully prolific in fish. In the bay "in ye olden time" the California hump-backed whale and other monster cetaceans, the lively and dangerous devil fish of the whaleman, used to congregate in vast schools in winter to bring forth their young, and many a whale boat has been smashed and brave whale man found a damp grave in their pursuit. This whale, the hump-backed whale (*Megoptera versabilis*), is peculiar to this coast, and is still captured to a considerable extent from off shore. I visited several stations where they are hauled ashore and their oily jacket stripped from them. The largest, fiercest whale in the world, the sulphur bottom (*Sibbaldus sulfureus*), is also found on this coast. This is the veritable monarch of the ocean, so fierce and strong are they that the best equipped whaling vessels seldom molest them.

I had always been noted for having quite a large bump of curiosity. I had long wished to see a living whale sporting in the briny deep. A few days ago I was called to Santa Cruz on business. On arrival there I found I should have to remain two or three days, so I, as usual when on the coast, went nosing around the shore. Meeting an acquaintance at the wharf I made known to him my great desire to go out with a party of honest fishermen. He being well acquainted there at once introduced me to the skipper of a fishing smack, who, he said, would "treat me white." The captain said, "I am going to start out at 2 o'clock this afternoon to lay my seine." I asked him what it would cost to go along. "Nothing, sir, we are in want of more ballast and irrigating facilities." So I laid in a quart of "mountain dew" and concluded to ship with the captain as ballast in the good smack Emma. At the appointed hour I was on hand. Our rig consisted of the smack, a lively trim two-master, a fine netted gill-net 500 fathoms or 3,000ft. long and 30ft. deep, a whale boat in tow and a smaller rowboat across the Emma amidships, with five men and myself as ballast. The plan was to run out about twelve miles, lay out the seine and let it drift with the current until morning, for the purpose of gilling small surface fish, such as herring, smelt, etc. We ran out with a brisk quartering breeze over the great round swells of the grand old Pacific, which was most delightful. In a couple of hours and by making one tack we reached the fishing ground. The great seine, which was neatly folded up in the whale boat, had the line to one of its ends made fast on board the Emma, and her sails were so set that she would draw slowly to the northeast, while two pair of strong arms rowed the whale boat to the southwest, with a man on each side of the great bulk of the seine to run it out properly. Soon its 3,000ft. were stretched on the water to drift with the tide and current. The current on this coast is to the south. When the seine was laid the rope to its northeast end was taken aboard the whale boat and two men took their place at the oars and rowed gently against the current, just enough to keep the seine stretched. A large float having been attached to the other end of the seine the small boat from the Emma was fastened to the whale boat. The last supply of my irrigating material was used up, and the captain and the boy with the Emma started back to port, leaving me in company of four swarthy fellows afloat on the vast and restless ocean. The evening was beautiful, the roll of the great round waves was regular and soft, with every sixth or seventh one much larger than its fellows—a regular pulsation eternally rolling.

It was just cold enough for a man with warm blood coursing in his veins to be comfortable with his ordinary winter clothing, and when the sun sank below the horizon one would need a good overcoat when resting; and this temperature is about the same the year around on this coast. The temperature is held steady by the great mass of water, which is of the same or nearly the same temperature the year around, and is never swept by hot nor cold currents of air. The general trend of the wind throughout the year is from points west to northwest. This wind having a sweep of thousands of miles over this warm water, its under stratum at least absorbs its temperature, and so it blows day after day: cool in summer, warm in winter. It was the intention to leave the seine out until the next morning, when the Emma was to return, and if the catch was sufficient to take out the fish, if not to let it drift until the next morning; and so on, taking out the fish every other day, until the seine drifted in too near shore.

The four men left with the seine were not at first sight prepossessing, but the captain and my friend had told me they were good, reliable fellows, and honest as honesty goes among fishermen. Miguel, the mate left in charge, was a low, heavy-set man, of great strength and activity, part Portuguese, part Indian, the other part white man,

about forty years of age, with small jet black eyes, quiet, soft spoken, and mild until excited. Jose, a small, active man, about thirty-five, a good sailor, but of low intelligence. The other two, Bill and Jack, were of slightly mixed race, lively young fellows of about twenty years. Their duties were: Two at the oars for two hours at a time to keep the seine stretched; the third at the tiller, keeping a sharp lookout over the southwest waters, and one to see that all was right and to notice the approach of any whales, porpoises, or other large sea mammals, and sharks. If such were seen approaching, it was the duty of the fourth man to take the smallboat and try and turn them from the seine; otherwise he rested or slept.

The evening wore on with no excitement nor life in sight, except now and then a school of porpoises passing up inside toward the shore, until just at dusk, when a whale spouted four times to the southwest, threw his flukes in the air and disappeared. As they stay under the water from thirty to sixty minutes before coming up to breathe again we heard no more of him. I sat in the peak of the boat after dark enjoying it greatly. The moon in its first quarter hung brightly in the western sky, its bright gleam on the waves stretching for leagues to a point beneath. The points of the bright lights of the city of Santa Cruz twinkled at the eastward and the great dark billows of the Coast Range loomed behind them. Sixty miles to the northward the hundreds of electric lights of the city of San Francisco changed the dark gray-blue clouds to a fleecy whiteness. The waters around us was filled with tens of thousands of phosphorescent lights flashing in every direction. Every one of the millions of life in the great deep left this fleeting quickly vanishing trail of pale firelight behind it. Away down in the inky depth the denizens of the deep could be followed in their motions and dartings by a pale blue stream of bluish light. We were indeed afloat and alone on the restless bosom of the mightiest of oceans, a mere speck on its vastness. What if a sudden fierce storm should arise, what would become of us in our frail open boat? All of us knew that this part of the great Pacific brews no such storms, besides we knew that if the wind should come on to "blow great guns" our watchful skipper would soon be out with the Emma and rescue us.

Sitting thus dreaming and building air castles, thinking of the fierce and murderous and most dangerous war waged on the humpbacks and California gray whales twenty-five or thirty years ago by man, when oil was oil, in the lovely bay before us, of the myriads of mighty mammals that once thronged this coast before the whalemen with harpoon and bomb gun and lance came and well nigh exterminated them, when the humpback and the great sulphur bottom could seek shelter in the bays and estuaries of this coast and bring forth and suckle their young undisturbed.

Time wore on. About midnight the thing became monotonous, and I had begun to think of snuggling down and taking a nap. Jack and Bill were at the oars, quietly pulling; Jose sat against the side of the boat soundly sleeping; Miguel had been standing stolidly in the stern of the boat for a long time, his keen black eyes wandering restlessly along the pale blue light caused by the seine in the water. The boys chatted away about their girls and other subjects. The rope from the end of the seine had been fastened to the end of the boat. All at once the boat gave a long and sudden lurch backward with such force as to leave the oarsmen in a heap at the bottom of the boat, with the bulky form of Miguel on top of them. Luckily for myself I had a short time before sat down in the boat with my back to the wind, or I probably would have been compelled to wade ashore. Miguel sprang up as quick as a flash and yelled, "To your oars, boys; there is a whale right ahead of us—look out for his flukes," but he had hardly got the words out of his mouth when the boat gave another surge and down he went again, and directly after there was a fearful splashing in the water away off toward the southern end of the seine. The boat gave surge after surge, and it was not possible for one to stay on his feet without something to hold to. In the first tumble one of the oars was lost and was floating away. The whale boat was liable at any moment to crush the small boat. Miguel, though usually cool and collected, a life-long fisherman, seemed for a time to entirely lose his head. He could in no way understand the state of things. The boat kept on surging. At last it dawned on his mind that some great fish or whale had become entangled in the seine. Gradually he collected his scattered senses into his noddle—the oar must be regained and the small boat cared for. He ordered Jose to get into the small boat and go after the oar, but he did not respond. This called our attention to him, and we saw he was sitting in the bottom of the boat, hanging on with both hands, prostrated with fright. Miguel could not move him by commands or threats, so he ordered Jack to perform the task, which he reluctantly did. He was gone some time and at last returned with the oar.

In the meantime the surgings continued and the furious splashings grew somewhat nearer. All at once the line was drawn very taut and the stern of the boat was drawn down so as to nearly take water, and the first wave caused us to ship considerable water—the next one would have sunk us. We all rushed to the bow of the boat, but before she had shipped the next wave the line slackened and we were for the time safe. Then all was quiet for a time, but soon the splashings commenced again still nearer. After a time, again the line drew down the stern of the whale boat, but this time we were all ready to jump into the small boat. After shipping a part of two waves the line eased up and she was bailed out. The same thing was kept up for a long time, the splashing constantly nearing us.

Jose pitifully begged Miguel to cut the line and get away out of danger, and Jack and Bill at times added their voices to the prayer, but Miguel's natural courage had come back to him. His all in this world was represented by a share or two in the Emma and the seine; and he determined not to let go until forced to. All was dark except our dim light on the mast. At last Miguel determined to take the small boat and go down the seine and see what was the matter. We all joined in begging him not to do this, he showed his determination by roughly ordering Jack and Jose to take the oars and Bill the rudder. They saw there was no use urging him further, so he grimly dropped into the little boat and sculled away. Before starting he lengthened out the line attached to the seine as much as he could and gave it two turns around the mast, crossed the end over the line and gave it to me to hold, with strict orders not to let go unless I was certain the boat would go down, if I did not let go. He stayed by us for some time until the stern was drawn down about as before and then started. He assured us he would be very careful. The fearful splashings and thrashings were still nearing us, and he did not have far to go. He soon came back with a puzzled look. He said, "I could not see much, but it is certain that some great fish has tangled itself up in the seine. It seems too small and lively for a whale and too large for a shark. It is a lively customer whatever it is."

And so the minutes, seeming hours, wore on. Every half hour or so our boat's stern would be drawn down as before described, each time seeming as if an inch or two more or another wave would send us to the bottom. Not being able to swim an inch, I kept precious near to the small boat. At times all would be quiet for a long time. Then there would be a great thrashing, snapping and splashing. Then down we would go. We soon found that when all was quiet the least noise would start trouble. So when quiet was on, we kept quiet. Toward morning we found that the commotion was only the length of our line away. At last day began to break, and as light began to spread over the dark waters we could see sticking out of the water the length of our line away a black triangle and a great bunch. So soon as there was light enough to see fairly plain some made a noise, and then trouble again commenced. The triangle was thrown high in the air, and we saw that it was the upper fluke of some great fish's tail that lashed the sea into foam. Besides its strokes in the water we could hear crash, crash, crash, like the fall of a heavy board on a floor. After a time all disappeared beneath the water and the stern of our boat was again drawn down. This time, when the line slackened up we were half full of water, and the fish that had caught us was much nearer than before.

It was now light enough to take in the situation. The first order of Miguel was to make fast another line to the one to the seine, so as to give us more sea room. This was quickly done, when down she went again, this time coming very near to us. This gave Miguel a hint, so he ordered Bill and Jack to the oars and told them so soon as the fish went down to pull steadily away. We soon saw that our safety depended on this strategy, for the fish was as likely to come up directly under us as anywhere, and it seemed rather more likely, and we at once saw that if our boat was once hit with the tail of the monster it would be crushed into kindling wood. As the morning grew into brightness the fish's struggles for freedom became more furious and kept us busy to keep out of his way. We could now see that the creature had become entangled in the seine at or near its south end, and he had in some way by his struggles for freedom continually rolled himself up in it, and had in fact nearly the whole three thousand feet wound around his body. The high gray hump we had seen in the early morning was where the seine was wound over the high dorsal fin, which was over three feet high. The seine was several times folded through its mouth and hung at each side cut into fringe by its sharp teeth. The body from its belly or anal fins and the great flukes of the tail were free. One of its great pectoral or forward side fins was free, the other rolled tight to its body by the seine. It was constantly bringing its great jaws together with a crash, and so the fearful fun went on until 10 o'clock, when the captain and the Emma came on the scene, and a madder man than our captain never made a quarterdeck blue and sulphurous with oaths. To see his great new seine, the first time she was ever wet, wrapped round and chewed up in such a fashion was enough to make him mad. He was so excited that it was all we could do to keep him out of danger, but he soon cooled off and took in the situation. It was decided that if we let go fish and seine were both lost. If we hung on to it, what would eventually be the end? They could see no safe way by which they could approach and kill, nor had they at hand anything to kill it with, if they could. They consulted about running down to the opposite side of the bay and getting a bomb gun, used there for killing whales, but then came the idea that if they threw a bomb into it, the bomb would utterly destroy the seine. At last after a long consultation it was agreed that the captain should take Miguel's place and hang on to things, and Miguel go back with the Emma after grub, counsel and irrigation material.

I concluded to stay with the captain and see the fun, and fun we did have. It was nearly one continuous round of thrashing, snapping and diving. Had the other great pectoral fin been free we could plainly see that we would have been towed where the fish willed, and drawn to the bottom of the sea or forced to cut the rope. As it was, the fish would only swim in a circle and could only sound or dive a certain distance. Owing to the use of only one fin he went down and up in the segment of a circle. By the time of the return of the Emma, at 5 o'clock, we could see that the fish was weakening gradually. She brought out several old salts, learned in the monsters of the sea, most of them having shares in the rig, to consult what to do. After long deliberation it was concluded to hang on to the creature until the steamer running from here to San Diego was due up on Friday, this was Wednesday eve, and then, if possible, induce the officers to haul all on board, save the seine in as good shape as possible, and bring the monster fish to the city and place it on exhibition as a "marine monster, a great man-eating shark." A new crew was placed in the whale boat, with full instructions from Miguel how to manage things, and I took passage with the other worn out ancient mariners for shore.

During the day I had carefully eyed the monster and concluded he was about 30ft. long. All the information I could get from Miguel or the captain was that it was a "bone shark." I came back to the city full and running over with shark. I fell asleep at night and an endless procession of great black sharks with snow white bellies and new moon-shaped mouths armed with row after row of glittering sharp teeth kept snapping me in two and then fiercely fighting for the pieces; and then while I was calmly enjoying the fun I would be snapped in two again, and so on. It was fun for the sharks and somehow under the circumstances I enjoyed it also.

Bone shark! What in blazes is a bone shark! I had read a most perfect treatise on the ancient and modern sharks, but not one word did it say about bone sharks. It said the fish of the genus *Squalus* were fierce, active, most ravenous and carnivorous fishes belonging to one of the oldest forms of fishes, that they were fearfully destructive to all forms of ocean life, that they could handle and were very dangerous to human beings if in the water. Also that they are cartilagenous fishes or without bones. Ah, I have it! I have a friend who was for thirty years a whaleman and an observing man, possibly he will know what a bone shark is. He does; well what is it? "Why a bone shark." That settled it. I asked him how large a bone shark he had ever seen, its color, etc. "I have seen them 30ft. long and have seen ten barrels of oil taken from one liver. I heard of one taken near New Providence over 30ft. long and its liver made fifteen barrels of oil." I replied that that was a fish story indeed, but he replied a little hotly that it was true, that he personally knew some of the crew who made the capture and they were truthful men, and referred me to the papers publishing the facts. The great quantity of oil in the liver gave me a clew and I asked my sailor friend if he had ever heard of anything called a basking shark. He answered, "Yes, I have heard landlubbers call the bone shark basking shark or something like it." This led me to believe that I had struck a rich shark bonanza in my sailor friend. So I pumped him dry, as the sequel will tell.

Sure enough, on picking up the *Chronicle* Monday morning I read "A Great Sea Monster—a great man-eating shark is now on exhibition at Central Park, 30ft. long. Admission, two bits."

I at once wended my way to Central Park, and sure enough there I found a great red-mouthed Irishman, under the picture of a great red-mouthed fish, from whose glittering teeth the red gore dripped in profusion, yelling, "Walk in, ladies and gintlemen, and see the great man-eating shark, 30ft. long and weighing 'liven thousand pounds. He's did, ladies, and he won't bite you. Walk in, ladies and gintlemen. Only two bits to see the greatest wonder in the world."

I stepped inside and found Miguel taking in the shekels and Bill keeping the flies out of the shark's mouth. It was stretched on timbers on a truck and was fully 29ft. long, with his mouth stretched wide open. He did look rather fearful, as though he could gulp one down at one small gulp.

I at once cornered Bill and made him give me the history of the struggle after I left. He said that by Friday evening the shark had nearly worn himself out, and in the forenoon, by the time the steamship came along, they had no trouble reaving a rope through his under jaw and another around his tail and hoisting him aboard. As he went up he was disemboweled and his liver saved on the Emma, from which the captain thought he would get 10 barrels of oil. Notwithstanding he seemed so near dead, when they began to hoist him he gave some trouble with his struggles, and he had some motion even on Sunday morning.

Returning, I went to my whaleman friend. "Why do you call it a bone shark?" "Because they have bone in their mouths, same as the right or Greenland whale." I could not understand, I had seen no bone in its mouth except teeth; so I carried him up to see it and explain. He showed me that this shark had bone, whalebone, or the great fringy process that we know as whalebone, by which these great creatures gather the exceedingly small life that swarms in the ocean for food. This led me to know that we had before us the great fish properly known as the basking shark (*Squalus maximus* or *Selache maxima* of different authorities), and really and truly the most harmless and inoffensive great fish that swims the ocean. It is found very rarely on every coast and on all soundings. It has, it is true, immense strength and great tenacity of life, brings forth its young alive, and is truly one of the most strangely wonderful of living creatures, belonging as it does to one of the most ravenous, cruel, gluttonous families. It is slow, sluggish, inoffensive, never under any circumstance trying to catch anything of any size for food. It feeds exactly as does the right or Greenland whale, by swimming very slowly along near the surface with its great mouth wide open, against current and tide, collecting its minute food in its "bone." When a quantity is so gathered it is swallowed. As in the case of the whale, whatever passes into the mouth has to be swallowed, for it has no loose tongue nor other means to throw it out. When full fed and in content, it lies basking in the sun at the surface of the water, hence basking shark. When disturbed by any cause it quickly sinks out of sight. A gentleman has just assured me that he saw one caught in the same way off the coast of the Gulf of California, by becoming entangled in a net, 39ft. long. How this may happen is now easily explained. The shark is quietly feeding along, with his great white mouth wide open. The fine strong twine of the gill-net strikes in his mouth, and when some is folded within he closes it, tries to swallow and pushes on; more collects within; his teeth all hook backward, those in his jaws and more particularly the longer ones in his throat. The seine is fast within, he has no possible way to get rid of it. He begins to struggle, and the more he struggles the more he becomes involved, and so on to the end.

BYRNE.

That Same Old Sucker Freed Again.—Lancaster, Pa., Aug. 16.—A number of boys were swimming in a creek near the old Moravian town of Lititz, in this county, a few days ago. One of them, in diving, found an old demijohn, which he brought ashore. Through a space where the wicker had been torn away the boys saw something moving about inside the jug. They poured out the water, but the object being too large to come out with it, they broke the demijohn and found a fat and lively sucker over a foot long. The only explanation that can be given for the presence of the big fish in the jug is that it entered when small, and enjoying the novelty of the retreat, remained there until it grew too large to come out, even if it wanted to.

Judge Longworth's Scientific Expedition.—Cincinnati, Aug. 17.—On Saturday next Judge Longworth's steam yacht C. O. proceeds up the river on a scientific expedition to investigate the fish fauna of the Ohio and its tributaries. The work will be prosecuted by Prof. Charles H. Gilbert, of the Cincinnati University, and Dr. J. H. Henshall, the well-known ichthyologist. Collections will be made for the U. S. Fish Commission, Cincinnati University and the Cincinnati Society of Natural History. The exploration is expected to yield very important results, for which the scientific world will be indebted to the liberality of Judge Longworth, who will join the C. O. on his return from Mackinac.

A MICHIGAN STREAM.

ON the 30th of April, Eugene S. and I engaged a livery rig and started for K.'s house some 12 miles from Lowell. We found him at home and expecting us too, although it had been raining all day quite hard and a strong wind blowing from the east; but we had promised K. the season before that he would find us at his place the night before the first day of May, 1888, and we had kept our word. K. said that some parties were netting and spearing the trout in his stream and but few were left; and if we got three apiece we might consider ourselves lucky. This was like cold water being poured down our backs, as we had expected fine sport if the weather would permit. He thought that no one but ourselves knew of trout being in the stream. It was a case of three and one more.

In the morning we got out at 5 o'clock. It had stopped raining and was very cold and the doorsteps were icy. K. could not go with us so early, but would join us at 10 o'clock. Eugene and I started. We had a notion to drive right home, as E. had a toothache all night and was feeling badly; but before we got to the stream, which was 4 miles from K.'s house, the sun came out and we thought we would go and try our luck, and if it proved poor, we would drive home, and stop at Spring Brook, where we knew there were lots of trout, but none so large as those in K.'s creek. Eugene said he was going to try the Cold Water River first as he believed trout would be found in it if anywhere.

I started up the creek near its mouth, and fished carefully without a single rise; neither could I get sight of a trout. I tried under old logs and driftwood and under roots of old stumps and trees; but nothing was there. I had fished about two hours, I think, when the clouds broke away and the sun came out warm and the day was lovely. On going up stream I came to an old bridge that was badly demoralized. I threw in just above it, and was rewarded with my first trout, about 10in. long. This gave me courage.

I saw up stream an eddy that whirled around the roots of an old stump. To this I crept carefully, and threw in. There was a splash and my line was carried under the log. I pulled, and out came a splendid trout. He made a grand rush for his hiding place; snap went the single gut on my hook and he was free again. Tying on another hook, I baited it nicely, and tried him again; but he had got enough for one day. At the next old log I secured one that would weigh one pound. Then I saw where the banks were worn in under by the current—just the place to find a trout at home. I found here the mate to my larger one. I went up a mile or so further and only got one more. I turned to retrace my steps and fished back; but had no luck to speak of, catching only one nice trout. I heard voices, and looking through the bush saw Eugene and K. K. had just arrived and had caught nothing. E. had a nice one, too, but his tooth ached so hard he could not take any comfort, and we decided to start for home. I said, "Let's fish back to the mouth of the stream." I started in at that place. E. took the road and started for the carriage, but dropped in a few times and caught two more trout. I came to where I lost my big fellow and crept up slyly. I threw in but saw no signs of a bite; and I thought I should pull my line out carefully and throw in a little above, and let it float down stream, but it did not come, and I kept pulling until my rod was bent almost double. All this time I had not felt a single motion on my hook, but all at once out tumbled a great big trout. I swung him around toward the bank, and a projecting limb sticking over the water prevented me from throwing him upon the shore, my rod hit against the limb and caused me to give a quick jerk, and away went my prize into the water again. I made a grand rush for him and went down on all fours, and my dog sprang into the water after him; but he was too quick and slippery for us and got in under the bank again. It just spoiled my fun to lose that trout, which would have weighed two or three pounds. I went on down stream and caught four more nice trout. I found I had nine and Eugene three. I found him curled up in the carriage. I hitched up and drove home as quick as possible, as Eugene was suffering with his tooth. He has since had it pulled, and we are going to try our luck at this same stream in the near future, and I hope we shall have better success. My largest trout weighed 1¼lbs. Eugene's largest weighed 1lb. I went down to Spring Brook one day this week and caught thirty-three; but they are not so large as the trout in the stream we visited in Bowne.

BROOK TROUT.

LOWELL, Mich., May, 1888.

CHIEF OF SMALL-MOUTH BLACK BASS.

Editor Forest and Stream:

Last evening, as I was walking up town from the post office, I noticed a crowd of people collected on one of the principal streets of our village, and as I neared the gathering a horse and carriage issued from it, and in the driver I recognized Mr. L. D. Boynton of Green's Bridge. When Mr. Boynton saw me he pulled up his horse, and putting his hand under the carriage seat produced and held up to view a monster black bass of the small-mouthed species. In reply to my inquiry he said that the bass weighed 8¾lbs., and had been weighed by people that he named and that I knew; then he drove on, leaving behind only the image of the great fish in my mind's eye.

Proceeding up the street to verify the weight of the bass, I met Mr. Chas. H. Hitchcock, who asked if I had weighed the fish, and if not, why not. Two hours would take me to Green's Bridge and back, allowing time to weigh the bass and get its pedigree; therefore, Mr. Hitchcock and I took a car and were duly delivered at our destination, where the bass was found on exhibition and intact. I put the big fellow on a set of counter scales and he balanced 9lbs.: but I found that the scales did not balance. Other scales were produced and tested, and at 8lbs. 10oz. the bass in the scoop balanced the scale beam. From nose to joining of caudal, measuring with a tape, following the contour of the body, the distance was 18in.; to fork in caudal, 24½in.: to extremity of caudal, 25in. The girth was 18¾in.

I said to Mr. Boynton that I would like to see the fish opened, eviscerated and again weighed, to which he at once consented. I cut it open, took out the gills and viscera, and again weighed it, when the scales marked 7lbs. 8oz. The gills and viscera weighed 1lb. ½oz., and the missing ounce and a half of weight—for the shrinkage between the dressed and undressed fish will be seen to have been 1lb. 2oz.—consisted of lost blood and bits of intestines rubbed out when washing the abdominal cavity. In the stomach of the bass was a partly digested yellow perch which in that condition weighed about five ounces. I have been thus particular about the evisceration and weighing before and after the operation, because it has been a matter of dispute how much a big bass loses by dressing. I have the records of a number of bass dressed and undressed, and the shrinkage is less than is generally supposed.

This giant bass was caught in Long Pond (Glen Lake), four miles from this village, with perch bait. Long Pond, not unknown to the columns of FOREST AND STREAM, has produced and given up more large specimens of the small-mouth bass than any water in the United States, but the very big ones show up about as often as a comet.

Mr. Hitchcock procured of Mr. Boynton the bass with whose person I have been so familiar in this letter, and to-morrow he will send it to Mr. W. S. Banta, 33 Pine street, New York city, and possibly it may be seen there.

GLENS FALLS, N. Y., Aug. 19. A. N. CHENEY.

LARGE MASKINONGE IN CANADA.

THE *Intelligencer*, of Bellville, Ont., in its issue of Aug. 16, gives an account of some remarkable maskinonge fishing which we take a twofold pleasure in recording—one being the extraordinary numbers and sizes of the fish, and the second the correct spelling of its name. The *Intelligencer* says:

"The maskinonge fishing of Mosquito Bay is only beginning to blossom. Since Mr. Reid discovered the bed the luck has been the greatest known in northern waters. Yesterday afternoon Messrs. H. K. Smith and Henry Leavens went down in Mr. Smith's steam launch Senga to try their luck. Mr. Smith had photographed Mr. D. R. Leavens' catch in the morning and sallied forth full of hope and bright anticipations. He reached the grounds between four and five o'clock, and when he left had three maskos on board, the largest measuring 49½in. long, 21½in. around and weighing 31½lbs. When it was opened at Mr. Wm. Black's fish market this morning in the presence of the writer, Chief Newton, Henry Leavens and others, a fresh pike measuring 23in. and weighing 2½lbs. was taken from its maw. The second in size was taken by Mr. Leavens and weighed 20lbs.; the third was small, an 8 pounder.

"Jos. Turley was fishing in the charmed spot yesterday and reports that he lost three large fish. Henry Leavens lost one from his hook, M. D. Ward one and D. R. Leavens one. A. N. Reid captured a 15-pounder and saw a monster strike for the spoon just as he was drawing it into the boat. The number and size of the fish caught can be vouched for, as they have all been brought to this city and have been seen by hundreds of people. Mr. Smith photographed his fish this morning.

"Mr. John G. Peck, of Ameliasburg, reports that a few years ago he captured two maskos in a seine, which together weighed 104lbs., one 58 and the other 48lbs. Mr. Peck is in favor of the total abolition of gill nets and the prohibition of the use of seines on rock bottoms during the months of July and August."

BERKSHIRE TROUT STREAMS.

I was up in Berkshire county in July and took occasion to go trouting several times, more to revisit the old streams than in the hope of doing any execution. The long dry weather in June had made them very low and I could get a dozen or two of respectable (7 to 9in. in that locality) trout only by using the finest of drawn gut leaders and flies. I tied on No. 12 and 14 hooks with gossamer snells expressly for the purpose. Brown hackles, alders and black-gnats and coachmen at evening were best.

The worst of such fine tackle as this is that while one is compelled to use it on these educated trout, in fine water to make any catch, one is almost certain to lose a good sized fish if one has the luck as I did on one or two occasions to hook one, as the tackle is too fine to take him out bodily, and in the small streams there is absolutely no room to play him. If you try the latter plan he is either floundering among the stones or makes a dart into some hole near by and is gone. However, although I lost several fish running ½ to 1lb., and they are rarely taken above this weight in the small brooks of Berkshire, I got several in water open enough to play and land my fish.

From a long acquaintance with this region I can say there is no trouting to be found there that would warrant an angler visiting that locality for sport alone. It is, however, a lovely country and well worthy a visit from every lover of nature who has not been there, and incidentally one can take a light rod and his very smallest and finest flies and leaders. Should then there be a rain to fill up the brooks, the angler may get a few hours of moderate sport, but he must be a skillful fly-caster to do it. With worms considerable more execution can be done, and the streams are heavily overgrown in places.

We had one rain while I was there, and for two afternoons I had some sport while the brooks were clearing, catching three dozen fish running from 6in. to 9in. in length, a very nice fish for the pan, but scarcely of a size to give sport on the hook. However, their shyness and the care that must be used in taking them offers some excuse for their size.

The bass fishing in the lakes there is not up to the average this year. I took two small strings with a fly and broke my split bamboo on a two-pounder, which seized the fly just as I was taking it from the water quickly to make a new cast. It was a great surprise to me and I trust also to the fish. I had the usual abominable time trying to make a splice stand in a split bamboo, which as usual was a failure. No matter how well you do it a splice in this kind of rod if below the tip soon becomes soft and the rod fails to cast well. I consider it one of the greatest disadvantages connected with this species of rod. And in this connection how about the new steel rods; haven't any of our angling friends tried one yet? I had hoped some one would report on their merits. I had some thoughts of trying one myself, but as I haven't been able to get away and make any regular fishing trip this summer I concluded to forego the luxury. Perhaps some have been more fortunate and have tried this rod. If so let them report for our mutual benefit.

NEW HAVEN, Conn. PERCYVAL.

FLY-FISHING AT LAKE EDWARD.

I HAVE read many interesting letters in FOREST AND STREAM lately on the subject of Lake Edward fishing, and I will now give my experiences for the benefit of anglers generally.

My brother and I camped on the lake from July 20 till Aug. 1, 1888, and were during that time joined for a few days by our nephew Walter J. Travis, of New York.

Many people seem to think that the trout in Lake Edward will not take a fly, but I assure you this is a great mistake. It is, I think, true that they will not generally rise very eagerly to the fly about the end of July, but nevertheless we had as good fly-fishing as any reasonable person could possibly desire on several occasions at even this the worst season of the year.

One day my brother and I landed about fifty trout (all with the fly) from say ½lb. to 2¾lbs. in weight, and once I hooked and landed three trout at one cast (all with large flies of my own make) and with a 7oz. lancewood rod, made by T. Chubb, of Post Mills, Vt., and finished by myself (the most perfect rod I ever handled).

We found the officials of the Quebec & Lake St. John Railway Company most obliging and courteous, and it is evidently their intention to do all in their power to make sportsmen enjoy themselves from the moment they leave Quebec for the north until their return; at least such was our experience. Mr. Rothwell, the mechanical superintendent; Mr. Walter Hoolihan, in charge of the supplies, &c.; Mr. J. F. Pelletier, the station agent, and Mr. and Mrs. Edgeley, proprietors of the Windsor Hotel at Lake Edward, did their utmost—and far more than they were called upon to do—to make our trip pleasant and satisfactory. They certainly treated us well in every respect. Mr. Rothwell kindly took us in his steam yacht Emma up the north arm of the lake, toward the inlet, and past what is called the "Deep Cut" on the railway. The scenery in this part of the lake—which is apparently seldom visited by sportsmen from a distance—is certainly grand. The hills are much higher than they are in the southern portion of the lake, at least they appear to be, perhaps from the fact that they take their rise more closely to the water.

One would scarcely imagine from Lake Edward that there was any passage or outlet from the bay to the north. These passages from one bay to another are very numerous throughout Lake Edward (properly called Lac des Grandes Iles), and one unaccustomed to the wilds might, in consequence, easily lose himself, as many of the islands and points look exactly alike.

We camped down the lake about nine miles from Lake Edward railway station, on a beautiful open point, where there is a nice sandy beach for bathing and a good landing place for the boats. It is true that there were plenty of black flies, sand flies and mosquitoes, and, although we used strong lotions, black-fly cream, etc., we were not able to keep them from tormenting us. Intending visitors should provide themselves with fine netting, long kid or buckskin gloves, and plenty of repellents (the strongest you can obtain). If you can only succeed in keeping free from fly bites the sport will amply repay you; but you must not expect to get good fishing near the railway station in July. You will require to go six or eight miles down the lake. For fly-fishing try near the Gull rocks, about nine miles down, and you will be sure to meet with success with the fly if the wind and weather are favorable.

With regard to flies the Parmachenee-belle and claret, dressed on large hooks (say No. 1), and with plenty of body, are very taking. I also found a fly designed by myself especially for the lake very effective. It is made thus: Body, reddish brown mohair; silver twist; tail of golden pheasant; hackle, claret; wings, dark bronze turkey, with thin strip of dyed bright yellow and purple feather on each side.

The air on the lake is certainly most invigorating and bracing, and during the whole time we were there we did not find it uncomfortably warm.

Any gentlemen who want really good trout should pay a visit to Lake Edward about the end of August or beginning of September, when, they say, the flies will have disappeared, and by which time the trout will have returned to the Lake Edward station end of the lake. Mr. Rothwell informed me that in June and September he and his daughter catch with fly all the trout they want casting from the end of his boat house, about 200yds. from the station.

The largest trout I saw taken in the lake weighed 4½lbs. It was caught with bait by Mr. Dando, of Philadelphia. He also caught some nice ones with the fly and trolling with minnows.

WALTER GREAVES.

BELLEVILLE, Ont., Aug. 15.

SUNAPEE LAKE.

Editor Forest and Stream:

This is my sixth week at this beautiful lake, and I have camped on the same old ground for the past five years. I have camped nearly all over New England, but usually bring up at Sunapee when opportunity offers. It has many attractions for me, but like most places is becoming civilized too rapidly.

The expectation of taking some of the "new trout" has brought many here this year; but so far as I can learn without any great success. Off the Hedgehog is probably the best trout fishing ground on the lake; there have been there from one to a dozen boats each day, rain or shine; but nearly all report "poor luck."

I tried it two days and a blistered nose was my only reward. The fishing is with minnows, in from thirty to ninety feet of water, some boats using two rods and even more to each man. A fine landlocked salmon was caught there a few days ago by one of the local fishermen; it was said to weigh 12lbs., and is, as far as I know, the largest ever taken in this lake. It was sold at once to a wandering "corn doctor" for $5, and its purchaser is probably posing before admiring friends as its captor. Such is fishing, it is a sure way to say the least.

I have never seen any illegal fishing of any kind here; perhaps the Commissioners look with more care after Sunapee than they do after Newfound Lake. While camping there some years ago I found the fishing was not as reported in the several guide books advertising it, and upon inquiring the reason was informed that I was too early, and that fall was the fishing season for the natives living around the lake, when the trout were taken in large numbers from the beds. Newfound is a fine

sheet of water, having the same general character as Sunapee. It should be looked after.

I have kept the camp supplied with bass, though I have not taken any over two pounds. The largest were caught by trolling with different artificial minnows. For shore fishing I am using a 7oz. split bamboo, and have had good success with various flies. My best evening cast is a polka-dot (Henshall) for stretcher and a white-moth or stone-fly for dropper.

Small game is quite plenty about here, an old hen partridge with her brood are always on the point near camp. A pair of loons have nested near here for several years, though they seem more shy each year.

I receive the FOREST AND STREAM regularly, and nowhere is it more appreciated than in camp. "Sam Lovel's Camps" strike me in a tender spot, knowing something of the locality of which they treat. WALTHAM.

SUNAPEE LAKE, Aug. 8.

BLACK BASS IN LAKE MAHOPAC.—On Monday last we saw eighteen fine black bass, which averaged over 3lbs. each, and were said to have been taken by a New York angler in one day from Lake Mahopac, in Putnam county, N. Y. The lake was stocked with these fish by Mr. E. G. Blackford five years ago, and if the fish really came from that lake the fishing must be good there. We obtained the information from a dealer who bought the fish, but he could not furnish the name of the person who caught them.

Fisheulture.

FOOD OF THE FISHES OF THE MISSISSIPPI VALLEY.

BY PROF. S. A. FORBES.

[Read before the American Fisheries Society.]

(Continued from page 68.)

PRINCIPAL ELEMENTS OF THE FOOD.

AN analysis of the facts made with reference to the kinds of fishes eating each of the principal articles in the dietary of the class, and showing the relative importance of these elements in the food of the various species, will have its separate interest for us, especially as it will exhibit the competitions of fishes for food, and also the nature and the energy of the restraints imposed by fishes on the multiplication of their principal food species.

The principal fish eaters among our fishes—those whose average food in the adult age consists of seventy-five per cent., or more, of fishes—are the burbot, the pike-perch or wall-eyed pike, the common pike or pickerel, the large-mouthed black bass, the channel-cat, the mud-cat, and the gars. Possibly, also, the golden shad will be found strictly ichthyophagous, this being the case with the four specimens which I studied. Those which take fishes in considerable but moderate amount—the ratios ranging in my specimens from twenty-five to sixty-five per cent.—are the war-mouth (Chænobryttus), the blue-cheeked sunfish, the grass pickerel, the dogfish, the spotted cat and the small miller's thumb. The white and the striped bass, the common perch, the remaining sunfishes (those with smaller mouths), the rock bass and the croppies take but few fishes, these making, according to my observations, not less than five nor more than twenty-five per cent. of their food. Those which never capture living fishes, or, at most, to a merely trivial extent, are the white perch or sheepshead, the gizzard shad, the suckers and the shovelfish among the larger species; and the darters, the brook silversides, the stickleback, the mud minnows, the top minnows, the stone-cats and the common minnows generally among the smaller kinds. Our eight specimens of the toothed herring had taken no fishes whatever; while our nineteen examples of the pirate perch had eaten only two per cent.

Rough-scaled fishes with spiny fins were eaten by the miller's thumb, the common pike, the wall-eyed pike, the large-mouthed black bass, the croppies, the dogfish, the common perch, the burbot, the bullhead, the common sunfish (*Lepomis pallidus*), the small-mouthed black bass, the grass pickerel, the gar, and the mudcat (Leptops). Among these, the common perch and the sunfishes were most frequently taken—doubtless owing to their greater relative abundance—the perch occurring in the food of the burbot, the large-mouthed black bass and the bullhead; and the sunfishes in both species of wall-eyed pike, the common pike, the gars, pickerel, bullheads, and mudcat. Black bass were taken from the common pike (Esox), the wall-eyed pike (Stizostedion), and the gar. Croppie and rock bass I recognized only in the pike. Even the catfishes with their stout, sharp and poisoned spines were more frequently eaten than would have been expected—taken, according to my notes, by the wall-eyed pike, both black bass, and a fellow species of the family, the *goujon* or mudcat.

The soft-finned fishes were not very much more abundant, on the whole, in the stomachs of other species, than those with ctenoid scales, spiny fins, and other defensive structures, an unexpected circumstance which I cannot at present explain, because I do not know whether it expresses a normal and fixed relation, or whether it may not be due to human interference.

Only the catfishes seem to have acquired defensive structures equal to their protection, the predatory apparatus of the carnivorous fishes having otherwise outrun in development the protective armor of the best-defended species.

Among the soft-finned species the most valuable as food for other fishes is the gizzard shad, Dorosoma, this single fish being about twice as common in adults as all the minnow family taken together. It made forty per cent. of the food of the wall-eyed pike; a third that of the black bass; nearly half that of the common pike or "pickerel" two-thirds that of the four specimens of golden shad examined; and a third of the food of the gars. The only other fishes in whose stomachs it was recognized were the yellow cat, *Ictalurus natalis*, and young white bass, Roccus. It thus seems to be the especial food of the large game fishes and other particularly predaceous kinds.

The minnow family (Cyprinidæ) are in our waters especially appropriated to the support of the half-grown game fishes, and the smaller carnivorous kind. They were found in the wall-eyed pike, the perch, the black bass, the blue-cheeked sunfish, the croppie, the pirate perch, the pike, the little pickerel, the chub minnow, the yellow cat, the mud cat, the dogfish, and the gar.

Suckers, Catostomatidæ, I determined only from the pike, the sheepshead, the blue-cheeked sunfish (*cyanellus*) the yellow cat, and the dogfish *Amia*. Buffalo and carp occured in the pike, the dogfish, and the above sunfish.

The ponds and muddy streams of the Mississippi Valley are the native home of mollusks of remarkable variety and number, and these form a feature of the fauna of the region not less conspicuous and important than its leading groups of fishes. We might, therefore, reasonably expect to find these dominant groups connected by the food relation; and consistently with this expectation, we observe that the sheepshead, the catfishes, the suckers, and the dogfish, find an important part of their food in the molluscan forms abundant in the waters which they themselves most frequent. The class as a whole makes about one-fourth of the food of the dogfish and the sheepshead—taking the latter as they come, half-grown and adults together—about half that of the cylindrical suckers—rising to sixty per cent. in the red horse—and a considerable ratio (fourteen to sixteen per cent.) of the food of the perch, the common catfishes (Amiurus and Ictalurus), the small-mouthed sunfishes, the top minnows, and the shiner (Notemigonus). Notwithstanding the abundance of the fresh-water clams or river mussels (Unio and Anodonta), only a single river fish is especially adapted to their destruction, viz., the white perch or sheepshead; and this species derives, on the whole, a larger part of its food from univalve than from bivalve mollusks, the former eaten especially by half-grown specimens, and the latter being the chief dependence of the adults. The ability of the catfishes to tear the less powerful clams from their shells have been already mentioned. Large clams were eaten freely by the full-grown sheepshead—those enormous and powerful pharyngeal jaws with their solid pavement teeth are especially adapted to crushing the shells of mollusks—and by the bullheads (Amiurus), especially the marbled cat. The small and thin-shelled Sphæriums are much more frequent objects in the food of mollusk-eating fishes than are the Unios. This genus alone made twenty-nine per cent. of the food of 107 specimens of the sucker family, and nineteen per cent. of that of a dozen dogfishes. Among the suckers it was eaten greedily by both the cylindrical and the deep-bodied species, although somewhat more freely by the former. Even the river carp, with its weak pharyngeal jaws and delicate teeth, finds these sufficient to crush the shells of Sphærium, and our nineteen specimens had obtained about one-fourth of their food from this genus. Besides the above families, smaller quantities of the bivalve mollusks occurred in the food of one of the sunfishes (*Lepomis pallidus*), and—doubtless by accident only—in the gizzard shad. The gasteropod mollusks (snails of various descriptions) were more abundant than bivalve forms in the sheepshead, sunfish and all the smaller fishes which feed upon Molluska, but less abundant in the suckers and the catfishes. In the sheepshead they made one-fifth of the food of the twenty-five specimens examined, but the greater part of these had not yet passed the insectivorous stage, this being much longer continued in the sheepshead than in many other fishes. A few of these univalve Molluska occurred in the food of the common perch and in certain species of sunfishes—especially the superabundant bream or pumpkin-seed. They made fifteen per cent. of the food of the top minnows, and occurred in smaller quantities among the darters, little pickerel, the mud minnows and the cyprinoids. The heavier river snails, Vivapara and Melantho, were eaten especially by the cylindrical suckers and the catfishes. The delicate pond snails (Succinea, Lemna and Physa) were taken chiefly by the smaller mollusk-eating fishes—a few of them also by the catfishes and the suckers.

It is from the class of insects that adult fishes derive the most important portion of their food; and, taken as a whole, this class furnishes 38 per cent. of the food of all which I examined. The principal insectivorous fishes are the smaller species, whose size and food structures, when adult, unfit them for the capture of Entomostraca and yet do not bring them within reach of fishes or Mollusca. Some of these fishes have peculiar habits which render them especially dependent upon insect life—the little minnow, Phenacobius, for example, which, according to my studies, makes nearly all its food (98 per cent.) from insects found under stones in running water. Next are the pirate perch, Aphredoderus (91 per cent.), then the darters (87 per cent.), the croppies (73 per cent.), half-grown sheepshead (71 per cent.), the shovel fish (59 per cent.), the chub minnow, Semotilus (56 per cent.), the black warrior sunfish (Chænobrytus) and the brook silversides each 54 per cent., and the rock bass and the cyprinoid genus *Notropis* each 52 per cent.

Those which take few insects or none are mostly the mud feeders, and the ichthyophageous species Amia (the dogfish) being the only exception to this general statement. Thus we find insects wholly or nearly absent from the adult dietary of the burbot, the pike, the gar, the black bass, the wall-eyed pike, and the great river catfish, and from that of the hickory shad and the mud-eating minnows (the shiner, the fathead, etc.). It is to be remembered, however, that the larger fishes all go through an insectivorous stage, whether their food when adult be almost wholly other fishes, as with the gar and the pike, or mollusks, as with the sheepshead. The mud feeders, however, seem not to pass through this stage, but to adopt the limophagous habit as soon as they cease to depend upon Entomostraca.

Terrestrial insects, dropping into the water accidentally, or swept in by rains, are evidently diligently sought and largely depended upon by several species, such as the pirate perch, the brook minnow, the top minnows or killifishes (*Cyprinodontidæ*), the toothed herring and several cyprinoids (*Semotilus, Pimephales* and *Notropis*).

Among aquatic insects, minute, slender, dipterous larvæ are of remarkable importance, making, in fact, nearly one-twelfth of the food of all the fishes studied. They amounted to about one-third the food in fishes as large and important as the red horse and the river carp, and made nearly one-fourth that of fifty-one buffalo fishes. They appear further in considerable quantity in the food of a number of the minnow family (*Notropis, Pimephales*, etc.), which habitually frequent the swift water of stony streams. Aquatic beetles and larvæ, notwithstanding the abundance of some of the forms, occurred in only insignificant ratios, but were taken by fifty-six specimens. The adult surface beetles, whose zig-zag darting swarms no one can have failed to notice, were not once encountered in my studies.

The almost equally well-known slender water-skippers seem also completely protected by their habits and activity from capture by fishes, only one occurring in the food of all our specimens.

It is from the order Neuroptera that fishes draw a larger part of their food than from any other single insect group. In fact nearly one-sixth of the entire amount of food consumed by all the fishes examined by me consisted of aquatic larvæ of this order, the greater part of them larvæ of day flies. These Neuroptera larvæ were eaten especially by the miller's thumbs, the sheepshead, the white and striped bass, the common perch, thirteen species of the darters, both the black bass, seven of the sunfishes, the rock bass and the croppies, the pirate perch, the brook silversides, the sticklebacks, the mud minnow, three top minnows, the gizzard shad, the toothed herring, twelve species each of the true minnow family and of the suckers and buffalo, five catfishes, the dogfish and the shovelfish—seventy species out of the eighty-seven which I studied.

Of the four principal classes of the food of fishes, viz., fishes, mollusks, insects and Crustacea, the latter stand third in importance according to my observations, mollusks alone being inferior to them. The insect larvæ should be more abundant in the food of fresh-water fishes than are crustaceans in a somewhat unexpected fact, but while the former make about 25 per cent. of the food of our entire collection, the crustaceans amount to only 14 per cent. Crayfishes made about a sixth of the food of the burbot, about a tenth that of the common perch, a fourth that of half a dozen gars and not far from a third that of the black bass*, the dogfish and our four rock bass. Young crayfishes appeared quite frequently in some of the larger minnows (Semotilus and Hybopsis), and also in catfishes, especially the pond and river bullheads, averaging nearly 15 per cent. of the entire food of the two most abundant species.

* Our specimens—especially of the small-mouthed black bass—were too few in number to make this average reliable.

The minute crustaceans commly grouped as Entomostraca are a much more important element. Among full grown fishes I find them especially important in the shovelfish—where they made two-thirds of the food of the specimens studied—and in the common lake herring. Among the sunfishes at large they were present in only insignificant ratio; but the croppies, distinguished by long and numerous rakers on the anterior gill, had derived about a tenth of their food from these minute crustaceans. In the early spring, especially when the back waters of the streams are filled with Entomostraca, the stomachs of these fishes are often distended with the commonest forms. Ten per cent. of the food of the sucker family consisted of them, mostly taken by the deep-bodied species, in which they made a fourth or a fifth of the entire food. This fact is explained, it will be remembered, by the relative long, slender and numerous gill rakers of these fishes. Large river buffalo were occasionally crammed with the smallest of these Entomostraca, only 1-25in. in length.

I have several times remarked the peculiar importance of Entomostraca to the shovelfish—one of the largest of our fresh-water animals—a fact accounted for by the remarkable branchial strainer of this species, probably the most efficient apparatus of its kind known to the ichthyologist. Here, again, the smallest forms were the most abundant.

Probably to those accustomed to the abundance of true worms in marine situations, no feature of the poverty of fresh-water life will be more striking than the small number of this sub-kingdom occurring in the course of miscellaneous aquatic collections in the interior. Similarly, we notice that in the food of fishes the occurrence of Vermes is so rarely noticed that they might be left out of account entirely without appreciably affecting any of the important ratios. Catfishes alone seem purposely to eat leeches, these occurring in nine specimens of three different species of this family, and also in one common sucker and in a single shovelfish. One of the fresh water sponges (*Spongilla*) had been eaten in considerable quantities by two examples of the spotted cat taken in September, but this element was not encountered elsewhere in my studies.

That the minutest and simplest of all the animal forms, far too small for the eye of a fish to see without a microscope, should have been recognized in the food of seventeen species of fishes is, of course, to be explained only as an incident of the feeding habit. It is possible, however, that these Protozoa, where especially abundant, may be recognized in the mass by the delicate sensory structures of the fish; and they seem in most cases to have been taken with mud and slime, rich in organic substances. As most of them are extremely perishable, and can scarcely leave a trace a few seconds after immersion in the gastric juices of the fish, it is probable that they contribute much more generally than our observations indicate to the food of some fishes, especially to those which feed upon the bottom.

Young suckers under 6in. in length clearly take them purposely, substituting them in great part for the Entomostraca taken by other fishes of their size and age.

I detected Protozoa in the food of several genera of Cyprinidæ, in the young of buffalo, the river carp, the chub sucker, the red-horse, the stone roller, in the common sucker, in a single gizzard shad, in a stone-cat and in a top minnow.

The only scavenger fishes of our collection were three species of the common catfishes; the spotted cat, the yellow cat, and the marbled cat—all of which had eaten dead animal matter, including pieces of fish, ham, mice, kittens, and the like. A single large-mouthed black bass had likewise eaten food of this description.

Considering the wealth of vegetation accessible to aquatic animals, and the fact that few others strictly aquatic kinds have the vegetarian habit, it is indeed remarkable that fishes draw from plants an unimportant part of their diet. Taking our nine hundred species together, the vegetation eaten by them certainly would have amounted to less than ten per cent. of their entire food, and excluding vegetable objects apparently taken by chance, it probably would not reach five per cent.

The greatest vegetarians are among the minnow family. Counting each genus as a unit, I find that the family as a whole obtained from plants about twenty-three per cent. of its food. The little Phenacobius, already reported as strictly insectivorous, was the only one studied in which vegetation can scarcely be said to occur.

Certain of the sunfishes evidently take plant food purposely on occasion, this making, for example, nearly a tenth of the food of forty-seven specimens of Lepomis. Among the larger fishes, the principal vegetarians are the gizzard shad, in which this element was reckoned at about a third, taken, however, not separately, but with quantities of mud. A considerable part of the vegetation here included, consisted of distillery slops obtained near towns. The buffalo fishes are likewise largely vegetarians, more than a fourth of their food coming from the vegetable kingdom; about a third of this in our specimens being refuse from distilleries. Vegetation made a tenth of the food of the larger genera of catfishes (*Amiurus* and *Ictalurus*)—some of it distillery refuse—and nearly as large a ratio of the great Polyodon.

Not infrequently, terrestrial vegetable rubbish—seeds of grasses, leaves of plants, and similar matter—was taken in quantity to make it certain that its appropriation was not accidental. The principal mud-eating fishes are the gizzard shad, the common shiner, and certain genera of minnows with elongate intestines and cultrate pharyngeal teeth. Much mud was also taken by the cylindrical members of the sucker family, but apparently as an incident to their search for mollusks.

I cannot attempt to discuss the practical bearing of the mass of data here presented, or of the much greater number which I have withheld, partly because the time is lacking, and partly because I know too little of practical fish-culture; and I will merely call attention to a few illustrative points which have occurred to me in writing.

It would seem that the fact that all young fishes compete, at first, for food, must have important practical result tending in various directions. It is probable that all fishes which are not especially adapted to the food requirements of the more valuable fishes are hurtful to them, because they limit the food available for their young. It seems possible that even the food species of the predaceous fishes may multiply to an extent injurious to the latter, since both robber and prey compete while young for the same elements of food. It would seem entirely likely that large fishes, like the shovel-fish, which destroy when adult immense quanties of the proper food of the young, must be reckoned injurious.

Again, it is evident that the fishes most desirable as food for other kinds are those whose own food is not eaten by valuable species, but exists in practically inexhaustible supplies. The gizzard shad and the mud-feeding minnows are examples of this sort; while the red-horse and other cylindrical suckers answer the purpose almost equally well, since no valuable fishes feed upon mollusks (especially preferred by the suckers), and these are among the most abundant animals in our western streams. The fact that they have likewise adapted themselves to civilization, so far at least as to relish distillery slops, is, perhaps, an additional recommendation from this point of view.

The smaller catfishes, being practically omnivorous, are the rivals of every other kind; and being almost perfectly protected from capture by their stout, sharp, poisoned spines, they contribute little to the food supply of other fishes. The common sunfishes are almost equally worthless and injurious from this point of view.

I need scarcely say that the fishculturist should examine the waters in which young fishes are planted, in order to

determine the amount of their appropriate food available. It is not impossible that myriads of whitefish have been set free to perish by starvation before the feeble fry could disperse widely enough to secure a single meal. It seems to me also, that in every case where it is proposed to introduce a new fish into waters already populated, the first question to be asked should be, what fishes do these waters already contain—and in what numbers—whose food and whose relations to nature generally are substantially the same as those it is intended to introduce?

And, finally, I would call attention to the necessity of keeping continuous watch of the balance and abundance of plant and animal life in its various leading forms in any body of water in which it is thought desirable to maintain especial kinds of fishes in the greatest number possible. The owner of a fish pond especially, who makes himself acquainted with the entire collection of animals and plants which his pond contains, and keeps the run of these in their variations of number and habit, from season to season and from year to year, will not only get some practical hints thereby which will aid him in the multiplication and preservation of his fish, but will derive no small amount of pleasure from his observations, and from the reasonings and reflections to which they will give rise.

NOTE ON THE FOOD OF THE WHITEFISH.

An elaborate account of this research was published in 1883, in the first volume of the Bulletin of the Illinois State Laboratory of Natural History; but as this article was not widely distributed among fishculturists, the great practical importance of the subject will, perhaps, justify the following extracts from it: More light was thrown upon the earliest food habits of these fishes by the discovery of raptatorial teeth upon the lower jaw, than by the dissections of their alimentary canals. All the families of fishes which I had previously studied whose young were provided with teeth were found strictly dependent at first upon Entomostraca and the minuter insect larvæ; while only those whose young were toothless fed to any considerable extent upon other forms. The discovery of teeth in the young whitefish, therefore, placed this species definitely in the group of those carnivorous when young. The fact that the adult was itself toothless interfered in no way with this inference, because other toothless fishes (Dorosoma) whose young were furnished with teeth had been found carnivorous at an early age.

The inconclusive character of the results thus far obtained made it necessary to attempt to imitate more closely the natural conditions of the young when hatched in the lake. In February, 1881, I obtained, through the kindness of Mr. Clarke, twenty-five specimens of living young whitefish, saved from a lot which he was planting in the waters of Lake Michigan, off Racine, Wisconsin. I succeeded in conveying them to the laboratory without loss, and there kept them for several days in a glass aquarium and supplied them with an abundance of the living objects to be obtained by drawing a fine muslin net through the stagnant pools of the vicinity. These consisted of many diatoms and filamentous freshwater Algæ, of two or three species of Cyclops, of *Canthocamptus illinoisensis* and *Diaptomus sanguineus* among the Copepoda, and of two rather large Cladocera, *Simocephalus vetulus* and *S. americanus*.

These little fishes were kept under careful observation for several days, the water in the aquarium being frequently aerated by pouring. Many of them had, however, been injured by handling, and eleven of the specimens died without taking food. It was soon evident that the larger Entomostraca (the *Simocephalus*, and even the *Diaptomus*) were quite beyond the size and strength of these little fishes and that only the smaller Copepoda, among the animals available could afford them any food at first. These they followed about from the beginning with signs of peculiar interest, occasionally making irresolute attempts to capture them. Two days after their arrival one of the young whitefish had evidently taken food, which proved on dissection to be a small cyclops. During the next two days nine others began to eat, dividing their attention between the Cyclops above mentioned and the Canthocamptus, and on the 22d two others took a Cyclops each and a third a Canthocamptus. One of these fishes contained still a large remnant of the egg sac, showing that the propensity to capture prey must antedate the sensation of hunger. On the 25th the fourteenth and last remaining fish captured its Cyclops and was itself sacrificed in turn. As an indication of the efficiency of the raptatorial teeth it may be worth while to note that I saw one of the smallest fishes make a spring at a Cyclops, catch it, give three or four violent wriggles and drop it dead to the bottom of the tank.

As a general statement of the result of the observations made on these fourteen fishes we may say that eight of them ate a single Cyclops each, that one took two and another three of the same, that one took a single Canthocamptus, that two specimens captured two each of this genus, and that finally a single fish ate Cyclops and Canthocamptus both. The final conclusion was a highly probable inference that the smallest Entomostraca occurring in the lake would prove to be the natural food of the species.

In order to test this conclusion with precision, I arranged a similar experiment on a larger scale, and under more natural conditions. Through the generosity of the Exposition Company, of Chicago, I was allowed the use of one of the large aquarium tanks in the Exposition Building, on the lake shore, and by the repeated kindness of Mr. Clarke, of Northville, Michigan, I was furnished with a much larger number of living whitefish. Five thousand fry were shipped to me in a can of water, but through unfortunate delays in changing cars at intermediate points about two-thirds of these were dead when they reached my hands. Those living were immediately transferred to the tank, through which the water, taken from the city pipes, had already been allowed to run for several hours. As this water is derived from Lake Michigan, at a distance of two miles from the shore, and had at this time the exact temperature of the open lake, the conditions for experiment were as favorable as artificial arrangements could well be made.

Sending a man with a towing net out upon the lake with a boat, or upon the remotest breakwaters, immense numbers of all organic objects in the water were easily obtained. After inclosing the exit of the tank with a fine wire screen, to prevent the escape of objects placed in it, we poured these collections of all descriptions indiscriminately in the water from day to day, thus keeping the fishes profusely supplied with all the various kinds of food which could possibly be accessible to them in their native haunts. From this tank one hundred fishes were taken daily and placed in alcohol for dissection and microscopic study, to determine precisely the objects preferred by them for food. These were examined at a later date, and all contents of the intestines were mounted entire as microscopic slides, and permanently preserved. A careful study was, of course, made of the organisms of the lake, as shown by the product of the towing-net, and when the experiment was finally ended, it was followed by an equally careful examination of the living contents of the water of the tank at that time.

These fishes, like those previously described, had already reached the age and condition at which it is customary to "plant" them in the lake. The ventrals were still undeveloped, the egg-sac had nearly disappeared, the four mandibular teeth were present, and the median fin extended from the tips of the pectorals on the belly to a point opposite the middle of the same fins on the back. In most the egg-sac did not protrude externally, being reduced in some to a droplet of oil, but remaining in a few of a size at least as great as that of the head. The alimentary canal was, of course, a simple, straight tube, without any distinction of stomach and intestines.

The sufferings of these fry in transit had doubtless weakened the vitality of the survivors, and although every care was taken to keep the water of the tank fresh and pure, about one-third of those remaining died during the progress of the experiment. The aquarium in which they were confined was built of glass, and had a capacity of about one hundred cubic feet. The temperature, tried repeatedly, stood at forty-two Fahrenheit. A steady current of the water of the lake was maintained through this tank, entering through a rose, from which it fell in a spray, thus insuring perfect aëration.

By far the greater part of the organic contents of the water of the lake, as shown by the product of the towing-net, consisted of diatoms in immense variety, which formed always a greenish mucilaginous coating upon the interior of the muslin net. In this were entangled a variety of rotifers, occasional filamentous Algæ, and many Entomostraca, the latter belonging chiefly to the genera Cyclops, Diaptomus and Limnocalanus among the Copepoda, and to Daphnia among the Cladocera.

As the Entomostraca proved to be far the most important elements of this food supply, the particulars respecting them may be properly more fully given. The smallest of all was a Cyclops, then new, but since described by me under the name of *Cyclops thomasi*.* This little Entomostracan is only .04in. long by .011 wide. The next in size, and by far the most abundant member of this group, was a Diaptomus, likewise new, described in the paper just cited, under the name of *Diaptomus sicilis*. This appears in two forms, one, evidently young, in the stage just preceding the adult. Full-grown individuals were .065in. long by one-fourth that depth. The Limnocalanus was a much larger form, evidently preying, to a considerable extent, upon the two just mentioned. All the Cladocera noticed were *Daphnia hyalina*, an elegant and extremely transparent species, occurring likewise in the lakes of Europe. A single insect larval form (Chironomus) should likewise be mentioned in this connection, since it had about the same size and consistence of the Entomostraca, and was consequently available for food. The specimens of each of the above species from a certain quantity of these collections were counted, in order to give a definite idea of their relative abundance in the lake; the Diaptomus numbered 225, the Cyclops 75, Limnocalanus 7, Daphnia 3, and Chironomus larvæ 1. It was a curious fact, however, that when the water was drawn off at the end of the experiment, more than half the Entomostraca were Limnocalanus; a fact partly to be explained by the predaceous habit of the latter, and partly by the facts relating to the food of the fishes themselves, which are presently to be detailed.

The fry were placed in the tank and supplied with the first food on the evening of the 12th of March. On the 14th one hundred specimens were removed, and twenty-seven of these were dissected. Twenty were empty, but the remaining seven had already taken food, all Cyclops or Diaptomus. Three had eaten Cyclops only, and six Diaptomus, while two had eaten both. Fourteen of these Entomostraca, seven of each genus, were taken by these seven fishes. From those captured the next day, twenty-five specimens were examined, of which nineteen were without food. Of the remaining six, three had eaten Diaptomus and three Cyclops; five of the former being taken in all, and ten of the latter. Three specimens were next examined from those caught on the 19th of March, two of which had devoured Diaptomus and a third a single *Cyclops thomasi* and a shelled rotifer, *Anuræa striata*. The character of the food at these earliest stages was so well settled by these observations that I deemed it unnecessary to examine the subsequent lots in detail, but passed at once to the specimens taken on the 23d. Twenty-six of these were examined, and found to have eaten thirty-three individuals of *Cyclops thomasi*, fourteen of *Diaptomus silicis*, and fourteen of the minute rotifer already mentioned (*Anuræa striata.*) Two had taken a few diatoms (Bacillaria), and one had eaten a filament of an Alga. Cyclops was found in sixteen of the specimens, Diaptomus in nine, and Anuræa in eight, only two of them being empty. The amount of food now taken by individual fishes was much greater than before, one specimen dissected having eaten two Cyclops and two *Diaptomus sicilis*, male and female. Another had taken five Cyclops, one Diaptomus and five examples of *Anuræa striata*. Still another had eaten four of the Cyclops, four Diaptomus, and one Anuræa.

Twenty-five specimens were examined from those removed on the 24th of the month, at which time the water of the tank was drawn off and all the remaining fishes bottled. Four of these had not eaten, but the twenty-one others had devoured fifty specimens of *Diaptomus sicilis*, forty-seven of *Cyclops thomasi*, fourteen Anuræa striata and a single *Daphnia hyalina*, the latter being the largest object eaten by any of the fishes. A few examples of their capacity may well be given. The ninth example had eaten six Diaptomus, two *Cyclops thomasi* and one Anuræa; the tenth had taken eight Diaptomus, two Cyclops and an Anuræa; and the twentieth, seven Diaptomus and three *Cyclops thomasi*. In two of these examples were small clusters of orange globules, probably representing unicellular Algæ.

Summarizing these data briefly we find that of the one hundred and six specimens dissected sixty-three had taken food, and that the ratio of those which were eating increased rapidly, the longer the fishes were kept in the aquarium. Only one-fourth of those examined on the 14th of the month had taken food, while more than five-sixths of those bottled ten days later had already eaten. The entire number of objects appropriated by these sixty-three fishes was as follows: *Cyclops thomasi*, ninety-seven; *Diaptomus sicilis*, seventy-eight; *Anuræa striata*, twenty-nine; *Daphnia hyalina*, one. Seven of the fishes had eaten unicellular Algæ, two had eaten diatoms and one filamentous Algæ.

From the above data we are compelled to conclude that the earliest food of the whitefish consists almost wholly of the smallest species of Entomostraca occurring in the lake since the other elements in their alimentary canals were evidently either taken accidentally or else appeared in such trivial quantity as to contribute nothing of importance to their support. In fact two species of Copepoda, *Cyclops thomasi* and *Diaptomus sicilis*, are certainly very much more important to the maintenance of the whitefish in this earliest stage of independent life than all the other organisms in the lake combined. As the fishes increase in size, vigor and activity, they doubtless enlarge their regimen by capturing larger species of Entomostraca, especially Daphnia and Limnocalanus.

A few words respecting the relative abundance of these species at different seasons of the year and their distribution in the lake will have some practical value. We may observe here an excellent illustration of the remarkable uniformity of the life of the lake as contrasted with that of smaller bodies of water. While in ponds minute animal life is largely destroyed or suspended during the winter, the opening spring being attended by an enormous increase in numbers and rate of multiplication, in Lake Michigan there is but little difference in the products of the collecting apparatus at different seasons of the year.† There is a slight increase in the number of individuals during spring and early summer, but scarcely enough appreciably to affect the food supply of fishes dependent upon them. They are not by any means equally distributed, however, throughout the lake, my own observations tending to show that there are relatively very few of these minute crustaceans to be found at a distance of a few miles from shore, and that, in fact, by far the greater part of them usually occur within a distance of two or three miles out. Indeed, the mouths of the rivers flowing into the lake are ordinarily much more densely populated by these animals than the lake itself, as has been particularly evident at Racine and South Chicago. Neither are they commonly equally distributed throughout the waters in which they are most abundant, but like most other aquatic animals, occur in shoals. In the deeper portions of the lake, many species shift their level according to the time of day, coming to the surface by night and sinking again when the sun is bright.

These facts make it important to the fishculturist that the particular situation when it is proposed to plant the fry should be searched at the time when these are to be liberated, to determine whether they will find at once sufficient food for their support. A little experience will easily enable one to estimate the relative abundance of the Entomostraca at any given time and place, and they require nothing for their capture more complicated or difficult of management than a simple net of cheesecloth or similar material towed behind a boat. This may be weighed and sunk to any desired depth, so that the contents of the water, either at the surface or at the bottom, may be ascertained by a few minutes' rowing.

STATE LABORATORY OF NATURAL HISTORY, Champaign, Ill.

*"On some Entomostraca of Lake Michigan and Adjacent Waters." *American Naturalist*, Vol. XVI., No. VIII. (August, 1882), pp. 649 and 649.

†For definite assurance of this fact I am indebted less to my own observations (which are, however, consistent with it so far as they go), than to the statements of R. W. Thomas, Esq., of Chicago, who, while making a specialty of the Diatomaceæ of the lake, has collected and studied all its organic forms for several years, obtaining them from the city water by attaching a strainer to a hydrant many times during every month throughout the year.

DR. SWEENY had seen catfish jerk snails out of their shells by getting hold of the animal and drawing it out bodily. He has also noticed thousands of shells of the fresh-water mussels, or Unio, popularly known as the "hydraulic clam," with a hole through on each side as large as a half dollar, and the meat gone. Doubtless this was the work of some of the fishes that Prof. Forbes has examined.

MR. MATHER had fed the salt-water mussel, *Mytilis*, to the marine sheepshead, *Diplodus*, or *Archosargus* as the scientists have it, while he was connected with the New York Aquarium, and had observed that this fish used its sheep-like incisors to nip off the byssus which held the mussel to its anchorage, and then crushed it with its pavement of teeth back of the jaws. After extracting the meat the shells were expelled from the mouth, and he had never noticed fragments of shell in the exuvæ. He had fed the fish hard clams also, but these required cracking with a hammer, and the shells were ejected after the meat was devoured as in the case of the mussels.

DR. PARKER asked what the food of the lake whitefish consists of.

PROF. FORBES answered that he had made no study of the food of this fish, except in the fry, and he had fully reported on their food. The United States Fish Commission has shown that crustacea form the principal diet of the adult fish.

MR. CLARK had examined some of the whitefish taken last February, and found nothing but small crustaceans in their stomachs.

DEATH OF SETH GREEN.

MR. SETH GREEN, widely known as a fishculturist, died at his home in Rochester, N. Y., at 1:05 A. M, on Monday last, aged seventy-one years. The immediate cause of death was paralysis of the brain, but he had been failing, both mentally and physically, for the past six months. He was a man of more than ordinary strength, and five years ago seemed as likely to live the century out as any man of his age; but last winter he began to fail, paralysis began in his feet and gradually worked up.

Seth Green was born in the town of Irondequoit, near Rochester, on March 19, 1817, and his father, who kept a hotel, soon after removed to a place which is now part of the city of Rochester. Having no taste for books, he received but a meager education, and this probably was the cause of his hostility to all scientific men and his well-known dislike of "professors." He was a man of a very observant nature and one who would, if properly trained, have made a first-class naturalist, for he was born with the instincts of one. He was naturally a sportsman, was a good rifle and wing-shot, as well as a most excellent fly-caster.

We find from Prof. Goode's "Epochs in Fishculture" that in 1853 Dr. Garlick and Prof. Ackley, of Cleveland, O., bred trout in 1853, and that in 1856 the State of Massachusetts began to investigate the subject, and finally established a fishery commission. Later Mr. Stephen H. Ainsworth began trout breeding at West Bloomfield, N. Y., some twenty miles from Rochester, and the attention of Mr. Green being called to this work he visited him, and knowing of the capabilities of Caledonia Creek, went there, and in partnership with S. M. Spencer, of Rochester, bought the property and began rearing trout and furnishing eggs and fry to others, and was the first American fishculturist who made the business pecuniarily profitable. In 1867 he was called by the New England Fish Commissioners to hatch shad in the Connecticut River, and meeting with eggs which required different treatment from any to which he had been accustomed he devised the floating shad box which bears his name. The next year the New York Fish Commission was created, and with Horatio Seymour and R. B. Roosevelt as colleagues, he was appointed to be a Commissioner for the State. This position he soon resigned in order to be the superintendent, and then he and Spencer sold their interest in the hatchery to Mr. A. S. Collins, who soon sold it to the State.

In 1871 Mr. Green transported 10,000 shad fry to California, a most difficult thing to do in that day, and for which he received a well-deserved credit. He also introduced the trout of California to Eastern waters, and was the recipient of several medals from foreign governments for his work. He was a joint author with Mr. Collins, and also with Mr. Roosevelt, of several works on fishculture, and contributed to various periodicals during his active life. He was a member of several game protective societies, a Royal Arch Mason, and an enthusiastic yachtsman. Mr. Green leaves a family of four children, who are well provided for. The flags at the hatcheries at Cold Spring Harbor and Caledonia were placed at half-mast in his honor, and he will long be remembered as an active worker in his profession.

The Kennel.

Dogs: Their Management and Treatment in Disease. By Ashmont. Price $2. Kennel Record and Account Book. Price $2. Training vs. Breaking. By S. T. Hammond. Price $1. First Lessons in Dog Training, with Points of all Breeds. Price 25 cents.

FIXTURES.

DOG SHOWS.

Aug. 22 to 24.—Third Annual Show of the American Fox-Terrier Club, at Saratoga Springs, N. Y. (Including all terriers.) Entries close Aug. 15. H. P. Frothingham, Secretary, 2 Wall street, New York.

Aug. 27 to 31.—Toledo Dog Show, Toledo, O. John Farley, Sec'y.

Sept. 11 to 14.—First Dog Show of the Buffalo International Fair Association, at Buffalo, N. Y. Entries close Sept. 1. C. W. Robinson, Secretary.

Sept. 18 to 21.—Dog Show of the Westmoreland County Agricultural Society, at Greensburg, Pa. John S. Sell, Secretary. Entries close Sept. 15.

Sept. 18 to 21.—First Annual Dog Show of the Syracuse Kennel Club, at Syracuse, N. Y. Howard B. Rathbone, Secretary.
Sept. 24 to 27.—Fifth Dog Show at London, Ont. C. A. Stone Superintendent.
Sept. 25 to 28.—Second Annual Dog Show of the Bristol Park Agricultural Society, Bristol, Conn. Entries close Sept. 22. C. F. Barnes, Secretary.
Oct. 9 to 12.—First Dog Show of the Virginia Field Sports Association, at Richmond, Va. B. H. Grundy, Secretary, Room 26, Shafer Building. Entries close Oct. 1.
Oct. 23 to 26.—Second Annual Show of the St. Paul and Minnesota Kennel Club, at St. Paul, Minn. J. E. Stryker, Secretary, Room 98 Globe Building.
Nov. 6 to 10.—Dog Show of the Richmond County Poultry and Pet Stock Association, in connection with Augusta National Exposition at Augusta, Ga. H. Madden, Superintendent.
Jan. 15 to 19, 1889.—Seventh Annual Dog Show of the Southern Massachusetts Poultry Association, at New Bedford, Mass. F. W. Dean, Secretary.
Feb. 12 to 15, 1889.—Fifth Dog Show of the New Jersey Kennel Club, at Jersey City, N. J. Geo. L. Wilms, Secretary, 142 Monticello avenue, Jersey City, N. J.
Feb. 19 to 22, 1889.—Thirteenth Annual Show of the Westminster Kennel Club, New York. James Mortimer, Superintendent.
Feb. 26 to March 1, 1889.—Second Annual Show of the Rensselaer Kennel Club, Troy, N. Y. Alba M. Ide, Secretary.
March 5 to 8, 1889.—Second Annual Dog Show of the Albany Kennel Club, at Albany, N. Y. Geo. B. Gallup, Secretary.
March 12 to 15, 1889.—Second Annual Show of the Fort Schuyler Kennel Club, Utica, N. Y. James W. Dunlop, President.
March 19 to 22, 1889.—First Annual Dog Show of the Maryland Kennel Club, at Baltimore, Md. W. S. Diffenderffer, Secretary.
March 26 to 29, 1889.—First Annual Dog Show of the Massachusetts Kennel Club, at Lynn, Mass. D. A. Williams, Secretary.
April 2 to 5, 1889.—First Annual Show of the Rochester Kennel Club, at Rochester, N. Y. Harry Yates, Secretary.
April 9 to 12, 1889.—First Annual Dog Show of the Mascoutah Kennel Club, at Chicago, Ill. John L. Lincoln, Jr., Secretary.

FIELD TRIALS.

Sept. 11.—Third Annual Field Trials of the Manitoba Field Trials Club. Derby entries close July 1. All-Aged entries Aug. 1. Thos. Johnson, Secretary, Winnipeg, Manitoba.
Nov. 1.—Second Annual Field Trials of the Indiana Kennel Club, at Bicknell, Ind. P. T. Madison, Secretary, Indianapolis, Ind.
Nov. 19.—Tenth Annual Field Trials of the Eastern Field Trials Club, at High Point, N. C. (Members' Stake, Nov. 15.) W. A. Coster, Secretary, Saratoga Springs, N. Y.
Dec. 3.—First Annual Field Trials of the Southern Field Trial Club, at Amory, Miss. T. M. Brumby, Secretary, Chattanooga, Tenn.
Dec. 10.—Second Annual Field Trials of the American Field Trials Club, at West Point, Miss. C. W. Paris, Secretary, Cincinnati, O.
Jan. 14, 1889.—Sixth Annual Field Trials of the Pacific Coast Field Trial Club, at Bakersfield, Cal. N. P. Sheldon, Secretary, 320 Sansome street, San Francisco, Cal.

COURSING.

Oct. 15.—Third Annual Meeting of the American Coursing Club at Great Bend, Kan. F. K. Doan, Secretary, 1210 Olive street, St Louis, Mo.

A. K. R.—SPECIAL NOTICE.

THE AMERICAN KENNEL REGISTER, for the registration of pedigrees, etc. (with prize lists of all shows and trials), is published every month. Entries close on the 1st. Should be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (50 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription $1.50. Address "American Kennel Register," P. O. Box 2832, New York. Number of entries already printed **6512**.

"DISGRUNTLED ASSOCIATES."

Editor Forest and Stream:

The statement of Mr. Wm. Rewalt, Jr., in yours 2d inst., that a member of the Hornell Club exposed both the "Chicago special" and "pewter medal" scandals, is correct. I prosecuted both, but both were brought to my attention, and the evidence furnished me, by a member of that club. Mr. Belmont excels the cuttle fish this time. Mr. Rewalt said "exposed," and Mr. Belmont sets forth what was brought before the A. K. C.! Surely Mr. Belmont should know that both scandals were exposed in your columns long before they were brought before the A. K. C.? Or is nothing but arraignment before that tribunal "exposure?"

I verily believe that Mr. Belmont has been deceived as to the action of the A. K. C. in these scandals, and that only such records have been shown him as suit the purposes of his informants, and he evidently has not informed himself on what the outside histories of these cases are. The holy of holies of the A. K. C. is probably deemed by him sufficient to establish the status of anything, just the danger of new hands at the bellows that I pointed out in a previous article.

I have no wish to drag Mr. Whitman into the affair again, particularly as I have always said that I did not charge him with personal dishonesty, but with a flagrant disregard of the sacred obligation of a trust. But Mr. Belmont's triumphant production of Mr. Whitman's letter, as a positive vindication of both the A. K. C. and Mr. Whitman, leaves no other course open. Mr. Whitman says that the special was donated "through me" [him], implying that he had a hand in procuring it, and was in a measure at liberty to do what he pleased with it. Now, among the "records" that Mr. Belmont quotes with such a whirl, is, or should be, a copy of the letter of the donor of the special to Mr. Whitman, saying that he had just learned that the special he donated had never been paid the winner, and that he was justly indignant at such treatment. This is not strikingly like "through me."

Furthermore, it was an open secret that the special was donated especially for Mr. Fellows to win, that the adoption of that wonderful "International Cocker Spaniel Association" standard shut "Uncle Dick" out of a chance of winning, and this special was to make it up.

Mr. Whitman raises the presumption that the check was not used until some considerable time after its receipt, yet the check itself was among "the records," and it showed that it was cashed the day of its date. As to Mr. Whitman's advising "the club" of the receipt of the check at the next meeting, I hold the letter of the treasurer of the club that he never heard of the special until after the close of the show, and I am almost certain that Mr. Child read his letter stating that same thing at the meeting of the A. K. C., which letter is also in the "record." The money was sent Mr. Fellows the day after I advised Mr. B. F. Wilson that I proposed to bring charges before the A. K. C.; and Mr. Whitman was then at Pittsburgh superintending the preliminaries of the show, certainly during his connection with the Pittsburgh show, and thus constructively "during the show." I don't recollect that I ever advised Mr. Fellows not to accept the money, and if I did do so it must have been in view of seeing that he was reimbursed in some way, for I distinctly remember that he wrote me something to this effect: "I need the money very badly, but by gum, I don't need it so badly but that I will return it if you say it will prevent your doing justice to my brother fanciers by stamping out this kind of biz." "Uncle Dick's" friends will recognize him in this at sight.

The whole case was unquestionably proved what might be called an embezzlement without criminal intent, and the condonation of it by the A. K. C established a most ruinous precedent, which is made ten fold worse by Mr. Belmont's presentation of the case in the light that the A. K. C. tried the case and aquitted the defendant without even an expression of disapproval!

The bogus medal case was fully as bad. It was publicly confessed that bogus medals had been given exhibitors, and the A. K. C. aquitted on the wonderful ground of the statement of the accused that exhibitors all knew of the character of the medals! Remember, not a single exhibitor was named who was said to have such knowledge, but the mere statement was accepted as proof of connivance of the exhibitors. Now, I would ask for the name of one exhibitor who had this knowledge, and I will give the names of Messrs. Chubb, Dole, Craig and Thayer who won such medals supposing they were genuine.

Mr. Belmont has succeeded in converting a case of shameful neglect of duty on the part of the A. K. C. into one of approval of wrongs, and I hope he relishes the result of his work.

Mr. Belmont reserves the most complete, unlimited misstatement for the Farley case. He says, "This association has always adhered to the principle that the club under whose jurisdiction the offense was committed must first act, the A. K. C. only taking the case on appeal, and it only assumes original jurisdiction over the acts of its own members" ("over its own members" is richness).

This reads like a deliverance of some Supreme Court, somebody whose decisions are not to be questioned; yet the facts known to every reader of the sporting press who cares to remember what he reads, are directly the reverse of the solemn opinion of the president of the A. K. C. The rule has invariably been just the opposite. In the Sans Souci Kennel case, Mr. Elliot Smith, in delivering his deciding vote, in the soundest, clearest opinion ever submitted to the A. K. C., took the express ground that one club might disqualify for an act committed at the show of another, and cast his deciding vote to sustain the disqualification, on this ground alone. In the Chicago special, pewter medal and Haldeman cases (the latter that one that was so unctuously read to the A. K. C.) Mr. Peshall urged his view of the case, just as Mr. Belmont says the A. K. C. has always held, and the vote was practically unanimous against him. Worse and more of it, at the very meeting where Mr. Belmont got off that "special" official idea, Mr. A. C. Collins protested Mr. Campbell for an offense committed at the W. K. C. show, and in spite of Mr. Peshall's "invariable" the meeting referred it to some committee. Now, here we have the president announcing the law of the A. K. C. to be just what the delegates have invariably voted against. I well remember in the Haldeman case that Mr. Winslow most conclusively disposed of Mr. Peshall's argument by saying to the effect that a gentleman had been accused of grave offenses, and that as he knew the accused to be straight he knew there was another side to the story and he insisted that the accused be allowed to present it.

I can conceive of no other explanation of Mr. Belmont's remarkable mistakes than that somebody else has supplied him with "the facts" and so much of "the record" to suit the case, for it is not to be believed that Mr. Belmont wilfully made the astounding misstatements that garnish nearly every article he writes. Truly the gross incompetency of Major Taylor, and the several mistakes of Mr. Smith, have not presented the A. K. C. in the pitiable light that Mr. Belmont always shows it in. W. WADE.

Editor Forest and Stream:

It seems a hopeless task to obtain from Mr. Belmont a retraction of what must now be called his wilful misstatement that I worked in an underhand manner toward the establishment of the National Dog Club, for had it been an inadvertent error I cannot conceive what would prompt him to neglect the first duty due his own character as a gentleman to withdraw it. Any person who of his own volition says that I had anything to do with the establishment of the National Dog Club, or with the holding of the meeting at Boston, is guilty of deliberate falsehood. The first I knew of the Boston meeting was in a paper I got at Denver, if I recollect rightly, and that was one which referred to what had been published in the previous issue. I am not clear in my mind as to what it was, but I know that it was not until I reached Chicago that I was in possession of the facts of the case.

I hoped to see some one draw attention in your last issue to the numerous errors made by Mr. Belmont in his reply to Mr. Rewalt, president of the Hornellsville club, and I can only account for this unusual silence by the supposition that what was everybody's business turned out to be nobody's. For the present I will content myself to calling attention to the most glaring errors. Mr. Belmont in the most specious manner seeks to controvert Mr. Rewalt's statement that it was through a member of the Hornellsville club the Chicago special prize business was exposed. What is supposed to be a denial of this is the statement that Mr. Wade of Pittsburgh made it public. What if he did? He got his information from Mr. Fellows, the secretary of the Hornellsville club.

Then in Mr. Belmont's defense of the second miscarriage of justice—the charge of theft at the Buffalo show by Farley—he says the Buffalo club was directed to first take action. The absurdity of this resolution on the part of the A. K. C. is apparent since the Buffalo Club was not a member of the A. K. C., which body cannot recognize any action taken by clubs non-members. That is an impossibility. Even Mr. Peshall, and that is going a long way, must admit that. But Mr. Belmont bolsters up his weak case by a most ridiculous error. He says that it has always been the principle of the A. K. C. to call upon the club at whose show the fraud took place to take action, and that no other person had any right to interfere. That will be news to Mr. Elliott Smith for instance, who made the decision in the San Souci Kennel case that Boston could disqualify H. M. Perry for his conduct at the Philadelphia show. Mr. Smith read an "opinion" on the case in which the sense of the argument was not at all in unison with the decision which followed.

Mr. Belmont's account of how the Atlanta awards came to be recognized by the A. K. C. clubs is not in keeping with the story as told me by Mr. Peshall. The resolution requiring registration of all dogs exhibited at a show given by an A. K. C. member was to take effect on Jan. 1, 1887. Atlanta was held after that, but there was no enforced registration. The secretary of the Philadelphia Kennel Club, Mr. W. H. Child, had asked me to take hold of the show catalogue and relieve him of a duty he did not care about wasting time over. It was my business to see that the entries were made in the proper classes and correct all blunders I could detect. One of Mr. Belmont's entries was placed in the champion class by him with a credit of a first at Atlanta. I drew Mr. Child's attention to this as an error, Atlanta having repudiated the registration rule. Mr. Child was of my opinion, and in order to have the matter decided in proper form, wrote to the secretary of the A. K. C., asking whether Atlanta wins were to count. Were this any ordinary secretary he would with the knowledge that his duties are purely clerical have referred the matter to the president for decision, and thus it would have come before Mr. Child in proper form. But Mr. Vredenburg is not an ordinary secretary by any means, so he paid the president the curt courtesy of simply writing across the letter of inquiry that Atlanta wins did count. Thus Mr. Child's authority as president was thwarted, and he could not, as secretary of the Philadelphia Kennel Club, take any action. Now, to come back to Peshall versus Belmont,

Mr. Peshall was on to the Philadelphia show, and meeting him on Chestnut street he tried to talk me over and explain his action in arguing for my rejection, as the Hornellsville Kennel Club was all right, and we must be good friends and all that flummery. I then said that no sooner did I leave than the A. K. C. got at the old game of wild cat legislation, and among other things brought up this Belmont case. Mr. Peshall then explicity told me that they had talked the case over at the meeting and that they had decided after he had explained that he never meant the compulsory registration rule to begin at any such little show, and would not have put in January 1, 1888, had he known of Atlanta, that Atlanta was not to be a compulsory registration show, but that the wins were to count. What other meeting than the A. K. C. meeting Mr. Peshall referred to I leave for him to specify. We were talking of no other meeting, and the case he said was decided with reference to Mr. Belmont's dogs. If it was not so, pray explain the authoritative reply of the A. K. C. secretary.

Mr. Child also had some conversation with Mr. Peshall, but I am not a competent witness as to what passed between. I only know that Mr. Child and I had, and I suspect still have, the opinion from what we were told that application of some sort was made by or on behalf of Mr. Belmont to have Atlanta counted so as to favor his dogs shown there.

Just one word to Mr. Peshall, please don't deny we had any such conversation as related. Get out of it in some other way if you must shield your president, but don't tell me I have not told what took place, otherwise my answer will be very short and to the point. JAS. WATSON.

OUR BOSTON SHOW REPORT.

AT a meeting of the American Kennel Club, July 23, its president, Mr. August Belmont, Jr., publicly stated that the FOREST AND STREAM's report of the Boston bench show was falsified. When Mr. S. T. Hammond, the writer of that report, asked Mr. Belmont to specify wherein the report justified this charge of untruthfulness, Mr. Belmont added to his original assertion a further one, that the whole intention of the report was to mislead readers of the paper as to the successful character of the show. In a footnote to the two letters as printed in our issue of Aug. 2, we pointed out to Mr. Belmont that his original statement as to the accuracy of our Boston show report and his second statement as to the purpose of the report were alike impertinent and void of truth.

In the next issue, Aug. 9, was printed another letter from Mr. Belmont, in which he averred that his charge was based on "very satisfactory written proofs given to me by the best authorities of each special breed;" and he "reiterated all he had said publicly and privately." Commenting on this we advanced as a reason for Mr. Belmont's extraordinary charge, that having threatened to boycott Buffalo, as he had boycotted Boston, Mr. Belmont recognized the necessity of bamboozling Buffalo into believing that a Belmont boycott would burst the show; hence his desire to make it appear that the Boston show had been injured by his boycott, despite the FOREST AND STREAM's report to the contrary. We suggested that having made his false charge about our report, Mr. Belmont was persisting in it, on the politician's principle that a lie well stuck to will do effective campaign work. But, in our desire to be perfectly fair in this thing with Mr. Belmont, and to grant him every possible excuse for having taken the course he did, we also said:

> Mr. Belmont does not need to be told that, if he has any such "satisfactory written proofs given to him by the best authorities of each special breed," the very best possible use he can make of them is to put them into print. If he can show that he has such "proofs," and was misled by them into making his charge at the A. K. C. meeting, the fact of his having been misled would be accepted in mitigation of the impertinence of the charge, though it would not affect its untruthfulness.

Summed up briefly, the case stands thus: Mr. Belmont, Jr., made a false statement with respect to the FOREST AND STREAM. Taxed with it, he adds a second false statement. We have given him an opportunity to show that he was deceived into making these false statements. This opportunity he has not cared to improve. A person who, having uttered an untruth, has an opportunity to excuse himself for having done so, and refuses to improve that opportunity, evidently does not care about his reputation for truthfulness.

The business of Mr. August Belmont, Jr., as set forth in the Directory, is that of a banker. He is, we believe, connected with the banking house of his father, Mr. August Belmont, agents of the Rothschilds, dealing in securities, bills of exchange, etc. To carry on a business of that nature there must exist between the banker and his clients confidence in the banker's integrity and fair and square business dealings. Now let us suppose a case: At a meeting, say at No. 44 Broadway, an inflated ignoramus, who differs from Mr. Belmont on some point, for argument's sake publicly asserts that Belmont & Co. on one occasion defrauded their customers. Mr. Belmont demands the ground for the charge. For answer he is told that not only did Belmont & Co. defraud their customers, but they did it deliberately and purposely. Mr. Belmont characterizes the charge as false. The retort is that he who preferred it has written proof of its truth. Mr. Belmont tells him that, if he has what he thinks are proofs, the production of them will relieve the charge of its malice but not of its untruthfulness. Now, will Mr. Belmont tell himself what the results would be? They would be these. First, the lying statement of the inflated ignoramus would not injure the credit of Messrs. Belmont & Co. Second, if the inflated ignoramus persisted in his charges, but refused to show that he had been imposed on and so led honestly into making them, those knowing to the affair would be apt to look on the inflated ignoramus with the contempt usually and quite rightly bestowed on that person who having lied about another person stubbornly sticks to it. And that, too, is just the way Mr. Belmont would look on him.

It requires a reputation for integrity to conduct a banking business; none the less is such a reputation essential to the conduct of a journal like the FOREST AND STREAM. We take pride in the public estimation of the fairness and fidelity to truth which mark the reports of dog shows published in these columns. Our reputation in this is established. In all the twelve years during which we have been engaged in this work, no man other than Mr. August Belmont, Jr., has charged us with writing reports to mislead the public. Mr. Belmont's charge cannot affect us one iota. It must hurt him, for it puts him in a position which no man with self-respect would care to occupy. For his own sake, not ours, Mr. Belmont should either withdraw his charge or else show that he was deceived by others into making them, believing them to be true.

BOYCOTTING BUFFALO.

Editor Forest and Stream:

Mr. Mitchell Harrison has advised Buffalo that unless A. K. C. rules are adopted he will not show there. On Aug. 2 this same Mr. Harrison wrote to the *Turf, Field and Farm*, "I most certainly do not approve of the American Kennel Club or its members doing anything that will unnecessarily antagonize any member of the National Dog Club or any other organization." This same Mr. Harrison patronized the Baltimore show and is to exhibit at Toledo and London, which are not A. K. C. shows. It looks a little inconsistent, to say the least of it; but Buffalo doesn't seem to weaken, and I hope the collie men, bad as the season is for them, will show the public that the Chestnut Hill Kennels is not all the world of sheepdogs. JAS. WATSON.

LONDON DOG SHOW.—London, Ont., Aug., 10.—*Editor Forest and Stream:* The London Kennel Club at their show to be held in this city in September will give prizes for classes of dogs not named in the premium list where the entries will justify them in doing so. We wish to thank, through your paper, J. W. Scanlon (comedian) for donating a handsome silver cup valued at $25, to be known as the Peek-a-Boo cup, for the best kennel of English setters at the show; also Peter Glen, Esq. (artist), for an oil painting of a dog, valued at $25, to be given to the best looking exhibitor at the show.—C. A. STONE, Manager.

THE TWO DOG CLUBS.

Editor Forest and Stream:

I am glad to see the good seed sown by the National Dog Club is now bearing its fruit. This club was "organized for the improvement of dogs, dog shows and dog competitions," and one grand stride has already been made in that direction. I have reference to Rule 16 of the A. K. C. regarding the transfer of dogs from the open class to the champion class when he wins a third first prize between the time of closing the entries and the opening of a show. When the rule was formulated it was strongly opposed, as it was believed it would cause no end of trouble, which belief has since been confirmed by facts. At the Boston show of 1887 a dog was disqualified for not having been transferred to the champion class (where it belonged according to Rule 16), and harsh words were indulged in, the natural result of the A. K. C.'s stubbornness in enforcing this rule contrary to the objections of the great army of exhibitors. Time after time the executive committee of the A. K. C. has met, yet took no action regarding this rule, and it would not now be under consideration and discussion by them, after three years of its life, had not the National Dog Club omitted it from their rules. It has been a thorn in the side of exhibitors for about three years, and it is sincerely hoped that the A. K. C. will rescind it. The National Dog Club is to be heartily congratulated upon having been the means of at least one reform-viz.: in opening the eyes of the A. K. C. to the fact that this, rule is all wrong and should cease to exist.

There was a large meeting of the A. K. C. on July 23 at their office, No. 44 Broadway. Thirteen clubs were represented, yet, excepting the Maryland, Philadelphia and Massachusetts clubs, the proxies were all held by the "little clique." After the example made of Mr. Watson, what outside delegate would have the temerity to object to any of the "cut and dried" proceedings? Yet this is the great club which Mr. Belmont claims to have been intrusted "a field" by the "immense majority of the dog interests of the country." A club that has never, as yet, corrected an abuse. A club whose presidents, with the honorable exception of Mr. Child, have invariably "constructed" rules to suit their purposes. A retrogressive club with a president representing "Taylorism" in its worst form.

Mr. Belmont in his puerile communication to Dr. Perry wrote "the American Kennel Club is by the most unmistakable implication unfit and incapable for the proper discharge of its duties." Just so: what we have been asking for years is that the A. K. C. should punish offending clubs and not obscure individuals only. "Discord is not what the breeders and exhibitors nor the public want." Certainly not, but as they support the kennel clubs they should be given, at least, proper legislation and an equitable executive. Give exhibitors, breeders and the public an honest return for their money.

Objectors to frauds have been called "kickers." The National Dog Club now stands ready to see that justice be shown to all alike, inasmuch as the American Kennel Club has, after years of trial, signally failed, and by its repeated blundering justly earned the contempt of the kennel world.

VICTOR M. HALDEMAN.

Milford, Del., Aug. 13.

The following correspondence explains itself:

Dr. J. F. Perry, President National Dog Club of America:

Sir—I am this day in receipt of a pamphlet, indorsed "Statement, etc., by the National Dog Club, in the interest of fair play," and addressed to the breeders of the country. I have read with some amazement your letter at the beginning of the pamphlet, and I have glanced over the names of your executive committee and members with feelings of contempt; *amazement* that your letter of introduction should contain an absolute and unqualified misstatement, for there is no other word to express it, and *contempt* that you, as the president of this club, should fraudulently use the names as members of the executive committee, and also of your club, of well-known breeders, who have *not only privately*, but *publicly* withdrawn from *all* connection with your club. The statement I refer to, is that the "A. K. C. had already declined to permit them to do so unless they formed a paper corporation, a course which they rightly assumed to be a dishonorable subterfuge." The facts in the case known not only to Dr. Perry, but to every one who can read, are simply these: On the 9th of March, 1888, Mr. Robinson wrote the secretary of the A. K. C. that it was the intention of certain parties in Buffalo to organize a corporation for the purpose of giving a fair, etc., and that as a part of said fair, they proposed to give a bench show of dogs, and asking how they could do so, under A. K. C. rules. The secretary very properly referred them to Rule 3, the same rule under which all clubs must organize to become members of the A. K. C., and it was a very simple matter to have made the A. K. C. rules a part of their present organization, and thus gained admittance to the club. This was no more a *paper organization* than the one the Buffalo show *now have;* it merely added *one* more feature, and *an interesting one.* About this time, Mr. J. Otis Fellows, a warm friend of James Watson, and a man who has made himself obnoxious to every breeder of repute in the country by his ill-advised conduct in connection with his club and the A.K.C., was engaged as superintendent for the doggy part of the Buffalo show. *From that moment* the plotting began, *not* to see *how* the show could be held under the A. K. C. rules, but to see *how* Buffalo *could be used* by J. Otis Fellows, James Watson and others of like reputations, to strike a blow at the A. K. C. and thus gratify *personal* malignity and *spite.* Mr. Busby, the editor of the *Turf, Field and Farm,* hearing of this, naturally wrote Mr. Hamlin a kindly letter and a very proper one, as he wished the show to be a success. What was the result? On July 3 Mr. C. W. Robinson (who was heretofore intimately associated with J. Otis Fellows in the management of the Hornellsville exposition) writes and sends broadcast a letter inclosing copy of Mr. Busby's letter to Mr. Hamlin saying: "*You will see that the fight is begun,* and as *Mr. Fellows* and *myself* have gotten the International Fair Association to *indorse* the National, we trust you will do everything in your power to prove Mr. Busby mistaken." Now, Dr. J. Frank Perry, how dare you or any member of the National Dog Club say over your signature that the A. K. C. began the fight, and that their "methods are cowardly?" Do you expect *independent* breeders, men who have reputations, to allow you or your club to parade their names as decoys for the venting of the *personal* spite of J. Otis Fellows and James Watson? You may claim, and perhaps honestly, that when you asked myself and others to join at Boston that you truthfully thought the National Dog Club would not be antagonistic to the A. K. C., but can you do so now? Every name that you have secured has been by *fraudulent* representations, *unintentionally* so perhaps at first, or are breeders who are willing to make a fight against the A. K. C., and you yourself at first an unwilling catspaw, must now either be confronted with the fact that you are either the *willing* tool of *designing* men, in that you train in the same company, and have the *same axes* to grind, or that your pretended friendship for the A. K. C. was only *a sham*—which horn will you take? I am entirely independent—I am not a member of any club that is even a member of the A. K. C. I have opposed in the past many of the methods in vogue under the maladministration of Elliot Smith. I am opposed to cliquism of all kinds, but I am also opposed to all that savors of blackguardism and blackmail in doggy affairs. I am opposed, and always shall be, to the methods of such men as James Watson and J. Otis Fellows, and when such men are masquerading, with you at the head of an organization, with reputable names that have been obtained by *disreputable methods,* by the last fraud by which you seek to gain converts by omitting the very *pith of the matter,* namely *the fact that your club through* J. Otis Fellows and C. W. Robinson *began the fight,* that *you are fraudulently* to-day parading names on your executive committee and as members that are *not either one or the other,* in order to catch the support of unsuspecting gentlemen—I say to you privately, what I shall say publicly, that a man of your years and discretion ought to be in better business than found supporting and intimately associating with men whose only ambition has been to destroy the A. K. C. by using your name, and the names of reputable associates to accomplish under cover what they as individuals could never undertake with any hope of success. I am, &c.,

(Signed) JAS. L. ANTHONY.

Netherwood, N. J., August 16, 1888.

James L. Anthony, Esq.:

Sir—Yours of the 16th I find on my return to the city after a brief absence. Although it was evidently written on the impulse of the moment, and contains many personal expressions which I am sure your second thought will tell you had better have been left unsaid, there are yet some points in it which I desire to set you right upon.

In regard to the appearance of Mr. Harrison's name on the executive committee, that is a mistake for which I am not responsible. As soon at my attention was called to the errors in the list of officers and members, I notified the secretary by telegraph to at once correct the same through the sporting press.

As for your remarks in regard to the Buffalo management and the American Kennel Club, permit me to remind you that according to your own statement you are not a member of said club. Hence your information must be unofficial. You weigh what you have been told as facts, with the statements made by me, and draw your conclusions, no one disputing your right to do so. But on reflection you must have felt that the expression of your verdict to me, unsupported by any evidence other than the mere statement of opposing parties, is a deliberate insult, which was, I think, far from your intentions. By a careful perusal of the editorial in the *Turf, Field and Farm,* July 30, you will see that the writer plainly suggested a "paper corporation," and even indicated its officers. That that method of proceeding was necessary to comply with Rule 3 of course all will admit, but many will also agree that no such rule should ever have been adopted. It certainly encourages "gauzy corporations," which, I am sure, you will never advocate.

Your statements as to the plotting, etc., indulged in by various persons to injure the American Kennel Club, being unsupported by the slightest proof, places you in the light of a "special pleader" for that club, and deprives, therefore, your letter of its weight. The constitution of the National Dog Club provides that the affairs of the club are to be managed by an executive committee of fifteen. Upon the one at present in existence the men of whom you speak so slurringly have no place. Any intimation that they are "running the club" is wholly gratuitous, and being, like all your other charges, mere assertion, conveys to every thoughtful man its own refutation. Those whom you mention are very likely able to defend themselves if necessary. As far as their connection with the National Dog Club is concerned, pray let me make it plain, in as forcible language as I have at command. *They have never attempted in any way to influence its action in any degree, however slight.* If you have anything to say publicly against them, the only manly course for you is to aim your attacks directly at them and so give them an opportunity to defend themselves.

It has been frequently said by its assailants—privately, by word of mouth and by letter—that the National Dog Club is composed of traders, and that it is controlled by a certain clique of disgruntled individuals, who are using it to work out their own ends. Here, again, are more assertions which it is sufficient to meet with the counter assertion that they are *unqualifiedly false.* When something like evidence is offered to substantiate such charges, it will then be time for us to meet them.

A word, merely, in reference to your invidious criticism of my own conduct. As I have already said, your evident position as special pleader robs it of any force which it might otherwise have had. I think my course in ignoring it is one you would take in like instance.

As either horn of a dilemma leads to the same bad result, it has always been a practice with me, when so entangled, to openly confess my error and meet the consequences. You may be certain that if I find myself in such a plight with regard to the National Dog Club, I shall take the same course. At present, I assure you that I believe in it and its methods thoroughly, and until convinced *by proof* that I am wrong, I shall do all in my power to persuade the breeders of America of the necessity for such an organization to protect their rights. Very truly, J. FRANK PERRY.

Boston, Mass., Aug. 20.

COONS.

Editor Forest and Stream:

In reply to the inquiries of "J. L. B." regarding the habits of coons, coons mate in February, and on May 5 I saw a litter that were evidently about five days old—they had not got their eyes opened. They bring forth from four to six. My opinion is that they breed every season, but some believe they only breed every other year.

In regard to its affecting the scent of dogs to get scented by skunk, there is no question, but still it does not always prevent a dog from following a strong scent, but that it affects his scent so much that he cannot work up a cold trail requiring delicate scent is my experience.

In regard to their emitting a cry at night there are different opinions. Most hunters say that they do, and two parties that had kept pet coons told that they had heard them holler.

John B. Clark, editor of the *Mirror and Farmer,* Manchester, N. H., has a long and interesing article on coon hunting in a little book called "Mirror Hand Book," which can be had of him for 10 cents.

Forest and Stream of June 19, 1884, has an article on coons, read by John Foster before the Game and Fish Commissioners of New Hampshire in June, 1884, and it contains many interesting notes relating to coons.

I hope that "J. L. B." will report through Forest and Stream some of his hunts in Windham. N. ELMORE.

Granby, Conn., Aug. 20.

SYRACUSE DOG SHOW.—Syracuse, N. Y., Aug. 18.—*Editor Forest and Stream:* The following express companies will return all dogs from the show held here Sept. 18 to 21, free: The American, the National and the United States express companies. The club will register all dogs free in the A.K.C.S.B. that are exhibited at their show that have not been previously registered, and registration blanks can be had by applying to the secretary. The premium lists are being mailed to-day, and the secretary will be glad to send the same to any address. We have changed the date of closing entries from Sept. 3 to Sept. 10. The special prize committee report great success, and the list will be published in the next issue of the Forest and Stream.—Howard B. Rathbone, Sec'y Syracuse Kennel Club.

NATIONAL DOG CLUB OF AMERICA.

Editor Forest and Stream:

Through printer's error the following names appeared in our circular list of members: Messrs. Harrison, Hopf, Saunders, Cook, Sawyer, Nash, and Mr. and Mrs. Hughes. They have withdrawn. Please note this in your paper.

H. W. HUNTINGTON, Secretary-Treasurer.

New York, August 20.

AMERICAN KENNEL REGISTER.

FOLLOWING are the numbers of the dogs entered in the August number of the *American Kennel Register:*

BEAGLES.

6436. Coriscana, Coriscana Hunting Club.
6437. Frances Cleveland, T. C. White.
6438. Navarro, Corsicana Hunting Club.

COLLIES.

6439. Bessie Clark, H. M. Clark.
6440. Brownie, Donald McLean.
6441. Duchess, J. C. Hutchinson.

ITALIAN GREYHOUNDS.

6442. Clio, W. H. Caldwell.
6443. Flossie, Henry Eichler.

MASTIFFS.

6444. Beech Grove Annette, F. L. Calkins.
6445. Ben Hur, Dr. Roland B. Whitridge.
6446. Beulah, Geo. L. Phippen.
6447. Chester II., C. H. Paine.
6448. Cleopatra R., Geo. J. Rupprecht.
6449. Dharra, Miss Anna F. Hankins.
6450. Duke Caution, Dr. Piper.
6451. Helen Caution, J. Hellen.
6452. Juno VIII., G. B. Robertson.
6453. Medusa, Geo. J. Rupprecht.
6454. Minting, Jr., J. Hellen.
6455. Omar, Edward A. Robbins.
6456. Pericles, Geo. J. Rupprecht.
6457. Ranger, R. O. Oxnard.
6458. Ray, R. R. Ulmer.
6459. Sellman, W. W. Robertson.
6460. Take Caution, R.R. Ulmer.

POINTERS.

6461. American Romp, Fred A. Hodgman.
6462. Bonanza, Fred F. Harris.
6463. Dick of Delphos, J. W. M. Cardeza.
6464. Duke Beaufort, Frank M. Hager.
6465. Jim V., A. H. Mason.
6466. Katisha, Fred F. Harris.
6467. Mike, Jas. P. Swain, Jr.

PUGS.

6468. Bradford Ruby II., Eberhart Pug Kennels.
6469. Joe II., Henry Eichler.
6470. Ky Ky, Eberhart Pug Kennels.
6471. Royal Bradford, H. Eichler
6472. Viola, Henry Eichler.

ST. BERNARDS.—Rough-Coated.

6473. Abbe, Robt. M. Riddle.
6474. Barry IV., J. W. Stewart.
6475. Bernie, M. Boylan.
6476. Benivard, Jr., Weimer & Lincoln.
6477. Cadess, Weimer & Lincoln.
6478. Lady Valentine, Otto W. Volger.
6479. Odin, Otto W. Volger.
6480. Queen, Mrs. J. B. Carson.
6481. Ranger, W. H. Gibbs.
6482. Volunteer, Weimer & Lincoln.

Smooth-Coated.

6483. Geoffrey the Prior, W. H. Perry.

SETTERS.—English Setters.

6484. Chautauqua Prince, F. T. Weatherill.
6485. Daisy Gladstone, W. Stall.
6486. Duke Noble, A. J. Oskamp.
6487. Killbuck Prince, A. Oskamp.
6488. Lady Brighton, F. T. Weatherill.
6489. Trim, W. H. Merrill.
6490. Vic-Vic, E. F. Garland.

Gordon Setters.

6491. Beaulah, Chas. T. Brownell.

Irish Setters.

6492. Foote's Yum, E. O. Damon.
6493. Meg Glencho, E. N. Foote.
6494. Ned II., Lyman W. Clute.
6495. Rob II., E. N. Foote.
6496. Ted Sarsfield, E. N. Foote.
6497. Twig Sarsfield, E. O. Damon

SPANIELS.—Field and Cocker Spaniels.

6498. Black Bess V., O. Gilman.
6499. Fannie Obo II., O. B. Gilman.
6500. Lora, O. B. Gilman.
6501. Lulu Obo, William Shiloh.
6502. My Bess, Waterford Kennel Club.
6503. Nona, Waterford Kennel Club.
6504. Phyllis II., Miss Marguerite H. Langley.
6505. Obo Reta, Geo. H. Carr.
6506. Sancho, O. B. Gilman.
6507. Shot, Wm. L. Nailor.
6508. Von Obo, Wm. Very.

Japanese Spaniels.

6509. Yoko II., Geo. E. Blabon.

TERRIERS.—Bull-Terriers.

6510. Lilly, F. G. Tripp.

Scotch Terriers.

6511. Snap, J. J. Nussbaumer.

Yorkshire Terriers.

6512. Brunette, Chas. York.

AMERICAN PET DOG CLUB.

Editor Forest and Stream:

The Forest and Stream and other kindred papers have recently published the constitution, etc., of the American Pet Dog Club, together with the breeds and classes of breeds recognized by the club as house or pet dogs. Neither Forest and Stream nor any other paper has made a single note of exception to the list. We now find two gentlemen, the president of the American English Beagle Club, and the secretary of the American Spaniel Club assuming the right to dictate what dogs the Pet Dog Club shall and shall not recognize as pets, and also what particular breeds ladies and gentlemen shall be permitted to have or not have in their houses as pets.

The readers of the Forest and Stream must not be surprised nor alarmed if in the next issue they should read a manifesto similar to the following; "We, the president of the American English Beagle Club, and the secretary of the American Spaniel Club, do hereby declare that no lady or gentleman in America shall be permitted to call her or his dwarf beagle or spaniel a pet, or to allow either to enter the hall or parlor; but shall keep the same closely confined within a kennel until such time as we may feel disposed to order them released for use in the field."

The American Pet Dog Club never had and has not now the remotest idea of interfering with any of the rights or prerogatives of the Beagle or Spaniel Club. On the contrary, the club and its individual members have repeatedly declared their intention to aid and abet not only the Beagle and Spaniel clubs, but all other clubs. On the other hand, it can hardly be expected that the American Pet Dog Club will consent to be dictated to by Messrs. Schellhass and Wilmerding as to what dogs it shall or shall not recognize as pets. It may not be amiss to inform those gentlemen that more beagles and spaniels are kept in this country (over which they claim dominion) as house or pet dogs than for use in the field. These two gentlemen are innocently sensitive. A MEMBER OF THE A. P. D. C.

"A BIT OF KENNEL HISTORY."

Editor Forest and Stream:

Your editorial, "A Bit of Kennel History," and my subsequent letter under the same heading are positively true in one and every particular. If the unscrupulous management of a kennel club or any other body of men engage a lawyer and remunerate him for falsifying facts, the perverted statements cannot be fairly charged as falsehoods to the lawyer's account; for a lawyer has the privilege of saying what he knows to be untrue when he is paid for it. I am waiting for a straightforward reply to my letter of two weeks ago, but fear I can hardly expect one until Mr. C. J. Peshall shall have severed all connection with the pecu-liar individuals in the Broadway office. Evil communications corrupt good manners, as is clearly shown when a man like Mr. Peshall bends to their influence. CHAS. H. MASON.

DOG TALK.

QUITE a little tempest in a teapot has been caused by General Manager Hain's recent order against the admission of persons with dogs in the cars of the New York elevated railways. The order is not a new one; the general regulations prohibited the admission of "persons with bulky parcels or accompanied by dogs," the object of the prohibition being of course to secure the convenience and comfort of the traveling public. The generally courteous disposition of the guards has led to considerable relaxation of the rules, both as regards bulky parcels and dogs, the chief offenders under the latter head being ladies with their pet dogs. Some of these pets display ill-temper, very much to the annoyance of the passengers. General Manager Hain's office has been inundated with complaints on the subject; but the crisis appears to have been brought on by a plethoric pug falling into convulsions in one of the cars, and displaying symptoms which were immediately interpreted by the timid passengers as evidence of hydrophobia. The admission of dogs into passenger cars, especially in the dog days, the public believes to be a source of real danger, and Colonel Hain's action in the matter has met with general approval. If the permission to transport dogs by the elevated railways were a convenience to any considerable number of the public, boxes could be readily provided, but comparatively speaking very few people care anything for the privilege, and the public has its temper so severely tried by the crowding to which passengers are unavoidably subject, that it would be impolitic to aggravate it by the popular fear of exposure to hydrophobia, however baseless that fear may be.

Mr. Will A. Bruette, of Jefferson, Wis., has recently imported the Sussex spaniel bitch Sussex Queen. She is by champion Baryta and out of Jill, she by champion Bachelor and out of Dove. She was whelped in June, 1887. Her breeder says of her: "She has much the same expression as her sire, champion Baryta, and is full as long and low, with good bone and quality, and beats him in coat, for she is the correct golden liver in color, and is brighter, Baryta being a shade too dark. Her coat is very flat and smooth, and she is a very fine worker and as busy as a bee." Mr. Bruette has presented her to Mr. F. H. F. Mercer, of Ottawa, Can. Mr. Bruette has also purchased another Sussex bitch, which before being shipped will be bred. If she proves to be in whelp she will also be sent to Mr. Mercer.

Mr. Thos. Johnson of Winnepeg, Manitoba, has recently imported from the kennel of Mr. A. P. Heywood-Lonsdale, Whitechurch, Eng., the English setter bitch Pitti Sing. She was welphed Jan. 26, 1884, and is by Baron Doveridge and out of Nora. Her litter brother Woodhull Bruce and sister Woodhull Beta are both winners at the English field trials, and Mr. Johnson expects that Pitti Sing will add to the reputation of her family at the coming trials of the Manitoba Field Trials Club. Accompanying Mr. Johnson's bitch was a half sister of hers, Jenny Deans, presented to Mr. S. Becket of Winnipeg. She is also entered for the Manitoba trials.

In response to an inquiry to the Long Island Railroad Company regarding the transportation of dogs over their road, we have received the following reply from Mr. H. M. Smith, Traffic Manager: "Long Island City, N. Y., Aug. 15. —*Editor Forest and Stream:* In reply to yours of Aug. 9 beg to say that we transport dogs, accompanying passengers, free, by the owner signing a release, which will be furnished by the baggage master at the starting point. When dogs are shipped by express they must be crated, and the rate for any distance under 50 miles is 75 cents, 50 miles or over $1.— H. M. SMITH."

Mr. E. B. Sears, of Melrose, Mass., received last week the St. Bernard bitch Lady Wellington, purchased by him in England last June from Mr. S. W. Smith, of Leeds. She was bred July 15 to Plinlimmon. When taken from the steamer, after an eleven days' journey, she weighed 140lbs. Lady Wellington has eleven champions to her credit, and her appearance on the bench in America will excite great interest.

Mr. J. L. Winchell, of Fair Haven, Vt., has recently imported from the kennels of Mr. Edwin Brough, Scarborough, Eng., the bloodhound bitch Ripple Buxom. She is three years old, and is by Triumph and out of Ripple Baroness. She is in whelp to Barnaby, winner of first at the New York show. With her came a pair of puppies that Mr. Winchell speaks very highly of.

The National Exposition at Kansas City, Mo., to be held in September and October, will give a dog show as one of the attractions. The date has not yet been decided, but will probably be announced soon. The address of the general manager is C. Ralph Evans, Room 16, New England Building, Kansas City, Mo.

A correspondent wishes to know if the last Cincinnati dog show was held subject to Rule 2, as a number of dogs shown there have not been registered in the "official." He also claims that mongrels are registered in the "official" as being purely bred.

W. C. Middleton Fitch-Kemp, master of the celebrated Foxbush Harriers in Kent, has been compelled to destroy the whole of that valuable pack in consequence of rabies making its appearance in the kennels at Hildenborough.

We are advised that the report which came to us of Mr. Hartley's death was premature, and that there is even a hope, in which we most sincerely join, that he may yet recover.

Mr. J. S. Hudson, of Covington, Ky., has purchased the English setter Ben Hill, the dog that was "pulled" in the heat with Lillian at Grand Junction in 1886.

In our issue of Aug. 2 we stated that Mr. H. T. Drake wished to find Dr. Chas. Neil. This was a typographical error; it should read Dr. Chas. Weil.

The London dog show managers are bidding for the support of the members of the N. D. C., by offering a valuable prize for the best looking exhibitor.

GREYHOUND IMPORTATION.—Great Bend, Kan., Aug. 12.—*Editor Forest and Sream:* There have just been received by the Waterloo Kennels, Great Bend, Kans., in association with Mr. D. N. Heizer and Mr. G. N. Moses, of Great Bend, three half sisters of the famous Miss Glendyne, the twice Waterloo winner, and a young dog, Trales, by Wandering Tom out of Little Emily III. Little Lady Glendyne and Milly Glendyne are by Loudon out of Lady Glendyne, and Lady Graham Glendyne, by Jester out of Lady Glendyne. Trales has the blood in the full pedigree of Bauker, Meg o' the Park, Martha, Benefactor, Villien, a litter brother of Alec Halliday, Rose Mary, Hanibal, Benylin and many other famous dogs. They are registered in Vol. VII., English Greyhound Stud Book. They are all wholly untried, having never seen a hare, although they are from fourteen to twenty months old. A large advance offer over the purchase price was made just before they were shipped. They are direct from the kennels of Dr. Walter Iliffe, of Kendal, Eng., a very noted breeder in the north of England. They were received in fine condition through the kind care given them by Mr. Arthur Massey, the slipper of the meeting of the American Coursing Club of 1887, who has just returned from a visit to England. This is the largest and most important importation ever made to this country, and will largely enhance the greyhound interest and add to the stud one of the most valuable dogs ever brought to this country. They will all be placed in training for the meeting of the American Coursing Club, Oct. 15.—GREAT BEND.

BUFFALO DOG SHOW.—Aug. 16.—*Editor Forest and Stream:* Please say that Rule 3, special regulations, should read July 1, 1888, for bitches with nursing litters of puppies. We have made two extra classes for Dandies, Class 123½, champion dogs and bitches, $10. Class 124½, bitches, first $10, second $5, third bronze medal. The superintendent, J. Otis Fellows, offers $10 for the best kennel of Dandies and Scotch terriers. The National Dog Club of America will give fifteen bronze medals as specials for the best Americanbred dog or bitch of the following breeds: Mastiffs, St. Bernards, deerhounds, English, Irish and Gordon setters, greyhounds, sporting spaniels, collies, pugs, bulldogs, terriers, (except fox), fox-terriers, pointers, toy dogs. Dr. J. Frank Perry gives as specials fifteen of his most recent works, "A Friend in Need," a household guide in health and disease. The same to be placed as the management see fit. This work is of 500 pages. Mr. W. Wade gives a special of $25 for best pointer. "A friend" will give $25 for the best collie. The Thayer Publishing Co. give twelve of "Ashmont's" well known books "Diseases of Dogs."—J. OTIS FELLOWS, Supt.

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope of large letter size. Sets of 200 of any one form, bound for retaining duplicates, are sent for 30 cents.

NAMES CLAIMED.

☞ **Notes must be sent on the Prepared Blanks.**

Queechy. By Warner & Hamilton, Canaan Four Corners, N.Y., for sable, white marks, collie dog, whelped July 13, 1888, by Clipper (A.K.R. 2529) out of Nellie McGregor.

Sussex Queen. By F. H. F. Mercer, Ottawa, Can., for golden liver Sussex spaniel bitch, whelped June, 1887, by champion Baryta (Bounce—Duchess VI.) out of Jill (champion Bachelor—Dove).

BRED.

☞ **Notes must be sent on the Prepared Blanks.**

Dot—Mayo. P. P. Lewis's (Tarrytown, N. Y.) beagle bitch Dot (Ringwood—Maida) to Geo. Laick's Mayo (Rustler—champion Bonnie), Aug. 8.

Sandycroft Bessie—Moses. Captain Talcott's (Morgan Park, Ill.) mastiff bitch Sandycroft Bessie (Hero III.—Nell) to C. C. Cook's Moses (Ilford Caution—Bess), July 15.

Jennie Sparkle—Kiddlewink. F. C. Smith's (Groton, N. Y.) cocker spaniel bitch Jennie Sparkle (Earl—Reta) to E. Powers's Kiddlewink (A.K.R. 997), Aug. 3.

Scarlet Princess—Royal Dick. Frank S. Clark's (South Paris, Me.) bull-terrier bitch Scarlet Princess (Young Royal—Scarlet II.) to his Royal Dick (Young Royal Prince—Nellie Curtin), Aug. 10.

Ida—Royal Dick. Chester Horn's (Norway, Me.) bull-terrier bitch Ida to F. S. Clark's Royal Dick (Young Royal Prince—Nellie Curtin), Aug. 2.

Nellie Scott—Dennis. E. A. Buck's (Chattanooga, Tenn.) Scotch terrier bitch Nellie Scott (Dennis—Jessie) to his Dennis (Tam Glen—Queen Lilly), Aug. 10.

WHELPS.

☞ **Notes must be sent on the Prepared Blanks.**

Hellen. E. A. Buck's (Chattanooga, Tenn.) Great Dane bitch Hellen (A.K.R. 4865), Aug. 7, twelve (six dogs), by A. Trimple's Brock; nine since dead.

Timferna. E. M. Crouch's (Thomaston, Conn.) pointer bitch Timferna (A.K.R. 5754), Aug. 15, six (two dogs), by his Brock (A. K.R. 5751).

Guess. W. L. Bidwell's (Monterey, Mass.) pointer bitch Guess (A.K.R. 6317), July 26, six (four dogs), by his Doctor (A.K.R. 6316).

Lassie. E. A. Buck's (Chattanoega, Tenn.) Scotch terrier bitch Lassie (A.K.R. 5708), Aug. 2, three (one dog), by his Dennis (Tam Glen—Queen Lilly).

Cress. E. A. Buck's (Chattanooga, Tenn.) Scotch terrier bitch Cress, Aug. 5, three (two dogs), by his Dennis (Tam Glen—Queen Lilly).

SALES.

☞ **Notes must be sent on the Prepared Blanks.**

Thorn II. Black, white and tan beagle bitch, age not given, by Sport out of Thorn, by Geo. Laick, Tarrytown, N. Y., to Clarence Travis, Ardsly, N. Y.

Burniston. Red and tan bloodhound dog, whelped Dec. 12, 1886, by Maltravers out of Duchess of Ripple, by J. L. Winchell, Fair Haven, Vt., to A. F. Nash, Detroit, Mich.

Beech Grove Jura. Light fawn mastiff bitch, whelped Aug. 30, 1887, by Ashmont Victor out of Beech Grove Duchess, by George Jackson, Beech Grove, Ind., to J. G. Short, Woodstock, Ont.

Little Tycoon. Fawn pug dog, whelped March 18, 1888, pedigree not given, by Calhoun Kennels, Springfield, Mass., to Miss Bessie Collins, same place.

Harvard. Fawn pug dog, whelped March 18, 1888, pedigree not given, by Calhoun Kennels, Springfield, Mass., to A. L. Fennesey, same place.

Bucho. Red Irish setter dog, whelped July 23, 1888, by Alice (A K.R. 3067) out of Mogens (A.K.R. 6079), by Jas. A. Farrell, Portland, Me., to G. W. Peabody, Connecticut.

Jack. Black and tan terrier dog, whelped September, 1886, pedigree not given, by Calhoun Kennels, Springfield, Mass., to Wm. Hoppler, same place.

Royal George. Orange brindle bull-terrier dog, whelped May, 1887, by Jack out of Conkey's Belle, by Calhoun Kennels, Springfield, Mass., to T. F. Sanborn, same place.

Nip. White, with tan on head, fox-terrier bitch, whelped Feb. 12, 1888, by Grip out of Dot, by S. Tilghman, Arvern-by-the-Sea, L. I., to Arthur White, Tarrytown, N. Y.

Maizeland Phyllis. Black, white and tan fox-terrier bitch, whelped May 22, 1888, by Blemton Sentinel out of Maizeland Lively, by Lawrence Timpson, Red Hook, N. Y., to J. G. Tomson, Philadelphia, Pa.

Maizeland Snowball. White fox-terrier bitch, whelped May 22, 1888, by Blemton Sentinel out of Maizeland Lively, by Lawrence Timpson, Red Hook, N. Y., to John E. Thayer, Lancaster, Mass.

PRESENTATIONS.

Sussex Queen. Golden liver Sussex spaniel bitch, whelped June, 1887, by champion Baryta out of Jill, by Will A. Bruette, Jefferson, Wis., to F. H. F. Mercer, Ottawa, Ont.

KENNEL MANAGEMENT.

☞ **No Notice Taken of Anonymous Correspondents.**

TUPAC, New Haven, Conn.—My setter's coat is staring. Gave him sulphur until he stank like one of Rabelais's devils. Result, no good. His appetite is good, and he is active enough; six years old; skin sound. Ans. Give 5 drops of Fowler's solution of arsenic in the food night and morning. Do not expect immediate improvement. Keep this treatment up for three weeks.

J. M. N., Albany, N. Y.—St. Bernard bitch is troubled with some kind of skin disease. At first small lumps of matted hair appear, which when examined easily come off, leaving perfectly bald spots which soon become inflamed. Difficult to keep her from biting them and making matters worse. Ans Get and use twice daily after washing the parts the following ointment:

℞ Ung. zinc oxide ..... ℥ iss.
Ung. diachylon ..... ℥ ss.

Mix. Give 5 drops Fowler's solution of arsenic morning and evening in food.

Rifle and Trap Shooting.

SCORING DEVICE.—Springfield, Mass.—Assistant Superintendent Peters of the electric-light company has arranged a system of electric clocks or indicators which will be used for scoring purposes by the Schuetzenverein September 3 at their annual shooting festival. Hitherto, whenever a shot has been fired, the man stationed at the targets has indicated the score by rising in the air a large card with the figures printed on it, but under the new arrangement, by which one clock is placed at the target and another at the grand stand, he simply turns the hand on his own clock to the requisite number and immediately by electric connections the same figure is indicated on the other clock, which is at once noted by the secretary. According to the German system of ring target scoring the values of the scores are indicated by figures ranging from 1 to 25, but these clocks will be numbered only to 23, so that whenever 24 is made, a white flag will be raised, and an American flag will do like service for score 25.

THE RIFLE OF OUR DADDIES.—*Editor Forest and Stream:* I recently purchased at auction a peculiar rifle patented in 1851 by F. D. Porter, of this city. It is very heavy, the barrel being thick, and contains nine chambers for ammunition in a sort of revolving wheel, and as this interferes the sight is taken along left side of barrel. There is a sort of loader affixed to top of barrel, and the trigger strikes at the right side of lock. Can you please give me any particulars about this gun, whether used for sporting or warfare, whether a success at the time it was first made, and original cost. I can scarcely decide whether it is a percussion gun or not.—W. F. (N.Y. City). [The weapon is probably one of a large number which were brought out about this time. Most of them were failures, but all were carefully studied by the designers of the successful breech loaders, which came in large numbers toward the close of the war.]

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

NEW YORK SHOOTING GROUNDS.

THE fact has frequently been commented on that the great city of New York with its thousands of shooters possesses no convenient public shooting ground. By convenient is meant a resort reached with small expenditure of precious time, where shooting facilities are ever in readiness, and where expenses are light. To provide such a resort an association has been formed, which is in plan and purpose unique. The New York Suburban Shooting Grounds Association, a corporation existing under the laws of New Jersey, was organized for the purpose of equipping and maintaining a public ground, club house, &c., for the benefit and enjoyment of all the shooters of New York city and vicinity, where any one may shoot a score for practice, test guns at targets, or shoot friendly or professional matches at almost any time. The character of the undertaking is set forth in the published handbook of the association as follows:

"This association is not a club in the ordinary sense of the word, but a business enterprise which the originators believe is certain of success from the start, as it is a well known fact that there are thousands of gun owners in this city alone who have no convenient place to shoot, and who for many reasons do not care to join an ordinary gun club, where, in most cases, a few ruling spirits monopolize all the prizes, and make their expenses in shooting sweepstakes at the cost of the majority who are less proficient; it is believed that these grounds offer special inducements to the beginner, and to those who wish to improve themselves in marksmanship. It is the object of this association to elevate the standard of this sport, and make trap-shooting one of the popular amusements of the day.

"The convenient location of the grounds at Claremont, N. J., on the Central R. R. of N. J., where one steps from the depot right into the inclosure. Time from foot of Liberty street, New York, eighteen minutes. Round trip, fare fourteen cents. It is convenient for the business man or any one who is hurried for time, and it is believed that a large number of spectators may be expected at all tournaments and advertised matches shot upon these grounds.

"The equipment of these grounds will be complete in every particular, all the latest and best improvements will be provided. Trappers and pullers will be in readiness on all fair days from 9 A. M. till sundown. The grounds and buildings will be in charge of a competent superintendent, and good order will be maintained.

"A comfortable club house and lunch counters will be provided. A grand stand seating at least 375 persons, besides seats in

the inclosure for the accommodation of those who do not care to pay for seats in the grand stand.

"Live bird shooting may be done at stated times from three or five traps. It is intended frequently to have noted experts present, and it is believed from the convenience of these grounds, and their being so easily reached from the city, that in a very short time nearly all of the great championship matches, for big purses, etc., will be shot here. The attendance will undoubtedly be large and gate receipts greater than could be expected elsewhere.

"The stock of this association must soon be very valuable, and pay a good dividend. It is to the advantage of all shooters to encourage this enterprise, that the sport of trap-shooting may be developed to the greatest extent, and enjoyed at reasonable cost. It is to the advantage of manufacturers and dealers in guns, ammunition, etc., perhaps more than any other class, in a money sense, and by their encouragement of such an enterprise they will greatly increase their sales and profits. It is greatly to the advantage of the professional shooter because nowhere else can he have such a dense population to draw from in gate money."

The management of the Association is vested in a board of nine directors, who in turn intrust such matters as they choose to an executive committee of three members. The board of directors will make provisions for holding special public exhibitions or tournaments, from time to time, and for their regulation and management, and they may hire out the grounds to clubs, parties or associations, for the purpose of holding matches, exhibitions, tournaments, etc. They will employ a superintendent, whose duty it shall be to have charge of the grounds, buildings and equipment, to keep the same in order, to keep adequate supplies of traps, targets, ammunition and other requisite appliances, always on hand, to enforce such rules, and to collect and pay over to the treasurer such fines, penalties, etc., as may be established.

Provision is made for two classes of members, stockholders and subscribing members. Stockholders in addition to this are entitled to all membership privileges, admission to the grounds at all times, and targets, ammunition and the services of attendants at the lowest practicable rates, to be fixed by the board of directors; they are entitled to a credit in the purchase of ammunition, targets, etc., to an amount not exceeding $25; and if holding more than one share of stock, they may designate other persons, one for each extra share, who shall be entitled to stockholders' shooting privileges.

Subscribing members, upon payment of an annual fee of $10, are entitled to stockholders' shooting privileges, except that of credit.

All persons using the grounds are subject to the rules of the Association governing the conduct of members and patrons. These rules are designed to insure personal safety and to promote the pleasure of shooters. Thus it is forbidden to fire a gun other than at the score, unless by permission of superintendent; to have in possession a loaded gun except at the score; to interfere with the shooter with intent to "rattle" him; to bet within prescribed portions of the grounds; to use profane or indecent language, etc. Infractions of the rules are punishable by fines. Upon hiring the grounds, or part of them, to any club or association who may wish to shoot under rules of their own, the superintendent may, with the consent of the executive committee, suspend for the time such rules as may conflict with the pleasure of the club occupying the grounds. Regular shoots will be held weekly and tournaments monthly.

The capital stock is $5,000, divided into fifty shares of $100 each.

At the recent meeting held in Jersey City the following officers were elected: Chas. Richards, President; Aug. Schmitt, Vice-President; Chas. M. Hathaway, Treasurer; O. E. Morton, Secretary; Board of Directors—Chas. Richards, Aug. Schmitt, Chas. M. Hathaway, O. E. Morton, Chas. Tatham, Hugh O'Neill, Chas. B. Reynolds, J. P. Dannefelser, David Ellis.

MARKSMAN JOURNU.

THE shooting of the Frenchman Journu has set Englishmen talking at a great rate. He has had things pretty much his own way, and in glory and cash has reaped a big double crop. He went over to London about the middle of June to participate in the events of what English shooters call international week. Since then he has remained in England, shooting every opportunity that offered and making a remarkable record. His success has been the more notable from the fact that he not only defeated the best shots of Great Britain, but he had to meet the best shots of other Continental countries than his own, among these being men from Belgium, Hungary and Spain, besides M. Paul Gervais, a well-known crack shot from Paris. The prizes in the events were worthy of the host, the amount within the possible reach of one gun in any day's event falling but little short of £400 during the international week. In the handicaps the men were placed according to their records. M. Journu's distance was 31yds., and no other man, except Mr. E. B. Cunliffe, was placed so far from the traps, except in the contest for the Gun Club International Cup, when 8 out of 63 subscribers were so placed.

On the first day, a cold, windy one, when the birds—English blue rocks—flew at the best, the shooters gathered at Hurlingham, where M. Journu won the £3 sweepstakes, or £100. The next day, Tuesday, at the Gun Club inclosure, he was again a winner. It was in the £3 sweepstakes, 28yds. rise, for a £25 cup. He killed 12 birds, but Mr. Merwyn Watts having killed as many, the two divided first and second money, amounting to £130, besides the value of the cup.

Wednesday M. Journu dropped out early in every contest, but on Thursday he retrieved himself in the international match for £100 a side, with 25 birds to each man at 30yds. The team of visitors included M. Journu, M. Paul Gervais, M. Aubarre (a Frenchman representing Spain), and Baron Dorlodot (Belgium). The home team included Mr. Merwyn Watts, Mr. Greville Ryan, Mr. E. B. Cunliffe and Mr. Bliss. M. Journu killed 22 out of the 25 birds, while his associates killed 19, 15 and 15, respectively, in all 72. The home team killed 19, 19, 17 and 16; in all 71.

On Friday, in a handicap sweepstakes, M. Journu killed 14 birds before missing, but Mr. Fortesque killed 15 and M. Ophoven, of Belgium, 16, and these two got all the money.

Saturday the events included the Members' Challenge Cup valued at 100 guineas, with £300 for first money; the Gun Club's International Cup, valued at £200, the club's gold medal and £40 for first money; a sweepstakes with a £25 cup and £70 first money, besides two lesser events. M. Journu won the Members' Challenge Cup contest and got third money in the contest for the Gun Club International Contest.

A summary of winnings for the week shows the leaders to have carried off as follows: M. Journu, £532; Mr. E. B. Cunliffe, £340; M. Ophoven, £200; Mr. Merwyn Watts, £277; Capt. Cecil Holder, £270; M. Abaurre, £235.

The success of M. Journu led to a challenge from Capt. Brewer, the American pigeon shot, now in England. They met in the Gun Club inclosure on Wednesday, June 27, and shot at 100 birds each for £100 a side. At the twenty-fifth round, when Capt. Brewer led by three birds, bets were made at 5 to 1 on the American, but M. Journu won by 81 birds to Capt. Brewer's 76.

During the last week of June, on Monday, M. Journu won second money in £3 sweepstakes, 30yds. rise, 25 subscribers, at Hurlingham, killing 11 birds to the winner's 12, and on Tuesday he divided £36 at the Gun Club. On Friday he divided £32 at Hurlingham. On Saturday he had to shoot again for the members' challenge cup at the Gun Club, which he held by virtue of his victory a week before. There was a first prize of £20 only, but four men entering. M. Journu again won. One more victory remained to be won before he would own the cup. Merwyn Watts, who is said to be the best man at the Gun Club, was put forward as the champion of Great Britain, and a match was arranged for £100 a side with 20 birds at 31yds., 20 birds at 33yds., and 20 birds at 35. This was a very cleverly arranged match for the Englishman, because M. Journu had not shown well at distances above 30yds. Mr. Watts won.

Saturday following the Frenchman made his last fight for the Members' Challenge Cup at the Gun Club. It was a £10 sweepstake this time, and there were eleven subscribers. M. Journu won, and thus became permanent owner of the cup, besides pocketing £110. As it requires three straight victories to win this cup the triumph of M. Journu was notable. No one has succeeded in winning this cup since 1885. On the same day M. Journu shared £46 with Mr. Gerard in a £2 handicap sweepstakes, each gunner killing 11 birds.

After his match with Capt. Brewer he was asked if he intended to cross the Atlantic at any time to try shots with other famous American marksmen. He replied emphatically that he did not; he did not see either money or glory in such a trip,

CENTRAL NEW YORK.—In a match shot at Syracuse, N. Y., between Oakly Thorne and Henry Whitney for $200 a side, at 100 king birds, Thorne broke 85, and Whitney 96.—HAMMERLESS.

WORCESTER, Mass., Aug. 17.—At the regular meet this week at Coal Mine Brook Range, the classification series of contests, under the auspices of the Sportsmen's Club, were continued. Clay-pigeons and blackbirds were used. In the classification score there was a possible 30 and in the prize a possible 10. The result in detail follows:

Class A.	Classification.	Prize.
E T Smith	523455—24	1111011111—9

BROOKLYN, N. Y., Aug. 11.—The Davison Gun Club held their second semi-monthly shoot at the Fort Hamilton Avenue Road House, at 3 o'clock P. M. The scores were fair for beginners; 20 blue rocks, 18yds. for 10g. and 16yds. for 12g.:

Capt J O Mattair (16)	1100100110111111011—14
Aug Schmitt (18)	1111111111111111111—20
J Scharff (16)	0011101011010111001—11
Howard Houseman (16)	1111111001111111111—19
David Ellis (18)	1011111111100011101—16
P J Stein (18)	0001101011001100001— 9
B Nolan (16)	0011010110100011111—11
Gus Ziescherug (16)	1000001000110110000— 7
Hugo Hipner (18)	0000000101060101910— 6
Match at 25yds.:	
H Houseman	0001010100010001— 5
Aug Schmitt	0110101101110101111—13
David Ellis	1011010101111111011—15

The occasion was very enjoyable, and the boys begin to feel that they might take a hand among the amateurs. Betting of any description is prohibited in this club.—DAVID ELLIS, Sec'y.

Canoeing.

Address all communications to the Forest and Stream Pub. Co.

Canvas Canoes and how to Build Them. By Parker B. Field. Price 50 cents. Canoe and Boat Building. By W. P. Stephens. Price $1.50. The Canoe Aurora. By C. A. Neide. Price $1. Canoe Handling. By C. B. Vaux. Price $1. Canoe and Camera. By T. S. Steele. Price 1.50. Four Months in a Sneakbox. By N. H. Bishop. Price $1.50. Canoe and Camp Cookery. By "Seneca." Price $1.

Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signal, etc., of their clubs, and also notices in advance of meetings and races, and report of the same. Canoeists and all interested in canoeing are requested to forward to FOREST AND STREAM their addresses, with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

AMERICAN CANOE ASSOCIATION.

OFFICERS, 1887-88.

Commodore: R. W. GIBSON, } Albany, N. Y.
Secretary-Treasurer: F. L. MIX, }

Vice-Com.	Rear-Com.	Purser.
Central Div. R. W. Bailey	W. R. Huntington	J. K. Bakewell, 110 Diamond St., Pittsburgh.
Atlantic Div. W. P. Stephens	L. B. Palmer	F. L. Dunnell, 186 Jeroleman St., Brooklyn.
Eastern Div. H. E. Rice, M. D.	Maxton Holmes	H. D. Marsh, Springfield, Mass.
N'thern Div. Robert Tyson	S. S. Robinson	Colin Fraser, Toronto.

Applications for membership must be made to division pursers, accompanied by the recommendation of an active member and the sum of $2.00 for entrance fee and dues for current year ($1.00). Every member attending the general A. C. A. camp shall pay $1.00 for camp expenses. Application sent to the Sec'y-Treas. will be forwarded by him to the proper Division.

Persons residing in the Atlantic Division wishing to become members of the A. C. A., will be furnished with printed forms of application by addressing the Purser.

WESTERN CANOE ASSOCIATION.

Commodore—J. R. Bartlett, Fremont, Ohio.
Vice-Commodore—D. H. Crane, Chicago, Ill.
Rear-Commodore—C. J. Stedman, Cincinnati, Ohio.
Secretary-Treasurer—O. H. Root, Cleveland, Ohio.
Executive Committee—G. J. Bousfield, Bay City, Mich.; T. P. Gaddis, Dayton, O.; T. J. Kirkpatrick, Springfield, O.

6. Springfield, Cup, Calla Shasta.

THE A. C. A. MEET, LAKE GEORGE.

THE American Canoe Association has changed and grown in many ways since its birth at Lake George in 1880, but the beautiful lake has not altered. Men may come and go (though death as yet has made few inroads on the A. C. A., time and circumstances have not been so kind, and old faces are missed in greater numbers each year), but the old spot is unchanged; the same grand and majestic hills look down on its inconstant and ever-changing bosom, just as they have since it has been known to man. The increasing popularity of the lake is shown in the added clearings and the new and handsome villas along its shores; but these are trivial details that hardly attract the eye, and the beautiful view is not marred by these advances of civilization. The long ride from Glens Falls in the stage coaches, by which canoeists first reached the lake, is now a thing of the past, and though the commonplace parlor car takes away much of the charm, it is more than compensated by the increased facilities for transporting canoes and camp duffle, formerly carted over the hills.

In the great feature of accessibility, so important in these busy times when vacations are few and short, Lake George is far ahead of last year's camp on Lake Champlain. From New York the canoeist can take the night boat at 6 P.M. or a sleeping car at midnight, by 9.30 A.M. he is at the head of the lake, Caldwell, where the steamer Horicon is waiting beside the track. Canoes and trunks are soon transferred and in another half hour are landed on Long Island. The expense, too, is very moderate, the round fare by boat is $7.70 from New York, to which must be added meals and stateroom both ways, while on the steamer but 25 cents is charged. Canoes and baggage are in most cases carried free. The charges from Boston and Montreal are about the same as from New York.

The camp itself is located on the south end of Long Island five miles from Caldwell and about one mile from each shore. Long Island is about 1¼ miles long and from ⅛ to ¼ mile wide, and is owned by Mr. D. S. Sanford, who has not only allowed the A.C.A. to use it but has done much this year to improve it as a camping ground. Paths have been laid out and graded around the waterfront, and much of the underbrush has been cleared away. While general location is excellent and the surrounding scenery very fine, the camp site does not compare with Grindstone Island or Bow-Arrow Point. The ground is high enough to be dry, but is exceeding rocky, so that it is difficult to travel through camp after dark. The main camp is completely surrounded by thick belts of evergreens, so that the shores and water are completely hidden from the camp, and can only be seen piecemeal through small openings on the water's edge. In order to enjoy the scenery for which the lake is famous, it is necessary to take a canoe and paddle out for a distance. The dense growth of evergreens also serves to keep off the breeze and make the camp very warm.

The main camp is scattered over the entire south end of the island, the Commodore's tent and headquarters being on the east side, while on the small bay which separates Long and South Islands are camped the Vesper B. C. of Lowell, the Deowainsta of Rome, N. Y., the Springfield and others. The many tents are scattered irregularly and none of the clubs have the same compact and well arranged encampments that have sometimes been so prominent.

Immediately to the north a thick wood of oak and hickory begins, in which is the mess-tent and kitchens. The mess is conducted by Mr. Geo. W. Ferris of the Horicon Lodge Hotel, immediately opposite the camp. The charge is $1 per day and the fare is very good. Further along is Squaw Point, in the heart of the wood. The center of the island is occupied by Mr. Sandford's handsome residence and grounds, in front of which the dock is located, the steamers calling here twice each way every day, while a small steamer makes the round of the neighboring landings.

Less than half a mile to the west is the group known as the Canoe Islands—Lorna, Ellard Isle and Betsy's Island, where the meets of 1881 and '82 were held. The log cabin built in 1881 is still in good condition, and bears the names of many canoeists who have called when cruising on the lake.

There is no beach to Long Island; the water runs directly up to the shore, the bank being 2 to 6ft. high. Instead of the ways used at Grindstone, small piers are built along the bank, two or three stout stakes are driven about 18ft. out, a strip is nailed across the top; on this rests four cross pieces, one end of each on the bank, and on them are laid hemlock boards, about 4in. above the water. These piers are quickly and cheaply built, and canoes can be hauled out very conveniently. There are few small tents this year; only one real canoe tent is to be seen, but most of the tents are from 8 to 10ft. square, with good board floors, a bright rug spread within, and more or less comfortable furniture, a cot, chairs, table, etc. Nearly all the men now bring the regular outfit for a permanent camp of ten or twelve days, and few, even the cruisers, are content with such a compact and simple outfit as could be carried on a cruise. This year the energetic head of the Camp Site Commitee, Mr. Foster, has taken entire charge of the piers and tents, with several carpenters and laborers in his employ. He has provided lumber and built floors and piers for all who wish them, at cost price, the Association making no profit. This plan has proved a great convenience to the canoeists.

The camp is marked off by alleged streets, at least by gorgeous signboards supposed to indicate various thoroughfares. That part of the camp honored by the Deowainsta C. C., of Rome, N. Y., glories in an "Appian Way," a "Tarpican Rock," and other classic features, while one little tent perched high on a knoll among the trees is pointed out by a signboard "Peanut Hump; Take the Elevator." Mr. Rushton's work tent is a great convenience, his obliging assistant is always ready and willing to help, and canoes are carried up there every day for repairs or alterations. One particular rocky and uneven patch of ground is used as a ball field for various scratch nines. Few of the clubs are uniformed as was once done, the white flannel shirt and gay tennis blazer and cap are seen everywhere. The Knickerbocker C. C. has a new and very neat yachting cap with the seahorse in gold braid on the front, but most of the clubs make no attempt at uniform.

The camp boasts little that is new in the way of tents and cruising gear. A long experience has shown what is best for the peculiar conditions of the regular A. C. A. camp—a dry and roomy tent, some simple furniture and a trunkful of the ordinary tennis and boating flannels. Nearly all patronize the mess tent, one or two cook for themselves, but there are no large messes, as the Deseronto in '84, the Brooklyn men in '85 and '86, and that presided over by the renowned Billings at Stony Lake in '83. There are in camp some who have cruised to the meet, notably two members of the Keystone C. C., of Philadelphia, and others who will cruise home or about the lake when the meet is over, and all of these have their cruising outfits, but while in camp they live in the mess tent. Those who care to cook find all the supplies they need at the camp store near the wharf.

The first canoeist on the island was Mr. Foster, who came on Aug. 1, and at once set to work on the camp ground, having all in readiness by the date of the opening, Aug. 10. Commodore Gibson and Secretary Mix arrived on that day, and camp was formally opened. Fourteen registered on the same day, including Mr. Walter Stewart, of the Royal C. C., and on the 11th there were forty-two in camp. A large number of the familiar faces are missed, but new men have come in their places; the large clubs have fewer representatives, as a rule, but many more clubs and new localities are represented. No officers of the Northern Division are present thus far, but Vice-Commodores Bailey, Rice and Stephens, Rear-Commodores Huntington and Palmer and Pursers Bakewell, Marsh and Dunnell are in camp.

The weather was clear when camp opened, but Saturday, Sunday and Monday were very rainy, all hands staying under canvas. Service was held on Sunday, as usual. On Tuesday the weather cleared, there were a number of new arrivals, and quite a fleet of canoes was out to try the winds of Lake George. The first campfire was held on Tuesday night. Wednesday passed quietly in the regular camp routine—visiting, tinkering on canoes and sails, sailing and pretending to work. In the evening a hop was held at the Horican Lodge, at which many from camp were present.

Thursday was also fair and warm, and the camp was filled with visitors, but Friday, the day set for the cruise, started in with a thunderstorm about 3 A. M., which ended in a steady pour before breakfast. The long talked-of cruise had been planned and the programme was posted on the bulletin board, but only a few subscribed as ready to start, and most of them declined when the rain began in earnest. Only one member, Mr. French, of Buffalo, entered a camp kit for competition, and the cruise was abandoned, the prize being awarded to him. Thus far the cruising men have not come forward to avail themselves of such opportunities as have been offered. In the afternoon the weather cleared and the night was bright and moonlit. Mr. Vaux, of the regatta committee, arrived, and set to work at once to locate the courses on the west side of the island. At night a large camp-fire was held near the "Tarpican Rock." On Saturday a large number of canoeists came in. There are now in camp Messrs. Gibson, E. M. Barney, Vaux, Rathbun, Mix, Stephens, Stanton, Shedd, Butler, Foster, Brokaw, Whitlock, Palmer, Pierson, Bailey, Warder, Rice, only four of those present, Messrs. Stephens, Rushton, Gardner and Palmer, having been at the first meet in 1880. The builders are well represented, Rushton, Ruggles, Bowditch and Spencer, of Lowell, Mass.

It is too soon yet to speak fully of the canoes and rigs, out a very large proportion are of one type, boats about 16×30, with much deadrise, deeper hulls than Pecowsic, of very light build, few or no bulkheads, small wells, boards in the center of the boat and of great size, some projecting far above the deck. The rigs are mostly of one type, Pecowsic run wild; standing sails of large areas, the mizen very large in proportion and fitted with battens in such a way that when not in use the sail must be kept flat and can only be folded by removing the battens. One luckless wretch was caught on Thursday with wet sails; the battens had swelled so they would not draw out, there was no clear space to lay them out flat, when stepped in the canoe they flapped furiously in the wind and threatened to carry off the whole boat, and when stood against the dripping trees the limbs pushed them into bags in spots. The beauty of Pecowsic's sails was in their small size and the ease with which they could be handled, and as used by Mr. Barney, and on his boat they answered admirably. In copying

them, canoeists have struck only the superficial parts of the rig, and lost sight of the underlying principles. With the general shape of Pecowsic's sails, they have enlarged the masts to 15ft. and over and the booms to 10 and 11ft., while the battens are so placed that the sail cannot fold up. When once afloat, with a steady breeze, and the crew hiking out to windward on his sliding seat, the rig is very fast and effective; not only is reefing impossible, however, but the canoe will not stand up under her sails without the crew on board, so the rig must be unshipped as soon as the boat stops sailing. The canoeist must get out in some way and seize his mainsail, removing it at once and laying it where he can, then looking over the mizen. As it requires a space of at least 10×14ft. for such a sail to lie flat in, the handiness and convenience of such a rig may be readily appreciated. In spite of the disadvantages urged against Mr. Barney's sails, they were certainly neat, simple, effective and very easily stowed and transported; but little can be said in favor of the present monstrosities save that they are a fitting part of a racing machine. There are several good lowering rigs present, but it is too soon yet to say what they will do in the races. Thus far the winds have been very unsatisfactory for a trial.

One of the most interesting boats present is the Charm, designed and sailed by Mr. Walter Stewart, R. C. C., who raced the Pearl in 1886 at Grindstone Island. As is generally known, Pearl was a heavy ballast canoe, very deep and of full model, sailed with the crew below. After trial with the American canoes, Mr. Stewart discarded nearly all of his ballast and tried the deck position with such good results that he adhered to it on his return. In the winter of 1886-7 he designed and had built a new canoe, the Charm, an entire departure from the British canoe, and at the same time unlike any American boats in detail. She is 15ft. 2½in. over all, 30¼in. beam, 5in. draft, 6in. least freeboard, 5in. sheer at bow and 3in. aft. She has the theoretic wave form, the bow being 60 per cent. and the run 40 per cent. of the total length. The midship section shows a V form with considerable deadrise, with a very hard bilge at the waterline, the topsides tumbling in a little. On deck she is very fine forward, with little flare, and very full aft, the appearance being far from pleasing. The centerboard is well forward, weighs 30lbs., and has an area 2.6sq. ft. The drop rudder is long and powerful, with a deck tiller, no footgear being fitted. The first rig tried last year was the Pecowsic, with three sails, but it did not answer in the uneven and squally winds of the Thames and Hendon Lake, so it was replaced by two balance lugs, one of 83ft. and one of 15. The sail area is limited in the R. C. C. to 100ft., not more than 75 per cent. of the total in the mainsail, and with this rig Charm is underspanred for American racing, more especially as she has no spinaker in her outfit here. The hull is planked with 3/16in. Spanish cedar, ribband carvel, with the plank edges smooth lapped as well, a very neat piece of boat building. The bottom is much rockered, being cut up almost to the waterline at each end, from a draft of 5in. amidship. The forefoot is nearly square, with a plum stem and slight rake to sternpost. The keel was shod with ¼in. iron, a weight of 12lbs. or more, but this has been removed since she reached camp. The hull and rig look well afloat, but the boat is not as fast as her rivals, and stands good from all appearances for nothing better than a place about the middle of the fleet in the Trophy race. She has been successful at home, winning the challenge cup of the R. C. C., both this year and last, but from the partial trials here she cannot hold any of the faster boats. Thus far there has not been wind enough at any time to sail over half the course, and it is very doubtful whether the races will be more than flukes.

Pecowsic is not here this season, and Mr. Barney, Sr., has a new canoe, one of the handsomest present. The Ruggles, as she is named in honor of her builder, is 16×30in., built of white California cedar, and is one of the lightest hulls yet built, the weight without fittings being 53lbs. The model is the joint production of the owner and builder, Mr. Barney specifying the leading features, while Mr. Ruggles arranged the details. The midship section savors of Pecowsic, though the boat is larger and abler, but is placed nearly 18in. forward of midships, the idea being to balance the crew properly when seated in the center of the boat, keeping all weights amidships. The lines are very fair and beautiful, but the boat would be faster if the ends were reversed. The sheer is peculiar and not handsome, there is a good deal of crook forward and aft, the deck is nearly straight. The board is of thin brass, the ordinary plate like Pecowsic, near the center of the boat. The fittings are very simple and light, the mizen sheet block being specially neat. It is fitted so as to swing to either side, always making a fair lead for the sheet. The two sails are of the Pecowsic pattern, the third or middle mast tube of the Pecowsic being omitted. Mr. George Barney is here without a canoe, and will not enter in the races.

Another fine specimen of canoe building is the Narka, owned by Vice-Com. Rice, of Springfield, and also built by Mr. Ruggles. She is 16×28, with very fair and easy lines, a beautiful craft both in model and workmanship. She has two mast tubes, a plate board directly in the well, with just room abaft it to sit inside for paddling, and no bulkheads. She will enter in the paddling and combined races, and is certain to make a good showing.

Near the Springfield dock are some very handsome canoes owned by Mr. Butler and several other canoeists from Lowell, Mass. No one has worked harder or made more improvements in his canoes within the last three years than Mr. Butler, and he deserves thoroughly to succeed. The present boats were built by Stevens, of Lowell, under Mr. Butler's direction. They are 16×30in., deep boats with full, round lines, the floor being flat amidships, with good bearings and an easy bilge. When in racing trim, no ballast being carried, they draw but 3 or 3½in., so that the full waterlines are admissible. The whole underbody is somewhat saucer shaped, wide rather than deep, giving some fulcrum for the sails and crew to balance on. The freeboard when in this racing trim is excessive, far more than would seem advisable for windward work, but it has an advantage in that the canoe can be heeled until the sails lie flat on the water, and yet no water will enter the well. They would be handsomer and faster to windward with 2in. less freeboard; but now they are practically non-capsizable. The general form of the bottom is not unlike that of the best Canadian canoes, and is in marked contrast to most of the racers at the meet, with great dead rise. In size and model they would make excellent cruisers, except for the fact that if loaded to a draft of 5in. they would be slow, owing to the fullness of the ends. The wells are of medium size, but the boards fill the greater part of the cockpit. Mr. Butler's board is 3ft. 6in. long. The deck fittings on his boat, the Fly, are all of aluminum, specially designed by him. The best wrinkle is a leader for the mizen sheet. With the old mizen of 15 to 25ft. there was little need of great delicacy of trim, and an eye or block on the sternpost served very well. Now, however, that the mizen has doubled in size and is nearly as large as the mainsail in some cases, it must be trimmed and tended as carefully as the mainsail. A single lead amidship will not do this, as hauling the sail flat must at the same time bring the boom squarely amidships. To avoid this, Mr. Butler has fitted a piece of ½in. tube, 6in. long, near the sternpost, pivoting it at one end so as to swing freely from side to side. Through this tube the mizen sheet is led, in the free end of the tube forward and out the end which is pivoted. When the sheet is hauled in the sail is trimmed flat, but the boom is kept 4 or 5in. from the center line of the canoe, the tube thus acting the same as a traveler on a sailboat. The boats are all ribband carvel built, of 3/16in. Spanish cedar, three strakes to each side, and are very light and strong. The workmanship is excellent, the planking being very fair and regular, with no lumps or hollows. The masts of the Fly are both hollow, four layers of 1/16in. spruce, each wound spirally, the first over a core or mandrel that is afterward removed, leaving the completed mast ¼in. thick, with a 1½in. hole through a 2in. stick. They are strong and light, but will not stand much exposure to water.

On the Lowell dock are two curious canoes; one, that was present last year, has a perfectly flat floor and straight, vertical sides—a scow canoe, while the other is a later development of the same idea, the bottom being rounded into the sides by a turn instead of a square angle where they join.

The two cup winners of the W. C. A. meet, Notus and If, are both present, the first sailed by Vice-Com. Bailey in the same form as when in Com. Gibson's hands last year, no change having been made. It is a large and powerful boat, built by Bowdish & Son from their own designs. She has little deadrise, but a gradual round from the keel up, the bilge being distinctly marked but not hard or angular. The sheer and the breadth on deck are both fair and pleasing, with no special peculiarities. The hull is built on a plan patented by the builders, which we have previously described, the planks are 5/16in. thick, each edge grooved with a thin feather of basswood, about 1/4×5/16 inserted in the grooves. The hull is very strong but heavy, as the makers have not as yet devoted any attention to building very light craft, and their machinery is not fitted to work thinner stuff. All parts of these canoes are got out by special machines, the ribs are bent and then slit so as to make four ribs of exactly the same shape from each piece. The planks are only 1½in. wide, each pair being shaped first from a piece thick enough for two, which is then sawn in half, so that both sides must be exactly the same. The ribs are joined to the keel by small brass pieces specially made for the purpose; similar pieces being used as knees. The rig is an enlargement of the Pecowsic sails, mainsail 50ft. and mizen 38, each with three battens so placed that the sail cannot be rolled or folded up. The mainsail is 10ft. 9in. on luff and 7ft. 5in. on foot; mizen 9ft. 9in. and 6ft. 9in. Though the If has raced as 16ft.x30in., on accurate measurement showed her to be nearly an inch over length, and Mr. Bowdish, who was in camp, spent a morning in altering her to comply with the rules.

A chance measurement of another racer which raced last year at the exact limit of her class showed that she had spread so as to be well outside the limits, a fact not at all surprising, when it is considered that she is a large canoe, quite deep and with a good deal of deadrise, and is built as light as possible, having neither bulkheads nor deck knees to stiffen her, not even mast tubes. Her board is very large and powerful, the trunk does not aid in stiffening the hull, while she carries a mainsail of 73ft. and a mizen of 38. When sailed hard she spreads to an unknown beam, and even when lying ashore she showed more beam than she had last year. In order to enter her the owner was obliged to squeeze the sides together by boring holes through the upper streak, in which strong brass hooks were screwed; a rope strap was stretched over the hooks and twisted with a stick until the sides were squeezed in. Two of these improvised clamps served to reduce the beam to the requisite limits. The If is noticeable for having a deep fishtail rudder of mahogany, nearly every other racing boat having metal drop rudders.

A very neat and effective pump has been devised by Mr. E. H. Barney for his new canoe. The foot valve is placed in a small brass casting on the keelson, just abaft the trunk, being pivoted so as to swing from side to side athwartship. The pump barrel is a brass tube, long enough to reach over the coaming, with a brass rod and valve for a plunger. The barrel may be screwed into the foot valve, being quickly put in place or removed, and when in use it may be swung to either side, so as to be always within reach when sitting to windward. A very few strokes suffice to throw out the water that is apt to be shipped at times in rough seas.

There are many other canoes and rigs in camp that deserve notice, but they are not yet in sailing trim and ready for inspection. The racing craft as a rule are more of the machine order than ever before, in model, rig and fittings, and the line between the racer and cruiser seems pretty clearly defined. It is evident to many that the present development of the sailing racer has already produced the "hiker canoe," and that another season or two of the same progress will either kill racing entirely so far as the average amateur sailor is concerned, or work its own cure by making necessary some strict regulations which shall preserve a certain number of races to the legitimate canoe. The paddling races too are threatened with an invasion which must drive out any man who is only a good cruising paddler. The latest star among the paddling racers, not a member of the A. C. A. however, uses a 14ft. double blade, standing in his canoe, and it is reported that as long as the balance can be maintained the speed is far greater than in the ordinary sitting position.

In spite of all this and the fact that the proposed cruise was a failure, the cruiser seems to grow and prosper, and this year he is present in goodly numbers, and with some excellent canoes. True, he does not always bring his canoe outfit to the meet, preferring a larger tent and meals at the mess tent, but there are many well known cruisers present, and plenty of cruising talk.

On Saturday evening a number of old canoeists reached camp, ex-Com. Edwards, of Peterboro, Leys and Johnson, of Toronto, ex-Com. Nickerson and Mr. Geo. M. Barney, of Springfield, with others of their club, Mr. Rushton, Mr. Chas. F. Gardner and his wife, and Messrs. Burchard and Nadal of New York. On Saturday Dr. and Mrs. Neidé spent the day in camp. Dr. Gardner will be remembered by the older members as one of the original founders of the A. C. A., and he has with him now the large canoe Iris that he used in 1881.

On Saturday night the first large camp-fire was lighted in the center of the main camp, there being upward of 300 seated around. The evening was passed pleasantly with songs and stories, the male quartette of the Deowinsta C. C. furnishing some very fine music. The night was delightfully clear, a blue sky with the bright moonlight dimming the red glow of the huge fire, and it was nearly midnight before the charmed circle was broken. Sunday proved one of the finest days the meet has yet been favored with, clear and warm, yet with a breeze all day. For almost the first time no service was held in camp, the only minister present being called away for the day.

BATH, Me., Aug. 15.—The interest in canoeing is steadily on the increase at Bath. The number of canoes afloat has increased from eight in 1887 to nearly thirty at the present time. The Star C. C. was recently organized with ten canoes in commission and the following officers were elected for one year: Captain, W. B. Potter; Mate, H. O. Stinson; Secretary and Treasurer, H. H. Donnell; Steward, C. B. Coombs. The Kennebec River and vicinity offers splendid water for cruises, either long or short, and canoeists here are not slow to take advantage of them. Most of the canoes in use at the present are canvas, about 13×36, but we are gradually grasping the idea that a wooden canoe a little longer and with a trifle less beam would be more suitable for general purposes, and the indications are that another season will see a great revolution in designs, sails, etc.—Sec.

POINTS OF THE N. Y. Y. C. CRUISE.

Editor Forest and Stream:

The recent cruise of the New York Y. C. has brought out the following principal points:

First—For the first time the new deep sloop Katrina met a vessel of her class in the 70ft. cutter Bedouin. They raced five times during the cruise. Four times in succession the Bedouin won, and the fifth race for the Fearing and Vanderbilt prizes, off Newport, turned out a fizzle, owing to the fluky nature of the wind, the leaders getting away full five miles before the rest worked into the same wind. These trials have shown that Katrina is a very fine craft, a vast improvement upon the orthodox style of American sloops. But the trials also demonstrated that a good cutter can always be built to equal anything in the centerboard line. These tests are fraught with just as much weight as the international races, and every time the latter are cited as proof in favor of the board, the performance of the Bedouin can be quoted to just the contrary. In short, speed does not depend upon type *per se*, but upon the individual excellence of each design apart from the type selected.

Second—The cutter Pappoose beat the new deep Burgess sloop Nymph as often as they met. In the heavy weather match from New Bedford to Newport she sailed the sloop out of sight, though the latter is several feet longer.

Third—In the Vineyard Sound race, in strong weather, the keel schooners Alert and Miranda beat the whole centerboard fleet of cracks, such as Sea Fox and Grayling, with the exception of the Sachem, this schooner beating the keels by about one minute. Considering that the Alert is new, her canvas not stretched and her picked-up crew scarcely knowing the ropes, and also that Miranda is twelve years old, of very strong build and with some of her ballast inside, it is fair to infer that both Alert and Miranda, when tuned up to the same pitch as Sachem, would give her the slip in a breeze and sea.

Fourth—On the run from New Bedford to Newport, the Grayling struck in 15ft. of water owing to the deep draft of centerboard vessels. She lost the day's race, lost the chance to race for the Newport cups Aug. 19, and lost several hundred dollars for repairs. A keel craft would have gone clear. Reports did not say that Grayling sprang a-leak, but it is likely she did. The light draft of centerboards is frequently a delusion.

Fifth—If the cruise was not very eventful, it seemed to remove some of the lingering prejudices against cutters and keels generally. Alert, Bedouin and Pappoose have made a host of new converts, while the deep centerboard schooner Marguerite and the sloop Nymph, through their comparative failure, have also helped along the good cause. X.

CORINTHIAN Y. C., MARBLEHEAD, AUG. 18.

THE races open to all New England clubs were sailed in a nice northwest wind and smooth water. Course for first and second class, 10 miles; for the rest 6 miles. The cutter Saracen showed best to windward among the big ones, and in second class the cutter Brenda won without resort to spinaker or topsail. The Cape centerboarder Mucilage, despite her sticky name, beat a very fast lot and was the surprise of the day.

NEW YORK Y. C. CRUISE.

AFTER the racing in Vineyard Sound the fleet got under way for a run to New Bedford, Aug. 15, in a fine southwesterly wind and some sea, giving the squadron a nice thrash to the westward through the Sound and a long board to the Sow and Pigs lightship, after which they squared away for New Bedford, Mayflower was disqualified because she rounded the buoy instead of the Sow and Pigs lightship, but explained the action by the breaking of a turnbuckle on her bobstay, necessitating squaring away too soon. The sloop Fanny, of the old type, found the wind too much for her and ran to leeward, being out of it altogether. The cutter Bedouin did great work in the sea, soaking out on Katrina's weather fast, but subsequently losing some of her lead in the run up to harbor, which is not to be wondered at, as it was discovered later on that she had been towing a huge lobster pot which had hooked the copper near the keel. The sloop Pocahontas, another light draft centerboard, was beaten by nearly 50m. The keel schooner class was devoid of interest, neither Alert nor Miranda being present. The centerboard schooners made very close racing, being within 2m. of one another over a 45-mile course. The cutter Pappoose easily outsailed the Nymph.

The squadron remained in New Bedford Thursday, devoting the time to races for gigs and cutters. Friday, Aug. 17, all hands got underway for the run to Newport. It was blowing smart from southwest again and quite a jump was pitching in from the sea. The schooners housed topmasts and some of them reefed down. The big compromises Puritan and Mayflower reefed down as did all the smaller craft, excepting the cutter Bedouin. The narrow boats proved to be the best sail carriers, both Bedouin and Miranda being the first to show working topsails. The performance of the Miranda in outcarrying the broad centerboards elicited much comment, even the Boston *Herald* forgetting itself so far as to say a good word and do the imported schooner justice. Grayling was making a close thing of it with Sachem, until she struck in 16ft. of water, broke up her board, slid to leeward and lost her excellent chance to score against the Boston boat. This "accident" to the Grayling is a possible argument against the deep draft of centerboard yachts in normal sailing condition. A keel yacht would have gone clear and could have hugged the shore closer in smoother water. Mayflower easily outsailed the Puritan and Bedouin only beat Katrina by a small margin of seconds, thanks to the lobster pot which was not discovered until her keel had been "swept" after arrival. The cutter Pappoose sailed the new sloop Nymph out of sight.

The winners in the several classes are as follows: First class sloops, Mayflower, which beat the Puritan 33m. 53s. corrected time; first class schooners, Palmer; third class schooners, Sachem; third class sloops, Bedouin, which beat the Katrina in corrected time 1m. 28s.

The fleet lay in Newport Harbor Saturday and Sunday, and on Monday, Aug. 20, mustered in fair strength for the race for cups presented by the citizens. The course was 15 miles and return from Brenton's Reef. The wind was fluky, interspersed with calms, and the race was a failure on that account. At one time the leaders had drifted 5 miles ahead of the rest and only the Volunteer finished within the eight hour limit. The summary of the race is as follows:

FIRST CLASS SCHOONERS.

Athlon, Cinderella and Gaviota were handicapped and not timed.

FIFTH CLASS SLOOPS.

Peri, Pappoose and Mabel Swift were handicapped and not timed.

N. B.—Handicap time was 12:00:00.

Although the cruise was not eventful and apparently excited but little interest outside of the owners of the racing yachts, it served as a good school of observation, and that some sound lessons were learned is shown by the following from the Boston *Herald*, which also exhibits the gradual conversion to the new order of things:

"In the sloop Katrina, Mr. A. Cary Smith has turned out a fine craft, and one capable of making a good performance with any yacht of her class in the country. Her chances are best with the Bedouin in moderate winds and fairly smooth water, and where she can carry all sail. The races of the Bedouin and Katrina have been remarkably close, and the question between them is narrowed down to the type, compromise cutter vs. compromise sloop. The Bedouin is Mr. John Harvey's production, now practically an old style of cutter, while the Katrina is supposed to be the best and latest type of compromise sloop. She has certainly fine form and an excellent sail plan, though the set of her sails is not yet perfect. It is a question if she can be improved much in form. This cannot be said of the Bedouin. There are many places in which she can be touched up, especially her after-body, all of which will make her go faster. Her sails are old, stretched out of shape some after two years of hard racing, and to-day she is not in her best form. Allowance should be made on account of her handling, for certainly she has an advantage in her expert skipper. The Bedouin's poorest point of sailing is reaching. Capt. Pittuck admits this. In fact, he told the writer that the topmast had to be buckled aft to get the best out of her on a reach. The performance of the Bedouin against the Katrina is certainly evidence for the cutter advocates to work upon, and if the Bedouin can be improved upon, as she certainly can, why is this not a point in their favor? There are now many who believe that a properly designed compromise keel sloop is the equal of a centerboard, or else why should the Bedouin hold the centerboard sloop Katrina so well by the wind, and the Pappoose beat the Shadow to windward?

"In the keel schooners of the third class, the new schooner Alert of Boston has jumped suddenly to the front. She has fairly outsailed the Miranda, allowing at the same time that the Miranda is a very fast keel schooner yacht. The Alert during the cruise was nearly in her worst public form. With a small cruising spread of canvas, which was baggy and set badly, with no light sails and off from racing form, she made a record which has placed her at the first place in the keel schooners of her class. She has the stiffness of the Gitana, but more speed, and when the conditions are the worst for other yachts, they are best for her. She can be greatly improved, and with a racing rig she would be a close match for the Sachem, and over a triangular course, with plenty of wind and a racing suit of sails, she would not be much behind the celebrated Burgess schooner at the finish. The performance of the Alert is a black eye for the advocates that 'as little surface friction as possible' is the proper thing for a well formed yacht. The Alert has immense surface friction, and her form gives her great power, which enables her to carry an immense sail spread without putting lee rails under. When the Alert puts her lee rails under her competitors will be hove to. There is some talk of fitting out the Alert as a racer."

The above quotation is all the more creditable, because the *Herald* has hitherto found it very hard to concede justice to anything having even a very distant relation to John Bull. The expressions to which the *Herald* gives vent are in line with the ideas and terms originating in these columns. Neither Mr. Harvey nor other good judges who understand the meaning of Bedouin's fine run will be likely to pad her out, the *Herald's* criticism being based upon familiarity with only one method of effecting good clearance, the method adopted in broad, shoal boats. The reverse curve noted in Bedouin's run is due to the long overhang and clean quarters and is chiefly above water. It is proper in a deep craft, and any padding would effect the opposite of what the *Herald* supposes. The chief count againt Bedouin is her extra strong construction of wood, which is heavy compared to the modern steel skeletons, but she will outlast the light steel racers many years.

A CRUISE UPON THE GREAT LAKES.

CLEVELAND HARBOR is not pretty nor pleasant, though the parks and drives along the water front of the city are picturesque. It would make a downcast skipper turn his quid and whistle to see the artificial havens along the shores of the Great Lakes. The general plan is a series of long parallel piers extending out in the most advantageous direction, cribwork filled with earth, stones, logs and slabs, according to cheapness, quantity or location. Enormous piers 10 or 12ft. above water and covered by acres of sawed lumber, piled 12 to 20ft. high, are seen projecting out and defying the gales and boisterous seas of Huron and Michigan, while inside of them lay vessels as quiet as if upon a millpond. Some of these piers have lighthouses upon their sea ends others have to be satisfied with cribwork and breakwaters marking the edges and points of shoal water. I was astonished to find piers at some Huron ports made entirely of unseasoned narrow edgings of boards and planks, with no foundation of earth or stone above water, but the edgings simply piled in shoal water, one upon another until the structure was of sufficient height. Into the long reaches between the piers flows the sewage of the city and the numerous tugs necessary to move the sailing vessels within the docks churn up the infusion of filth in a lively way and raise a stench like that of the Augean stables. It was so loud at Cleveland the hot August night I took the steamer for Detroit that I was forced to leave the side of the craft; and it clung to us until we were out in the lake beyond the outer lights. The wind blew us sailing yacht in and out of such nastiness, but Cleveland is a great city, and the smaller wooden harbors further north have larger rivers in proportion to their size to dilute and wash away the opprobrium of civilization.

The long lanes of water are like canals. The commotion made by a moderate breeze, or the movements of a screw or wheel, set the water dancing up and down the piers and racing along the cribs in a manner distressing to every small craft around. Up and down, in and out, forward and back, I saw fishing and pleasure craft tugging at their bonds, while the crew would stand with boat hooks and prod frantically at logs and push mightily against the piles and jagged ends of edgings to save their egg-shells from crushing. More than the Coot in the Delaware was the occasional struggle for safety, but strong muscles and good judgment saved the brave boatmen.

Security can be found away up the water lanes where the seas do not reach, the steamers rarely go, and the waves are quieted by sawdust and other debris of mills that shoot their refuse upon the tide. Another nice place for a glossy black skimming dish or a milkwhite cutter to lie quietly, while her vacationists are surveying the flat lands, stunted pines and paintless cabins of shanty town, or rambling through the pretentious town or city beyond the dock neighborhood.

Open roadsteads and these harbors are what one must depend upon for the most part in yachting upon Huron and Michigan, and these are few and far between. I do not wonder that cutters are in demand, for one who leaves a port must make up his mind to stay out all night or shorten his log line.

The winds rise upon these lakes in a mysterious way. A faint zephyr grows to be a strong breeze or a moderate gale in a short time. At the straits of Mackinaw the wind blows southwest or northeast every day, and the procession of schooners are either running with free sheets and a flowing sail, or are battling against head seas with sheets trimmed flat down. And such seas! It is a mooted question whether there is any difference between lake seas and ocean seas, fresh or salt. I think there is. The specific gravity is less than that of the ocean, and it is easier and more quickly raised by the wind. There is no trusting to a summer sea, as along the Atlantic. If you run off shore half an hour, the breeze may strengthen and raise such a chop as you would perhaps be half a day getting back. Upon the Atlantic it takes more time to raise the white caps. The Mackinaw boats have it rough enough, are built especially for short choppy seas, are light and shapely and not over-canvassed. Wonderful stories are told about them of desperate trips in living gales of wind, but they have been reaching and running, not windward work. I was not impressed with their windward qualities as compared with salt-water craft. I was on a good-sized steamer from Marquette to the "Soo" in a strong northern gale, with a heavy broadside sea. I was the only passenger who was not sea-sick before turning-in time, half the crew were *hors de combat*, and I began to feel a little uncomfortable after my evening cigar. The seas were high, short, quick and spiteful. Take a basin of water and shake it rapidly sideways and you have a good imitation of the turbulent surface. The seas were all alike, too. No series of threes and then a smooth time for recovery of equilibrium, but a push and a thump against the side, increasing in strength all night, and I was glad to see land around when I crawled out next morning. "Pretty heavy gale," said I to the captain. "Oh, this is not much of a gale," said he. "Rather a nasty sea, though," I ventured to say. "No, the usual thing this time of year." "It seems to me the seas are shorter and quicker than upon the Atlantic." "I guess not; I went to sea upon the North Atlantic for eight years, and I don't see any difference." So it goes; I shall hold to my opinion.

There are many craft to be seen upon the lakes and rivers. One is constantly meeting the long, deep, clumsy coal or ore-laden schooners, three, four or five strung together with hawsers and towed by a tug or ore steamer, using sails in favorable winds, and sometimes cutting loose intentionally from the tow or breaking away in a strong gale and working into a harbor or going upon a lee shore. Some of them are shapely and built with due regard to safety and speed; others are queer and ancient in appearance. Seventy to eighty of them pass through the Government Lock at the Sault Ste. Marie every twenty-four hours, and it is a fine place to study them and their crews.

One sees passenger and freight steamers very frequently along shore, and they furnish entertainment and excitement through the various members of the human species *en voyage*. Man will turn from the prettiest scenery of the Hudson or the Rhine to study an old woman in fustian or a child toddling about the deck.

I had hoped to see yachts in great numbers and of all types flitting over the inland seas, but was disappointed. Only one was seen under sail during the month following Aug. 15, while I visited Cleveland, Detroit, St. Clair, Huron, the shore of the southern peninsula of Michigan from Harrisville around to Petosky, St. Ignace, Mackinac Island, Sault Ste. Marie and Marquette. One small sloop, flying yacht colors, was seen in tow of a tug going up the canal of St. Clair Flats, the crew cuddled under a tarpaulin over the cockpit to keep out of the rain that was falling heavily. I envied them even this. The sloop yacht Jennie June was seen tied up at the dock at Mackinac Island. She cruised from Detroit to Mackinac, and down to Petosky and back again, with Corinthian sailors, and I do not believe they would hazard the trip again. They had some hardships and were in great peril several times, and nearly foundered in Thunder Bay. The report of their cruise in a Detroit journal confirmed my opinion of the dire necessity of cutters upon the lakes; showed up the danger of the long distances between ports, the miserable harbors for yachts and the character of winds and seas, and made me thrill with sympathy and admiration for fresh-water yachtsmen.

One steam yacht visited Mackinac Island a few days and she was the only one seen underway. Where were they all? Tied up or at anchor near their club houses in the cities, and there they remained the greater part of their time. A regatta starts them out for a day or two, and then down goes the anchor to rust in the mud, while their owners do lots of cruising in the club houses.

The St. Mary and the St. Clair Rivers have considerable currents to annoy yachts, but there are many broad reaches and bays bordered by lovely shores and scenery, where short cruises would be most delightful. It is plainly to be seen that Western yachtsmen have either little heart in the business, or else too much business to permit them to indulge in the yachting activity of the Atlantic coast. In traveling over the same distance by water upon the New England coast that I did upon the lakes, it is safe to assert that I would have seen over a hundred yachts, including some of the finest and best that float. There is some compensation, however, to the Westerner, in plenty of game and lots of fish. Those who have the yachting mania upon the Great Lakes have my heartfelt sympathy and I would advise them *à la* Horace Greeley, to "go East."

W.

PITTSBURGH, Pa.

SIPPICAN Y. C.—Fifth club regatta, Aug. 15. Start at 1:40 P. M. Weather hazy. Wind, strong S.W. (all boats reefed). Tide, ebb:

FIRST CLASS SLOOPS.

	Length.	Elapsed.	Corrected.
Mucilage, C. C. Hanby	26.02½	2 23 50	2 21 50
Zingara, E. V. Bird	27.00	2 46 18	2 46 18

NEW YARD.—Mr. W. K. Pryor, who is now established for himself in South Boston with a yard and railway, has been fortunate in his first year's work, having built the handsome cutters Marguerite and Sharon, the smart Caribou, Eureka and others, all of which are fine specimens of high class execution and finish. With forty years' experience Mr. Pryor is ready to give the public the benefit of his long and varied experience in turning out all styles of craft, with a sound business reputation at his back.

New Publications.

ANIMALS OF THE SEA SHORE.*

UNDER this title the Lippincotts have just published a very useful little book from the pen of Angelo Heilpim, Curator in charge of the Philadelphia Academy of Sciences. Professor Heilpim is well known as the author of more than one work on popular science, so called, and his present contribution to educational literature seems likely to be quite as productive of good as anything he has yet done.

At this season of the year, when so large a proportion of city residents are at the sea shore, the publication of this little book is extremely timely, and it is a great pity that a copy of it could not be introduced into every home near the salt water. The children would certainly be interested in it, and parents who should study it in secret would be able to answer many a question put to them by the little ones, which now is too much for them.

The little book deals with the common forms of marine littoral life, especially such as are found on the New Jersey and Long Island coast, and with this volume in hand it should be possible for any one to identify most of the shells and other animal remains which are always found so abundantly scattered along our beaches. It is copiously illustrated with figures, which, if not

*The Animal Life of our Sea Shore. With special reference to the New Jersey coast and the southern coast of Long Island. Angelo Heilpim. Philadelphia, J. B. Lippincott Co., 1888. Price 50 cents.

especially elegant from an artistic point of view, will yet serve to enable any one to identify a specimen. Of these figures there are nearly two hundred, most of them representing the common shells, but covering a wide field, from the delicate hydroid up through the warlike fiddler to the hideous toadfish. The information about the animals described is given in simple, plain language. Sometimes there is not much of it, at others the account is quite long, but whatever the amount, it is told in an interesting way, and so that it can be readily understood.

The book is a very useful one, perhaps not so much for the actual information which it conveys in words as for its figures. It will serve as an introduction to the study of marine littoral life. It is a primer of invertebrate zoology of the shore, and since its low price puts it within the reach of all it should do a great amount of good.

Messrs. Cupples & Hurd, of Boston, announce "Daylight Land," an elegantly prepared volume, written by W. H. H. Murray, descriptive of the Northwest.

Answers to Correspondents.

W. B. TAYLOR.—Please send your address to this office.

E. S. P., New Haven, Conn.—Where can I obtain books or papers giving an account of lobster raising in the United States? Ans.—There is no book on the subject. The only practical account of lobster culture is by Mr. Richard Rathbun and can be found in the Bulletin of the United States Fish Commission for 1888, pp. 17-32. The same volume also contains articles on the subject by Mr. Dannevig, of Norway.

W. A. W., Memphis, Tenn.—In duck shooting at Beaver Dam Lake, Miss., and at Wapanocka, Ark., I often kill one or two black mallards. These seem to be fond of other mallards, or else go alone. Seem rather larger and have not the curl tail of green-heads. They are more plentiful in wild rice at St. Clair Flats. Are they opposites of albinos, or a distinct breed? I never see a flock of them. Ans. These birds are undoubtedly black or dusky ducks (*Anas obscura*). They are nearly allied to the mallard, but are an entirely different species.

E. E. T., Toronto, Ont.—1. I have a yearling foxhound that is just beginning to hunt very well. I got him for thoroughbred and he looks like a good strain, but his note, although perfect when baying at a stranger or a cow, is a mere yelp when he is after a ox or coon. Will he outgrow this defect? 2. When the fox goes to earth or the coon trees, he merely declines to figure in further proceedings, and will in neither case indicate the animal's retreat. How can I cure him of this? Ans. 1. His voice may improve as he grows older. 2. The only remedy that we have successfully tried in such a case is to run the dog with one that is true to tree and hole.

THE TOBIQUE TRAGEDY.

BANGOR, Aug. 21.—Major C. F. Howes, of Boston, whose wife was shot and killed by poachers on the Tobique River, New Brunswick, last Sunday morning, passed through here this afternoon on his way home with his wife's body. The story of this shocking crime is without paralell in the criminal annals of this section.

It appears that Major Howes, who is a great sportsman, has a cabin on the Tobique, where he goes to fish for salmon. This season he was accompanied by his wife, daughter, and three sons, together with a young college friend of his oldest son, Harry F. Lincoln.

Last Saturday night the party, who traveled in four canoes and carried four Indian guides, camped at Gulquek, on the Tobique. This is about forty-two miles up the river, and in the heart of the wilderness. In front of their camping place was a splendid salmon pool, where they proposed to fish the next morning.

It was after dark, and the party was gathered around a big camp fire, laughing and chatting. Suddenly they saw canoes out in the river occupied by men carrying lights and busily engaged in spearing salmon. Poachers have long been a pest on Tobique. When Major Howes saw these men at work he shouted to them:

"No spearing in this pool to-night."

The Indians set up a yell to frighten them away, and one of them fired a gun in the air. At the first outcry of Major Howes the men extinguished their lights, and then sat on the river in their canoes, hurling insulting language at the Howes party.

No more was heard from the men that night. The poacher in the bow of the canoe was recognized as the party moved away.

The next morning Major Howes and his people broke camp and started down the river. About four miles down the Tobique from Gulquake, at a place called Oxbow, Claude Howes and Harry Lincoln saw some owls on the bank and stopped paddling.

Young Lincoln had a heavy Colt's rifle and Claude carried a doublebarreled shotgun, but these were the only arms in the party. As the young men stopped the canoe containing Major Howes and his wife, one of the smaller boys and an Indian guide went ahead, disappearing around a bend in the river.

The owls were killed, and as they were being secured, the sound of firing was heard near the head canoe. The young men did not think of danger, but paddled quickly out of curiosity. They heard four shots in rapid succession, and supposed that some one was firing at ducks in the river.

But as they passed around the point and came in sight of the other canoes, Claude saw that men in the bushes were firing at his father's canoe. The men at the same time saw him, and sent four shots at his canoe.

After the third shot Claude caught up his shotgun and began firing at the bank, for he could not see the men. He called to Lincoln, who was some distance behind the load, to fire at them.

Young Lincoln bravely pushed his canoe ashore, and rifle in hand jumped into the bushes and started in the direction of the shots. He fired as he went, and the bullets evidently went near the attacking party, for the men ran off through the woods.

As soon as the firing ceased Claude Howes paddled over to his father's canoe, saying to his sisters: "I fear some one is hurt."

She laughed at him, and said that the firing was only done to frighten them, but as they approached they saw that their mother was wounded.

Major Howes was holding her head over the side of the canoe, and the blood was flowing slowly from it. She was dead. It was the third shot that struck Mrs. Howes.

The bullet entered the left side of her head below the temple, and passed directly through, coming out on the other side. Her death was instantaneous.

Three of the poachers have been arrested.

An excellent litter of puppies by Monarch now ready for delivery. If taken at once $25 each.
WYOMING KENNELS,
Melrose, Mass.

IRISH RED SETTER
CHAMPION GERALD.
IN THE STUD
TO FIELD BROKEN BITCHES ONLY. Fee, $25. Gerald has been heavily shot over two seasons in the South. PARK CITY KENNELS,
P. O. Box 2,057. Bridgeport, Conn.

St. Bernards.
IN THE STUD.
Champion "RIGI."
Young stock for sale sired by Rigi.
WENTWORTH KENNELS,
P. O. Box 264, Utica, N. Y.

Silver Shoe.
Imported pug dog; a grand sire. Weight 13lbs. **Stud Fee, $25.** (A.K.R. 3758). Pups for sale.
MIDGET PUG KENNELS,
sepl,tf Lansing, Mich.

Yorkshire Toy Terrier.
The English bench winner **Bradford Harry**, Described in all show reports as "best Yorkshire in America." Photos 50c. Pedigree and winnings free. P. H. COOMBS, 1 Exchange Block, Bangor, Me.

The Kennel.

Syracuse Kennel Club.
PRIZE WINNERS.
Lillian (3735) Dad Wilson (3371)
Di (3637) Chance
Lit II.—Dad Wilson (3371)

Three beautiful litters of strong, rugged pups from the above famous bitches, and by the two great sires that stand second to none. Address for prices and particulars to W. C. NELSON, Hastings, N. Y., or HOWARD B. RATHBONE, Sec'y, Syracuse, N. Y. aug2,6t

English Setters.
I have for sale six English setter dog pups, pure bred stock, whelped July 7, 1888. Sire, Dick Belton (Yale Belton—Clara R.); dam, Queen R. & M. (A.K.R. 5945). The pups will be ready for delivery about Sept. 1. Will be warranted in every particular. Price $25.
H. S. REYNOLDS, M. D.,
aug2,4t Clinton, Conn.

FANCIERS.—FOR SALE.—EIGHT THOROughbred Gordon setter puppies, by imported Murkland Ranger, registered in England and in the A.K.R. 5803), out of champion Beaulah, registered A.K.R. The only thoroughbred Gordons in this country, with a full and straight printed pedigree. Address with stamp C. T. BROWNELL, Mount Pleasant Gordon Kennels, Box 335, New Bedford, Mass.

PRIZE MASTIFF BROOD BITCH FOR SALE. Great chance for breeders. Price very low. P. KASCHENBACH, Wilkesbarre, Pa. 2t

Hound Puppies For Sale.
I have a lot of finely bred deer and foxhound puppies, and having more than wanted will sell some. The stock is the best bred and selected in Virginia, as my paternal ancestors have been hunters for many generations, and my father especially has been devoted to foxhunting.
I refer to Hon. John S. Wise, of Richmond, Va., as to my reliability, and also as to stock of dogs.
MINOR BOTTS LEWIS, Harrisonburg, Va. aug16,3t

BRANFORD KENNELS
BREEDERS OF
Pointers and Gordon Setters.
Young dogs and pups on hand. Also a fine litter by champ. Beaumont ex Queen.
Address with stamp, Box 202, Branford, Conn.

FOR SALE OR EXCHANGE.—PURE LAVeracks: dog, 2yrs. old, prize winner; two dogs, 1 yr. old; two bitches, 5 mos. old, by champion Royal Albert. Llewellin dog, 1½ yrs. old; pug bitch, 2 yrs. old, by champion Bradford Ruby, 1st prize winner. Address T. H. ADAMS, Pawtucket, R. I., or J. H. Brady, Box 17, Central Falls, R. I. aug16,2t

FOR SALE CHEAP.—FINE ENGLISH AND Irish setter pups, guaranteed. Also 54in. English bicycle. H. B. COLBURN, Liberty, Va. aug16,2t

FOR SALE.—FIVE LIVER AND WHITE pointer puppies, whelped July 26, 1888, by Doctor (A.K.R. 6316) out of Guess (A.K.R. 6517). Address all inquiries to DRY HILL KENNELS, Monterey, Mass. aug16,3t

COCKERS.
Full grown cockers, broken and unbroken, for sale at MOUNTAIN KENNEL, Cabin Hill, N. Y. aug23,5t

FOR SALE CHEAP.—A FEW FULL pedigreed prize-winning Irish setter pups, 6mos. old; also some old stock, all guaranteed as represented. ISAAC FERGUSON,
aug23,2t Winsted, Conn.

At New York, 1884 seven 1sts, six specials and one 3d.

WANTED.—BROKEN COCKER DOG FOR partridge and woodcock, cheap. S. B. CARPENTER, Clinton, N. Y. 1t

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, AUGUST 30, 1888.

VOL. XXXI.—No. 6. No. 318 BROADWAY, NEW YORK.

CORRESPONDENCE.

THE FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. Communications on the subject to which its pages are devoted are respectfully invited. Anonymous communications will not be regarded. No name will be published except with writer's consent. The Editors are not responsible for the views of correspondents.

ADVERTISEMENTS.

Only advertisements of an approved character inserted. Inside pages, nonpareil type, 30 cents per line. Special rates for three, six, and twelve months. Seven words to the line, twelve lines to one inch. Advertisements should be sent in by Saturday previous to issue in which they are to be inserted. Transient advertisements must invariably be accompanied by the money or they will not be inserted. Reading notices $1.00 per line.

SUBSCRIPTIONS

May begin at any time. Subscription price, $4 per year; $2 for six months; to a club of three annual subscribers, three copies for $10; five copies for $16. Remit by express money-order, regi ered letter, money-order, or draft, payable to the Forest and Stream Publishing Company. The paper may be obtained of newsdealers throughout the United States, Canadas and Great Britain. For sale by Davies & Co., No. 1 Finch Lane, Cornhill, London. General subscription agents for Great Britain, Messrs. Davies & Co., and Messrs. Sampson Low, Marston, Searles and Rivington, 188 Fleet street, London, Eng. Brentano's, 17 Avenue de l'Opera, Paris, France, sole Paris agent for sales and subscriptions. Foreign subscription price, $5 per year; $2.50 for six months.

ANSWERS TO CORRESPONDENTS

THE SMIRCH OF POLITICS.

WE have said before and we say again, that when it comes to the question of game protection, politics and wire-pulling should not be allowed to interfere. This sounds like a platitude. It would be a platitude among honest men. Unfortunately we often have to deal with men who are not thoroughly honest in promoting the public service, even in the protection of game and fish.

There are on the statute books of this State certain laws prescribing the times and the ways in which game and fish may be captured. A force of game and fish protectors are appointed and paid to detect and bring to punishment offenders against these laws. At its last session the Legislature made provision for a chief protector to direct and control the force. Several months have elapsed since this law was enacted, and as yet no chief protector has been appointed. The reason is said to be that the Commissioners of Fisheries are not willing to toady to the political behests of Governor Hill and appoint a man who will look out for Hill first and for the game and fish last; nor do they dare to appoint a fit man who will perform the duties of the office without regard to wire-pulling and turning political grindstones. So the office remains unfilled and the by no means unimportant interests involved are left to take care of themselves as best they may.

Now, will any man, without regard to the ticket he may vote, sit down and calmly consider this matter, and tell us if it be not an outrageous shame and a disgrace to a great State like this that the machinery for the enforcement of the game laws should be made a part of the machine political. The game in the woods and the fish in the streams are to be sacrificed because they may not be protected by a protector unless that protector be a tool of the Governor.

The Commissioners express a desire and a determination to keep politics out of the conduct of their affairs. Why, then, it may be asked, do they not appoint a chief protector without regard to the demands of Governor Hill? The reason assigned is this: There is a disputed point as to the terms of office of some of the Commissioners; it is claimed on the one hand that they shall continue to hold office for life or until they resign; and on the other hand it is claimed that their terms have expired, and that the Governor may at his will remove them. Now, if the Commissioners appoint a chief game protector who is not acceptable to the Governor as a political heeler, they fear that as officials they will be put into a bag and thrown from the palace window into the Bosphorus. So they are holding off until after election. Next November, then, we may look for the selection of a chief protector.

The attitude of men in political life toward game protection is not an encouraging one to contemplate. It has been demonstrated in this State that an individual may jack deer out of season and yet be nominated for high office. If such a man were elected, he would be a fool who should expect from him any substantial aid in the task of securing a wise and economic conservation of our wild game and fish resources.

TO PROMOTE TRAP-SHOOTING.

UNDER the title of the American Shooting Association a corporation is forming whose purpose is to promote trap-shooting. Mr. C. W. Dimick, of the United States Cartridge Co., is the prime mover in the enterprise, and in accordance with his plans the association will be composed wholly of manufacturers. They will support it and it will be under their control. The association will be incorporated under New York laws; the central office will be in this city, and Major John M. Taylor will be the general manager.

The association will prepare a set of shooting rules which they will endeavor to have adopted throughout the country, so that all records of work at the trap may be made under uniform conditions. The next step will be to classify the trap-shooters of the country. There will be three classes, A, B and C; to one of which a shooter will be assigned according to his recorded score. It is proposed to form State leagues composed of various teams, who shall contend in State contests offered by the association, the winning or champion State teams to meet in inter-State or national tournaments. The plans of the promoters are not fully perfected as yet, but in general it may be said that national tournaments engaged in by individuals and teams who shall qualify by preliminary contests will be a main feature. When ready for business the association will come before the public either with a programme of a "big shoot," or with a scheme for State league contests.

The success of the movement is yet to be determined by actual trial, but it appears to be perfectly feasible, if run on business principles. The prizes will certainly stimulate interest in the sport, and the number of shooters will naturally be increased, to the benefit of those who have for sale guns, ammunition and targets. In brief, the manufacturers will broaden their market and sell more goods.

The capital stock of the Association is $20,000, divided into shares of $50 each. The subscribers, with the shares subscribed for by each, as the list stood Aug. 24, are named below. Some of the subscriptions will be adjusted in conformity with a scale to secure due representation of all interests.

AUTUMN ANTICIPATIONS.

GLORIOUS autumn is at hand. Already we have had days whose crisp air had in it all the tingle of October, days which tempt one afield to tramp with the dogs until he becomes weary, days which bring out all a man's vigor, and call up memories of a hundred autumn outings past.

Already in the marsh and along the shore some lucky sportsmen have tried their hands at stopping the darting blackbreast, or have sent their leaden hail through the bunches of frightened, gentle willets, as with dangling legs they hung, uncertain, over the decoys. Already men have been pushed in their cranky skiffs over the rail marsh at high water, have listened to the splashing of the running birds amid the grass and reeds, and then to the cry of "Mark! Mark!" and with light loads have dropped the fluttering sora right and left. Already on the prairies of the West, the young "chickens" have tumbled to the report of the double barrel.

The days are growing shorter and the air cooler. The first flocks of blue-wing teal are here and a few English snipe will soon make their appearance. The roar of the ruffed grouse will be heard as he takes wing from before the dog. A month from now we shall begin to look for the first flight of fall woodcock. The autumn shooting will have fairly opened.

The autumn shooting! To each man who uses a shotgun there is magic in these words. To one they call up that golden October time when his puppy worked so superbly on snipe on the wet meadow, and when the birds were plenty enough to keep up the excitement all day long; another looks back to that keen November morning when he first caught two crossing quail as the bevy rose, and then got a third just as they flickered over the hill; before a third comes up the day when, with chilled body and stiffened fingers, he lay for hours in the blind, and over his ice-laden decoys had such shooting at can vasbacks and redheads as never came to him before or since.

Nor is the man who uses the rifle without his memories. The cool breezes of autumn stir recollection in his breast as well, and call up before his mental vision camps in forest and by stream or lake, camps on the mountainside or on the desolate prairie, and for him each camp has its own story. From one he started on his first chase after buffalo, to another he walked in triumph leading his horse packed with his first mountain sheep. Happy memories! Day so full of pleasure can never come back to us older men, who have drunk deep of the cup brimming with the delights of outdoor life. The draught is sweet to us still, but never again can we find in it the delicious flavor that it had when first it touched our lips in the autumn days of long ago.

Before long the shooters will have scattered out over the land and the lead will be flying. Some of us will kill much, others but little. But what difference does it make? The pleasures of his outing are hardly less to the man who has but barely stained his hands with blood than to him who has bathed in it. It is not what we kill, but how we kill it, that makes life in the open air a delight, and its memories a lasting blessing to the true sportsman. If he who goes abroad for the autumn's outing—whether it be to tramp after the quail, grouse and woodcock, or to lie in the blind for fowl, or to silently track through the forest after the timid deer, or to breast the steepest mountain sides after bighorn—if he possess the heart which causes him to appreciate Nature's beauties, if the contemplation of her works fills his soul with gentler sentiments and with a broader love for all that is good and true and beautiful, his outing has not been wasted. Whether he return with a full bag or with a load that is but light, he is a better man, more fitted to do good to those about him than he was when he started from his home. He has read from Nature's book another great lesson.

At this stage it is in order to call the roll of anglers:

GROVER CLEVELAND.—Gone fishing in the Blue Ridge Mountains.

BENJAMIN HARRISON.—Gone fishing in Lake Erie.

MATTHEW S. QUAY.—Been fishing off New Jersey coast

WARNER MILLER.—Will go fishing in the Adirondacks.

JAY GOULD.—Gone fishing in the Catskills.

CHARLES STEWART PARNELL.—Gone shooting in Ireland.

AND A MILLION MORE, bright with the glare of notoriety or hid in the gloom of obscurity.—Been fishing, gone fishing, or going fishing.

The Sportsman Tourist.

THE SINGING MOUSE.—I.

BY E. HOUGH.

THIS is my room. I live here. These are my things. My friends come here sometimes, such as I have left. They are welcome, I know, to anything I have.

That's my coat. Worn a little. That's my gun. Yes, the barrels are a trifle brown. That's my rifle. The stock was broken in the Rockies. Yes, I know the tip of the old rod is broken. And there's a guide or so gone. And the silk is fraying in the lashings. And the silver cord on the hand-piece is loose. The silver cord will loosen and break some day. Ay, in the very best of men—rods, I mean.

There's the table. There aren't any keys. Here's the fire. You are welcome, I know, to anything there is here. . . .

But the Singing Mouse won't come out; not while you are here. Funny about that! But after you have gone, after the fire has burned down and the room is all still—usually near midnight, as I sit and muse alone over the dead fire—why, then the Singing Mouse comes out and asks for its bit of bread; and then it folds its tiny paws and sits up, and turning its bright red eye upon me, half in power and half in beseeching, as of some fading memory of the past—why, it sings, I tell you; it sings! And I listen. . . . . And the fire blazes up. . . . . The walls are rich in art now. . . . . My rod is new and trig now. . . . . There is work, but there is no worry now, ... I am rich, rich! I have the Singing Mouse. And so strange, so wondrous, so real are the things it sings; so Lorelei-like is the song, so sweeter than that of any siren's; so broad and fine are the countries; so strong and true are the friendships; so brave and kind are the men I meet—so beautiful the whole world of the Singing Mouse, that when it is over, and in a chill I start up, I hardly can bear the shrinking in of the walls, and the grayness of the once red fire, and my gold turned to earthenware, and my pictures turned to splotches. In my hand everything I touch feels awkward; a pen—now let me laugh, let me chuckle a little at that! A pen—to talk of that! If one could use it while he was in the land of the Singing Mouse—then it might do. I think the pens there are not of wood and iron, stiff things of torture to reader and writer. I have a notion—though I have not examined the pens there—that they are made from plumes of an angel's crest; and that they could talk, and say things which would make you and me ashamed and afraid.

* * * * * * *

The Singing Mouse came out. Saintly and sweetly and with wondrous clearness it began an old, old song I first heard long ago. And as it sang, back with red electric thrill came the fine blood of youth, and beat in pulse with the song:

"When all the world is young, lad,
And all the trees are green,
And every goose a swan, lad,
And every lass a queen.
Then, hey! for boot and saddle, lad,
And round the world away!
Young blood must have its course, lad,
And every dog his day!"

And young blood began its course anew. Booted and spurred, into the saddle again! Face toward the West! And off for round the world away!

"There are green fields in Thrace," sighs the gladiator as he dies. And here were green fields in the land before us. Only these were the inimitable and illimitable fields of Nature. Sheets and waves and billows and tumbles of green; oceans unswam, continents untracked, of thousandfold green. Then, on beyond, the gray, the gray-brown, the purple-gray of the higher plains; nearer than that, a broad slash of great golden yellow, a band of the sturdy prairie sunflowers; and nearer than that, swimming on the surface of the mysterious wave which constantly passes but is never past on the prairies, bright red roses, and strong larkspur, and quaint sweet Williams—away from the woods, here; and at the bottom of this ever-shifting sea, jewels in God's best blue enamel. You can't buy it in the windows. Where shall they send for it? Why, to the land of the unswam sea.

* * * * * * *

A little higher and stronger piped the compelling melody; why here are the mountains! God bless them! Nay, brother, God has blessed them; blessed them with unbounded calm, with boundless strength, with unspeakable peace. You can take your troubles to the mountains. If you are Pueblo, Aztec, you can select some big mountain and pray to it, as its top shows the red sentience of the oncoming day. You can take your troubles to the sea; but the sea has troubles of its own, and frets. There is commerce on the sea, and the people who live near it are fretful, greedy, grasping. The mountains have no troubles; they have no commerce. The dwellers of the mountains are calm and unfretted.

And on the broad shoulders of the mountains once more was cast the burden of the young man's troubles, and once more he walked deep into the peace of the big hills. And the mountains smiled not, neither wept, but gravely and kindly folded over, about, behind, the gray mantle of the cañon walls, and locked fast doors of adamant against all following, and swept a pitying hand of shadow, and breathed that wondrous unsyllabled voice of comfort which any mountain goer knows. *Ai!* the goodness of such strength! Up by the clean snow; over the big rocks; by the lace-work stream where the trout are—why, it's all come again! That was the clink made by a passing deer. That was the touch of a green balsam—smell it, now! And there comes the snow, folding down the top, and there is the crash of the thunder; and this is the rush of the rain, and this is the warm yellow sun over it all—O, Singing Mouse, Singing Mouse! this is just dangerous.

* * * * * * * * * *

Back again now, by some impulse of the dog which hasn't had any day. It is winter now, I remember, and I am walking by the shore of the great Inland Seas. There is snow on the ground, the trees look black in contrast as you gaze up from the beach against the high bank. It is cold. It is dark. There is a shiver in the air. There are icicles in the sky. Something flying through the trees, but silent as if it came out of a grave. I have been walking, I know. I have walked a million miles, and I'm tired. My legs are stiff, and my legging has frozen fast to my overshoe; I remember that. And so I sit down—right here, you know—and look out over the lake—just over there, you see. The ice reaches out from the shore into the lake a long way; and it is covered with snow, and looks white. I can follow that white glimmer in a long, long curve to the right—twenty miles or more, maybe. Yes, it is cold. But what's that out there? Say, what's that? It is setting all the long white curve of ice afire, that's what it's doing! It's throwing down hammered silver in a broad path out there on the water, that's what it's doing! Ripples? Those aren't ripples! That's silver! There'll be angels walking out there on that pathway before long! That isn't the moon coming up over the lake! It's the swinging open, by some careless angel's mischance, of the door of the White City of Rest.

Singing Mouse, Singing Mouse, thou art cruel!

How old, how stiff a man climbed up the steep bank! There were white fields. In the distance a dog barked. Away across the fields a bright and cheery light shone out from a window, and as the moon rose higher, it showed the house which held the light. It wasn't a very big house, but, someway, I wanted that house, I remember, was that my home? Did I own it? No; I didn't own it. Home—what's that? I tell you, my legging was frozen fast to my overshoe, and my legs were stiff. You fool, you're getting—But what's that now? It's the rest of the old song. Listen to it, will you?

"When all the world is old, lad,
And all the trees are brown,
And all the sports are stale, lad,
And all the wheels run down,
Creep home and take your place there,
The sick and maimed among,
God grant you find one face there,
You loved when you were young."

* * * * * * * *

The light in the little house went out. I think it was a happy home. So may yours be always. But I think the Singing Mouse will come and live with me. And—O, Singing Mouse, is it time—is it time to awaken?

Natural History.

THE "FANTAIL" DEER.

Editor Forest and Stream:

I am deeply interested by an article by "Gazelle" about the fantailed deer found in Montana, published in the FOREST AND STREAM of the 16th inst. He describes it from memory as having a tail eight inches wide and fifteen or more inches long. It is small in size, with short legs and with crumpled horns turning inward. Now this description excites our interest but fails to satisfy it. If careful measurements had been taken and noted at the time it would have been more satisfactory, no doubt, to the author as well as to the rest of us.

The Virginia deer has a longer tail than any of the other of our species, though they differ very widely in this regard. No other known species ever has a tail 15in. long. The strong probability is that this fantailed deer is a variety of the Virginia deer, which has by far the widest distribution of any deer in North America, if not in the world.

The Virginia deer in the far Northwest, where they have been called the long-tailed deer, or the white-tailed deer further south in the Rocky Mountains, have peculiar characteristics, as indicated by those appelations; and some naturalists have classed them as a distinct species and given them the name of *Cervus lucurus*, but they are simply the Virginia deer with tails no longer and no whiter than specimens often met with in this latitude, although the average there may have longer and whiter tails than here.

In this respect the tails of this deer are more varient than any other of their members. In one respect their tails are remarkably uniform, that is in their shape or form—they are always flat and of a lanceolate form—broad at the base and tapering at the end. They are all white beneath and colored on top. This top color is very varient, from a black to a light tawny or gray shade, but always colored to some extent. When observed from behind, usually, if not always, the white beneath extends beyond the dark on top so that it appears to have a white border. Measurements of the tail with its colorings of one of these fan-tailed deer would be very interesting.

But more than all would the skin of the outside of a hindleg from the hock to the dew claws be useful. In this would be the metatarsal gland, which would with almost a certainty declare the species. That gland is located a little above the middle of the cannon bone. The gland is covered by long reversed hairs. When these hairs are open the gland is revealed. It is say an inch long on a deer of an ordinary size; it is entirely naked or without hairs. It is covered with a black scale, which is the condensed exudation from the gland, which may be peeled off, revealing the flesh-colored surface beneath. This gland is first surrounded with a narrow border of white hairs, say a sixth of an inch broad at the skin, and the balance of the tuft of reversed hairs is of the color of the leg beyond. The Virginia deer in Montana, as a rule, have more white on them than in lower latitudes, and I once had a specimen from there in my collection, all of whose legs were entirely white from the hock and knee down. In that specimen the white border about this gland would not be seen. If the leg is of the ordinary color, so as to show the narrow white band around the metatarsal gland, it certainly declares it to be a *Cervus virginianus*, for I have never seen nor heard of any other deer in North America that has this white border around this gland and no specimen of this deer without it.

If "Gazelle" is so fortunate as to get and send you a head of this variety of deer, examine, first of all, whether the tines are projected from the beam posteriorly. If they are, it would be strong evidence that it is a variety of the Virginia deer, for in all of our other deer the tines are projected anteriorly, or at least not distinctly posteriorly. Abnormal tines are sometimes found on all of our species. I speak of normal formations. There are many others, indeed, of species of our deer which I cannot now stop to point out, for which I must refer you to "The Antelope and Deer of America," published by your company.

JOHN DEAN CATON.

CHICAGO, Aug. 21.

THE SCIURIDÆ.

II.—PRAIRIE DOGS.

NEXT in order in the family *Sciuridæ* we come to the genus *Cynomys*, containing our now two well-known species of prairie marmots, or "barking squirrels" recognized everywhere as prairie dogs, which latter name has undoubtedly saved the life of many hundreds of them, for I am convinced that did settlers and others fully realize that they were a squirrel and not a "dog," many and many a one would have been roasted on a spit over the pioneer's and hunter's camp-fire, for I assure you they are capital eating. Many a cowboy have I heard express himself to the effect that he would have to be pretty hard up before they could induce him to eat dog's meat; while on the other hand I have seen Sioux Indians deliberately shoot a prairie marmot when an antelope stood within easy range. The men of that tribe are as a rule very partial to their meat. Probably no species of our typically western mammals are more universally and better known than these; their habits, their "towns" and all about them seem to have had a peculiar fascination for the popular mind, and account after account has been published and circulated about them. For nearly eight years I have had the opportunity of studying them, all the way from Dakota to Mexico, and even to-day I cannot pass through one of their "towns" without having my interest in its inhabitants thoroughly awakened.

It is now no longer the prevailing notion that these engaging little animals do not drink water, but on the contrary, however they may get it, they are very fond of it, and in reality must have it frequently. A prairie marmot which I have as a pet drinks water freely three or four times a day, and if deprived of it, shows the effect at once and drinks double the amount the very next time he gets a chance. This little fellow I bought from a Navajo Indian, when it hardly had its eyes open; at present he is full grown and hibernating in a burrow which he dug in the cellar last October. I emphasize the word hibernating because many still believe that these animals do not do so. Even here at Fort Wingate and I presume in other parts of New Mexico, these animals become torpid just as soon as the first cold snap strikes them, and repair to their burrows for hibernation again, until the return of warm weather lures them out. There is a large "prairie dog town" not a mile from where I sit at present, and one may pass through it every day during the cold weather and when snow covers the ground, and not a track of this little animal can be found anywhere in the vicinity. By the middle of next month (February), however, they will begin to show themselves.

There is another old story now nearly entirely exploded about them; I refer to the happy family of the "prairie dog," the prairie owl and the rattlesnake, all living in harmony in the same burrow. Of course they do nothing of the kind, but the marmots have to put up with these owls and snakes as best they can, precisely as we, in our large towns and communities, have to put up with our owls and snakes in human form—meeting and passing men every day of our lives whom perhaps we know well to be sneak-thieves and cut-throats. It is said upon good authority that prairie marmots will even desert the burrow in which a big "rattler" enters, and even, if small cobblestones be handy in the neighborhood of the entrance, deliberately seal it up with them, so that the snake cannot get out, and must starve to death.

Elsewhere I believe I have published something in reference to the diet of these animals; as to their ravenous appetite for raw meat; but I would like to add here in the present connection, that the fact of the matter is, that these animals, when kept as pets, are truly omnivorous, and will eat anything that is offered to them. The one I have, referred to in a former paragraph, will not only eat raw meat with avidity, but raw oysters, fried oysters, jelly, raisins, drink soup, milk, and indeed stops short at nothing. One day while conversing with an officer of the army, and my pet was sitting up on his haunches near us in the front yard, the officer started to light a cigarette, but the thing would not draw, and with a toss he threw it to the "prairie dog," which to our surprise picked it up and ate the whole of it, tobacco, paper and all! We watched for a violent attack of nausea, may be the death of the greedy little scamp—but no, neither of these events followed its rash act, and two hours afterward my pet was going about as lively as ever. He became, before he took to ground for the winter, one of the fattest things I ever beheld, there being a longitudinal, median crease of no mean depth the whole length of his back; he was a perfect mass of fat. There is a great difference in different individuals of this species when raised thus from the very young. Some grow up gentle and amusing pets, which never offer to bite one, even on great provocation; while others are never tame, and as they grow older become wild and vicious, constantly try to get away, and bite you whenever they can.

I have never had this species breed in confinement, though they will do so without any trouble, and the female will give birth to as many as seven young at a time; the usual number, however, is four or five.

It will be noted that in the U. S. National Museum "List" the "short-tailed prairie dog" (*C. gunnisonii*) is not taken up as a species, and up to the present moment I have never had pointed out to me the supposed differences that separated this variety from *C. columbianus*. I have before me the "Pacific Railroad Report" (1859), which gives a figure of this "short-tailed" species, and the description, but so far as I can see the animal thus described in no way differs from, as I say, the *C. columbianus*. Of this latter species I have shot many a one where the tail was "less than one-sixth the length of the body." It would interest me to know the present history of this rejected species.

Structurally the prairie marmots present us with much that is interesting; anatomically, of course, they are organized upon the sciurine plan, and have shallow cheek-pouches, which connects them more intimately with the

Fig. 1. Fig. 2.

Fig. 1.—An Arizona Squirrel (*S. arizonensis*); adult male; about one-third life size. Drawn from nature by the author.

Fig. 2.—Western Barking Squirrel or Marmot (*C. columbianus*); adult male; rather less than one-half life size. Drawn from nature by the author, aided by photohraphs taken by him from living specimens.

spermophiles than it does with the true tree squirrels. A careful examination of the entire structure of this species is desirable, as it is in most of our common types, which as a rule morphologists are rather inclined to overlook. Very often something is discovered which the external appearance of the animal would hardly lead us to suspect.

Coming next to the genus *Tamias*, we are met by a long array of chipmunks, almost every region of our country being supplied with its peculiar geographical race, which races are now considered to be distinct species. Every reader of FOREST AND STREAM is so familiar with the habits of our common little Eastern chipmunk (*T. striatus*) as to render it unnecessary for me to dwell upon them here, and in No. 22 of this journal for last year, June 22, 1887, I gave an account of the Gila chipmunk, which account was illustrated by a life-size drawing of a male of that species. Although the habits of these several ground squirrels are essentially much alike, the various species differ from each other, both in appearance and size in no small degree. For instance, I find a specimen of Townsend's chipmunk (*T. a. townsendi*) to be nearly seven inches long, being of a dusky brown above, and a light gray beneath, and with five black stripes down its back, while a specimen of the Rocky Mountain chipmunk (*T. a. quadrivittatus*), being an inch less in size, is white beneath and reddish brown above, with five dark brown stripes down its back, and four lighter ones occupying the lateral intervals among the former. This last named species is said to be more given to running up trees when alarmed than is the habit of these ground squirrels generally.

Mr. Oldfield Thomas, F. Z. S. of the British Museum, in speaking of the characters of the genus *Tamias*, says that they "are characterized by the possession of internal cheek pouches, and by their style of coloration, all being ornamented on the back with alternate bands of light and dark color. Their skulls are slenderer and lighter than those of the true squirrels, from which they differ in several unimportant details." There is a chipmunk closely resembling our Eastern one (*T. striatus*), which occurs in northern Europe and Asia, that by some authors is considered to be identical with our own, but it is undoubtedly a distinct species. Its habits are much the same as are those of the other members of the genus.

When one is still-hunting for heavy game in the forests, these little animals are frequently a source of great annoyance, as by their shrill cry they give warning to all game within hearing.

Following the ground squirrels we have their nearest allies, the spermophiles, constituting the genus *Spermophilus*. These little marmot-like squirrels are familiarly known in many parts of the country as "gophers."

Some twenty years or more ago I collected a small series of the Eastern striped spermophile in central Wisconsin, where I found them quite abundant, more especially in old barren fields, where sometimes their burrows were so numerous as almost to resemble a miniature "prairie dog town." The people there only know them by the name of "gopher," and I herewith present a drawing of mine of one of these very engaging little animals.

We derive the term *Spermophilus* from the Greek words, *sperma*, a seed, and *phileo*, to love, indicating the principal food of these species, the several kinds of grain or seeds they may obtain in the localities where they occur. As in the genus *Tamias*, the spermophiles possess quite ample cheek-pouches, which they pack full of grain to carry to their subterranean storehouses, when the season arrives for them to lay up for the winter months. Every one of our sixteen or seventeen species of this genus make wonderfully interesting little pets when they are caught and tamed; they are very gentle, active and as sprightly as most squirrels. They are all fossorial mammals like the marmots, but appear much oftener outside their burrows than do those animals, having many of the traits of the prairie barking squirrels (*Cynomys*); popping down their holes whenever one approaches, and chipping away at a great rate, but soon making their appearance again to further inspect the cause of their alarm.

Parry's spermophile (*S. e. empetra*) is an exceedingly interesting representative of the genus, being found across the continent of northern North America. They are frequently observed in communities, with their burrows quite close together, usually chosen on some sandy hillock where loose rocks of all sizes are in the immediate vicinity. As with the Alpine marmot of Europe, they have the habit of posting a sentinel to warn "the town" of danger, as upon the approach of man, or when a soaring bird of prey comes in sight. This species hibernates during the winter months.

A popular writer in zoölogy thus alludes to Richardson's spermophile, describing it as being "yellowish gray or black; beneath pale grayish orange. The ears are very short; the body short and thick, being only nine inches and a quarter long; the eyes are large, the legs short, the tail bushy. It resembles the squirrels, but is less active in its movements and less elegant in its attitudes. It inhabits the sandy prairies along the branches of the Saskatchewan River, and the Rocky Mountains from latitude 45° to 38°. The burrows are usually situated on some sandy hummock; the earth scooped out is formed into a little mound on which the animal sits, so that he may overlook the surrounding group and reconnoiter before he ventures to make an excursion. Four or five live in a burrow; they appear to hibernate; they feed on young buds in spring, and tender herbaceous plants in summer, and in winter on leguminous plants and the seeds of grassss." Some of these species of spermophiles are banded somewhat as in the chipmunks, others are faintly spotted, the former being represented by such forms as Harris's and Douglass's spermophiles, the latter by Townsend's. They vary not a little both in size and general appearance, some of them partaking more of the squirrel type, while others more nearly resemble such forms as *Cynomys* and the marmots. Nearly all live in communities, and all but the southern species hibernate in winter. All possess cheek-pouches, and all give vent to a peculiar cry when either angry or alarmed. In Europe and western Asia this genus is represented by a number of allied forms, prominent among which may be mentioned the well-known souslik of Bohemia, Ireland and some parts of Hungary.

We next pass to a brief discussion of one of the most interesting groups of rodent mammals to be found in the entire world's fauna. I refer to the genus *Sciurus*, the true squirrels. Even within the faunal limits of the United States we have as many as thirteen well-defined species of these animals, including such elegant forms as *S. fossor* and *S. aberti*. Of the latter I gave a life-size head in a former issue of FOREST AND STREAM (No. 22, June 23, 1887) and a short account of its habits. So well known is the general appearance of one of these animals, and so familiar to us all are their characteristic habits, that such topics hardly need to be touched upon here. Far less widely is it known, however, that none of the true squirrels are found in Madagascar or the Australian region, while many specimens of wonderfully beautiful forms and colors are indigenous to the tropics and temperate zones of both continents. When we come to the coasts of Malabar and other parts of the Oriental region, we find types of the most strikingly developed sciurine forms. In some parts of Africa and Borneo, squirre's are found which are no bigger than mice, as *S. soricinus* of the latter island and *S. minutus* of the former country. Then the Malabar squirrel is as large as a cat, with a bright red color above, set off by intense black, while the nether parts are brilliant yellow.

So eminent an authority as Mr. Oldfield Thomas, on this group of rodents says in speaking of the species of the Malayan region, that nearly all of them are "brilliantly marked, and many are ornamented with variously colored longitudinal stripes along their bodies. One of the commonest and best known of the striped species is the little Indian palm squirrel (*S. palmarum*) which in large numbers runs about every Indian village. Another Oriental species (*S. caniceps*) presents almost the only known instance among mammals of the temporary assumption during the breeding season of a distinctly ornamental coat, corresponding to the breeding plumage of birds. For the greater part of the year the animal is of a uniform gray color, but about December its back becomes a brilliant orange-yellow, which lasts until about March, when it is again replaced by gray."

As gaudy and as handsome as these elegant foreigners may be, indeed the Malabar squirrel is as striking as any macaw that ever screamed through a Brazilian forest, yet where do we find more impressive animal beauty, more native grace, more winning traits, surpassing agility, than we do in our own Northern gray squirrel or Abert's squirrel, or that jolly little rogue "the squirrel" of Europe? In my estimation we have no handsomer animal in our fauna than the black variety of Abert's squirrel, and the black form of our common gray squirrel is a splendid creature.

Of all the habits of the gray squirrel none are so extraordinary as the migrations they at certain periods undertake. Multitudes of them on these occasions, guided by some common consent, flock together from all the regions

roundabout, and regardless of rivers, roadways, or any other impediment, pass in a body across the country, often for miles, to other forests and other scenes, where they again disperse. The districts passed over by this host are absolutely stripped of everything that a squirrel will consume. While many of them are drowned in their attempts to swim broad rivers, and they are preyed upon night and day by hawks, owls, foxes, lynxes and other enemies, still on they march to their destination. To complete such an inexplicable crusade they should march into the sea, as do the lemmings of northern Europe.

One writer in describing such a migration says that "these creatures, on coming to the water, after some little hesitation and running to and fro, launch into the waves, and paddle across as they may. They are poor swimmers, sink deep, and advance with considerable difficulty. In October, 1833, as I was descending the Ohio in a steamboat, one of these migrations—though not remarkable for the extent of the numbers—was in progress. When we were in the region of Marietta, we saw hundreds—perhaps thousands—of these creatures in the water, making for the southern or Kentucky shore. In all cases we only saw the nose above water; many were dead and drifting down the stream; many were on the Ohio side, hesitating upon the banks, where, sad to relate, were men and boys with clubs ready to dispatch them. Similar accounts have often been given; the march of far greater numbers has often been witnessed, but the cause of such strange movements is hidden in mystery."

A group of Flying Squirrels (*Sciuropterus volucella hudsonius*). Reduced. Taken from the Standard Natural History.

Although I have never seen it suggested elsewhere, I sometimes wonder whether or no this may not be an inherited impulse on the part of these gray squirrels and lemmings, in some way associated with what animals may have perforce have had to undertake during the glacial period in former periods of the earth's geologic revolutions.

Eastern Striped Spermophile (*S. tridecimlineatus tridecimlineatus*); adult male (reduced). Drawn by the author.

In a former contribution to these columns, I gave a brief sketch of the Arizona squirrel (*S. arizonensis*), wherein I remarked that sometimes a glance at one of this species as it scrambles up the rocks in New Mexican cañons, leaves the impression on your mind that its coat is of an ochrish color all over. This is not always the case, and I am inclined to think that a certain amount of seasonal change in color of pelage is taken on in this squirrel. Be this as it may, I have since shot specimens in the same locality, and have a skin before me, made up by my eldest son, which is a bright steel gray for the under parts, except the throat and forelimbs, which are of a light grayish brown. Above, the posterior moiety of the dorsum is conspicuously grizzled gray, tawny and black, due to the barred markings of the individual hairs with these colors, while anteriorly, where the hair is much shorter and finer, this grizzling still obtains, but is not nearly so pronounced. It has a long and handsome tail, where again we find each hair to be barred, sometimes four-barred, often six, but usually being grayish white as it leaves the skin, then black, then grayish white again, black once more, and finally terminating with a grayish white tip (See Fig. 1). The ears of this squirrel are not tufted, but its whiskers are long and pronounced. In the paper I referred to above, I gave a few notes on its habits, and would add here, that although it is not nearly as vivacious an animal as the Eastern gray squirrel, nor as restless perhaps, yet its study is full of interest for the naturalist, who is quite content to take nature as he finds her, beautiful as she is under all aspects, view her endless stores as we may.

Chickarees or red squirrels I have shot, skinned, collected and studied ever since I could, or did, raise a single-barreled, muzzleloading, cherry-stocked shotgun to my shoulder, but I have little worthy of record in the way of facts that would be new to my present readers, in addition to those numerous published accounts which I have before me of these, the most saucy of all the small squirrels that enliven our forests and glens. Several years ago when collecting in southern Louisiana, Professor Baird wrote me that either Audubon or Bachman had described a small red squirrel for that region, "red all over" that had never since been captured, and he was very desirous of securing specimens if possible. But all my own efforts to find it failed, and a reward outstanding for nearly a year of twenty-five dollars for each specimen, also failed, and I am quite sure no such variety exists there. Still, Louisianian forests are broad, and they may yet yield us specimens which we hardly think exist there, and the fauna of that State needs working, in some particulars, more than does the fauna of Montana.

Fox squirrels I have both shot and eaten, but reckon their meat poor, and their chase pales as compared with an old-fashioned gray squirrel hunt of a frosty October morning in the hickory woods of northern Connecticut.

I have many notes on other squirrels, but find that my space is nearly expended, so will reserve them for the future, as I have just a word to say here about flying squirrels.

Viewed as a whole, the flying squirrels of all parts of the world are divided by systematists into two genera, *Pteromys* and *Sciuropterus*. *Pteromys* includes a number of large and brilliantly colored flying squirrels of Asia, Java and some of the off-lying islands of the East Indies. They are as yet but slightly known, being nocturnal in their habits, and confined to regions not thoroughly explored. This genus has the dermal-parachute very perfectly developed, and by its aid the animal can make flying leaps of fifty yards or more, wherein it at first descends by a long gentle curve from the point of starting to rise by a far more abrupt curve to alight upon the point toward which it directed itself.

Turning to our "List" we find that the U. S. National Museum quotes but two flying squirrels for this country, a northern and a southern form, both included in the genus *Sciuropterus*. These beautiful little creatures stand among the gentlest and most winning of our smaller animals; they are easily tamed, too, and become the fondest of pets. With their large, prominent, dark eyes, their chubby noses, broad silky tails, exquisitely soft pelts, and their lively and engaging attitudes—one never tires of studying them or admiring the loveliness of their forms. These little creatures are quite nocturnal in their habits, remaining curled up during the glare of the day in their nests, usually situated in the hollow of some great tree in the forest. Here, too, they bring forth their young, the period of gestation being about one month, and as many as half a dozen may be produced at a birth. In the North they rarely have more than a litter a year, while in the Southern States two is the rule. These squirrels, structurally, are quite nearly related to the true squirrels, there being some differences in their dentition, and the possession of the lateral integumental folds forming their volant parachutes.

The time to study the habits of this species in nature is shortly before nighttall, when one must repair to the woods where they are known to exist and occur in abundance. You will not have long to wait, for very soon a dozen or more will be seen sailing through the air about and above you, leaving the uppermost limbs of one tree to glide down, spread out like a little mat of hair, to alight on the side of the trunk of another tree, some distance beyond where you stand. They seem to be actually alive with the sport and to be enjoying themselves to a great extent. Flying squirrels seem to subsist on pretty much the same kind of food as the tree squirrels, being very partial to beechnuts, large seeds and chestnuts.

About a year ago, Mr. H. K. Coale, of Chicago, kindly presented me with an embryo of this species, and in it I found the lateral skin folds which constitute its wings notably well developed, yet the tender little mite had not the sign of a hair anywhere on its body. This specimen is now in the collection of Prof. W. K. Parker, F.R.S., of London, to whom I presented it, for the skull it contained as material illustrating that part of the skeleton in an interesting representative of the Rodentia.

In my next paper I trust to take up other forms from other families of rodents, to illustrate the "List" we have under consideration. In the present essay, my own notes extending over many years, have been materially refreshed and amplified by my perusal of some of the able papers in the Proceedings of the Zoölogical Society of London, especially those contributed by Dr. Günther, F.R.S.; by Prof. W. H. Flower's scientific works and memoirs; by the writings on the *Sciuridæ*, by Mr. Oldfield Thomas, F. Z.S., of the British Museum; by the contributions of Baird and others in the Pacific Railroad Reports (1859); by some very excellent popular works in Goodrich's Natural History, collected from reliable sources; and by the morphological and systematic works of Huxley, Prof. Parker, both father and sons, Mivart, Claus, Gegenbaur, Owen, and a number of others.

R. W. Shufeldt, M.D., C.Z.S.

FRESH-WATER MUSSELS.

Editor Forest and Stream:

I can now report upon the edibility of the *Unio* or mussel of our fresh-water streams. A youth of sixteen, known to me by the name of *Davidius giganteus huldeus* (because he is of gigantic size and greatly in love with a maiden named Huldah), having heard that I was much interested in these creatures, went into the Clear Fork a few days ago and captured sixty-two specimens, which he brought me in a sack. As you may well judge, with such a gift I felt like a lucky man. I put thirty-eight in a pond for safe keeping, and sent twenty-four to a lady living near, who had desired to cook the first I should get.

She made a soup of them in this manner: The two dozen animals, taken from their shells, were put in three pints of clear water and stewed fifteen minutes, with a little salt. Then three pints of fresh milk were added; whereupon crackers were put in, and a lump of fresh, sweet butter. All these were stewed together about ten minutes, and the soup then served smoking hot on the table. There rose a savor from it which was very pleasing and appetizing, insomuch that a couple of my backwoods friends who sat near could not refrain from smacking their lips. On going into the soup I found it delicious. I never ate any that was better, and I doubt, indeed, if I ever ate any that was half so good. It was rich, well-flavored, and without any objectionable quality. A little lemon juice squeezed into each plate added to the charm of it. Therefore, I write mussel soup down on my list as a most choice viand; shall eat a good deal of it in the future, and greatly deplore my ill-luck in having lost so much good eating in the past through ignorance. Had I only known it, how blest I might have been! Howbeit, I hope I have many good years yet, and there are lots of mussels in the creeks.

One of my friends who partook of the feast said that the soup under the treatment it had from the cook, would have been fine even if stones had been boiled in it instead of mussels. That may be, but the excellent flavor of the mussels would not have been there.

As for the mussels themselves, they were tough indeed, in part. *Davidius giganteus huldeus*, who also ate of the feast, has a pair of jaws which I should take to be fully as strong as a boar's, but they failed to grind the mussel; he stating that the more he chawed the bigger it grew! To me it seemed like chewing a thick piece of new India rubber; at least a part of each mussel did.

However, the lady who made the soup, hearing so much complaint of the toughness of the animals, was provoked to say that she believed she would overcome their obstinacy and would do so next time. Therefore, the remaining thirty-eight were turned over to her. At dinner next day, mussel soup was again served, but I fished it in vain for the mussels. But in due time a dish heaping-full of fried mussels, brown and crisp, were placed on the table, looking exceedingly nice under sprigs of parsley and sliced lemon. On tasting I found they were good, and that their toughness had indeed been conquered. She had first made soup of them, then dipped them in batter and fried them in butter. They were not as good as oysters, but still they were passably good; not such as one would greatly hanker for, but such as he would eat occasionally with much relish, and generally with comfort. Treated right they are no mean dish.

It is likely that the mussels of the Clear Fork of the Brazos are the best in the world, and not to be compared with those on which "Awahsoose" has been accustomed to be fed. In the frigid zones they are probably but miserable and stunted dwarfs. In the Clear Fork they are great, fat and joyous fellows. I have the right valve of one before me on my table now which is 11in. long and over 6 in width. The animal taken out of it would have filled an ordinary breakfast plate. The tough part of them is their foot. I presume the mussel of the frigid zones is all foot. Here his foot is delicate for a monster of so great size. The lady who cooked them for me says if you want a really elegant dish, as tender as the oyster, cut the foot off and throw it away. The water of the Clear Fork is slightly saline; just enough so to give you a taste of it without being disagreeable. Some of the ladies about here pound the pearly inside of the unio—aragonite—into powder, and say it makes an incomparable starch for fine dresses.

Carrondale, Tex.

A Dining Car Line to the Pacific Coast.—The completion of the all rail line between Portland, Ore., and San Francisco gives the Pacific coast traveler an opportunity to patronize the famous Dining Car and Yellowstone Park Line, the Northern Pacific Railroad. The sportsman traveling in the West, whether a lover of the rod or gun, naturally seeks this road, penetrating as it does the lake park region of Minnesota, and running through the valleys of such trout streams as the Yellowstone, Gallatin, Hell Gate, Clark's Fork, Spokane, Yakima and Green Rivers, for a distance of fully 1,500 miles, as well as lying immediately contiguous to the finest hunting grounds in the United States, viz., The Big Horn, Snowy Belt, Bitter Root, Coeur D'Alene and Cascade Mountains. Information in regard to this region can be obtained by addressing Charles S. Fee, General Passenger and Ticket Agent, N.R. R., P. St. Paul, Minn.—*Adv.*

Price $1.50. Shore Birds. Price 50 cents. Woodcraft. By "Nessmuk." Price $1. Trajectories of Hunting Rifles. Price 50 cents. The Still-Hunter. By T. S. Van Dyke. Price $2.

IN "GALLOGER" DAYS.

AMONG the many charming features of the FOREST AND STREAM, one is especially pleasing, and that is the stirring of memory by the relation of varied experiences by its large corps of contributors. There is hardly a number that does not see the mind running back in enjoyable retrospect through years whose shadows are well relieved by sunny gleams here and there, telling of pleasant rambles through forests, by the side of placid lake or dancing stream, on the mountain crest or in the quiet vale, where nature, undespoiled by ruthless man, reigned in all her glory and beauty.

Such experiences for the most of us are gone forever except in memory, and now when we take the gun or rod and go afield, we wander in treeless fields, by the side of fishless streams, whose beds are dry for months of the year or swollen bankful, only to subside as rapidly as they filled. The summer sun glares on unshaded farms, through whose brown pastures roam cattle in vain search of herbage, from which to swell their shrinking udders, and the honest milkman makes up at the pump what he lacks from the cow. The woods are for the most part mockeries, being second or fifth growth, where thick and straight grow the saplings and the lonesome chipmunk "chips" from some decaying stump, sole remnant of the giant of centuries gone. Or if some lost partridge whirs away, risking his neck among the myriad spindles, it only serves to make the silence and gloom more intense. If, perchance, a respectable woods is found, the work of the cordwood chopper, whose brush, chips and piles of wood show his tracks; by the rail-splitter, whose stacks of chestnut rails tell of butts and wedge; and by the bark peeler, whose hemlock victims lie stripped of their clothing, whitening in the sun that for long years kissed only their lofty tops. The squirrels that once made their nests in their huge trunks and feasted yearly on the toothsome nuts, knowing no lack and fattening on plenty, have seen with wondering eyes and fluttering hearts their homes despoiled, and now deprived of these and sustenance are gone, whither, no one can tell. But gone they are, and it is only at rare intervals that one sees a black or gray squirrel, and the glimpse is apt to be very brief.

But I set out to say that the articles on the ancient weapon called the Galloger carbine, in recent numbers of the FOREST AND STREAM, bring vividly to mind some charming rambles and very pleasant experiences among the peaks and cañons of the Rocky Mountains years ago, when, desirous of killing some game and having no gun of my own, I was kindly armed by my friend Joe Mills, of Georgetown, Colorado, with one of the above-named shooting irons. It was a scandalous old piece, having several coatings of rust on the outside and no telling how much in the bore, and had a general air of abandonment on account of general worthlessness. Joe had no idea when he put it into my hands and rummaged around among the shelves of canned goods, powder, fuse and other miners' delicacies with which the store was furnished, for a few mildewed cartridges to match the fusee, that it would ever be of any use to me or danger to any game; but his goodness of heart was appreciated just the same.

I hadn't much confidence in it myself, but felt better with something in my hands that would make a noise, and that was the gun that could do it. It shot a ball about as large as a grapeshot or small apple, and if the cap was a good one, and the tube was clear, and the vent in the cartridge wasn't stopped up, and you could pull the trigger off, the thing would generally "go Gallagher," and anything within range would surely get a big hole through it, if it was holeable. I was confident that if I ever ran against "Old Ephr'm" or a "lion," and could hold the gun on him when it went off, his hide was mine and his carcass food for the ravens.

Many a happy day have I spent alone among the rocks and whispering pines listening and watching for deer and sheep, camping at night on the mountainside with a huge rock at my back, a companionable fire in front and the ever ready and generally harmless cannon by my side, while I munched my bread and meat, watching the dancing lights and shadows among the encircling trees, wondering how it would seem and what I should do if suddenly from out the darkness beyond the flame two burning orbs should glow as the huge cat noiselessly swung his tail and contemplated the strange scene before him. But 'twas never necessary to do anything, and I never knew how it would seem, for my camp was never molested nor my sleep disturbed except when my feet and the fire grew too intimate, or the wind rising during the night roared among the branches, driving sleep before it. How delicious was the sense of loneliness!

Yet there was no lack of company, and best of all, one's own choosing, the very choicest kind. The "everlasting hills" were on every hand, "mute but eloquent," a perpetual study and soothing delight. Rank upon rank they rose into the heavens, "majestic monarchs of the clouds," looking afar with bared brows on a scene of surpassing grandeur. The magnificent forest encompassed you with its myriad companions, stately and graceful, always attendant with benignant arms and gentle whisperings. Deep down between precipitous mountain sides the limpid stream sang to its trout as it laved the glistening rocks, chafing but always cheerful. The coney from his lookout on the rockslide, barked a sharp warning to his fellows and incontinently dove for security. The pine squirrel chattered and scolded on his perch as he watched the intruder and tore apart the cone for his lunch, raining the hulls in a careless shower through the branches beneath, and the startled grouse with his companion rose to a convenient limb and faded motionless into the foliage. As I sit amid nature in her tamer aspects, diverted in great measure of her wondrous beauty, I long for

> The rocks and the rills,
> The vales and the hills,

where I can once more know truly what it is to be alone.

Once I followed the track of a lion nearly all day in a three-inch snow as he wandered apparently aimlessly about, zigzagging here and there over the mountain, away from a mining camp, to which he had made a nocturnal visit in search of something appetizing. He was accustomed to make such a visit occasionally, and sometimes woke the boys as he nosed around the cabin, which he could do with impunity, as the boys had no gun.

Several times that day I thought there was about to be trouble, as the track entered a patch or mat of dwarfed wind-swept spruce, flattened and spread out as though a Titan had put his huge foot on the top of a tree and crushed it downward, as a silk hat is crushed when some one accidentally sits on it. It would have made a capital resting place for the beast I thought; but it was not to his taste, as the track always reappeared on the further side; and finally, when it took a shoot down a clear two-mile slope toward a creek and wooded mountainside beyond, I gave up the quest, and it being well along in the afternoon, I turned back on Republican Mountain and proceeded to see what the Galloger would do toward obliterating a grouse's head and neck, for I had noted several during the afternoon and succeeded in beheading several and wasting a number of cartridges in so doing. I have thought more than once since that day that it was—

> O, well for the Galloger man,
> As he prowled around that day,
> That he got no glimpse of the tawny cat,
> Nor brought that feline to bay.

Speaking of rifles reminds me of the FOREST AND STREAM'S report of the Schuetzen shoot at Newark recently and the editorial thereon. I suppose all those sharpshooters whose sole idea of a gun is that it is to shoot at a target with, and who haven't the faintest expectation or desire to test their skill in the field, are privileged to turn themselves inside out, other end to, tie themselves into a knot, or shoot backward between their legs at a mark, and so secure medals and badges to ornament their brave bosoms with, but their positions have always seemed supremely ridiculous to me. It is difficult for me to conceive of a rifle as a piece of mechanism to be used solely for amusement at a target. Such it is in the minds and hands of thousands. But even so, why not stand up like a man and shoot it? Of course there are thousands of shooters, as evidenced by the attitudes they assume, who are so rickety and lacking in control of their nerves and muscles that they are unable to stand forth in a manly way and shoot a rifle, and for such, of course, harness and portable rests and the hip racket are indispensable. I don't see why such unreliable persons are permitted to have guns. If a man is not able to hold a gun alone, he had better "shoot the gun." Just imagine a hunter after moose or deer in a tussocky bog, flopping on his back in the mush, while he makes a sawbuck of his knees, ties his left arm around his neck and waits for the scared game to get in front of his telescopic wind-gauged artillery. Or picture to yourself a hunter wallowing on the ground on his stomach, shooting squirrels out of a hickory tree, or carrying lumber around with him for a rest while he hunts antelope, or caroming on his hip with his elbow as though he had colic while he shoots a charging grizzly. There is a just pride, an exhilaration, a feeling of confidence that comes from being able to hit the center, standing up like a man, with a rifle at "arm's length," in true off-hand style, that these hip and other rest men have no consciousness of. There is manly grace in such a position worthy of emulation and admiration, and whenever it becomes necessary to use a gun in an emergency such a marksman will "get there," while these other fellows are considering what particular style of rest they will choose for the occasion. Away with this rest business! It ought to be relegated to the shades of flint locks and percussion caps. O. O. S.

THE STORY OF THE WHITE BUFFALO.

MACDONALD'S POINT, N. B., May 8.—*Editor Forest and Stream*: Of the many New Brunswickers who acted on the advice of Horace Greeley, perhaps none was more widely and favorably known, after seven years of Western life, than Edgar Hendry, late editor of the Helena (Mont.) *Independent*. By his death last December New Brunswick lost one of her most gifted sons, and Montana an able journalist. His description in his paper of two trips through the National Park did much to awaken interest in that land of wonders; and he had picked up a vast fund of interesting stories of travel, sport and adventure, from persons whom chance threw in his way.

In boyhood our homes were only a few miles apart. Later, we "began life" in the same business. During '78 and '79 we were members of a select circle of five young men, who met every Saturday evening for mutual improvement and amusement. Hendry, Editor Belyea, of the Grant county *Herald*, Minnesota, and Dr. Macdonald, now of St. John, N. B., were the talent, life, and a large fraction of the brains of the party. Those were good times—long to be remembered by at least one.

It is therefore with pleasure, not unmixed with sadness, that I read the anecdotes, sketches of Western character and travels in the note books which, with his other personal effects, came home to his friends. In one of them I find the inclosed, which I thought perhaps you would like to publish. I have copied it word for word, save that it shows every sign of having been hastily written, and the writing is not always plain, there may be a letter or two wrong in some of the proper names.

L. I. FLOWER.

STORY OF THE WHITE BUFFALO.

(Told the writer by W. O. Gabriel.)

The color of the American bison shades from a dark brown to almost a black and any specimen, varying markedly from that, may be considered an accidental freak of nature, like a white crow or black fox. Once a yellowish or very light brown buffalo, (sometimes erroneously spoken of as white) was killed in the Yellowstone region. I also heard of a "white" buffalo among the taxidermists' display in the Dakota department of the New Orleans Exposition; but those who have seen it say it was far from that color. I have myself seen several of the fine "silk" robes, as they are called from the peculiar soft character of the hair; but the only white buffalo of which I ever heard any authentic account, is the one that forms the subject of this sketch.

In the summer of 1875 I was with a great hunting party of Yanktonnais Teton-Sioux. The band consisted of about 200 lodges under Medicine Bear. Besides myself, the white men with them were John Freeman, Charlie Ingram and Frank Beatty, plainsmen; and Dr. Southworth of Rochester, N. Y., then Agency physician at Old Fort Peck. We were on Frenchman's Creek, a tributary of the Milk River, about eighty miles north of the Missouri and fifteen or twenty from the Canadian boundary. We were following the main herd of buffalo. We had stopped six hours that morning to let it pass, and a great body of the animals stretched out over the prairie.

With the herd was this white buffalo, which I afterward found to be a cow about four years old, and of a uniform color, even to her hoofs and horns. I had dismissed the stories previously told by the Indians concerning the creature as mythical tales and Indian folk lore. They had seen her with the herd the year before. They said she was always surrounded by other buffaloes, which protected her from the hunters; that she was very fleet, and had been known to mysteriously disappear. They thought her a spirit—one of the many embodiments of good or evil, which the Indians see in all material objects, for the peculiarities of which they cannot account. As they had been unsuccessful when they saw her first, she was therefore an evil spirit—"bad medicine," and as such must be killed, and an order to that effect had long since gone forth.

When we reached the bounds of the hunt that morning the bucks or soldier band had broken into the herd, and in every direction were riding down stragglers, detaching small bands from the struggling mass, whooping, shouting and spearing. My companions and I were watching the scene when an exclamation from a squaw near us drew our attention to the white buffalo. She had been seen more quickly by the hunters than by us, and a number of the most active of the young bucks, anxious to display their prowess, though perhaps secretly half afraid, were in hot pursuit. We were so much interested that we started in the direction of the race. As one after another of the pursuers dropped out to join the main hunt, it looked as if it would be another victory for the "spirit," for the stories of her fleetness had not been exaggerated to the usual extent. But one young buck, after a hard ride, succeeded in coming up with her and killing her. His peculiar whoop drew the attention of the chiefs of the hunt, and they, followed by the entire band, hastened to him.

We were among the first to arrive. The successful hunter had dismounted and stood silent and stolid by the side of the carcass, which he had been careful not to touch. After a brief council the chiefs stripped him of all arms and clothing, except his breech-cloth, took his horse from him and directed him to walk back to the home camp on the Missouri. This was intended as a sort of penance to appease the wrath of a possibly offended god. The cow was then skinned and the hide fastened to the top of an upright pole, as an offering to the Sun—the supreme god of the Sioux. Then began a sort of religious ceremony, in the form of a dance around the pole, accompanied by their peculiar chant or prayer, which continued the remainder of the day and extended far into the night. They asked for plenty of grass on which buffalo feed, success against their enemies, good luck in their hunts, and a number of minor favors. After the outfit moved on in the direction of the herd, runners were regularly sent back to see that the sacrifice was in its place on the pole.

We whites, whose feelings of reverence for the robe reached a no more advanced stage than admiration, thought it a pity that it should stay there to be ruined by the elements. We had a great desire to "reduce it to possession." One night, around the campfire on the outskirts of the Indian encampment, we discussed how it could be done. Among the Sioux was a young French half-breed, who was a little less superstitious than the rest. We knew that his absence from the camp would not be likely to be noticed. A little mild ridicule of his fears stirred his pride, and the promise of a bright new eagle stimulated his cupidity to such an extent that he rode back and got the skin, with which he stole into our camp and delivered it a little after midnight. We kept it carefully concealed among our blankets during the rest of our stay with the savages.

The next courier who went back to look after the offering, reported it gone. The Indians immediately concluded that the Sun had taken it, and expressed much satisfaction at the good omen. The remarkable success of the continued hunt fixed the belief that the removal of the robe by the sun was a signal mark of favor, and that the killing of the cow had brought good luck. The young man who killed it was amply rewarded at the close of the hunt.

Dr. Southworth took the skin to Fort Peck and tanned it with chemicals. Soon after he returned to his home in the East, and took the robe along with him. There was a rumor that he presented it to some institution in Philadelphia; but I have never since had any reliable news either of him or of the hide of one of the most beautiful and singular animals I ever saw.

J. E. HENDRY.

GAME IN TEXAS.—Fort Worth, Aug. 16.—*Editor Forest and Stream:* Chickens are scarce, though by taking a run up the Denver to the borders of the Nation one can get good sport. Turkeys are very numerous—the largest crop for years. Quail very abundant. They all left last year or died from the droughts, but are here in large quantities now, and good sport is expected next month. Plovers are very plentiful. By the way, I noticed a long article in your columns from some old woman in Decatur, Texas, last spring, not very complimentary to me or to my feelings, about plover and slaughtering them by the million, etc. All bosh from beginning to end. I suppose she got the idea from some advertisements of mine in the papers. I conclude she was an old woman. It might have been some fellow jealous of my trade in sporting goods here, which I am glad to say is out and out the best in this section. If you or any friends ever think of visiting Texas for a hunt I shall take particular pains in putting you on all the good things, though you did turn me round in your paper last spring for shooting plover.—ARTHUR STERT.

THE WOODCHUCK CREEK COUNTRY.

I.—FLUID.

THE rain came pouring down with that peculiar persistency, pertinacity and perverseness which characterizes a Michigan November rain. It began at daylight and appeared to have made all proper arrangements to stay with us. The clouds were a dull leaden mass of moisture, and hung so low that it seemed easy enough to touch them with a trout rod; but as we had no trout rod handy, we will simply call this an estimate. This rain was especially unwelcome, unexpected and exasperating. We had reached the "Castle" two days previously, with dogs, guns, provisions and other necessaries for a two-weeks' campaign among the game in a section of country which, so far as exclusiveness, quantity and quality were concerned, was to us almost as good as a private preserve.

I have no desire to mislead the confiding reader by the allusion to a castle. Strictly speaking, it was not a castle. So if you have already any fanciful ideas of

"* * * battlements gloomy and high,
That tower aloft to the frightful sky,"

with moats, port-cullis, drawbridge and such like, it would be well enough to heave them overboard at once. It was a good, plain, substantial log cabin. It was said by Sysiphus, one of our party, to be unique and primitive—aboriginal, so to speak. Sysiphus is a great admirer of the unique and primitive. The style of architecture was strictly colonial, and as it may serve a useful purpose to others who may have an inclination to erect a substantial "forest house," a sketch of the "Castle" is given with its surroundings. It will be observed that the chimney is on the outside of the structure, and is of liberal capacity. There are two outside doors large enough for a horse to haul in logs 6ft. long and 2ft. diameter or more, in front of the fireplace, which are rolled into that spacious receptacle, three making a very respectable pile, with small wood to fill the interstices, and when fairly blazing the effect is in the highest degree cheering and comforting. Well, as may be imagined, the blazing hearth possessed a charm on this dismal, damp, disgusting November morning, which in some degree reconciled us to the depressing features of the landscape as viewed from the south window of the Castle.

A rendition of Hamlet, with the part of the Prince of Denmark omitted, would be no less complete than would these chronicles minus the tangible and all pervading presence of Aaron, the portly, sable genius who presided over the domestic arrangements of the Castle. These domestic arrangements were as broad in their comprehension as a political platform, but more conscientiously adhered to by the *chef*.

Aaron was once a cook and house servant, in the days of slavery, on the plantation of a wealthy Virginia planter, and what he did not know about concocting toothsome dishes and consoling draughts and all the little tricks and mysteries of comforts, elegancies and luxuries that contribute to the gratification of physical wants and fancies, wasn't worth making any effort to learn. He was a natural born genius in his line, and when it came to providing a dinner for four with a very limited larder to draw upon, he surpassed himself, broke the records every time. This is mentioned incidentally as a tribute to the moral and intellectual worth of a person who makes no claim, desires no notoriety, and seeks no higher place than serving his esteemed employers at $50 per month and found.

On this eventful morning Aaron had a decidedly moody party to cater for, and the troubled and anxious expression upon his ebony countenance fully declared that he appreciated that fact. The roaring, blazing, crackling fireplace was about the only cheerful feature to be seen.

"Well, gent'men, dis 'ere's a right smart narsty mornin' and no mistake; rains like it wa'n't never goin' to stop. Howsomever, we got to have bre'kfust all de same, and what do ye feel like hevin'? We've got some venison steaks and some of dat dar bird pie left over from yist'day and some partridges ready to go on the gridi'on."

The Doctor was the first who found tongue to answer. "I want no game, Aaron, nothing that will remind me that I am here on a hunting expedition. Nothing that will destroy the illusion that I am not in a Bengal jungle with a six month's rain on hand, and a tiger or two to every square yard of territory outside of this house. No, give us some corn bread and bacon, strong coffee without sugar or any of that condensed abomination."

"Better have a little stewed boa constrictor or fried monkey with it, to carry out your ideas most perfectly. You can have your bacon, but, Aaron, for me, let it be a bountiful allowance of that excellent bird pie warmed up, and a couple of piping hot baked potatoes."

"How about the buckwheat cakes, Aaron?"

"All right, sah, the kitchen is as dry as a squirrel's nest, and dat batter de best what we haint neber had yet."

"Well," sagely remarked Sysiphus, "I see no immediate danger to be apprehended so far as eatables are to be considered, and guess we'll worry through till noon, rain or no rain."

In half an hour we were sitting around the "hospitable board," discussing as good a breakfast as falls to the lot of most humans, and a very contented quartette we were, much to the relief of old Aaron.

The wind was fast rising, and the fury with which it ever and anon dashed the rain against the windows was calculated to make us duly thankful that we were so comfortably housed. The waves on the lake, which washed the gravelly beach a hundred feet distant, were ornamented with fluffy white-plumed caps, and threw the spray far up on the bushes that grew along the margin.

It was a wild day, and the prospect was that there remained for us a choice between a day of inactive stupidity in doors, or a battle with the elements without in a doubtful pursuit of game. An hour was passed before the great fire with cigars and pipes. The previous day's sport was gone over, the big buck inspected for the fourth or fifth time, the small game counted up, the guns and other accoutrements of the chase examined and declared "the best and cleanest outfit ever turned out of a shop," the dogs fed and duly cared for and all was in order and satisfactory.

The General stood looking gloomily out of the window, down which the water poured in torrents. Presently he turned to the others with a fierce expression of determination to do something rash, "Yes sir, I'm going to take a sly shot at those turkeys down on the creek; I don't propose to stay housed up all day because it happens to rain a little."

"Will you listen to that, now?" exclaimed Sisyphus; "turkeys on such a day as this; quail, too, perhaps, and grouse, eh!"

"No, I don't want anything to-day but turkey, except, perhaps, I may bring in a couple of wild geese."

Amid the derisive comments of the rest of the party, the General proceeded to don his waterproof shooting suit, and when he was fully equipped, he looked so thoroughly comfortable and able to encounter any amount of moisture that more than one of us secretly wished that he were going along too, but it would manifestly never do to acknowledge any such weakness. So off went the General at a swinging gait with his faithful Don at his heels.

The stable was but a few steps distant, and a brief visit thereto revealed the fact that Aaron had performed his duties in that department perfectly; the pair of bays were comfortably and contentedly enjoying themselves, their sleek coats shining like satin, eloquent proof of the darkey's vigorous grooming. Fleck, Rose and Maj. were stretched out in the straw and everything bore an aspect of perfect neatness and contentment.

Inside the Castle to-day at least was a place to be sought, and as the chronicler entered, the Doctor was heard say:

"Speaking of those antlers on our big buck, what do you suppose becomes of the horns shed by deer?" "What becomes of 'em? Why they—they 're—er, that is I suppose they sort of—disappear," replied Sisyphus. "Well, that is about as clear an idea as I thought you would evolve out of that gigantic brain of yours. Chronic, what do you say? Have you ever thought about the subject sufficiently to hazard an opinion?"

"I always supposed that the Indians gathered 'em up and sold 'em to cutlery manufacturers for knife handles."

"Oh, you did always suppose so, eh? Well, that does you great credit, as a naturalist, and I wonder you never published a book on the subject. I'll bet old Aaron can give a better solution of the question than either of you. Aaron, do you know what becomes of deer's horns when they shed them?"

"Wall, d'know, Doctor; of course dere's a heap o' dif'nt 'pinions 'bout that question, and likely 's not aint comin' widin forty rows of apple trees of de right one; but when I lib'd in Alabama, when I was a young man, on old Kernel Compton's place, he was consid'able of a feller for huntin', had stacks of dogs, a dozen horses, an' guns—wall, I neber seen no gun shop what hed so many—an' I used to go 'long wid him to de woods pooty often; an' I mos' freq'ently found horns layin' roun', an' I uster take notice dat dey was gnawed an' chawed all ober, an' like some beasteses had been tryin' for to eat 'em up—mebby wolves. De horns was shed down dere 'long in Feberay an' Murch, an' I kinder watched to see what in de Ole Harry it was dat eaten de horns. I watch 'bout ev'ry day, an' bimeby I seen a couple o' gophers goin' for 'em, an' bimeby I seen some of dem pesky wood rats a-nibblin' at 'em, an' den it was the squirrels carryin' off great big chunks; an' 'twant long before the hull horn was done gone, for sure."

"That is just the explanation exactly, Old Ebony. And I have observed the same facts in Mississippi and also Virginia, and my theory is, that wherever deer abound and their horns are not found, the regions will be ascertained to be well stocked with squirrels, field mice, wood rats, gophers and other industrious rodents."

"An' I took notis of anuder ting," added Aaron, "an' dat was, dat dese 'ere horns is cast off at a time o' year when de stock of pervishins was runnin' mighty short wid these little varmints, and dere wan't nothin' wuth speakin' about dat was big enough of the new crap, an' so dey jes go for dem horns like they was mos' starved."

"Very philosophical and very observing, my sable friend; you ought to belong to some scientific association."

"Like Brudder Gardner's Lime Kiln Club, for instance," put in Sysyphus.

"No, sar, I don't want no truck wid dat whitewash brigade. I waded froo one 'er two ob dem perceedin's ob de meetin's, an' I 'klar to grashus it mos' turned my stummick."

"Hark!" ejaculated the Doctor, "wasn't that the General's gun? There's another!" as the sharp reports rang out plainly in the direction of the creek, and in less than five minutes two more broke the damp stillness.

"I believe the fellow's pluck and bad taste in going out in such weather are to have a reward; if he has got a turkey he will be home before dinner time."

"Which will be in an hour. Aaron, betake yourself to the culinary department and employ your time from now on as usefully as you may in preparing for us the wherewith to fight the pangs of these formidable appetites, and great shall be thy reward."

And the cloud disappeared with a grin that threatened to let the top of his head fall off. KEUKA.

KANSAS PRAIRIE CHICKENS.—Prairie chickens will soon be ripe, and after Sept. 1 can be lawfully killed. Many people, however, seem either to be in ignorance of the existing game laws or wilfully violate them. Reports have been received at this office from observing gentlemen who have been traveling through our State, that our game birds are now being rapidly exterminated by the ruthless slaughter that is now going on, and many instances are given where sporting vandals from the large Eastern cities are now in this State shooting prairie chickens in defiance of the laws of Kansas. In most other States game laws are rigidly enforced and highly beneficial. Action should be taken where these violations occur, and they will be encouraged by a large number of sporting men who thoroughly enjoy the lawful hunt, and who earnestly hope for the enforcement of our laws.—*Leavenworth Times, Aug. 19.*

OF SAM LOVEL'S CAMPS, as published in the FOREST AND STREAM, the Whitewater (Wis.) *Register*, Aug. 9, said: "There are many passages equalling the best descriptive touches of Thoreau, and there is a humor and an absence of personal self-consciousness and a close recognition and discernment of nature's very heart, which that well-famed writer fails to show.

RAIL SHOOTING is now in order at Port Elizabeth, N. J., Mauricetown, N. J., and Chester, Pa.

THE CONNECTICUT ASSOCIATION.

Editor Forest and Stream:

The persons interested in the formation of the Connecticut Association of Farmers and Sportsmen for the Protection of Game and Fish met in Hartford, and completed organization by the election of the following officers: President, A. C. Collins, of Hartford; Secretary, Allen Willey, of Hartford; Treasurer, Dr. N. W. Holcomb, of Simsbury. At the next meeting eight directors will be elected one from each county in the State. F. B. B.

Editor Forest and Stream:

I see that that Mr. A. C. Collins and a few selected gentlemen are trying to combine the interests of the farmers and city sportsmen. I suppose I am what I have noticed some of your correspondents call a "pot-hunter." Surely I am not overburdened with this world's goods; I am not guilty of shooting birds on the ground without giving them a chance for life. I have sold game to defray expense of my powder and shot, and with a great many of my farmer friends I claim to be a sportsman. I am a farmer's son, and as much interested (and perhaps more) in the protection of game as our would-be city friends.

There is a very foolish game law in force here which deprives me from sending a brace of partridges to the editor of this valuable paper or any other friend without danger of arrest from Mr. C.'s special agents, if he gets them; but city sportsmen from many cities outside this State come here, shoot large strings of our game and take it out of the State. It is not a fair deal. I claim if partridges are plentiful on my farm, and I can shoot them, I should be allowed to sell or give them away if I wish, in any place that I wish, the same as I would trout from my private fish pond. Unless there is a revision of our game laws I think very few farmers will join the association of "farmers and sportsmen."

ONE OF THE FARMERS.

WESTCHESTER, Conn.

Herbert Banning, of Lyme, Conn., who is a crack shot with gun or rifle, hunts for the market, says the Hartford *Globe*. Game Warden Collins successfully prosecuted him last year for a violation of the game laws. A friend of Banning gave a *Globe* reporter Banning's record of game slaughtered for two years past:

1886. Partridges, 180; quail, 495; woodcock, 75.
1887. Partridges, 176; quail, 480; woodcock, 80.

Banning kept no account of rabbits or squirrels, and made no special mention of a few foxes, coons and musk-rats that he had killed in the two years, or of several hundred meadow hens. Banning's biggest shooting last year was one day when he brought in thirty-eight head, six partridges and thirty-two quail. Banning in one day shot seventeen partridges. He hunts from October 1, or a little before, until it is too cold to handle a gun. Besides his wholesale slaughter of game, he finds time to attend chicken and turkey shoots, and if he thinks it advisable can bring a chicken or turkey every time he shoots.

NEW ENGLAND GAME.

BY the time these lines reach the eye of the readers of the FOREST AND STREAM the open season for game bird shooting in the New England States will have begun. The 1st of September brings that welcome day in Maine, New Hampshire, Vermont and Massachusetts, and it is very natural for the enthusiastic gunner to desire to know what the prospects are. In the first place the reports are rather favorable for grouse shooting in the most of the States named above. Those who have been watching the woods in Massachusetts with considerable thoroughness say that the broods of ruffed grou e are more plenty than usual. One gentleman, living in Reading, says that there are three broods of these game birds this year where there was one last. He has several broods located against the opening day, and that day being Saturday, he will try his dogs in earnest. He has several times taken his dogs out for an imaginary hunt of late—a hunt to him imaginary, because he has not allowed himself to take a gun, so long as the law was on, but perhaps more real to the dogs, since he has them trained so that they will point an old partridge in a very few moments any day. This gentleman claims that there is a good deal of dissatisfaction expressed concerning the change that has put the opening season on woodcock forward to Sept. 1. The feeling among the gunners is that these birds are all flown before the first of September, and that it is impossible to get any as late as that, unless it be occasionally a flight bird. The enforcing of the law is regarded as simply giving away the birds reared here to the more fortunate gunner in the South, where the birds winter. The gentleman mentioned above thinks that the feeling is pretty general to break the law on woodcock, for the above reason, while all are willing to wait for the proper season to kill partridges. In this case all the gunners fair alike, and fairness is a jewel with them.

Certainly from some parts of Maine the prospects for grouse shooting are fully up to the average. It was the remark of a well-known gunner from Cumberland county to me the other day that he had been out but very little this year himself, but that he had heard from the boys, who are very close observers, that the broods of grouse are plenty and also unusually large. The same report comes from Androscoggin county. From Oxford county, in the southern part, I have not heard except from one young man, a great lover of the gun. His idea is that partridges are not as plenty as last year. In the northern part of that county, especially in the Lake region, it is doubtful if grouse are as plenty as last year. The frequenters of the Lake Road, from Andover to the South Arm, a noted grouse ground, say that they have not seen half as many partridges as last year. On the other hand, I saw a gentleman the other day who is familiar with the roads into the lakes, via Phillips and Rangeley, and he claims that grouse are unusually plenty. A Boston sportsman, who takes one or two outings in New Hampshire with dog and gun each year, says that the best information he can get goes to show him that the birds are quite plenty in the neighborhoods he visits. But the entire New England States involve a vast territory for grouse shooting, and from the meager reports at hand it is fair to conclude that the shooting this fall is to be as good as last at least. But a good deal of this shooting is to be done by the local gunners. Each year the interest in this sport has been growing among the farmers' boys, and they are likely soon to take about all there is of it. As a rule these boys are law-abiding. They are willing

to wait till the first of September, for the birds are then better grown, and by a sort of common consent they have agreed among themselves to see that the law is observed.

For duck shooting along the New England sea coast the prospects are not very bright, and the same is generally true of duck shooting in the inland ponds and lakes. Spring shooting has about ruined this sort of sport, and now the spring shooting itself has fallen off very seriously. Constant and terrible shooting at these birds at every turn, both spring and fall, has either in a great measure destroyed them or it has forced them to seek other shores, where they are not so continually harrassed with the gun. I hear it mentioned by fishermen and others acquainted with the shores along the Nova Scotia coast and even down to the shores of the North Bay that these birds are growing more plenty in those regions, and it is possible that they are driven away from the New England coast, even as a feeding ground, to say nothing of breeding.

It is certain that in the inland lakes in Maine, once very populous with several breeds of ducks and divers, these birds have been greatly thinned out within a few years. This is probably the direct result of the carrying of guns into Maine, even in June and July, by fishermen and tourists. The feeling with the men and boys who thus take guns is, contrary to law, to kill everything at sight. Why, even the great northern divers, once so common in the celebrated trout lakes of Maine, are actually becoming rather scarce, the result of popping away at every loon that comes in sight. It is a shame that these noble birds should thus be driven out of those waters and perhaps out of existence. It is certain that one of the charms of the annual visit to the lakes will be over when the loon's night cry is no longer to be heard. But the carrying of guns into the game regions by mere tourists and vacationists in the months when all the game is under the protection of the law is something that should not be tolerated. Why, I stepped on board the Portland steamer the other evening in order to be with a brother a few minutes longer before the steamer sailed, and we counted six men and boys, each with gun or rifle cases and generally with fish rod cases. Now, they were taking these guns into Maine during the close season, for the boat was not to stop till she reached Portland, in that State. For what purpose were the guns? Why should they he allowed? Well, there are to be some changes in the game laws of that State next winter. SPECIAL.

A NORTHERN FOWLING GROUND.—Seal Island, which was lately advertised as for sale by its owner, Mr. Arthur Tousaint, of Quebec, is a well-known marine sporting ground of which Canadian sportsmen have frequently spoken to us. Lying in the St. Lawrence River, about forty-five miles below Quebec, in the direct course of migrating wildfowl, it is, we are told, a great resort for black and other ducks, as well as for geese and brant. Beach birds and snipe are found there in almost countless numbers. The owner states that last autumn in twenty minutes he killed forty-five brant; and the duck shooting is said to be unsurpassed in Northern waters. Seal Island was described at length in our issue of Dec. 16, 1886, by Mr. J. M. Le Moine, of Quebec.

COMPLETING THE WORK OF EXTERMINATION.—Laurel, Mont., Aug. 15.—*Editor Forest and Stream:* On July 30 a large buffalo bull came within 200yds. of one of Dilworth's "round up" camps on Rock Creek, about thirty-miles south of the Yellowstone. The cowboys became possessed of the killing fever at once, and two of these gentry proceeded to run the "remnant" down, which they succeeded in doing, finishing him with revolver shots after a ride of ten miles. They secured only the head, he being in poor condition and hide comparatively worthless.—M. W. C.

SHARKS CHEW TOBACCO.

I WAS a passenger on the steamship "City of Dallas" bound from Truocillo in Central America to New Orleans, and we had anchored over night opposite the town of Ceiba on the Spanish Main, for the purpose of taking on a cargo of bananas. We lay about half a mile off shore, right on the open coast, and the light of the early morning spread before us a beautiful panorama of hills and mountains in the background, with dark green verdure of tropical forest extending from mountain top down to water's edge. Out of doors it was cool and pleasant, with only a faint, soft breeze stirring the morning air. Not a ripple was on the surface of the water, and the usual swell of ocean was barely perceptible on deck. Down below in the saloon and staterooms we had passed a warm night of uneasy slumber, listening to the monotonous slow creaking and rattling of doors, and racks, and tiller chains. The vessel lay head to wind, and not a breath of air stole its way below, so that break of day found me, and many others like myself, lounging and promenading under the awnings on the upper deck. The water beneath us was clear as crystal, and the anchor and chain with some thirty fathoms out could be vaguely seen on the bottom. The songs of birds and cries of wild parrots on shore were distinctly heard on the ship, and likewise we could hear the shouts of natives loading their lighters with bananas. This stillness is usual on the coast during the dry season, but it seldom lasts later than 10 o'clock in the morning, when the sea breeze comes in and kicks up a big sea, and blows until midnight.

With the prospect before us of nothing to do to pass the dull time of waiting, I hailed with delight the proposal to angle over the vessel's side. I blamed my short-sightedness for not having foreseen this possibility and providing myself with proper tackle, but I made a mental resolve then and there always to carry some with me hereafter. To rectify this omission I cast around to borrow a fishing line from some one, and tried Tony the dudish mate, and Jim the handsome purser, but without success, and wound up by borrowing a primitive hook and line from Mary the pretty little stewardess. It reminded me forcibly of boyhood days—a chunk of lead and two hooks at the end of a knotted cotton line. However, I was as well pleased at its performance as if it had been one of Conroy's, for the way I snatched in the snappers from out of the wet was a caution. By the time I had fixed up my line in proper shape several other parties had also rigged themselves out with nondescript tackle, and were conjecturing where the bait was to come from, but did not have long to wait, for Joe the steward soon came along with several salt mackerel, and the white belly of that fish made excellent cut bait for our purposes.

In a short while we had caught a nice mess of small snappers, from ten to twenty inches long, and were having a real good time. We had not fished very long, however, before a large shark put in an appearance, and stopped our sport. We first knew of his presence by his greedily snapping off the fish from one of my neighbors' lines, having followed it up from the bottom. He executed this performance several times, and then the snappers stopped biting entirely. Not even a nibble could we get, so we hauled in our lines and commenced to pay our attention to the shark. He was a monstrous fellow, about fifteen feet long, and he kept swimming round and round the vessel, sometimes on top the water and sometimes away down deep below us, but always at a respectful distance. His reddish brown body could be plainly seen through the clear transparent green water, and you may be sure he was the cynosure of all eyes. A great many plans for his capture were discussed, but none appeared practicable within our limited means. The engineer suggested that if the shark would give him time, he would forge a proper hook and chain, but as the shark was unable to give him a guarantee he abandoned the project.

While we were thus talking, I noticed the native pilot every now and then throwing overboard one of the snappers we had so recently caught, and as the current carried it a little distance clear of the vessel the shark would gobble it down, and in fact the intervals were so regular that Mr. Shark seemed impatient when the regularity was broken by a little delay. We saw that our pilot had some ultimate object in view, and it drew our attention to him. I had not particularly noticed the man before this, more than that he was a fine looking, dark-skinned man, with good European features, but evidently of mixed blood. As he was born and raised on this coast, and had probably served his pilot's apprenticeship as a fisherman, he knew how to deal with his inveterate foe, the shark. Anyhow, we all thought so, and gave him credit for it, and although he did not say much, he went about it in a very earnest manner. After having thrown over ten small fish, he selected another a little larger than the others, and with a stick of wood rammed a roll of chewing tobacco, nearly as large as a man's hand, down into its belly, and pressed its throat together again. He held it ready to throw, and as the shark came up, anxiously looking for his fish, he tossed it to him and as it barely touched the water the shark turned over on its back and sucked it in. The shark then swam off as usual to the side of the vessel, and then below us, and was apparently rising again in expectation of another fish when the nicotine commenced its work. His struggles and contortions were terrible to behold, as he darted here and there in a blind rage, and vomiting blood, but as he swam, or was carried by the current away from us, his struggling grew gradually less, until it ceased altogether. The tobacco had killed him. L.

MONTMORENCY BEAVER MEADOWS.

THE Province of Quebec is renowned for its fishing rivers and lakes, and in the country surrounding the old rock-built city of Quebec it is especially so. Within a few miles of this city are the famed Falls of Montmorency, above which are the Natural Steps, as glorious a picnic ground as there is in the world. There one may recline in secluded spots, surrounded by ferns and raspberry bushes, and whip from the cold rushing stream the brightest of speckled trout. In that stream are dark and silent pools, eddying current and fierce rushing rapids. On one side are the nature-worked steps, barricaded by a forest of pines and maples, whose odor is most entrancing; on the other side is a grand precipice, which rises from the deep waters perpendicularly to a height of over two hundred feet, and at whose summit are lofty trees bending down over the rushing waters. Shrubs and bushes climb up the wall of the precipice and add a beauty to the otherwise bare wall. Ascending the river the scenery grows wilder and grander, and the follower of Izaak Walton can enjoy his full of pleasure in whipping from the stream the brook trout which swarm this river. The wild flowers and ferns which deck its banks are the most varied and beautiful which delight the eye, while the formation of the rocks remind one of terraces and castelated mansions. But it is not particularly this portion of the Montmorency River I wish to describe. Further up, about fifteen miles, are what are called the Beaver Meadows, which extend for about ten miles.

To reach this place the sportsman should, in leaving the city of Quebec, go down by the Beauport road and take the road to the left when nearly opposite the parish church and drive for about fifteen miles, where he can be accommodated with board by Mr. Doherty in a house located on the river's bank. The fishing there is entirely free, and trout of three and four pounds can be taken in abundance. A few miles above this place is the club house of the Montmorency Fish and Game Club, whose president is also president of the Quebec Fish and Game Protection Club. The club house is a fine building of about 90ft. frontage, and affords accommodation to about twenty guests. The club is composed mostly of gentlemen belonging to Quebec, but strangers are admitted and those who are fond of using the rod and fly should endeavor to participate in the advantages which the club possesses. Further up the river is another club house affording the same accommodation, and both these houses are owned by the same club. For twenty miles the right of fishing at the Beaver Meadows is owned by this club, whose members have the right to grant to strangers the privilege of fishing in these rich waters.

One may speak or write of the fishing in the Lake St. John district, but in the Beaver Meadows of the upper waters of the Montmorency there are finer and larger trout caught. Fish of from 3 to 4lbs. are caught continually, while often others ranging from 6 to 8lbs. are taken. The fly mostly used is the red-hackle in the morning, fancy flies in the day time, and moths in the evening. There are grand stretches of still water where the sportsman may take his bark canoe and from it whip the stream from early morning till twilight, and not without success, for at the Beaver Meadows fish are plentiful, and the sportsmen will never return with an empty basket.

Entering the Montmorency is the Snow River, also abounding with trout and under control of the club, as also are many of the lakes within their fishing rights. Snow River and the many lakes are gold mines to the fisherman. The club houses are not far distant and tents and camp equipage are easily procurable, provided you are a member of the club or a friend of a member. One can therefore ever be certain of accommodation and comfort when proceeding on a fishing excursion to the Beaver Meadows, and one can also be certain of a good catch of not only many trout, but large trout; trout which will exercise the expertest anglers, for there are such rapids in the river Montmorency that when a trout gets the fly in his mouth and takes a rush down the stream, the sportsman must be a good swimmer and an agile follower of his prey. I will merely say that at the Beaver Meadows, on the Montmorency River, one can have more pleasure and catch more and larger trout than elsewhere in the Province of Quebec.

It is not only the trout fishing that forms the attractions of the Beaver Meadows. It is certainly within an easy distance of the city of Quebec, and roads and bridges have been built to render access thereto very easy. But leaving aside the piscatorial attractions of these upper waters of the Montmorency, there is such scenery as rarely excites the wonder and admiration of the tourist. The river Montmorency comes down from the Laurentian Mountains and these grand ranges of hills look down upon the rushing stream from tree-clad heights. Here and there the bare rocks rise up like castles or battlements, again like terraced halls. Up from the dark and whirling river rise precipices, rise mountains, clothed with the verdure of earth. The maple and the pine overhang the mountains and the wild ash ever keeps watch, and who can describe the wild dashing river, the raging torrents and rapids, the whirlpools and placid nooks and silent water. One cannot conceive a more glorious river for either the sportsman or the tourist than this portion of the Montmorency, and it is ever a favorite resort of not only Quebecers, but of Americans who visit the city. And it is no matter of surprise, for no grander river exists than the Montmorency, whose waters rush over the precipice at its mouth and so well known as the Montmorency Falls. T. J. O.

QUEBEC, Canada.

LARGE MASKINONGE IN CANADA.

IN our last issue we gave an account of some extraordinary catches of maskinonge taken in Mosquito Bay, as recorded by the *Intelligencer*, of Bellville, Ont. The excitement at Bellville over the discovery of many large fish of this species seems to be at fever heat and men who never fished before are buying tackle and hurrying to the bay. The same paper, in a later issue, says:

"Every novice seems to have luck. The fish have been loafing around for years for their city friends to call, and now that they are recognized have no hesitation in 'catching on.' In the evening about dark groups of persons can be seen making their way to the boat landing. Then the triumphant procession sets in. First comes Mr. Herbert Greaves. There is the end of a stick projecting over his shoulder in front, the other end is on the shoulder of a friend behind. They walk with a military tread, keeping excellent time. Between them wiggles and wobbles a 25-pound masko. Then Mr. H. A. Hodgson emerges from a crowd of admirers. He had a stick over his shoulder and looked several inches taller. His is an 18-pounder, with a small pike to keep it company. Shortly after Mr. A. N. Reid emerged from the gathering gloom with a large basket on his arm and a stick on his shoulder; he has been there before, and is getting accustomed to it. It took some time to recognize the party who supported the rear end of the stick who was overshadowed by a ten cent straw hat, as the popular Alderman of St. John's Ward, Toronto, Mr. A. H. Gilbert. It was a beauty, one that would crowd 50lbs. into a close corner. The darkness gathered, but the steady tread of happy pilgrims homeward bound kept up until, when all had passed, the score card showed a record of ten big fish.

"The successful ones are A. H. Hodgson, Herbert Greaves, H. A. Gilbert, Carl Strom, E. Guss Porter, J. C. Keith, L. H. Henderson, Mr. Lockett, and a son of D. R. Leavens, who caught two. Ald. Porter heads the list with the largest fish captured so far, viz.: 37½lbs. It measured 4ft. 4½in. × 21in., this morning. The half gold and half silver bait is said to be the best. An extraordinary circumstance yesterday was the capture by Ald. Porter of a mudcat, which took his large troll. Mr. Walter Greaves failed to get a maskinonge, but he got a 12lb. sheepshead, which gave him plenty of sport. The number of maskos captured this week up to Friday night is 24, 4 on Tuesday, 4 on Wednesday, 6 on Thursday and 10 on Friday."

WEAKFISH IN PRINCE'S BAY.—During the past week the catches of weakfish in Prince's Bay have been large in numbers and of fair size. This portion of Staten Island is easily reached by New Yorkers who take the Staten Island ferry to St. George and then go to Richmond Valley by rail. Out in the channel the small school fish are plenty, and each angler must decide for himself whether he will fish for them or stay on the flats and try for the larger and more uncertain tide-runners. Weakfishing does not rank high as sport, but hundreds find it amusing, and the morning ferry boats carry many lunch baskets and boxes of shedder crabs.

TOURISTS seeking rest and recreation during the hot summer months can obtain valuable information from the illustrated guide books entitled "A Summer Jaunt" and "Summer of 1888" issued by the Wisconsin Central Line. These books are descriptive of the summer resorts in Wisconsin and Minnesota, reached by the Wisconsin Central Line, and will be sent free to any address upon application to JAMES BARKER, General Passenger and Ticket Agent, Milwaukee Wis.—*Adv.*

GAINESVILLE, Tex.—*Messrs. Wallace & Sons, New York:* SIRS—After an exhaustive trial with every make of shell, I find the strong primer Climax paper shell equal to any English shell I have used. Nothing can be found better for Schultze or American wood powder. (Signed) "ALMO."—*Adv.*

LAKE EDWARD.

BOSTON, Aug. 20.—*Editor Forest and Stream:* I have just returned from a canoeing trip of six weeks through the Lake St. John region, and as I read up the back numbers of the FOREST AND STREAM, I see numerous contradictory communications about Lake Edward and the fishing there.

Our party of three camped about eight miles down the lake, from July 12 to 17, and we had very excellent fly-fishing most of the time. I think that the contradictions of your correspondents result from the fact that they overlook the fickleness of the Lake Edward trout. For instance, one of our party had excellent fishing during the afternoon of July 13. The next afternoon, with apparently the best of conditions in regard to weather and water, we did not get a rise, while at noon the next day, under a glaring sun, the water smooth as glass, one of our party took a pair of trout weighing 3¾lbs. in the gross. One day bait was tried as an experiment, and it could not be sunk to the bottom before it was seized by a trout. We were able to judge somewhat from this fact of the large stock of fish that must be in the lake. They are the finest flavored trout I ever ate and the gamiest. They had a trick when hooked of jumping out of water, generally three or four times, though they did not jump as high as the winnanish.

The largest taken on a fly by our party weighed 3lbs., and was one of a pair that took 1½hrs. to land, the other fish weighing 1¾lbs. During our stay we took scarcely a fish weighing under ¾lb. From these facts, I gather that Lake Edward is full of large trout which are ever ready to take bait and which will take the fly, under the proper conditions, in water not over 30ft. deep.

H. H. H.

THE TRAGEDY ON THE TOBIQUE.

THE three men suspected of the murder of Mrs. Howes on the Tobique River, in New Brunswick, were apprehended and taken into custody. They are William Day, Frank Trafton and Henry Phillipine. They have been held on the verdict of the coroner's jury, which was as follows: "We find that Susan L. Howes came to her death by a bullet fired from a rifle in the hands of William Day, Frank Trafton or Henry Phillipine, and that said William Day, Frank Trafton or Henry Phillipine did wilfully murder Susan L. Howes."

The following account of the affair by Major Howes is taken from the Boston *Herald:*

The cowardly murder of Mrs. Susan L. Howes, wife of Major C. F. Howes, by poachers, on the Tobique River, has caused widespread indignation and interest throughout the country. The Tobique River is one of the tributaries of the St. John, and enters two miles below Andover, N. B., at a place called Indian Point. It is noted for salmon fishing, and the Government derives a large revenue from leasing this privilege. The river has been free until recently for fishing purposes, but of late it has been bought and leased by a company of gentlemen. This has incensed parties who have heretofore been accustomed to fish in the river without molestation, and who now take umbrage at the Government leasing this privilege to others. They have openly avowed their intentions of protesting against the Government's interference with what common usage has made appear to them as a law. This accounts for the attack which was made on Major Howes and his family. Throughout the section the settlers are a law-abiding people, and feel deeply grieved that such a blot should rest upon them. They have shown much energy and promptness in hunting down and arresting the parties whom they suspect are guilty of this outrage.

Upon the arrival of Major Howes in this city, a *Herald* representative called upon him, and the following version of the affair was given:

"We left Andover July 30 in a wagon, the Indian guides with four canoes preceding us two days, and drove 65 miles to a little settlement called Riley Brook, where we met our guides and proceeded 14 miles up the river, and encamped two weeks among the salmon pools. On Aug. 14 we started down the river seven miles, and encamped at what is known as The Forks, remaining there until Saturday morning, Aug. 18. We then left and went down the river about 20 miles, reaching a place called Gulquah, at the mouth of the Gulquah River, where we encamped at night. Just before we reached our camping ground we noticed a man dodging behind an island, evidently wishing to spy us but not to expose himself. He was observed by several of our party, but nothing of importance was attached to the occurrence. We could see that there was a camp there, as we observed smoke arising from across the island. About 9:30 that night we noticed a canoe containing two men with a lighted flambeau and spear coming down into the salmon pool. I shouted to them two or three times not to spear in the salmon pool and to come ashore, but they paid no attention to it, and I stepped down to the shore, launching a canoe and calling to one of the Indians to paddle me out to them. As I was doing so my son fired off his gun in the air, when they put out their flambeau and started down the river, I following them to the lower edge of the pool without having any conversation with them. There was nothing said that would in any way exasperate them, and I then returned to camp. I had intended to remain there a number of days, but receiving letters forwarded to Riley Brook from Boston changed my plans, and we started down the river Sunday morning, intending to reach Andover Monday night.

"After we had proceeded some four miles we came to a short turn in the river known as the Ox-bow, my canoe being in advance. As we turned the bend in the river a shot was fired at us from the embankment, which was about 20ft. high and some 40 or 50yds. away. In the canoe was my wife, my little son Stewart, 8 years old, an Indian boy by the name of Ambrose Lockwood and myself. To the left, nearly on a line, was a canoe containing our baggage and camp equipage, paddled by an Indian named John Thomas. The shot struck the Indian's canoe directly under where he was sitting, and passed directly through, nearly causing it to sink. The next shot passed between myself and my wife, who sat facing me, and that was quickly followed by another shot, which struck my wife above the left ear, going through the brain and passing out of the opposite side of her head, causing instant death. Several shots followed in rapid succession, striking all about us.
